tion and the physiological processes which issue in having a sensation, it is necessary to look at sensation as a conscious experience of the subject. This is another inquiry, to be conducted under other conditions and with other modes of investigation. The machinery that we use is introspection, and the method is by the interrogation of consciousness. Introspection has its difficulties. There is the difficulty arising from the swift movement of states of consciousness and the fact that, when we fix attention on a state, it has already passed into the background. Each movement has its content, and it is difficult to arrest its progress without changing it. Indeed, it is a question whether we can fix our attention on a state of consciousness without influencing that state in some way. This difficulty has been discussed by F. H. Bradley:

'We all, when our attention is directed to our extremities or to some internal organ, may become aware of sensations which previously we did not notice. And with regard to these sensations there may be a doubt whether they were actually there before, or have on the other hand been made by our attending. And though this question may seem simple, it really is difficult. Can we directly compare attention's object with something to which we do not at all attend? To answer in the affirmative appears not easy. Can we then recall what we have not noticed, and, now attending to this, compare it with some other object? If reproduction necessarily depended on attention, any such process would seem impossible. But, since in any case this view of reproduction must be rejected as erroneous, we may reply confidently that the above comparison is a thing which actually happens. Still asserting the possibility and the general principle, we have not removed all doubt as to the special fact. For how do I know in a given case that my present attending has not vitally transformed the result? Am I to postulate that in principle attention does not and cannot alter its object? Such an assumption, so far as I can see, could hardly be justified. Certainly, apart from such an assumption, we may argue that any effect of attention requires time, and that hence, if the sensation appears as soon as we attend, the sensation must have preceded. And this inference is strengthened when we are able to pass thus repeatedly and with the same result from inattention to its opposite. Still, at its strongest, an argument of this kind seems far from conclusive. And in any case I cannot think that no more than this is the actual ground of our confidence when we refuse to believe that attention has made the thing that we feel. I agree that in some cases we recollect our state before attention supervened, though such a recollection in most cases, I should say, is absent. And, again usually, and if you please always, we have the persisting after-sensation or after-feeling of our previous condition. But, all this being admitted, the question as to the actual ground of our confidence remains. In order to compare our previous state we *ex hypothesi* are now forced to attend to it, and there is a doubt, whether we can assume generally that attention does not alter. We have therefore to ask whether we are in a maze with no legitimate exit, and whether such a result, if accepted, does not throw doubt on the whole subject [of immediate experience]' (*Essays on Truth and Reality*, Oxford, 1914, pp. 161-163).

Whether there has been a time in the history of life in which immediate experience was possible is a question not easily determined; it is also impossible to say that there will be a time in which immediacy is altogether transcended. For life has never been a matter of pure feeling or immediacy, and for the most developed human intelligence the immediacy of feeling is a fact that is never transcended. Perception is something different from feeling and from sensation. It is at least the cognition or the recognition of something related to the feeling in some way or other. It is an activity of the subject, in which it seeks to determine and interpret, or at least to recognize something in sensation which is more than the sensation.

At this stage it is expedient to deal with a new term—'presentation'—which seems to avoid the difficulty elaborated by Bradley regarding the intervention of attention and the result of that intervention. This word plays a great part in the psychology of Ward and Stout.

'All that variety of mental facts which we speak of as sensations, perceptions, images, intuitions, concepts, notions, have two characteristics in common:—(1) they admit of being more or less attended to, and (2) can be reproduced and associated together. It is here proposed to use the term presentation to connote such a mental fact, and as the best English equivalent

for what Locke meant by idea and what Kant and Herbart called a *Vorstellung*.

A presentation has then a twofold relation,—first, directly to the subject, and secondly, to other presentations. By the first is meant the fact that the presentation is attended to, that the subject is more or less conscious of it: it is "in his mind" or presented. As presented to a subject a presentation might with advantage be called an object, or perhaps a psychical object, to distinguish it from what are called objects apart from presentation, i.e., conceived as independent of any particular subject. Locke, as we have seen, did so call it; still, to avoid possible confusion, it may turn out best to dispense with the frequent use of object in this sense. But on one account, at least, it is desirable not to lose sight altogether of this which is after all the stricter as well as the older signification of object, namely, because it enables us to express definitely, without implicating any ontological theory, what we have so far seen reason to think is the fundamental fact in psychology. Instead of depending mainly on that vague and treacherous word "consciousness," or committing ourselves to the position that ideas are modifications of a certain mental substance and identical with the subject to which they are presented, we may leave all this on one side, and say that ideas are objects, and the relation of objects to subjects—that whereby the one is object and the other subject—is presentation (J. Ward, art. 'Psychology,' in *EB* xx. 41).

It is well to have a term to fulfil the useful function described. We carry with us the fact that presentations admit of being more or less attended to. But, as we read on, we find:

'As to the subjective relation of objects, the relation of presentation itself, we have merely to note that on the side of the subject it implies what, for want of a better word, may be called *attention*, extending the denotation of this term so as to include even what we ordinarily call *inattention*.'

This adds to the difficulties expressed by Bradley as to the effect of attention on that to which we attend. If we extend the meaning of attention to include inattention, what becomes of the rôle which attention plays, according to Ward, in our mental experience? The relation of a presentation to a subject is the fact that it is attended to, he says, but then it appears that it is still a presentation, even if it is not attended to. If the meaning of attention is extended to include inattention, then it is wholly indistinguishable from consciousness—that 'vague and treacherous word' on which Ward refuses to depend. Presentation in the language of Ward seems to mean anything of which the subject is aware, whether attended to or not.

On the other hand, Stout, while keeping the term 'presentation,' uses it in a sense and according to a definition of his own. He writes:

'I have endeavoured to bring out clearly the special nature and function of Presentation. It will be seen that I do not here follow Dr. Ward in his comprehensive use of this word as covering "whatever is the object of the understanding when a man thinks." I cannot do this because the term is the only convenient one which I can find for a certain special kind of object, possessing a distinctive character and function of the utmost importance. . . . It is convenient to have a common name to cover all the varieties of immediate experience which have an objective character. We may agree to call all immediate experiences which are primarily objective "Presentations"' (*Manual of Psychology*³, London, 1913, pp. v, 101).

The term, whether in the sense of Ward or in the more limited sense of Stout, enables them to set forth a large part of our experience without any attempt to delineate that side of experience which involves the activity of the subject, and without forcing them at that early stage to grapple with the difficulties of subjective experience. When they come to deal with cognitive process, whether perceptual or conceptual, they have the advantage of all that they have formulated under the name of 'presentations.' Presentations are largely treated as if they went by themselves, and under that treatment hardly anything is said about the subject for which the presentations are. It may be that for purposes of exposition psychologists are compelled to isolate certain problems, to treat them as if they were in fact isolated, and to try to solve them with the means which they have in hand at the stage at which they have arrived in their exposition. But, when we look at the solution, we find that they have, unconsciously perhaps, assumed

the resources of the mind, and brought in for use all the higher categories which they have not yet reached.

We submit that the function ascribed to presentations is one which they are unfitted to discharge. Presentations are retained, associated, and reproduced not from any virtue in themselves, but because these are the ways which the mind has of arranging its experiences or of recognizing ways in which order has to be won.

We have made this caveat because it seems of importance in relation to the question of perception with which we more immediately deal. Here, too, we have to complain of the way in which problems are isolated by psychologists. Perception is treated in isolation, and its processes as if it was a process by itself. 'Conceptions without perceptions are empty, and perceptions without conceptions are blind.' It may be well to have this oft-quoted maxim in the words of Kant himself, 'Gedanken ohne Inhalt sind leer, Anschauungen ohne Begriffe sind blind' (*Kritik der reinen Vernunft*, original ed., Riga, 1781, p. 51, in *Gesammelte Schriften*, Berlin, 1900-13, I. iv. 48). The maxim has been translated by Max Müller as follows: 'Thoughts without contents are empty, and intuitions without concepts are blind.' *Anschauungen*, here translated 'intuitions,' is translated by almost all English commentators 'perceptions.' It is so used by Edward Caird in his great work on Kant, and by John Watson (*The Philosophy of Kant Explained*, Glasgow, 1908), who invariably translates it by 'perceptions.' Thus, when describing Kant's 'Axiomen der Anschauung,' he writes:

'These fundamental judgments, or principles of understanding, he classifies as (1) axioms of perception, (2) anticipations of observation, (3) analogies of experience, and (4) postulates of empirical thought' (p. 179).

It is to be observed that Watson translates *Anschauung* by 'perception,' and *Wahrnehmung* by 'observation.' Now, *Wahrnehmung* is the usual word for 'perception' and is mostly used so in German philosophical literature; e.g., in F. Kirchner's *Wörterbuch der philosophischen Grundbegriffe* (Leipzig, 1911), s.v. 'Wahrnehmung,' it is written:

'Im wesentlichen deckt sich also der Begriff der Wahrnehmung mit dem der Anschauung. Will man beide unterscheiden, so kann dies mit Wundt so geschehen, dass man bei dem Ausdruck Wahrnehmung mehr die Auffassung des Gegenstandes nach seiner wirklichen Beschaffenheit, bei dem Ausdruck Anschauung dagegen vorzugsweise die dabei vorhandene Tätigkeit unseres Bewusstseins im Auge hat' (p. 1035).

Something like this distinction must have been in the mind of Kant when he wrote 'Axiomen der Anschauung' and 'Anticipationen der Wahrnehmung,' the latter of which Watson renders 'anticipations of observation.' It is not a happy rendering. There is no doubt that Kant's language lays stress on the activity of the mind when he deliberately and consistently uses the word which Max Müller translates 'intuition.' We may use the translation 'perception,' if we remember that stress is laid on the activity of the mind in perceiving.

Kant nowhere formally dealt with perception in itself, nor did he give an account of it from the psychological or metaphysical point of view. In fact, the reference to *Anschauung* in the 'Transcendental Aesthetic' is not consistent with that in the 'Transcendental Analytic.'

According to Kant, the process from perception to knowledge is possible because of our continued consciousness in time. It is governed by certain principles and determined in certain ways.

'These principles depend upon the part played by space and time in all our perception, and the manner in which we employ time and space in placing together our discontinuous perceptions. Now, obviously it is quite possible to hold this position without having thought out what is implied in being present to the mind in perception. This is what Kant did. He describes perception in different and inconsistent ways. The reason for this lac-

sistency is that Kant is not concerned with the nature of perception, but with the relation of what is immediately perceived to what is not but may be immediately perceived, and be therefore never worked out any consistent account of perception. He sometimes talks of perception reaching objects directly, and refutes the view that we perceive only what is in our mind. . . . But usually he takes the ordinary idealist view that we do not perceive things, but affections produced in us by things. Owing to this inconsistency, Kant constantly seems to be stating very much more than he has any right to. This is specially true in all that he says about knowledge being confined to phenomena and not extending to things in themselves. When he talks of our knowing only phenomena, he sometimes seems to mean that we know objects, things in themselves, only in part, in so far as they appear to us. That would make the distinction between the phenomenon and the thing in itself a distinction between the same thing imperfectly and perfectly understood. He sometimes, and this is the more usual view, seems to mean that we are aware of appearances, entities separate and distinguishable from the objects which produce them in our minds. But if we work out in any of Kant's arguments the point of his appeal to the fact that knowledge is only of phenomena, we shall find that in every case the difference between a subjective idealist and a realist view of perception, of what "being present to the mind" means, is irrelevant, and that his argument holds on either theory' (A. D. Lindsay, *The Philosophy of Immanuel Kant*, London, 1918, p. 48 f.).

As we are not concerned with the main argument of the Kantian philosophy, but only with perception, we may accept Lindsay's statement as sufficient. Yet it must be said that Kant's treatment of perception is not satisfactory. At one time perception seems to be purely passive, as when he says:

'Our knowledge springs from two fundamental sources of our soul; the first receives representations (receptivity of impressions), the second is the power of knowing an object by these representations (spontaneity of concepts). By the first an object is *given* us, by the second the object is *thought*, in relation to that representation which is a mere determination of the soul. Intuition, therefore, and concepts constitute the elements of all our knowledge, so that neither concepts without an intuition corresponding to them, nor intuition without concepts can yield any real knowledge' (*Critique of Pure Reason*, tr. F. Max Müller, London, 1881, p. 44).

Immediately Kant is met with the difficulty of showing that representations which are passively received can become elements in the activity which makes knowledge. Generally he so separates the understanding from the perceptive experience that he has great difficulty in finding any point of contact between them. But, as he goes on, we find that he is constrained to discover a very close connexion, though only at the cost of attributing an intellectual activity of a sort to perception. In the 'Transcendental Analytic' he seeks to connect the working of the understanding with perception. This he accomplishes through the synthetic power of imagination.

He begins with the phenomenon, 'which, if connected with consciousness, is called *perception*'. Without its relation to an at least possible consciousness, the phenomenon could never become to us an object of knowledge. It would therefore be nothing to us; and because it has no objective reality in itself, but exists only in its being known, it would be nothing at

tion, and the function of which as applied to perceptions I call *apprehension*. This imagination is meant to change the manifold of intuition into an image; it must therefore first receive the impressions by its own activity, which I call to *apprehend*' (ib. p. 105 f.).

This is not the only place in which Kant emphasizes the activity of the mind in relation to perceptions. But, if there is an activity of thought manifest in sensuous perception—and Kant's account of what is meant by 'apprehension' is decisive in this relation—then perception cannot be the merely passive process on which he lays so much stress in the foregoing quotation. Perception and thought cannot be two wholly distinct activities of consciousness. Passive perception is meaningless, and, if perception be an activity, it cannot be shut out from thought in the way postulated by Kant.

The present writer's contention is that perception is an activity, that it is part of the cognitive process, and is at least the active reaction of the mind

against what has been presented to it. Nor can we refuse to the perceptive activity of the mind the help of those categories which appear in all their activity at a further stage of the evolution of knowledge. It is not at all certain that what is presented to us as given is a manifold. Sensuous presentations are sifted in the act of being presented. They are not a 'big buzzing confusion'; they are so far ordered in the very presentation of them. It is not necessary to enter on a description of the senses from the physiological side. All that we need here is to mention that it is an ordered sensibility that is described. The relation of light to vision, the relation of atmospheric vibrations to hearing, and the relation of odours to smelling do not give one the impression that he is reading of a mere manifold, into which order is to be introduced by the categories of the understanding. The eye may be said to select out of the external universe those manifestations to which it is adapted. The same may be said of all the other senses. Kant, it must be said in fairness, does not dwell on this aspect of the inquiry. He is concerned with the problem of how the universality and the necessity which are essential for a valid judgment can be introduced into our sensations and perceptions. From the fact that he has denied to perception the power of apodictic judgment, and from his doctrine that a concept is necessary for a universal judgment, we conclude that he has forgotten that in the given there is already a principle which consciousness does not make, but only recognizes. He has with fullness discussed the question of the way in which we effect necessary synthesis in sense-perceptions. He deals with such propositions as 'The room is warm,' 'Sugar is sweet,' and insists that these are only references to the same subject, and only to the actual state of the subject at the moment. They are not judgments of experience; they are only judgments of sense-perception. When he deals with sense-perceptions which are to have universal validity, he introduces the additional fact that they are referred not only to the same subject but also to one another. But, if they are referred to one another, there are plainly recognized elements which do not depend on the mere sensibility or the idiosyncrasy of the subject, but are common to all subjects. Kant, however, always insists on the view that judgment proper belongs to the understanding alone, and that necessity and universality do not belong to sense; it is the characteristic of the understanding.

Perception, therefore, is more than Kant allows to it. It is already intelligent, active, and synthetic. And the relation between perception and conception has to be considered afresh and on their merits. Take the view of Herbert Spencer, which is also that of Höffding:

'In all cases we have found that Perception is an establishment of specific relations among states of consciousness; and is thus distinguished from the establishment of these states of consciousness themselves. . . . The mind is occupied by classes as such or by something producing it, the mind is occupied with the relations between that affection and others, either past or present, which it classes with like relations' (Spencer, *The Principles of Psychology*³, London, 1890, II. 251).

Clearly in this passage, and, indeed, in his whole treatment of perception, Spencer attributes to perception functions which, according to Kant, belong to the understanding alone. We may also quote Höffding on this important point:

'The complex nature of perception affords an important contribution to the determination of the relation between sensuous perception and thought. Since perception rests on a process which may be described as involuntary comparison, it manifests itself as an activity of thought, by means of which we appropriate what is given in the sensation, incorporate the sensation into the content of our consciousness. If, then, an activity of thought is manifested in sensuous perception, it is evident that sensuous perception and thought cannot be two

wholly distinct activities of consciousness. There is no such thing as absolutely passive sensuous perception. What is received into consciousness is at once worked up in accordance with the laws of consciousness' (*Outlines of Psychology*, Eng. tr., London, 1891, p. 130).

It may be well, at this stage, to assert boldly that the cognitive process is one from beginning to end. It is no more possible to divide it into separate phases than it is to partition off the mind into separate faculties. It may be valuable to distinguish various stages of it, and indicate what seem to be points of departure, but these distinctions are not to be pressed as if they were absolute. For a rational being perception is not possible without thought, and the first act of cognition achieved by the infant mind involves thinking, and thinking of the same kind as is manifested in grasping the formula of the law of gravitation. Thus we are unable to follow in the steps of James or Stout when they deal with the perceptive process as if it could go along without the guiding power of thought. James quotes with approval the following definition of perception from Sully's *Outlines*:

'Perception may be defined as that process by which the mind "supplements a sense-impression by an accompaniment or escort of revived sensations, the whole aggregate of actual and revived sensations being solidified or 'integrated' into the form of a percept, that is, an apparently immediate apprehension or cognition of an object now present in a particular locality or region of space'" (*Principles of Psychology*, London, 1905, ii. 79).

Or, as James says in his usual picturesque and incisive fashion, and in italics, 'Every perception is an acquired perception.' Every percept is so far built up by the mind itself, in accordance with its own nature and disposition. Thus a presentation, if we call it so, is an object of which the subject is aware, but, whether it is a percept or a concept, it has been constituted as an object by the activity of the mind. In other words, we utterly disagree with the view that speaks of presentations as if they can exist for the mind without representations. Sully's definition and James's maxim alike involve the fact that presentations imply representations, that cognition even in its most elementary form implies recognition.

With Stout let us take it that 'perceptual intelligence, in its pure form, is exclusively concerned with the guidance and control of motor activity in relation to an immediately present situation and to its acquired meaning as conveyed by implicit ideas inseparably coalescing with actual sensations. Thus, the perceptual consciousness cannot deal with past, future, and absent objects except in the act of dealing with what is given to it here and now. In the pursuit of ends it is circumscribed by the necessity of always working forward step by step from the actually given situation through a series of others until the goal is reached. It is limited in a way comparable to actual motion; just as in actual motion we cannot transport ourselves from one place to another except by passing through the series of intermediate places, so in perceptual process we cannot transport ourselves in thought into the future except through an immediate series of presents' (p. 365).

Stout has limited his description of perceptual intelligence by postulating that it is 'in its pure form.' He seems to find the realization of that pure form in the picture of the kitten at play. He grants that perceptions 'form series having a certain unity and continuity similar to trains of ideas or trains of thought.' But all these are dominated by the present situation, and continue to be so dominated, for apparently in the perceptual process we never get beyond the present situation. But one asks, How is the present situation constituted? Confessedly it is a complex situation, for it has an acquired meaning as conveyed by implicit ideas. That is curious in a situation which cannot deal with past, future, and absent objects except in the act of dealing with them here and now. What of the acquired meaning? Is there no consciousness of how that meaning arose? Stout describes an impossible situation. It is not possible so to delimit the perceptual attitude as to confine it to a present situation. Even if we grant

that it is possible in merely animal intelligence, it is out of the question in beings who are implicitly rational from the beginning of their existence. The presence of rationality transforms all intelligence, such as intelligence in beings who are irrational through and through, and to isolate perceptive intelligence from thought in general is an illegitimate procedure. It does not help us to limit perceptual intelligence to a situation described as present, for it has elements which are not present in what is actually in the situation, and the perceptive intelligence is aware of them.

Perception has in it all the characteristics which belong to intellectual activity at its highest. Organized perception succinctly describes all the activity of the intelligence. Instead of dividing the substance of mental action into successive planes or grades of sensibility and understanding, it would be more to the purpose to recognize in perception an implicit mental activity which has only to be made explicit in order to give us all that we need to know regarding the procedure of the mind in the acquisition of knowledge. If every perception is acquired, and if the process of acquisition is as prolonged and as complex as psychologists describe, how are we to shut off from the process of modification and growth of percepts that process of evolution which is subsequently described as conception? May not conception be an element in the formation of a percept? Psychologists do not limit the perceptual process to a description of the simple reaction of the mind against a sensation. Nor do they limit it to what is actually present to the mind in that reaction. For they postulate retentiveness and reproduction, and they also prove that attention is involved. As is observed by Stout, 'attention is always in some manner expectant or prospective' (p. 367). If attention is an element in our appreciation of the present situation, then the present situation is not altogether present, nor can the past be shut out from the present situation, for there are the phenomena of retentiveness and reproduction to be taken into account. What Stout has given with the one hand he seems to take away with the other.

If we work out any situation which is the object of perception, we find it inextricably connected with the past and the future. Ought we not to extend the meaning of perception to make it correspond to the facts? Looking at the facts, we find that there is no presentation which is not also a representation, and no cognition which is not also a recognition. We cannot find an object which is not complex, and which is not an object until somehow it is differentiated and discriminated from other objects. It is vain to seek to make distinctions the aim of which is to shut out all reference to those principles which we set forth explicitly when we have so far completed the analysis of the mental processes. For the principles which have come to clear consciousness through analysis are there in every act of knowledge, and we simply delude ourselves by calling them by names which seem to involve less than the whole action of the mind, and yet do involve all that action. It is not possible to keep, as Stout seems to try to do, the action of thought at the perceptual level, for at every step of the description the power of thought is present, intrusive, and active.

We may observe here that the ordinary use of language is against such a limitation as is presented in these treatises of psychology. We may take two illustrations of the meaning of the word 'perceive' from the AV of the Bible. We need not refer to the fact that the word 'perceive' is the translation of two different Greek words, for our purpose is simply to illustrate the usage of the English language.

'Sir, I perceive that thou art a prophet' (Jn 4⁹), says the woman of Samaria, and the perception was the outcome of the whole previous conversation, and of all that she had learned and understood of the character and function of a prophet. It is a conclusion drawn from a long process of thought and reflection, and she puts it as a 'perception.' Was she wrong, from a psychological point of view? If so, she errs in good company. The other Scripture passage we take from the speech of Peter to Cornelius: 'Of a truth I perceive that God is no respecter of persons' (Ao 10³⁴). But this perception was the result of a long and complicated process of persuasion through which Peter was led to overcome many prejudices, and to make a new departure of the greatest significance to himself and others. We need not detail the steps by which Peter was led to this conclusion. The significant thing is that he can call the conclusion to a long and complicated series of experiences by the name 'perception.' In this we plead that he was psychologically correct. It is consistent with ordinary experience. And a perception may be the justifiable outcome of an experience in which all the factors of intelligence have been obviously at work.

We quote an instance from another writer, which illustrates another aspect of the problem. Hort, speaking of the Western Text of the NT and of its rejection by many critics, says:

'This all but universal rejection is doubtless partly owing to the persistent influence of a whimsical theory of the last century, which, ignoring all Non-Latin Western documentary evidence except the handful of extant bilingual uncials, maintained that the Western Greek text owed its peculiarities to translation from the Latin; partly to an imperfect apprehension of the antiquity and extension of the Western text as revealed by patristic quotations and by versions. Yet, even with the aid of a true perception of the facts of Ante-Nicene textual history, it would have been strange if this text as a whole had found much favour' (B. F. Westcott and F. J. A. Hort, *The NT in the Original Greek*, Cambridge and London, 1881-82, II., 'Introduction', p. 120).

We quote the passage simply for its use of the word 'perception.' It is good English. Is it also good psychology? Is Hort justified in his use of the word 'perception' to describe the result of a long process of observation of the manifold facts and phenomena of MSS, versions, Patristic quotations, and so on? It is as complex a series of facts as ever was presented to the human mind, and yet Hort called the outcome of it all a 'perception.' If he is justified, then we may rightly call the outcome of all experience in any sphere a 'perception'—all our investigations, all our conceptions, all our generalizations, may go to form a perception.

If this is psychologically justifiable, as well as consonant with the usage of the English language, it will be necessary to revise our psychology. It will be necessary to look at perception as a final term, recapitulative of a long process of experience in which all the resources of the mind have been at work. At present, mainly under the influence of Kant, percepts are regarded as raw material waiting to be gathered up into a unity by means of rules brought to bear on them by the understanding. This view is partial and has some justification, in so far as percepts have to be organized and brought under rule. But what is the source of the rule? Are we to pass into a country foreign to the perceptual powers and wait for a rule to be given by something outside of the perceptual process? Is not the rule given already in the very description of the perceptual process? At all events, the perceptual process cannot be described without the rules which are supposed to be brought to it by the higher faculty.

It is to be observed that there is no recognition in our text-books of psychology of the reverse process, which issues in a perception as the outcome of a long experience. And this is a real experience, familiar in every department of human activity. It is indeed a commonplace of literature. Experience does attain to a prophetic strain and culminates in insight into a situation of the most complex order. Illustrations of the fact abound, and are so obvious that they hardly need be mentioned. It may be useful, however, to refer to the part which language plays in the evolution of the mind of a child. It has been contended by some

(e.g., J. T. Merz, *Religion and Science*, Edinburgh, 1915) that the first impression on the mind of a child is made through persons. This, at all events, is true, that a child begins very early to speak and to understand speech. This fact must have a great influence on our view of perception; for crude perception, if there ever is such a thing, is certainly modified by it. All language is abstract, and one part of the education of a child is to attach meanings more or less definite to the words that he has learned—to find concrete illustrations of them. This is true of the ordinary intercourse in a family; it is still more so when the child begins to read, and to use language more abstract than that used in the family. In fact, a great part of the education of a man is to translate out of the books that he has read into the language of common life the words that he happens to come across. General ideas are only pale ghosts until they are touched with the vividness of a perception. As the knowledge of the mind grows, and the words become more technical and more abstract, the necessity of translation into perceptions becomes more urgent. But, as knowledge grows, so the perceptions grow until a man learns to perceive a whole situation as the immediate thing to be grasped by the mind in an intuition or a perception, as the case may be, for from this point of view perception and intuition mean the same thing. We can never be sure that we have grasped the essential meaning of a situation until we have gathered it into a perception which enables us to come to a decision or to take appropriate action.

Instances of the way in which the whole experience of a lifetime may be gathered into a view of the situation present at a given moment that will enable a man to make a decision adequate to the circumstances, and fit to initiate or to terminate a course of action, are of everyday occurrence. Whatever a man's trade, occupation, or profession may be, his success in it will depend on how much of his experience he may be able to gather up in view of a situation with which he has to deal.

From Schopenhauer, who, whatever we may think of his philosophy in general or of his personal attitude towards life, has flashes of insight and apprehension worthy of all admiration, we learn something which we cannot find in any other thinker:

'Strictly speaking, all thinking, i.e. combining of abstract conceptions, has at the most the recollections of earlier perceptions for its material, and this material is not a mere substitute for the original perceptions, but is the very perception itself. Now the concepts which the reason has framed and the memory has preserved cannot all be present to consciousness at once, but only a very small number of them at a time. On the other hand, the energy with which we apprehend what is present in perception, in which really all that is essential in all things generally is virtually contained and represented, is apprehended, fills the consciousness in one moment with its whole power. Upon this depends the infinite superiority of genius to learning; they stand to each other as the text of an ancient classic to its commentary. All truth and all wisdom really lies ultimately in perception. But this unfortunately can neither be retained nor communicated. The objective conditions of such communication can certainly be presented to others purified and illustrated through plastic and pictorial art, and even much more directly through poetry; but it depends so much upon subjective conditions, which are not at the command of every one, and of no one at all times, nay, indeed, in the higher degrees of perfection, are only the gift of the favoured few' (*The World as Will and Idea*, tr. R. B. Haldane and J. Kemp, London, 1883-86, II. 247 f.).

Again, a little later on, he says:

'Perception is not only the source of all knowledge, but is itself knowledge *κατ' εἶδος*, is the only unconditionally true, genuine knowledge completely worthy of the name. For it alone imparts insight properly so called, it alone is actually assimilated by man, passes into his nature, and can with full reason be called his; while the conceptions merely cling to him. In the fourth book we see indeed that true virtue proceeds from knowledge of perception or intuitive knowledge; for only those actions which are directly called forth by this, and therefore are performed purely from the impulse of our own nature, are properly symptoms of our true and unalterable character; not so those which, resulting from reflection and its dogmas, are

often extorted from the character, and therefore have no unalterable ground in us. But *wisdom* also, the true view of life, the correct eye, and the soaring judgment, proceeds from the way in which this man apprehends the perceptible world, but not from his mere abstract knowledge, that is, not from abstract conceptions. The basis or ultimate content of every science consists not in proofs, nor in what is proved, but in the unproved foundations of the proofs, which can finally be apprehended only through perception. So also the basis of the true wisdom and real insight of each man does not consist in conceptions and in abstract rational knowledge, but in what is perceived, and in the degree of acuteness, accuracy and profundity with which he has apprehended it' (p. 252).

Schopenhauer's doctrine of perception is helpful, but must be amended in two respects: (1) in relation to his contention that perception is personal only and incommunicable; and (2) there is no recognition of what we regard as true and essential, namely the fact that conceptions, and abstract reasoning generally, may add to the contents, extent, and validity of a perception. Schopenhauer says:

'If perceptions were communicable, that would be a communication worth the trouble: but at last every one must remain in his own skin and skull, and no one can help another. To enrich the conception from perception is the unceasing endeavour of poetry and philosophy' (p. 248).

In this Schopenhauer approaches very near to a contradiction in terms. He asserts that perceptions are incommunicable, and yet adds that poetry and philosophy are striving unceasingly to enrich conceptions from perception. Are philosophy and poetry incommunicable? Are not poets and philosophers incessantly striving to communicate their perceptions to their readers? Are they unsuccessful in this endeavour? Let the popularity of poets—the popular appreciation of poets from Homer downwards—give the answer. The man in the street may not be able to see the poet's vision in all its splendour, but he sees something of it, sufficient at least to discern that the poet has had a vision, and by diligence he also may have some share in it. For all humanity is in every man, and all the gains of humanity may become his portion. But the second assumption is, after all, the more important. Our contention is that, as perceptions enrich conceptions, so conceptions may enrich perceptions. We are aware that the possibility of this has been ignored altogether by most thinkers on this subject, and yet we believe that it is true. Here again illustrations abound in every department of human activity. Let us select one which may be regarded as typical.

Before us is a picture of the Forth Bridge. I have a clear perception of its form, and I see that it is stretched across the Firth at a sufficient height to allow ships to pass beneath it. I see also that it is of sufficient strength to bear all the trains which need to cross it on their way from south to north or from north to south. I can also see how much it shortens the railway journey, and how greatly it facilitates traffic. These thoughts arise within me as I look at the bridge, and all are part of its meaning to me. That is the perception which this bridge presents to an ordinary traveller. But the perception of this bridge varies with the experience and culture of this traveller; it may mean much or little, but it does mean something for everybody. Every one sees that it is something which can afford communication from one shore to another, and every one understands something of its usefulness. But the range of this perception varies with the culture of the individual, and the perception will grow from more to more according to the particular interest, knowledge, and experience which the spectator carries with him towards the mere appearance, which is the same for every one. There the bridge stands, stretching from shore to shore, and across it trains speed night and day. It has some meaning for all, but to each the meaning is greater or less according to the number of concepts which he can pack into the perception.

Let us lay aside for the moment the perception of the bridge as it appears to the ordinary traveller, and consider how it became what it is. The outcome of the whole process of its becoming is that it stands there visible to the eye, and men can perceive it. But before it became a visible and tangible fact it was present to the mind of some man, or men, as a hope and an aspiration. The hope was to complete the bridge and to afford a shorter and easier way for traffic to be carried. But this purpose needed realization, and the engineer set himself to design the bridge. He had to study profoundly all that mathematics and mechanics could tell him of curves, strains, wind-pressure, climatic conditions, the allowance for expansion, if this bridge was to be made of steel, and also the height to which

it must be raised in order to leave a fair sea-way and to afford an easy gradient for trains to ascend from this level of the neighbouring land. Then he had to calculate the strength of material, and the mathematical form of the curves which would give at once the greatest strength and the greatest economy of material. A thousand other qualifications were also necessary, but we have enumerated a sufficient number to explain our meaning. The engineer had the benefit of all the experience of engineers since engineering began, and that has been condensed for him into hooks and formulae. He had his own experience also, and he had to use them all if his work was to be successfully done. This is our point—all this experience of engineers, all the experience of this particular engineer, all the formulae of mathematics, all the achievements of physics, and all the conceptions available for this purpose have to be used to produce the design of the bridge, and to condense it into a perception, which may become a picture for the eyes of this ordinary man. All these conceptions have been constrained into this service of this perception. Nor is this perception incommunicable, as Schopenhauer asserts. The plans and specifications are drawn out and are set before the contractors. There are drawings of the most specific and detailed order; there are specifications dealing with every part of the bridge; and the contractors must master these before they offer to construct the bridge. The work of the engineer is communicated to the contractor. What the engineer has condensed into the picture of the bridge in his design the contractor must translate into the material of which the bridge is to be built. Thus the perception of the bridge can be communicated, and it can be realized. We do not see any reason why we should not call the thought that we have of this bridge a perception (it has all the marks of a perception) and the knowledge which we have of it, or rather the knowledge which the engineer had of it, when his design was complete.

Direct, immediate knowledge of a situation may be the outcome of long meditation, of endeavours which have employed all the resources of science, all the powers of reflexion, and even all the powers of thought, in order to understand all the forces and characters which have entered into the situation and made it what it is. Not until we have thus defined the situation can we be said to have it under our control and be in a position to form a resolution and pass it into action.

But in truth this power of gathering up into a present whole the experience of a life and bringing it to bear on any given situation is one which is characteristic of every master of men—admiral, general, or political leader. If he is unable to see a situation, or if he is unable to avail himself of his knowledge and experience, if he cannot focus them all into a living whole and perceive them as present, he will break down at the moment when a decision has to be made, and action which ought to be inevitable will become vague, indefinite, and confused. This power is, so far, present in every man, and the perceptions of every successful man may be seen to be of gradual growth and of growing intensity. There is no difference in kind between the perceptions of one man and those of another; the difference lies in the power which a man acquires of utilizing his experience and of focusing it into a perception which is the necessary presupposition of intelligent action.

JAMES IVERACH.

PERFECTI (or Boni Homines).—The Perfecti were the pastors or teachers of the Cathari, or Albigenses, who, in recognition of the spiritual perfection to which they were supposed to have attained by virtue of their approved practice of the ascetic doctrine of the sect, had been admitted to the number of the 'Consolati,' i.e. those who had received the *Consolamentum* (see ALBIGENSES). They were also generally distinguished by their

superior learning and intimate knowledge of the Scriptures, which they studied in a different version from the Vulgate. George Carleton, bishop of Chichester, as late as 1626 refers to what he characterizes as 'the Pharisaical prides and dreams of the Cathari and Perfectionists' (*An Examination*, London, 1626, p. 135). The Perfecti, generally speaking, abstained from intercourse with mixed society and often passed several days together in complete isolation from the world, but, when called upon to defend their peculiar tenets against the Catholics, exhibited the utmost readiness to meet their antagonists in a formal disputation. An early instance of this occurs in the year 1165, in connexion with the Council of Lombards in the diocese of Albi (Mansi, *Concilia*, Venice, 1759-98, Paris, 1901 ff., xii. 167; C. de Vic and J. Vaissette, *Hist. générale de Languedoc*, Paris, 1872-90, iii. 4, vi. 3-5; C. Schmidt, *Hist. et doctrine des Cathares*, do. 1848-49, ii. ch. iii.).

J. BASS MULLINGER.

PERFECTION (Buddhist).—Broadly speaking, perfection relates either to the nature or state of a given unit of thought or to achievement by such a unit. In the light of mankind's imperfect and fluid knowledge, evolving or degenerating in its ideals, the former meaning is usually expressed either in negative terms or in terms of bare superlativeness. Thus the Buddhist books also speak of a perfect nature or state as *an-uttara*, 'beyondless,' or as *parama*, *sammā*, 'supreme,' or *brahma*, *seṭṭha*, 'best,' or *agga*, 'the highest.'

'So Kassapa . . . ere long attained to that supreme goal of the religious life (*anuttaram brahmachariyapariyosānam*)' (*Dialogues of the Buddha*, i. 240; cf. *Sutta-Nipāta* (SBE x. 2 (1898) 15, rendered 'highest perfection of a religious life').

'One that is pure, perfect (*paramam*) and sane, I see . . .

Who here below hath known the best as best (*paramam*)' (*Sutta-Nipāta*, 783, 87 (in tr. 88)).

This perfect or ideal state was spoken of by the negative term *ni-bbāna* (*nirvāṇa*), or extinction (interpreted by commentators as 'going away from')—extinction referring to the elimination of all sinful qualities and painful conditions. Since the latter were wholly and permanently expugnable only with the extinction of life itself, earthly or heavenly, the permanently perfect state was incompatible with life. But, since thought and language are limited by life, the perfect state was both inconceivable and inexpressible. Hence no Buddhist tries to describe any such state, but confines himself (1) to maintaining the aspiration to such a supreme goal both during life and at final death (*sa-upādisesa-anupādisesaṃ nibbānam*), and (2) to depicting in positive terms the former, or relative, *nibbāna* attainable in this life, despite its brevity and hindrances, by the perfected man, or *arahant*.

In the characteristics ascribed to the perfected man or woman two salient features may be noted: (1) in no religion is the perfection of the saint as something won and realized during life so emphatically conceded and insisted upon as it is in early Buddhism; (2) but it is a perfection of achievement, the completion of a strenuous career, the attainment of an end. It is akin to the *telos* of the utterance in Matthew's Gospel (5⁴³): 'Be ye perfect,' 'Be ye such as have attained a *telos*, an end.' It is true that, in the Buddhist canon, groups of qualities, intellectually and ethically desirable, are predicated of the *arahant*. The *Sutta-Nipāta*, e.g., and the *Psalms of the Brethren* (*Theragāthā*) abound with such descriptions. But the staple formularized description of *arahant*-ship and the *arahant*, repeated throughout the *Suttas*, is a rosary of epithets relating to an end accomplished, a goal won, a task finished, a *summum bonum* secured. The *arahant* is he 'who has destroyed

the intoxicants (*āsava*), has lived the life, has done the task, has laid down the burden, has won the good supreme, has broken away the fetter of becoming, is emancipated through perfect knowledge.'¹ To be perfect was to round off the line of life by maturing certain potentialities in it, and thus to attain a certain attitude regarding it. To this line of life there had been no beginning—beginnings are anthropomorphic conceptions, to a Buddhist mere conventional notions—but there might, in one way only, be an ending. This was in the maturity, the fruition, the dying out, as a living unit, of the 'fulfilled' life of the *arahant*. Beyond that dying out neither thought nor language could follow any further development:

'In whom the intoxicants are dried up,
Whose range is in the Void and the Unmarked
And Liberty:—as flight of birds in air
So hard is it to track the trail of him'

(*Psalms of the Brethren*, 82).

It is in the terms 'fulfilled,' 'fulfilment' (*paripūṇa*, *pāripūri*), and 'maturity' (*paripakka*)² that Buddhist thought comes nearest to the Latin term 'perfected.' The figure of the rounded orb of the moon is frequently used to illustrate the former notion. *Pūṇṇa* and *Punnā* were personal names, and sister *Punnā* was admonished:

'Fill up, Pūṇṇā (*Pūṇṇā* / *pūrasu*) the orb of holy life,
Even as on fifteenth day the full-orbed moon.
Fill full the perfect knowledge (*paripūṇā paññā*) of the Path'

(*Psalms of the Sisters*, 3).

Again:

'Lo! I am he whose purpose is fulfilled (*paripūṇa-samkappo*)
And rounded as the moon on fifteenth day'

(*Psalms of the Brethren*, 546).

Arahant (*arāḥat*) means, it is true, neither 'perfect' nor 'saint,' but 'he who is worthy' (from the root *arh*). But it was the beneficent example and influence of perfected lives that made such subjects the worthy and 'perfect field' (*anuttaram khettaṃ*), wherein the faithful should sow their homage and fostering care.

So organically conceived was this maturity of the perfected that it was judged heterodox to suppose that they could revert to immature stages (*Kāthāvatthu*, i. 2, tr. in *Points of Controversy*, PTS, London, 1915, p. 64 f.).

The fulfilled quest of the *arahant* is well brought out by the scriptures cited (*ib.*) to support this verdict.

'Not twice they fare who reach the further shore . . .

For whom no work on self is still unwrought . . .

. . . there is no building up again,

Nor yet remaineth aught for him to do.'

This absolute completeness of achievement along a certain line of effort came to be confused with competence in general. Thus in *Points of Controversy*, ii. 2-4, xxi. 3, it is asked whether, in worldly matters, such as finding his way in a new district, or in arts and crafts, the *arahant* may not show less knowledge, more doubt, than others, whether also, if he overcomes ignorance as the last barrier at the threshold of *arahant*-ship, he is to rank as omniscient.

The specific nescience there and then overcome was lack of that perfect insight into the relation between life and suffering, cause and effect, summarized as the 'four true things'—the 'one thing needful' for the earnest Buddhist. His quest of this insight was held to have led him clear of the nine 'fettlers' in succession, of soul-theory, doubt, belief in rite- and rule-efficacy, clear of all residual desires of sense, enmity, desire for prolonged life in any lower or higher spheres, conceit, and distraction.

¹ See, e.g., the writer's Index vol. to *Saṃyutta Nikāya*, London, 1904, pp. vii, 12.

² Cf. *Saṃyutta Nikāya*, v. 35, 103 f., 200 f., iv. 105; *Aṅguttara Nikāya*, iv. 314 f., 336 f., etc.

Then, as the mists of ignorance rolled away, there burst on him the supernal clarity of vision that revealed the lonely pinnacle on which he stood—the climax of a life to which there had been no first birth, but of which there was to be, here and now, the last end.

'And glad is he, for he hath won the top (*agga-patto pamodati*).

Whoso hath all his training perfected (*paripurna*),
And cannot fall away, who hath insight
Supreme, and doth behold the fading out,
The end of births—lo! him I call a seer,
"Last-body-bearer," and "abandoner
Of all illusions," "crossed-beyond-decay"

(*Iti-vuttaka*, 90, 46).

To become perfected, in this sense of completed achievement, was for the earnest disciple the positive motive or spring of religious life, complementary to, and supervening on, the negative motive of escape from *dukkha*, or misery. Conviction of his liability at all times to suffering spurred him to turn from worldly interests; the realization of a perfection, a goal or fruition to be attained, gradually replaced that *vim a tergo* (cf. *Points of Controversy*, p. 230 f.).

C. A. F. RHYS DAVIDS.

PERFECTION (Christian).—I. **NT CONCEPTION.**—Some phase of the idea and ideal of perfection has a place in the Christian thought of every generation. The term itself, however perverted in the history of fanatical sects, is of too frequent occurrence in the NT to be overlooked. It stands for a conception of the completeness and blessedness of Christian experience which has attracted the wistful desire of orthodox and sectarian alike. As Christian it is to be distinguished from the metaphysical perfection of speculative thought and from the ideal or *summum bonum* of philosophical or naturalistic ethics. Its more direct lineage is discernible in the OT. But from that conception also it is differentiated by definite characteristics—e.g., by being evangelical rather than legal, positive rather than negative (Mt 7^{12.21.24}, Jn 14¹⁵⁻²³ etc.); by taking account of inward disposition as well as of outward act (Mt 5^{22.28}, Jn 3^{3.6} etc.); and especially by setting forth the perfect love of God and man as the fulfilling and fulfilment of the divine law, thus raising the righteousness of the law to its highest power in the perfection of obedience through faith and love (Mt 5⁴³⁻⁴⁸, Ro 13¹⁰, Ja 2⁸, 1 Jn 3^{18.23} etc.). It is also distinguished in Christian thought from holiness (*q.v.*) and from sanctification (*q.v.*) as a question of degree, or as the specific from the generic. Many Christians who urge the possibility of holiness plead the impossibility of perfection.

The essential significance of 'perfect' (τέλειος) in the NT is that of an ideal relation of the Christian to the divine end, or τέλος, in regard to his character and service. But, as this ideal is progressively realized, every τέλος, both in revelation and in experience, is also an ἀρχή—a beginning. Hence 'perfect' is a relative term. Christian perfection is never identical with absolute perfection. That belongs to God only (Lk 18¹⁹). In the measure of the human that is perfect which is complete in all its parts and powers, which possesses all that is necessary to the integrity of its nature, and reaches its divinely designed end. Thus, as a possibility and an obligation, Christian perfection signifies the full cluster and maturity of the specifically Christian graces which give the Christian character its completeness for life and service within the conditions of its earthly environment. The NT term 'perfect,' itself general and abstract, only materializes its meaning in organic relation to its context. This varies according to the immediate conception of the nature of the divine law

which reveals the ideal end for the perfect man in any particular age or circumstance.

'The τέλειος is one who has attained his moral end, that for which he was intended, namely, to be a man in Christ' (R. C. Trench, *Synonyms of the NT*, London, 1876, p. 74).

It is of primary importance to bear in mind that the context in which 'perfect' occurs in the NT varies very considerably (cf. Mt 5⁴⁸, 1 Co 13^{10.28}, He 7¹⁹ 12²³). There is a perfection, possible and obligatory, recognized as crowning each stage of the Christian life. (1) At the beginning of Christian discipleship there is the perfection that constitutes a perfect conversion: 'If thou wouldest be perfect, go, sell that thou hast . . . and come follow me' (Mt 19²¹). This perfection refers to the completion of a preparatory state, which is initial to a discipline for further perfection more truly Christlike. (2) The estate of justification has its perfection in a redemption perfect as regards evangelical status and privilege: 'For by one offering he hath perfected for ever them that are sanctified' (He 10¹⁴). (3) A perfection attaches to the state of obedient faith which 'knows the things which are freely given to us of God,' 'Howbeit we speak wisdom among the perfect' (1 Co 2⁶; cf. Ritschl, *Justification and Reconciliation*, p. 647). (4) A perfection attends the religious status marked by the attainment of the end of a ritual of privilege (He 7¹⁹ 9⁹ 10¹), or the perfection for leadership and official ministry reached through long discipline (He 2¹⁰ 7¹¹ 9¹¹). (5) There is a perfection realized only in the consummation of another order of life—'the spirits of just men made perfect' (He 12²³)—and with this may be associated that perfection of eternal spiritual progress anticipated in the words, 'When that which is perfect is come, that which is in part shall be done away' (1 Co 13¹⁰).

But the sense in which 'perfect' is usually understood in Christian thought has reference to that ethical and spiritual completeness of Christian character which crowns the faith and discipline of the religious life. In this sense Jesus used it in what may be regarded as the great charter for the Christian ideal: 'Ye therefore shall be perfect [imperative future], as your heavenly Father is perfect' (Mt 5⁴⁸). He states perfection in ethical, not in legal, ritual, or eschatological terms; it consists in moral likeness to God, in perfect sonship to the perfect Father; it is a quality of character, an ethical achievement resulting in the 'Christianizing of the Christian,' rather than a privilege of Christian status or imputation. This is the ideal towards which all NT teaching looks and moves. It is stated most fully in the profound and daring petitions of the apostolic prayers for Christian believers (Eph 1¹⁶⁻¹⁹ 3¹⁴⁻¹⁹, Col 1⁹⁻¹¹, 1 Th 5², 2 Co 13⁹). These find their all-comprehending unity in a supreme exposition of the law of love; they unfold an ideal of ethical and spiritual excellence that cannot be surpassed: 'May your spirit and soul and body be preserved entire, without blame at the presence of our Lord Jesus Christ' (1 Th 5²³), that ye may 'know the love of Christ which passeth knowledge, that ye may be filled unto all the fulness of God' (Eph 3¹⁹). The aspiration of the Christian soul can go no further. No limit is set to Christian privilege. The main question before which faith and practice have halted throughout the Christian centuries is whether St. Paul here prays for such perfection as a spiritual blessing obtainable in the present life. He appears, however, to have anticipated this natural hesitation and forestalled it in the doxology that follows one of these prayers: 'Now unto him that is able to do exceeding abundantly above all that we ask or think, according to the power that worketh in us,' etc. (Eph 3²⁰), and in the sure note of confi-

dence that closes the other: 'Faithful is he that calleth you, who will also do it' (1 Th 5²⁴). These passages indicate the possibility of a state of Christian experience that can be described as 'unblameable in holiness' (1 Th 3¹³), in which in this life Christians may stand hallowed through and through (*δολοκλειῆς*), in every part of their nature (*δολοκλήρον*), subsisting by grace in a spiritual condition able to hear the scrutiny of their Lord's presence without rebuke. It is to this achievement that the fidelity of God to His purpose in calling men to be Christians is pledged. The obligation, moreover, to be 'sincere and void of offence unto the day of Christ; being filled with the fruits of righteousness' (Ph 1¹⁰) rests upon all Christians and is not regarded in the apostolic ideal as a 'counsel of perfection' for a privileged few; for the acknowledged end of the apostles' labour was 'admonishing every man and teaching every man in all wisdom, that we may present every man perfect in Christ' (Col 1²⁸), 'always striving for you in his prayers, that ye may stand perfect and fully assured in all the will of God' (4¹²).

(a) The closer definition of Christian perfection is almost invariably stated in the NT in terms of love. The injunction, 'Become ye imitators of God, as beloved children; and walk in love' (Eph 5¹⁶), which compresses the ideal of perfection into a phrase echoing Mt 5⁴⁸, arose from the contemplation of God's tireless tenderness in merciful dealing with the evil and the good, the just and the unjust. God's perfection is perfect love; man's is in being like Him. Love with all the heart and soul and mind is the last sign of the perfect (Mt 22³⁷⁻⁴⁰); for every relationship, human and divine, 'love is the bond of perfectness' (Col 3¹⁴), and 'he that dwelleth in love dwelleth in God, and God in him. Herein is our love made perfect. . . . There is no fear in love; but perfect love casteth out fear' (1 Jn 4^{16a}). The boldest and most beautiful interpretation of Christian perfection in sacred literature is St. Paul's great hymn to love in 1 Co 13 (cf. also 2 P 1⁴⁻⁷, Ja 1²⁵); for, 'if we love one another, God abideth in us, and his love is perfected in us' (1 Jn 4¹²). Obedience to 'the royal law according to the scripture,' 'the perfect law, the law of liberty,' 'Thou shalt love thy neighbour as thyself' (Ja 1²⁵ 2⁸), becomes the vanishing point of every prophecy, precept, promise, and privilege in the NT; for on this 'hangeeth the whole law, and the prophets' (Mt 22⁴⁰). Such love is the harmonious expression and completion of the whole human personality—mind, will, and feeling—not of feeling alone (1 Th 5²³). But this love is always set forth as dependent upon the recognition and reception of 'the love which God hath in us' (1 Jn 4¹⁸); 'We love, because he first loved us' (4¹⁹). God's love towards us is first 'perfected in us' (4¹²), 'emptied forth in our hearts through the Holy Ghost which was given unto us' (Ro 5⁵), in order that, by 'the expulsive power of a new affection,' 'fear that hath punishment' may be cast out, and the soul energized in all its activities Godward and manward by a human love made perfect through the divine. Only thus may we 'have boldness in the day of judgement; because as he is, even so are we in this world' (1 Jn 4¹⁷).

(b) Hence Christian perfection is constantly declared to be wrought by the grace of God through Christ who dwells in our hearts by faith, 'to the end that, . . . being rooted and grounded in love,' we 'may be strong to apprehend with all the saints what is the breadth and length and height and depth, and to know the love of Christ which passeth knowledge,' that we 'may be filled unto all the fulness of God' (Eph 3^{17a}), 'being confident of this very thing, that he who began a good work in you will perfect it until the day of Jesus

Christ' (Ph 1⁶; cf. He 13²¹, Ph 2¹³). This peculiar quality of perfection as Christian is basal in the NT teaching: 'perfect in Christ' (Col 1²⁸); 'for in him dwelleth all the fulness of the Godhead bodily, and in him ye are made full' (2¹⁰; cf. 1 Co 1³⁰); it is realizable only in Christ, and this in every aspect of its origin, progress, and end. Something in His life and death is regarded as essential to its inception and hope: 'The law made nothing perfect' (Ho 7¹⁹); 'For by one offering he hath perfected for ever them that are sanctified' (10¹⁴); the ethical discipline by which perfection is attained finds its centre and sanction in Him: 'Having been made perfect, he became unto all them that obey him the author of eternal salvation' (He 5⁹; cf. 12²). Moreover, He is Himself the only perfect man—the complete type to which all human perfection must conform; we are 'foreordained to be conformed to the image of his Son, that he might be the firstborn among many brethren' (Ro 8²⁹), so that 'the perfecting of the saints' tarries 'till we all attain . . . unto a fullgrown man, unto the measure of the stature of the fulness of Christ' (Eph 4¹³; cf. v. 3² 5¹, Ph 2⁵).

(c) Nevertheless, perfection is considered to be dependent upon the effort of man in co-operating with the grace of God: 'But whoso keepeth his word, in him verily hath the love of God been perfected' (1 Jn 2⁵); 'If we love one another, God abideth in us, and his love is perfected in us' (4¹²; cf. Ph 2¹², 2 Co 7¹, Ja 5⁸). In order to be Christian, perfection must also be the perfection of the pure intent, the single eye (1 Co 10³¹, 1 P 4¹¹, Mt 6²³), of the entire renunciation of self (Lk 14²⁸), the complete discipline of the tongue (Ja 2¹²), as well as the full cluster of the fruits of the Spirit (Gal 5^{22a}).

(d) The lofty ideal of Christian perfection thus presented in the NT raises two questions of great importance and of equal difficulty, which have been the chief grounds of controversy in the history of the doctrine within the Church. To these the NT gives no categorical answer; such answers as are available, while valuable as far as they go, are at best equivocal or inferential. (a) Does Christian perfection imply a state of sinlessness? The Johannine writer asserts plainly concerning the children of God: 'Whosoever abideth in him sinneth not. . . . Whosoever is begotten of God doeth no sin, because his seed abideth in him; and he cannot sin, because he is begotten of God' (1 Jn 3⁶). And yet the same writer asserts with equal plainness: 'If we say that we have no sin, we deceive ourselves, and the truth is not in us. If we confess our sins, he is faithful and righteous to forgive us our sins, and to cleanse us from all unrighteousness. If we say that we have not sinned, we make him a liar, and his word is not in us' (1^{8a}). It is obvious that these assertions present an exceedingly difficult exegetical problem. Taken at their face value, they are contradictory. Considered in the light of the doctrine of perfection, they depend much for their meaning upon the significance attached to the common term 'sin,' and upon the nature of the qualifying words chosen to express its closer definition. Some relief has been sought in distinctions between sin as outward or indwelling, voluntary or involuntary, momentary or habitual. The issue is too fine for discussion here. Cogent reasons for regarding Christian perfection in the NT as the destruction of all sin are given by John Fletcher ('Essay on Christian Perfection,' *Works*, v. 40-50), and for the opposite view by P. T. Forsyth (*Christian Perfection*, pp. 1-49). Commentaries (*in loc.*) should also be consulted. But, whichever view is adopted, there can be little doubt that Christian perfection is regarded in Scripture as compatible with infirmity of knowledge and with other natural and inevitable human limitations consistent with

the persistence to the end of life of a state of ethical and spiritual probation (Jn 17¹⁵, Ro 8^{10, 23}, 1 Co 15⁴⁵ 9⁷, 1 Jn 2¹). This implies a constant need of the grace of the atoning work of Christ (1 Jn 1⁷) and the continued possibility of further progress in spiritual attainment (Ph 3¹⁰⁻¹⁵).

(8) Is the attainment of Christian perfection possible in the present life? The answer to this depends largely upon that given to the previous question. While it is extremely doubtful whether any specific NT passage gives an answer in the affirmative, it may fairly be said that the general tenor of the NT teaching forbids a negative reply. This may be gathered from the passages already quoted in this exposition. But it must be acknowledged that the use made of these for this end frequently depends upon whether their exposition proceeds upon lines determined by antecedent Calvinistic or Arminian tendencies. Moreover, it should be noticed that the great ethical and spiritual experiences that constitute finality in the Christian life are mostly presented in timeless relations in the NT. Nevertheless the obligation to regard perfection as the attainable goal of the Christian estate is undeniable (Mt 5⁴³⁻⁴⁸, 2 Co 7¹, Ph 3¹⁵, He 6¹). The privilege, possibility, and promise of reaching this blessedness are not, however, declared chiefly in definite textual statements; they are too deep for words. What the NT here reveals is not so much a doctrine as a consciousness—and a consciousness of indescribable wealth and power—that He who hath begun a good work in us will also perfect it. In this vital and vitalizing consciousness the expectation of Christian perfection lived, moved, and had its being in the Apostolic Church.

II. HISTORICAL.—Each of the main theological systems has preserved, in the form of doctrine, experience, or tradition, one or other of the aspects of Christian perfection presented in the NT; but there is no consecutive history of the doctrine. It will be more satisfactory, therefore, to consider the types of theory exhibited than to attempt any chronological arrangement of the material available.

I. Patristic.—This type appears in fragments mostly continuing the strain of thought and phraseology of the NT; Christian perfection is the perfection of love achieving through grace the righteousness of faith.

'By love were all the elect of God made perfect. . . . Those who have been perfected in love through the grace of God attain to the place of the godly. . . . Blessed were we, dearly beloved, if we should be doing the commandments of God in concord of love. . . . Blessed is the man to whom the Lord shall impute no sin, neither is guile in his mouth' (Clement of Rome, *ad Cor.* 49 f.).

Speaking of faith, hope, and love, Polycarp writes: 'If any man be in these, he has fulfilled the law of righteousness, for he that hath love is far from all sin' (*ad Phil.* 9).

Ignatius repeats this testimony: 'Faith is the beginning of life and love the end; and the two being found in unity are God, while all things else follow in their train unto true nobility. No man professing faith sinneth, and no man possessing love hateth' (*ad Eph.* 14). 'Seeing ye are perfect, let your counsels also be perfect; for, if ye desire to do well, God is ready to grant the means' (*ad Smyrn.* 11).

Irenaeus understands that the apostle Paul 'declares that those are "the perfect" who present unto the Lord body, soul and spirit without offence; who not only have the Holy Spirit abiding in them, but also preserve faultless their souls and bodies, keeping their fidelity to God, and maintaining righteous dealings with their neighbours' (*adv. Haer.* v. vi. 1; cf. also *Didache*, i. vi., x., xvi.).

Clement of Alexandria, influenced by Gnostic tendencies, illustrates how early the wavering faith of Christian thinkers was drawn in two ways respecting Christian perfection: 'A man may be perfected, whether as godly, or as patient, or in chastity, or in labours, or as a martyr, or in knowledge. But to be perfected in all these together I know not if this may be said of any who is yet man, save only of Him who put on humanity for us' (*Strom.* iv. 21). Yet he writes again: 'It is a thing impossible that man should be perfect as God is perfect; but it is the Father's will that we, living according to the Gospel in blameless or unfailling obedience, should become perfect' (*ib.* vii. 14).

Jerome may serve to illustrate a later phase of Patristic

thought when Pelagian views of perfection found currency: 'We maintain also that, considering our time, place and bodily weakness, we can avoid sinning, if we will, as long as our mind is bent upon it, and the string of our harp is not slackened by any wilful fault' (*Dial. against the Pelagians*, iii. 4).

2. Methodist.—This type is considered at this stage because (a) the doctrine of Christian perfection is pre-eminently the distinctive doctrine of this community, which at present constitutes the largest Protestant Church; (b) it presents the fullest and most definitely articulated statement of the doctrine, and claims to be a direct continuation in modern times of the apostolic teaching; (c) it is claimed by J. A. Faulkner, of the Drew Theological Seminary, that 'the Methodists were the first Christians who officially, and as a united body, without deviation, and with the power of a church behind them to make it effective, taught the NT doctrine of Christian perfection' (O. A. Curtis, *The Christian Faith*, p. 525); they also embodied it in their standards and expounded and defended it as 'the grand depositum which God has lodged with the people called Methodists, and for the sake of propagating this chiefly He appeared to have raised us up' (J. Wesley, *Letters*, 15th Sept., 26th Nov. 1790); (d) it is claimed that the state of Christian perfection has been attained and enjoyed in living experience. The doctrine is stated in 'A Plain Account of Christian Perfection, as believed and taught by the Reverend Mr. John Wesley, from the Year 1725 to the Year 1777,' and 'Brief Thoughts on Christian Perfection' (*The Works of the Rev. John Wesley*, London, 1840, xi. 351-423). The spiritual values of the doctrine find their highest expression in *The Methodist Hymn Book*, particularly in the unique section 'For Believers seeking for Full Redemption.' W. B. Pope (*A Compendium of Christian Theology*, iii. 27-100) gives a careful dogmatic and historical review of the doctrine. From the days of the Holy Club at Oxford (1730) the Wesleys persistently sought perfection. Their earliest conceptions of it were mystical and ascetic, but intensely ethical. The influence of these characteristics remained even when, after their conversion, their conception of perfection had become strictly evangelical; their theory progressed from a preparatory ethical discipline, whose elements were but imperfectly understood, to a clearly apprehended and, as they profoundly believed, Scriptural conviction of the privilege open to every Christian believer of being perfected in the love of God and man, and of being wholly delivered from indwelling sin. The doctrine formed the natural sequel to the joyous assurance of acceptance with God that was the seal of justifying faith; Christian perfection was the further seal of the Holy Spirit set upon the earnest striving of the regenerate will accompanied by a faith working by love; such faith made this blessing its direct object, received it as a gift of grace, and retained it by the obedience of faith which became fruitful and effective through an abiding union with the crucified and risen Redeemer. Indeed, the doctrine of a complete deliverance from all sin was regarded as the logical and experimental outcome of the proclamation of a free, full, present salvation as the gift of grace to every penitent sinner. The exposition of the doctrine is marked by reasonableness and moderation, by great frankness and spiritual daring. Definitions often state what it is not. The main features of the Methodist doctrine are as follows: (1) it is not absolute, nor Adamic, nor angelic perfection, nor is any one 'infallible while he remains in the body' (Wesley, *Works*, xi. 400); nor is it a perfection of justification (p. 424); it is not legal, yet it is relative to a given law—the law of love; hence (2) it is perfect love:

'By perfection I mean the humble, gentle, patient love of God and our neighbour, ruling our tempers, words and actions'

(p. 428). 'Pure love reigning alone in the heart and life—this is the whole of Scriptural perfection' (p. 335). 'There is nothing higher in religion; there is, in effect, nothing else' (p. 413).

(3) Perfect love is the one law stated in the gospel to which we are now subject in the Christian dispensation; this is not a mitigated law, but a higher law than that contained in ordinances; it is the only law possible for us to obey and by which we can be judged. Because it is the royal law, the law of Christ, obedience to it constitutes Christian perfection in the Methodist sense (cf. p. 399). This is the plain doctrine found in varying words throughout John Wesley's writings (cf. *Journal*, 27th Aug. 1768). While mystical and ascetic teachers of perfection, who make love its essence, have seldom related it to the ethical obedience of faith, he boldly declares that the righteousness of the law is fulfilled in those in whom faith working by love is reckoned for perfection. Hence, as his critics admit (cf. C. Hodge, *Systematic Theology*, iii. 258), there is no tolerance of antinomianism in Wesley's doctrine. Moreover, 'this law of faith working by love is plainly different from the law of works' (Wesley, *Works*, xi. 400). Only in obedience to the law of love can Wesley's doctrine be regarded as (4) sinless perfection. He writes:

'I do not contend for the term "sinless," though I do not object against it' (p. 428). 'Is it sinless? It is not worth while to contend for a term. It is salvation from sin' (p. 424). Yet in answer to the question, Does being made perfect in love imply that all inward sin is taken away?, he says:

'Undoubtedly; or how can we be said to be saved from all our uncleanness?' (p. 371f.; cf. p. 360ff.).

'The Methodist doctrine is the only one that has consistently and boldly maintained the destruction of the carnal mind, or the inbred sin of our fallen nature' (Pope, iii. 97). It goes further than certain mystics and the Pietists of the school of Spener in asserting that the newness of life imparted by perfect love depends for its full exercise upon a perfect death to sin.

'The combination of the two elements, the negative annihilation of the principle of sin and the positive effusion of perfect love is, it may be said, peculiar to Methodist theology as such' (ib.; cf. also A. Lowrey, *Possibilities of Grace*, New York, 1884; R. S. Foster, *Christian Purity*).

Nevertheless Wesley frankly admits that, while those who are perfected in love are freed from all unholy tempers, pride, anger, self-will, and sinful desires, they are not free from mistakes, infirmities of judgment, involuntary negligences, and ignorances. These, however, though they are indeed deviations from the perfect law, are not, strictly speaking, sins. He recognizes the difficulty of accurately discriminating between sinful and sinless faults (cf. xi. 381), but nothing is sin properly speaking save 'a voluntary transgression of a known law.'

'I believe there is no such perfection in this life as excludes these involuntary transgressions which I apprehend to be naturally consequent on the ignorance and mistakes inseparable from mortality. Therefore "sinless perfection" is a phrase I never use, lest I should seem to contradict myself. I believe a person filled with the love of God is still liable to these involuntary transgressions. Such transgressions you may call sins, if you please; I do not, for the reasons above mentioned' (xi. 390; cf. also p. 363).

Still such faults, though not properly sins, cannot bear the rigour of God's justice, and therefore 'the best of men need Christ as their Priest, their Atonement, their Advocate with the Father; not only as the continuance of their every blessing depends on His death and intercession, but on account of their coming short of the law of love. For every man living does so. . . . The most perfect may properly for themselves, as well as for their brethren, say, "Forgive us our trespasses." . . . For want of duly considering this, some deny that they need the atonement of Christ. Indeed, exceeding few; I do not remember to have found five of them in England. Of the two I would sooner give up perfection; but we need not give up either one or the other. The perfection I hold, "love rejoicing evermore, praying without ceasing, and in everything giving thanks," is well consistent with it; if any hold a perfection which is not, they must look to it' (xi. 401; cf. p. 379).

(5) Perfection is received instantaneously by faith.

'As to the manner. I believe this perfection is always wrought in the soul by a simple act of faith; consequently in an instant. But I believe a gradual work, both preceding and following that instant' (xi. 423). 'But God does not, will not, give that faith unless we seek it with all diligence in the way which He hath ordained,' namely 'in vigorous, universal obedience, in a zealous keeping of all the commandments, in watchfulness and painfulness, in denying ourselves, and taking up our cross daily; as well as in earnest prayer and fasting, and a close attendance on all the ordinances of God' (p. 356). 'Yet these are not necessary in the same sense or same degree as faith. . . . they are remotely necessary; faith is immediately and directly necessary' (vi. 60).

(6) Perfection is possible in this life. Wesley frequently urges this, but admits that it is a rare experience, though 'several persons have enjoyed the blessing without interruption for many years.' 'I know many that love God with all their heart' (xi. 402; cf. pp. 393, 389, iii. 96-100). His mature judgment was:

'As to the time. I believe this instant generally is the instant of death, the moment before the soul leaves the body. But I believe it may be ten, twenty, or forty years before. I believe it is usually many years after justification; but that it may be within five years or five months after it, I know no conclusive argument to the contrary' (xi. 429; cf. p. 373). Yet, as it is given instantaneously, in one moment, 'we are to expect it, not at death, but every moment; now is the accepted time' (p. 367; cf. p. 378f.). Still 'I believe that in the case of most they gradually die to sin and grow in grace, till at, or perhaps a little before, death God perfects them in love, but not all; sometimes He "cuts short His work"; He does the work of many years in a few weeks, perhaps in a week, a day, an hour' (p. 406); 'so that one may affirm the work is gradual, another, it is instantaneous, without any manner of contradiction' (p. 407). 'But those who are perfect can undoubtedly grow in grace, and that not only while they are in the body, but to all eternity' (p. 409).

(7) *Assurance and profession.*—Wesley applied his doctrine of assurance to the attainment of Christian perfection as he did to the clear consciousness of justification. The Spirit of God bore witness to the reality and certainty of each of these spiritual states. This witness and the 'marks' in experience of a total death to sin and an entire renewal in the love and image of God were essential to the human confidence that the state of perfection had been reached (pp. 385f., 404). This interior evidence was not always equally clear; it was susceptible of intermission and of increasing degrees of certainty (p. 403). As to the profession of Christian perfection, his statements are characterized by great caution and a sane reserve; he is at pains to admonish professors against the presumption of pride and the perils of enthusiasm, yet he favours a humble confession of enjoyment of the blessing to the glory of God.

'Be particularly careful in speaking of yourself; you may not indeed deny the work of God; but speak of it when you are called thereto, in the most inoffensive manner possible. . . . Indeed, you need give it no general name; neither perfection, sanctification, the second blessing, nor the having attained. Rather speak of the particulars which God hath wrought for you. You may say, "At such a time I felt a change which I am not able to express; and since that time, I have not felt pride, or self-will, or anger, or unbelief; nor anything but a fineness of love to God and all mankind" (xi. 417; cf. pp. 382, 390).

It seems doubtful whether Wesley himself ever professed to have reached this state (for the opposite view cf. Curtis, p. 374 ff.). Later Methodists have been extremely shy of profession.

'As employed by the individual Christian concerning himself, perfection is a term more appropriate to his aspiration than his professed attainment' (W. B. Pope, *A Higher Catechism of Theology*, London, 1883, p. 276). 'There is no consciousness more unconscious of self than that of perfect holiness and love' (Pope, *Comp. of Chr. Theol.* 3 ill. 56).

(8) *Amissibility.*—Wesley's later judgment, contrary to some of his earlier statements, was that Christian perfection as a state of grace might be lost by unfaithfulness; it was never beyond the reach and reality of temptation.

'I do not include an impossibility of falling from it, either in part or in whole. Therefore I retract several expressions in our Hymns, which partly express, partly imply such an im-

possibility' (xi. 428). 'We are surrounded with instances of those who lately experienced all that I mean by perfection. They had both the fruit of the Spirit, and the witness; but they have now lost both' (p. 409 f.; cf. pp. 402, 425, also *Journal*, 25th July 1774, and *Letters*, 27th Jan. and 12th Feb. 1767).

3. **Arminian.**—Methodist doctrine generally was Arminian in type, and its doctrine of Christian perfection found a starting-point in the teaching of the Remonstrant divines. The early Arminians wrote much on this doctrine; it was a consequent of their primary theological principles; but their views lacked clear definition. It was exhibited rather in its opposition to the Roman doctrine of works of supererogation and the Calvinist tendencies to antinomianism than as the clear obligation and privilege of evangelical religion. For the views of Arminius himself, who died early (1609), which are less sharply defined than those of his followers, see *Works of Arminius*, tr. J. Nichols, London, 1825-29, i. 608, ii. 408. Charged with Pelagian tendencies because he asserted that it was possible for the regenerate perfectly to keep God's precepts, he repudiated the Pelagian position by basing this possibility wholly upon the grace of God, and therein claimed affinity with the teaching of Augustine. His followers dwelt upon a perfection of three degrees: (1) that of beginners; (2) that of proficient—the perfection of unimpeded progress in the regenerate life; and (3) that of the truly perfect—the perfection of an established maturity of grace in which the sinful habit is subdued. Of the last stage little is positively taught concerning its limitations, means, or certitude. Episcopus says:

'The commandments of God may he kept with what He regards as a perfect fulfilment, in the supreme love which the Gospel requires according to the covenant of grace, and in the utmost exertion of human strength assisted by Divine help. This consummation includes two things, (1) A perfection proportioned to the powers of each individual; (2) A pursuit of always higher perfection' (ap. Pope, *Comp. of Chr. Theol.* iii. 84; cf. Hodge, iii. 253). P. van Limborch describes it as 'perfect, in being correspondent to the provisions and terms of the Divine covenant. It is not sinless or an absolutely perfect obedience, but such as consists in a sincere love of piety, absolutely excluding every habit of sin' (*Institutiones Theologiae Christianae*, Amsterdam, 1716, pp. 658a, 659b, 661a [tr. W. Jones, London, 1702]).

Similar positions were regarded sympathetically by the Cambridge Platonists; their exposition and enforcement of Christian perfection formed a transition stage between the Arminian doctrine and its more definite and evangelical development in Methodism. It was natural that the Arminian type as elaborated and deepened by Methodism should be met antagonistically by the type of thought characteristic of Calvinism.

4. **Lutheran and Calvinistic.**—In general this offers a direct negative to most of the positive claims regarding Christian perfection: perfection is never realized in the present life; in no case is sin entirely subdued; the most advanced believer daily needs to pray for the forgiveness of sins to which guilt attaches. It is admitted that a direct obligation lies upon the Christian to be 'perfect even as your Father which is in heaven is perfect'; that the gospel provision for Christian perfection is all-sufficient; that a perfection involving ultimately a complete deliverance from all sin is the sure promise of God in Christ. The essential question, however, is whether this promise of perfection is intended by God to be fulfilled in this life, and whether cases are known in which the promise has been actually fulfilled.

Whilst 'all admit that God can render His people perfect before death as well as after it, . . . the answer given to these questions by the Church universal is in the negative' (Hodge, iii. 246).

The grounds for this view are: (i.) the spirituality of the divine law with the absoluteness and immutability of its demands; for it condemns as sinful any want of conformity to the standard of

absolute perfection as exhibited in the Bible; (ii.) the express declaration of Scripture that all men are sinners—and this not in the sense that all men have sinned and all are guilty, but that all men have sin constantly clinging to them;¹ (iii.) passages of Scripture which describe the reality of the conflict between the flesh and the spirit—e.g., the fragment of Paul's autobiography in Ro 7, the confession of persistent imperfection (Ph 3¹²⁻¹⁴), the lusting of flesh and spirit in Christian living (Gal 5¹⁶⁻²⁰); (iv.) the unceasing testimony of Christian experience, corporate and personal, in the confession of sin and the prayer for forgiveness.

A Christian 'never is in a state which satisfies his own conviction of what he ought to be. He may call his deficiencies infirmities, weaknesses, and errors, and may refuse to call them sins. But this does not alter the case. Whatever they are called, it is admitted that they need God's pardoning mercy' (Hodge, iii. 250). 'Nothing which the law does not condemn can need expiation. If these transgressions, therefore, need atonement, they are sins in the sight of God' (ib. p. 255).

The one sense in which Christian perfection is acknowledged in the standards of the Reformation—Lutheran and Reformed, and particularly in modern Calvinism—is perfection by imputation. This assumes that his status as perfect as well as his status as justified is for the Christian believer completed in Christ, and applied to him as a free gift in the covenant of grace. His perfection is the imputed righteousness of Christ. Col 2¹⁰, 1 Co 1³⁰, and He 10¹⁴ are quoted in support. It is the perfection of Another reckoned to the elect believer, 'given to them for whom it is appointed' (cf. *Conf. Aug.* xxvii.; Calvin, *Inst.* iii. xxii. 2, iv. i, 17, viii. 12; art. 'Vollkommenheit,' in *PREF* xx. 733 ff.). A modified form of this view appears to be taken by Forsyth (*Christian Perfection*², chs. i. and ii.). Perfection thus tends to become a subject for dogmatics rather than ethics in the Christian system; for moral character is not transferable. In the keen controversy on Christian perfection at the time of the Evangelical Revival the Calvinistic arguments were met by John Fletcher, vicar of Madeley, himself not only an authoritative exponent of the Methodist position, but a beautiful example of its grace. His *Last Check to Antinomianism* (London, 1787), written in reply to a polemical pamphlet, *A Creed for Arminians and Perfectionists*, by Richard Hill, Fellow of Clare Hall, Cambridge, seeks to show the Scriptural character of the Methodist doctrine, and that it was sanctioned by the best theological writers (*Works*, iv. 406-v. 226). Whilst the doctrine of the Wesleys has been generally condemned by the Churches, it is not difficult to establish sympathetic relations between it and the higher spiritual aspiration and teaching of the Church of England, of which the Wesleys and Fletcher were clergymen.

5. **Anglican.**—Here the strong desire for comprehension in doctrine and devotion made room in the articles and offices of the Book of Common Prayer for both Calvinistic and Arminian tendencies. The former tendency is seen chiefly in the doctrinal colouring of the articles, the latter in the devotional wealth of the liturgies of the Church. The Arminian positions were favoured by High Churchmen of the Nonjuror type. The Wesleys came by ancestry from that stock, and strong spiritual sympathy with its traditions deeply influenced their teaching. In this atmosphere their doctrine of Christian perfection was born, and its development was nourished by these traditions. John Wesley declares that the doctrine of Christian perfection, which he held until the close of his life, was essentially identical in principle with that

¹ Luther is quoted as saying: 'The sins of a Christian are for his good; and if he had no sin, he would not be so well off, neither would prayer flow so well' (K. H. Bogatzky, *Golden Treasury*, London, 1778, p. 828).

which he preached in a University sermon, in St. Mary's, Oxford, on 1st Jan. 1733, five years before his evangelical conversion; he also traces its starting-point to the reading of Jeremy Taylor's *Rule and Exercises of Holy Living and Holy Dying*; he acknowledges the influence of a Kempis upon it, and expresses his great indebtedness to the writings on Christian perfection of the fearless Nonjuror, William Law (*Works*, xi. 351 ff.). He considered that the type of Christian perfection which he expounded was in harmony with the spiritual ideals and devotional formularies of the English Church; it was not forbidden by her articles and was sanctioned by the language of her offices, collects, and homilies.¹ Fletcher shows how 'this vein of godly desire after Christian perfection runs through her daily services' (iv. 436-453). Attention may be called to the confirmation of the view that (i.) Christian perfection consists in perfect love; the words of the collect in the ante-communion service, 'Cleanse the thoughts of our hearts by the inspiration of thy Holy Spirit, that we may perfectly love thee, and worthily magnify thy holy Name, through Christ our Lord'—in themselves stating a doctrine of Christian perfection satisfying every evangelical claim—find echo in other collects and exposition in certain of the homilies (e.g., the collect for Quinquagesima, the homily on 'Charity,' and 'for Good Friday'); Wesley quotes Archbishop Usher as confirming his conception of being perfect:

'To have a heart so all-flaming with the love of God, as continually to offer up every thought, word, and work, as a spiritual sacrifice, acceptable to God through Christ' (*Works*, xi. 369).

(ii.) Christian perfection implies cleansing from all actual and inbred sin; this is a burden of desire and expectation in several parts of the liturgy; e.g., in the ancient liturgical creed of the Church, the 'To Deum': 'Vouchsafe, O Lord, to keep us this day without sin'; it is the refrain of many of the collects (cf. those for the Circumcision, the first Sunday after Easter, the first, ninth, eighteenth, nineteenth Sundays after Trinity, Innocent's day, St. Luke's day, etc.); the baptismal office definitely contemplates and desires a death to all inbred sin, that the baptized 'may crucify the old man, and utterly abolish the whole body of sin'; the proper preface for Christmas day in the communion office regards the end of the Incarnation as 'without spot of sin, to make us clean from all sin'; lest these should be regarded as aspirations for the unattainable, the faith of the Church is directed to God who is 'wont to give more than we desire or deserve' (twelfth Sunday after Trinity).

6. Earlier views.—Behind Protestant theories of Christian perfection lay the influential systems of philosophical and psychological theology—Gnostic, Pelagian, Augustinian—which never wholly pass out of sight. Each of these had its doctrine of perfection.

(a) *Gnostic*.—Influenced both by Platonic and by Stoic philosophy, the Gnostic regarded perfection as the prerogative of the 'spiritual'—those redeemed from the bondage of matter and the flesh—for it was assumed that sin was an inseparable association of matter. Consequently a metaphysical perfection took the place of the ethical and evangelical privilege of the NT; it was attained by way of knowledge possessed only by the initiated, and as a gift independent of the exercise of faith and the ethical grace of love; it was an esoteric state entered through theosophic insight and had no living connexion with Christ through obedience to His perfect law of love (cf. Clem. Alex. *Pæd.* i. 6).

¹ 'The power of the Church of England lay not so much in its formal theology as in its liturgy' (A. V. G. Allen, *The Continuity of Christian Thought*, London, 1891, p. 324).

(b) *Pelagian*.—Perfection here was the crown of natural processes—the supreme effort of the inherent power of the human will; God required nothing unattainable by the exercise of native faculties succoured by natural means of grace; perfection was in the wise adjustment of the human organism to its appointed environment; no inherent tendency to evil interfered with complete obedience to the divine law; education was the means and instrument of perfection; the revelation and example of Jesus, together with favourable circumstances, were aids of the highest order to its achievement; by their means a self-disciplined spirit might, and in some cases did, attain, without the specific help of the grace of the Holy Spirit, to the perfection of character which satisfied the merciful Judge of mankind; the same merciful regard covered the inevitable faults of imperfect adjustment; the grace of God was original in human nature, and perfection was its instinctive quest and attainable goal; grace merely enabled the recipient to reach it more easily. Hence the Johannine saying, 'If we say we have no sin, we deceive ourselves,' is, for such as 'attain,' the hyperbolism of humility, and the petition of the Lord's Prayer, 'Forgive us our trespasses,' is a corporate confession used only as expressing the desire and need of others (cf. Pelagius, *ap. Augustine, de Perf. Justif.* 2 f., 6). Obviously perfection of this type is naturalistic rather than distinctively Christian; it was on this account condemned at the Council of Carthage (A.D. 418).

(c) *Augustinian*.—Excessive dread of Pelagianism fettered the mind of Augustine, its great antagonist, in his judgment as to the possibility of attaining Christian perfection. Hesitation in accepting the full implications of his doctrine of grace is a marked feature of his teaching. Perfection is possible; for divine grace is irresistible; the human will might be so constrained by the divine that perfect concurrence with the good and acceptable and perfect will of God would be effected. Moreover, he connects such a concurrence directly with perfect love—a supreme delight in God which overcomes every opposite tendency. It may not be asserted that God cannot so make Himself present to the soul that, the old nature being entirely abolished ('*tota penitus vetustate consumpta*' [*de Spir. et Lit.* xxxvi. 66]), a life should be lived in this world such as will be lived in the eternal contemplation of Him in the world to come. But, in the inscrutable wisdom of the divine sovereignty, God has restrained His grace so that no soul may reach perfection on earth:

'Et ideo ejus perfectionem etiam in hac vita esse possibilem, negare non possumus, quia omnia possibilia sunt Deo, siue quae facit sola sua voluntate, siue quae co-operantibus creaturae suae voluntatibus a se fieri posse constituit. Ac per hoc quicquid eorum non facit, sine exemplo est quidem in ejus operibus factis; sed apud Deum et in ejus virtute habet causam qua fieri possit, et in ejus sapientia quare non factum sit' (ib. v. 7).

In a word, Augustine dismisses the hope of perfection in this life, while acknowledging that it is possible, because the will of God permits and appoints that sin should persist in the most perfect Christians as essential to true humility; this view harmonizes with his theory that sin is a defect that in the divine scheme works a greater good. Hence all saints confess themselves sinners, though he hesitates about including the Blessed Virgin.

These earlier views entered as determining factors into the conceptions of perfection prevalent in Roman Catholic teaching and practice. From Gnostic sources came the ascetic tendencies, Pelagianism contributed the element of human ability which lay in the doctrine of merit, while the doctrine of concupiscence and the power of sacramental grace are closely allied with Augustinianism.

7. Ascetic and Roman.—(a) *Asceticism* in some

form has been a popular and persistent variant for perfection in Christian history (cf. Harnack, *Hist. of Dogma*³, i. 238 f.). For its self-discipline apostolic authority is claimed (cf. 1 Ti 4⁷, Ac 24¹⁸). Perfection is possible only as the fruit of long, lone vigilance, ever-deepening humility, and ceaseless self-mortification. Macarius of Egypt († 391) is a typical exponent.

Perfection is to burn with 'ardent and inextinguishable love to the Lord' (*Hom.* x. 2), to reach perfect freedom and purity, 'the perfect cleansing from sin, and freedom from base passions, and the attainment of the highest reach of virtue, that is, the sanctification of the heart, which takes place through the indwelling of the Divine and perfect Spirit of God in perfect joy' (*Hom.* ii. 2). But, while 'every one of us must attain blessedness through the gift of the Holy Spirit, he may in faith and love and the struggle of the determination of his free will reach a perfect degree of virtue, that so he may both by grace and by righteousness win eternal life' (*de Perfect. in Spir.* ii. 1; cf. *Hom.* xix.).

Stress is laid upon the co-ordination of human merit and divine grace, in winning perfection; this is a tendency of ascetic writers generally. A further typical movement regards concupiscence as remaining in the soul for its discipline in humility, even when desire for the extirpation of sin had become a ruling passion. Hence Christian perfection never becomes more than aspiration and approximation in religious experience. Macarius confesses:

'Never have I seen a Christian man perfect and entirely free. . . . I myself may have reached that point sometimes, but have learned still that no man is perfect' (*Hom.* viii. 6).

It is common testimony that the perfect destruction of sin in the heart lies beyond human experience—e.g., Nilus († c. 440), a typical representative of Greek asceticism (*de Temper.* ii., *de Octo Vitiis*), Marcus Eremita, a 5th cent. Egyptian hermit (*de Temper.* 27), Maximus Confessor († 662; *Cent.* iv. 'de Charitate,' *Cent.* iii. 46, 79), and especially Cassian († c. 450; *Conferences, passim*). Reference should here be made to the association of Christian perfection with the obligations of a 'religious' vocation; it was not the calling of the many, but of the few; it implied 'counsels of perfection'—chastity, poverty, and obedience—which only the elect could receive. The resultant idea of a two-fold standard of perfection, which arose in the early history of the Church (cf. *Didache*; Cyprian, *de Opere et Eleemos.*; Ambrose, *de Officiis Cler.*, etc.), deepened into a fundamental principle in the ascetic quest for perfection.

'The Church resolutely declared war on all these attempts to elevate evangelical perfection as an inflexible law for all, and overthrew her opponents. She pressed on in her world-wide mission and appeased her conscience by allowing a two-fold mortality within her bounds' (Harnack, ii. 123; cf. a discussion of 'The Two Lives,' in C. Bigg, *The Christian Platonists of Alexandria*², Oxford, 1913, pp. 46, 115-122; E. Hatch, *The Influence of Greek Ideas*, London, 1890, p. 164 f.).

This doctrine lay at the root of the mediæval theory of Christian perfection. Thomas Aquinas, adopting the distinction in the Christian life between 'beginners, progressing, and perfect,' held that the highest perfection attainable by the 'beginners' and those 'progressing' is that which excludes mortal sins, which oppose the love of God, and all that hinders the soul from turning wholly to God. Ascetic practices were the means, though only the means, of true perfection (*Summa*, ii. ii. 184).

(b) *Roman Catholicism*.—In practice this was ascetic; only the discipline of the monastic life secured an ordering of temporal circumstances sufficiently favourable for its pursuit. In doctrine the most important stress lies upon the recognition of the distinction between mortal and venial sin. This distinction depends, in turn, upon the conception held of the nature, scope, and obligation of the moral law to which those enjoying the Christian estate are amenable. Consequently the possibility of perfection in this life was favoured by

Franciscans, Jesuits, and Molinists, and deprecated by Dominicans and Jansenists, the last-named modifying the doctrine in the spirit of Augustine and modern Calvinism. Indeed, interpretations of Christian perfection conforming more or less closely to most of the theories mentioned in this article may be traced in the history of Roman Catholic thought. Perfection, exhibited in the sanctity which has received the Church's seal in canonization, reveals considerable variety in specific doctrine and practice. Attention here must be confined to sanctioned dogmatic standards and to their approved exponents. These make a clear distinction between 'Christian' and 'religious' perfection. The former is attainable by 'seculars'; the latter is the privilege of the devout who bind themselves to obey the 'counsels of perfection' which are the means and instrument of attaining the higher state.

(a) '*Christian*' perfection.—The Council of Trent determined that to those infused with the grace conveyed in baptism, by which all of the nature of sin is removed from the soul, perfect obedience is possible; nothing need hinder their full conformity to the divine law; they may avoid all sin; good works performed in this state of grace are perfect from taint of sin:

'Si quis in quolibet bono opere justum saltem venialiter peccare dixerit . . . anathema esto' (*Canon and Decrees of Council of Trent*, sess. vi. cap. 25).

But this law, to which the regenerate may, and often do, render perfect obedience, must be specifically defined; it is not the absolute moral law, but the law so modified as to be accommodated to the fallen estate of men—'pro hujus vitæ statu'; it is to be distinguished from the perfect law of love. Only the law in its accommodated form is binding upon all; justice cannot demand more from man in his present state; this relaxed law may be and ought to be obeyed. When this obedience is accomplished, the Christian man is perfect. But this perfection does not imply the highest degree of moral excellence. An obedience beyond the demands of the law may be offered; this, however, is a work of supererogation and constitutes the merit of the saints. Perfection, therefore, in the Roman sense is perfect justification rather than a further and distinctive Christian experience; it is compatible not only with the absence of beatitude, but also with the presence of human miseries and rebellious passions. Those who attain it are not free from venial sins; these may be committed without prejudice to their perfect state; for such are only condemned by the highest law of love; indeed, these defects are not properly sins, judged by the law to which obligation is now due, for they do not forfeit grace; they are rather signs of concupiscence—the remains of original sin, tendencies that are not removed by baptism, but for which the perfect are no longer accountable. On the ethical qualities of venial sins the Council of Trent did not dwell. The expositions of Bellarmine and, later, of J. A. Möhler should be consulted.

'The defect of charity, for instance, our not performing good works with as much fervour as we shall exhibit in heaven, is indeed a defect, but not a fault, and is not sin. Whence indeed our charity, although imperfect in comparison with the charity of the Blessed, yet may absolutely be called perfect. . . . If the precepts of God were impossible they would oblige no man, and therefore would not be precepts' (Bellarmine, *de Justificatione*, iv. 10 [*Disputationes*, Paris, 1603, iv. 933b]).

Möhler indicates that this position is still held: 'In modern times some men have endeavored to come to the aid of the old orthodox Lutheran doctrine by assuring us that the moral law proposes to men an ideal standard, which, like everything ideal, necessarily remains unattained. If such really be the case with the moral law, then he who comes not up to it, can as little incur responsibility as an epic poet for not equalling Homer's *Iliad*' (*Symbolism*, Eng. tr., London, 1894, sect. xxiii. p. 172; cf. also sect. xxi.).

(β) '*Religious*' perfection.—Obedience to the law of love may 'by the will of God and His gratuitous

liberality' achieve the merit of a state rising above the law; the saints are more than perfect. Nevertheless even within them the *some peccati* remains; there is no provision for destruction of sinful desire, and therefore no guarantee of the soul's final ethical perfection; even purgatorial discipline removes only the stain, not the principle, of sin. Further, both ability and disposition to seek perfection are the gift of grace conveyed only sacramentally. Yet 'Christian' and 'religious' perfection spring from and are sustained and tested by the act, pursuit, and practice of charity. Suarez explains the necessity of charity in three ways: (i.) essentially, because the essence of union with God consists in charity; (ii.) principally, because it has the chief share in the process of perfection; (iii.) entirely, because all other virtues necessarily accompany charity and are ordained by it to the supreme end. Faith and hope are prerequisites for perfection, but they do not constitute it; for in heaven, where perfection is complete and absolute, faith and hope no longer remain. The other virtues belong to perfection in a secondary and accidental manner, because charity cannot exist without them, but they without charity do not unite the soul supernaturally to God (*de Statu Perfectionis*, i. iii.; cf. also H. R. Buckler, *The Perfection of Man by Charity*², p. 68 ff.).

8. Mystical.—Tendencies towards this type were associated with the several theories of Christian perfection already mentioned and pervaded almost every stage of their expression. These have common religious characteristics, which should be carefully traced in the rapidly growing literature dealing with mystical religion in general (see MYSTICISM). Their chief feature is that perfection is realized in the entire detachment from the creature and in perfect union with the absolute Creator, the all-perfect All. Conceptions of this type of perfection originated mostly in the pantheistic systems of the East (see PERFECTION [Buddhist]). They came to permeate the atmosphere of Christian thought largely as the result of the doctrines of Neo-Platonism (*q.v.*), which overflowed into the ways of mediæval religion, quickening a wistful desire to seek perfection in identification with the nameless, uncreated Essence of whom no attribute can be predicated. They tended towards the exclusion or suppression of the religious and ethical consciousness of the individual, and therefore to the confusion of the distinction between God and the creature. Neglecting the historical processes of the Christian redemption through the Incarnate Word, the mystical views of perfection in the Church have often lost any essentially Christian features that they claimed to possess. *E.g.*, the German phases of mystical perfection leaned decidedly towards pantheism, the French and Italian issued in Quietism, and the Spanish ran into a type of antinomian Illuminism (cf. Pope, *Comp. of Chr. Theol.*² iii. 77). In each the method of attaining perfection may be comprehended within the three stages of the mystical way—the way of purification, of illumination, and of union (cf. Bigg, *Christian Platonists*; W. R. Inge, *Christian Mysticism*, London, 1899; R. M. Jones, *Studies in Mystical Religion*; E. Underhill, *Mysticism*², do. 1912, and *The Mystic Way*, do. 1913; F. von Hügel, *The Mystical Element of Religion*, Eng. tr., do. 1909; W. K. Fleming, *Mysticism in Christianity*, do. 1913). The more distinctively Christian type of mystical perfection may be illustrated by the teaching of the Society of Friends (*q.v.*), which holds a mediating position between the opinions tending to antinomian indifference and those associated with ascetic discipline. The Quaker view is evangelical: conformity with the law of God in the obedience of good works is not

possible to man in his own strength and of his own will.

'Yet we believe that such works as naturally proceed from this spiritual birth and formation of Christ in us are pure and holy, even as the root from whence they come; and therefore God accepts them. . . . Wherefore their judgment is false and against the truth who say that the holiest works of the saints are defiled and sinful in the sight of God' (R. Barclay, *Apology*¹², Manchester, 1869 [1st ed. 1678], prop. vii. 3). 'In whom this pure and holy birth is fully brought forth, the body of death and sin comes to be crucified and removed; and their hearts united and subjected to the truth; so as not to obey any suggestions or temptations of the Evil One, and to be free from actual sinning and transgressing the law of God, and in that respect perfect. Yet doth this perfection still admit of a growth; and there remaineth always in some part a possibility of sinning, where the mind doth not most diligently and watchfully attend unto the Lord' (ib. prop. viii.).

9. Fanatical.—Most theories of Christian perfection have suffered from the teaching or practice of extremists whose exaggeration or caricature of leading features has issued in foolish or hurtful excesses. Historically these have mainly been associated with claims for abnormal effusions of the Holy Spirit deeper and richer than the experiences of His descent at Pentecost. Montanism (*q.v.*) in the 2nd cent. favoured the assumption that the Paraclete was not given to the apostles, but was reserved for a third dispensation. This fuller gift of the Holy Ghost, of which Montanus declared himself the prophet, raised its recipients to a higher perfection, such as elevated them to the rank of *spirituales* or *πνευματικοί*, whereas before they were merely *ψυχικοί*, or 'earnal.'

'They will say that the Paraclete has revealed greater things through Montanus than Christ revealed through the Gospel' (pseudo-Tertullian, *de Præscr.* 62 [PL II. 91]).

Perfection was possible, but only to those who had received this ecstatic gift of the Holy Spirit. The boast of a plenary, but exclusive, outpouring of the Holy Spirit has appeared also in several fanatical sects which have claimed perfection in mediæval and modern times. On this ground the Novatianists (*q.v.*) of the 3rd cent. and some of the Catharists (see ALBIGENSES) of the 12th and 13th appropriated to themselves the term *τελειοί*, or Perfecti (*q.v.*), in contradistinction from the general body of *Credentes*, or believers, who were depreciated as persons to whom had been vouchsafed only the ordinary gift of the Spirit in the grace of regeneration (cf. Harnack, ii. 121; and Reinerus, 'Liber contra Waldenses,' in *Bibl. Max.* xxv. [1677] 266, 269). Frequently those who have thus appropriated the term 'perfect' exclusively to themselves have assumed in teaching and practice that their spiritual privileges and prerogatives have lifted them to a state beyond the obligations of the moral law. This unethical perfection has been illustrated not only by the Fraticelli, the Brethren of the Free Spirit in the Middle Ages, the Anabaptists at the Reformation, and certain fanatical Perfectionists of the Puritan period, but also in recent times, chiefly in America, by Bible Communists, Free Lovers, and other fanatical sects (cf. J. H. Noyes, *Salvation from Sin the End of Faith*, Oneida, 1869, *The Perfectionist*, Putney, Vermont, 1843-46, and *Hist. of American Socialisms*, Philadelphia, 1870; W. Hepworth Dixon, *New America*, London, 1867; C. Nordhoff, *Communitistic Societies of the United States*, do. 1875). While, however, in no serious degree depreciating the ethical values inseparable from Christian perfection, some of its evangelical advocates also regard it as consisting in a new and distinct dispensation of the Spirit. The gift of the Spirit for perfection in sanctification and service of love is distinguishable in kind from and superadded to that received already by the regenerate rather than a richer degree of His grace previously bestowed. In this sense Christian perfection is frequently referred to as the 'second blessing' (cf. A. Mahan, *The Baptism of the Holy*

Ghost; also the literature of the Pentecostal League, and, in criticism, Forsyth, p. 7). Although this teaching has doctrinal affinities with the characteristic principle of Montanism, it would be unfair to class it with fanatical types.

10. Present-day tendencies.—Most of these are simply heirs of the past whose inheritance is modified by eclectic or syncretistic methods characteristic of modern doctrinal teaching and ethical systems. But some fresh features emerge, particularly as a result of a renewed social emphasis in the conception of religious idealism.

(a) The more recent interpretations of Christian perfection in regard to the individual have been much influenced by psychological and ethical principles underlying the theology of the Oberlin school—an American type of teaching in affinity with the Pelagian or Semi-Pelagian theories of human nature (cf. A. Mahan, *The Scripture Doctrine of Christian Perfection*; C. G. Finney, *Systematic Theology*; J. H. Fairchild, *Moral Philosophy and Elements of Theology*, Oberlin, 1892).

According to this school, perfection is 'a full and perfect discharge of our entire duty, of all existing obligations to God, and all other beings' (Mahan, *Christian Perfection*, p. 7). 'Nothing more nor less can possibly be perfection or entire sanctification than obedience to the law. . . . Nothing can possibly be perfection in any being short of this: nor can there possibly be anything above it' (Finney, *Oberlin Evangelist*, II. [1840]).

The perfect law of God consists in disinterested benevolence; happiness is the only ultimate good; the highest virtue is that which seeks voluntarily the well-being or blessedness of the whole sentient universe including God. But the principle of love, the only virtue, resides in the will. Good will is the *summum bonum*; all responsible character pertains to the will in its voluntary attitude and action; this action of the moral agent is free; hence moral obligation is limited by the agent's power; sin is a voluntary failure to meet obligation, and nothing else is sin; anything which lies beyond the range of voluntary action is not a matter of immediate obligation, and can be neither holiness nor sin. Consequently, when a man's generic choice or purpose is at any moment to promote the happiness of the universe, he is perfect; the sincere man is the perfect man. But the law does not assume that our powers are in a perfect state, as if we had never sinned; the service required is regulated by our ability and condition. The principle of perfect obedience is our own natural ability, though divine grace may of sovereign choice aid our effort at every point through the Holy Spirit. Nevertheless a free moral agent must be able to be and to do all that the law can justly demand.

'It is a first truth of reason that moral obligation implies the possession of every kind of ability which is required to render the required act possible' (Finney, *Sermons*, New York, 1839, vol. IV. no. 18).

As God, therefore, expects from every man, at any given moment, only the best that he can do with his impaired faculties, perfection is simply doing one's best. In other words, perfection is in full consecration, in an entirely surrendered will. This may be regarded as a sinless state, because nothing outside the will—no motive or tendency to evil resident in the nature of man as such—is sinful; feeling, e.g., has no moral character. Hence perfection resides in free volition alone, not in the complete personality; it is wholly relative and subjective also—a goodness limited by present ability, which marks the boundary of present responsibility. The moral law has been superseded by the law of faith. Thus the life of faith is the perfect life, and, when perfectly maintained, excludes the presence and power of sin. Moreover, this gift of faith which makes perfect is a distinct bestowment of the Holy Spirit—a 'second blessing' following the primary gift of faith (cf. 'Have ye

received the Holy Ghost since ye believed?' [Ac 19⁷], and Mahan, *The Baptism of the Holy Ghost*, p. 34 ff.). The prevailing teaching among those who to-day advocate the possibility in the present world of a perfect Christian life is to regard it as thus realized, i.e. in an entire surrender of the will to God, issuing in the power and joy of full consecration to His service and in the sustained habit of the life of faith. What is known as the Keswick school may be considered here as typical.

This 'sets before men a life of faith and victory, of peace and rest as the rightful heritage of the child of God, into which he may step not by the laborious ascent of some "Scala Sancta," not by long prayers and laborious effort, but by a deliberate and decisive act of faith' (C. F. Hartford, *The Keswick Convention*, London, 1907, p. 51.).

The 'Scriptural possibilities of faith in the daily life of a Christian,' particularly in attaining 'victory over all known sin' in distinction from the eradication of inbred sinfulness of nature, which is characteristic of the Keswick movement, applies also as their main feature to similar modern movements in America and in Europe generally.

(b) The difficulties emphasized by the modern mind in respect of current views of individual Christian perfection are such as relate to (a) the extent to which the Scriptural support claimed for the doctrine can be acknowledged in face of the scientific method of using Scriptural proofs now considered essential in Biblical theology (cf. Curtis, p. 385); (b) the fact that they generally assume an original ethical and spiritual perfection of the human race rather than accept the evolutionary view of the persistent progress of the race towards a goal of perfection never yet attained; (c) the degree to which the sharp distinctions made between actual and original, voluntary and involuntary, sin are admissible, and how far the whole problem of human nature and sin is modified by the acceptance of modern views regarding the relation of man to his animal ancestry, the doctrine of divine immanence, the evidence adduced by the psychology of religion, and the social implications of personality; and (d) the strong desire of the modern mind to state the ideal of moral and spiritual perfection in terms of practical ethics rather than in the doctrinal values of theology and metaphysics (cf. Ritschl, pp. 171, 333 f.).

(c) The defects frequently exhibited in practice by most theories of Christian perfection have been an exaggerated individualism and a preference for the unsocial habit of life; separateness has often entered as an essential constituent into their ideals. The present-day authority of social obligations and the recognition of the principle of solidarity in ethical and spiritual relations encourage the interpretation of Christian perfection in terms harmonious with the inseparable connexion of personal religion with the social organism. The conception of the Kingdom of God is now set in the forefront of theological thought. Frequently obscured in earlier Protestant conceptions of perfection, it is at present the all-comprehending theological ideal of finality. The individual and the community cannot be severed in thought. Perfect personality can be realized only in perfect fellowship. This clearer insight into the social nature of personality, characteristic of modern psychology, contributes a distinctive feature to the modern view of perfection. The tenor of NT teaching is that the perfection of the individual Christian is not something apart from his relation to the Christian community, but is realized in it and through it.¹ Perfection as the end of personal religion can never be divorced from the coming of the Kingdom; for the Christian

¹ Cf. the use of *καταργισμός* (a medical term) to denote Christian perfection in the NT as the setting of each man in his right moral relation to the social whole—the body of Christ (Eph 4¹², He 13²⁴, Gal 6¹, 1 P 5¹⁰, 2 Co 13⁹).

ideal of perfection is a social order constituted by an organized body of individuals standing in definite religious relations to one another as well as to God. Hence Christian perfection excludes all forms of ethical idealism which state the goal of human perfection in terms of the relation of the individual soul to God. The Christian's relation to his fellows is not simply a means to an end; it does not fall away as a transition stage when perfection is ultimately attained, so that his relation to God alone remains. 'That is the mystic ideal, but it is not Christian' (W. Adams Brown, *Christian Theology in Outline*, p. 194). In Christian perfection 'the relation of man to his fellows remains as an integral element in his relation to God now and forever' (*ib.*). Christian perfection, therefore, is not individual or social alone, but the full self-realization of the individual in society; the perfection of these is reciprocal; Christlikeness is their common goal; only the complete attainment of this characteristic achieves the ideal of Christian perfection. Moreover, its attainment is obviously synonymous with entering into the life of perfect love, which is the social bond of perfectness. The law of the Kingdom of God is as the nature of God; it is holy love; this also constitutes the fellowship of the life eternal, and, as he who dwelleth in love dwelleth in God, he who loveth God loveth his brother also (cf. 1 Jn 4:12-21). Such an interpretation of Christian perfection obviously goes much beyond the meaning which Ritschl attributes to it when he uses the term in harmony with the Augsburg Confession merely in the sense of life in the Kingdom of God lived in the conscious assurance of God's fatherly providence and personal reconciliation 'together with humility and the moral activity proper to one's vocation,' and in the spirit of prayer (p. 647; cf. *Augsburg Conf.* xx. 24, xxvii. 49). If, then, the modern exponent of Christian perfection means by it not simply 'that victory over deliberate and wilful sin which ought to characterize the normal Christian experience,' but also mastery over 'the subtler forms of selfishness from which God would set us free,' and such complete subordination of self to God in each new social situation in life as characterized the experience of Jesus, the question recurs to him as to the older advocates of perfection: Is it possible? Can we, within the limits set by our finiteness, our individuality, and environment, live in the spirit of submissive trust, complete obedience, and self-sacrificing love which exhibited His perfection on earth?

To answer this in the negative would be to set a gulf between Jesus and other men which would not only imperil the genuineness of his humanity, but would render impossible of accomplishment the end for which he gave his life' (W. Adams Brown, p. 415).

A similar reply constitutes the main point of an able plea for co-ordinating the eschatological perfecting of the Kingdom of God on earth with the perfected faith and love of the personal Christian life presented by A. G. Hogg, *Christ's Message of the Kingdom* (cf. also R. Mackintosh, *Christianity and Sin*, London, 1913, pp. 202-205). Nevertheless the modern tendency to bind up the attainment of individual perfection with the realization of the social ideal of the Kingdom of God demands as its complement faith in that unbroken continuity of spiritual life which is characteristic of the gospel of the Kingdom and constitutes the Christian hope of immortality.

LITERATURE.—The Histories of Doctrine do not treat of Christian perfection; A. Harnack, *Hist. of Dogma*, Eng. tr., London, 1894-99, i. 253 f., ii. 121-123, and G. P. Fisher, *Hist. of Christian Doctrine*, Edinburgh, 1899, pp. 392, 417, make slight reference to it.

FREDERIC PLATT

PERFECTIONIST COMMUNITY OF ONEIDA.—See COMMUNISTIC SOCIETIES OF AMERICA.

PERFUMES.—The use of perfumes may have first been suggested to man by the scent of flowers and of various vegetable substances, while some animal substances had also a fragrant odour—civet, musk, castor, and ambergris. The prepara-

tion of them attained great perfection in early times in Egypt and Arabia, and the East generally has always been famed for the manufacture and use of perfumes. Without detailing the processes of manufacture, it is sufficient to say that they were obtained easily from gums and resins exuding from trees, by pouring boiling fat or oil over odoriferous substances, by distillation, intincture, or infusion of flower-petals, leaves, woods, barks, seeds, and the rind of fruits, as well as from the animal substances mentioned.

While a generally recognized distinction between pleasant and disagreeable odours can be made, and while classifications of the various kinds of odours have been attempted,¹ it is certain that savages can endure and apparently enjoy odours which revolt civilized men. There is a varying perception of and liking for odours both among different races and among different individuals.

1. Flowers.—Odoriferous flowers are worn by some savage races—e.g., the natives of Torres Straits and the Polynesians.² They were also worn by members of higher races—Nahuas, Mayas, Chinese women, Tibetans,³ Hindus (see art. FLOWERS), ancient Egyptians, Greeks, Romans (see art. CROWN [Greek and Roman]), and modern Europeans. Hence, as flowers were pleasing to men for their fragrance, they were used ritually, as part of the offerings to the dead and to spirits and gods.

The Polynesians presented flowers to the embalmed body of the dead.⁴ Flowers and sweet-scented gums were included among the sacrifices of the ancient Peruvians.⁵ The Egyptians made daily offerings of flowers on the altars in the cult of Aten, as well as in other cults, either loosely or made into bouquets, garlands, and wreaths, while the mummy was also adorned with flowers.⁶ Flowers were placed in the graves of Babylonian women and girls, and offered to the gods.⁷ In the rituals of the Northern Dravidians of India the offering of flowers has a conspicuous place, and in Hindu cult one of the stages of adoration includes a floral gift to the gods, while in the *Institutes of Vishnu* (xvi. 5 ff.) an odourless or evil-smelling flower is forbidden as an offering, but one with a sweet smell is approved. This has passed into the ritual of Tibetan Buddhism, in which flowers for decking the hair of the god are offered, but the offering of flowers in Buddhism is general and dates from early times.⁸ In India the *Bhagavad-Gītā* speaks of offering flowers with devotion, and Krishna is himself said to wear celestial flowers (ix. 17, 32). In the domestic rites of Shintō vases of flowers invariably stand on the 'god-shelf' or shrine.⁹ The Aztecs offered flowers on graves during the four years in which souls were passing their preparatory stages in heaven.¹⁰ Flowers were also offered in ancient Ægean cult, and the sacrifices in Greek and Roman rituals wore or carried garlands; victim and altar were also thus adorned. Flowers were offered to the gods or placed as chaplets on their heads.¹¹ Among Muhammadans sweet basil or other flowers are placed on tombs during the two great 'ids, or festivals of the year.¹² The early Christians retained the pagan custom of strewing flowers on graves,¹³ and the decking of altars and churches with flowers has been customary for many centuries.

2. Anointing with perfumes.—The practice of rubbing fat or oil on the skin was extensively followed among savages, as an ordinary or ceremonial custom. The substances used were often fragrant, though by no means always so. The practice was also followed by higher peoples—Egyptians, Greeks, Romans—either to render the

limbs supple or for hygienic reasons, the fat or oils used being often perfumed with the products of various plants.

This custom became so luxurious and the substances used so costly that laws were passed against the sale or use of them both in Greece and in Rome. Still the custom increased, both native perfumes and fragrant oils and those of Egypt and the East being used in anointing the hair and body, and in other ways. Many of these were costly, and a street in Capua consisted of shops devoted to their sale. The peoples of Egypt and India made similar use of perfumed oils, ointments (made of strong-scented woods and herbs pounded and mixed with oil), scents, and powders. Among the Hebrews anointing with fragrant oils and unguents was customary (cf. Ca 38), the method used in making the latter being to mix the fragrant ingredients in boiling oil or fat. Fragrant substances were strewn on beds, placed among the clothing, or carried in bags or boxes (Pr 717, Ps 458, Ca 113, Is 320). Among the more civilized peoples of ancient America similar customs existed. Zapotec women mixed liquid amber with their pigments, and when these were rubbed on the body, they emitted perfume. The people of Tehuantepec washed their bodies and clothes in water scented with the root of an aromatic plant. Among the Mosquitos a bride was washed and perfumed during three days. The Mayas carried sweet-smelling barks, herbs, and flowers for the sake of their odour, and used perfumes in the toilet.¹ Perfumed water for anointing or washing the body is also used in the East, and forms part of the offering to the gods for their use.² In Egypt images of the gods were anointed with fragrant ointments by the king or priest, and the mummy was ritually anointed.³ In Polynesia petals and leaflets of fragrant flowers were fastened to the stalk of the coco-nut leaf which was anointed with scented oil and placed in each ear or in the native bonnet. Body and hair were smeared with fragrant oil, as were also the images of the gods.⁴ The use of fragrant oils in Hindu cult is illustrated by the fact that Krishna is said to have 'anointment of celestial perfumes.'⁵

Divine beings and places are often said to possess a fragrant odour (see INCENSE, § 2).

3. Embalming.—The use of fragrant substances in connexion with embalming or other death ritual found its greatest vogue in ancient Egypt, and has been described under DEATH AND DISPOSAL OF THE DEAD (Egyptian). But it is found elsewhere either to aid in the preservation of the body or as a seemly action towards the dead.

In Polynesia the eviscerated body was filled with cloth saturated with perfumed oils.⁶ The Aztecs washed the body with aromatic water and sometimes used embalming with aromatic substances.⁷ Homer describes the washing and anointing with rich oil and unguents nine years old of the body of Patroclus,⁸ and a similar custom was followed in later times. Anointing the corpse with oil and perfumes was usual among the Romans. Flowers and burning incense were also placed in the chamber where the dead lay. Among the Hebrews and later Jews anointing and wrapping the body in fragrant ointments, perfumes, and spices was usual (2 Ch 1614, Mk 161, Lk 2336, Jn 1939; cf. 1237). 'Burning' for the dead—probably the burning of aromatic spices—is referred to in 2 Ch 1614 2119, Jer 345. Muhammadans, after washing the body, sprinkle it with rose-water, and with water mixed with pounded camphor and leaves of the lotus-tree.⁹

4. Perfumes in social observances.—The burning of aromatic woods in houses for the sake of their fragrance was common in Greece in Homeric times. Hippocrates is said to have delivered Athens from plague by burning such wood in the streets and hanging up packets of perfumed flowers. At banquets, after the first course was finished, perfumes and garlands were distributed to the guests. In ancient Mexico the royal palace was perfumed with the odour from numerous censers in which spices and perfumes were burned, and at banquets among the Nahuas guests were given reeds filled with aromatic herbs, which were burned to diffuse fragrance, the smoke being inhaled. Tobacco mixed with liquid amber and aromatic herbs was also burned.¹⁰ In Eastern countries—e.g., in Egypt—ambergris, benzoin, aloes-wood, or other substances are burned on braziers in houses, especially at feasts, and the beard and moustache are perfumed with civet, or rose-water is sprinkled on the guests. Perfumes

are sprinkled on the persons composing a wedding procession, and their use is very common, especially among women.¹

5. **Perfumes in ritual use.**—Thus used in daily life, perfumes were naturally employed in the worship of the gods and spirits and also in magic. The burning of substances agreeable to the smell in the cult of the gods has already been considered under INCENSE. Here we shall discuss their use apart from such an offering. As already seen (§3), the images of gods were sometimes anointed. But offerings of perfumes in various other forms were made.

The Aztecs offered reeds of perfume on the graves of the dead during the four years' period already referred to.² In ancient Egypt oils and fragrant ointment were offered to the gods in large quantities, as many as 'a thousand boxes of ointment' being mentioned.³ Perfume vases were sometimes made of turquoise, as in the mysteries of Osiris at Denderah.⁴ Flasks of fragrant oil, perfume, and unguents were buried with the mummy for his use in the other world. Previous to burial the dead man was anointed, perfumed, and crowned with flowers, perfumes being supposed to give him the vigour of renewed life, and as many as seven different kinds were used. The ceremony concluded with a prayer in which the perfume of Horus was desired to place itself on the dead man that he might receive virtue from the god. The ceremony of purification by incense consisted of presenting five grains of incense to mouth, eye, and hand.⁵ In Babylonia fragrant herbs, oils, and incense were offered to the gods, and bottles of perfume were placed in the tombs of women as part of the grave-goods.⁶ The fragrant substances which were used as incense by the Greeks were also offered to the gods without being burned, and aromatic cakes were presented as a separate rite in the cult of various divinities.⁷ An essential part of Hindu worship is the offering of perfumed water for washing the body of the god, as well as sandal-wood, saffron, and holi powder. The *Institutes of Vishnu* (xvi. 2) say that the householder must not make an oblation with any other fragrant substance than sandal, musk, or fragrant wood of the odoriferous *devadāru*-tree, or camphor, or saffron, or the wood of the *gātiphala*-tree. Sandal-wood paste is also used as an offering. In the funeral rites perfumes and flowers are set out for the dead man, and during the *śrāddha* the gods are honoured with fragrant garlands and sweet odours. In Tibetan worship perfumes (*gandhe*) form one of the 'five sensuous qualities' offered on the altar.⁸ In ancient Persia there are frequent references to the perfume of the wood-billets used in the sacred fire. 'I offer the wood-billets with the perfume for thy propitiation, the Fire's'; 'this wood and perfume, even thine, O Fire.' The ground was sprinkled with water and: *... ..* or nine nights' purification. *... ..* Knu dynasty began with *... ..* attract the divinities or spirits worshipped and to secure their presence at the rite. A vase contained the spirit, in which fragrant herbs were infused, and 'the fragrance partaking of the nature of the receding influence penetrates to the deep springs below.'¹⁰

In magical ceremonies perfumes have their part to play.

Thus in Muhammadan methods of consulting the future the burning of perfumes is used, perhaps by way of affecting the vision. The diviner is said to obtain 'the services of the Shēytān . . . by the burning of perfumes.'¹¹

Fumigations by burning either pleasant or, more usually, obnoxious substances are common, especially to drive away evil spirits. See art. INCENSE, §2, and *ERE* iii. 437, 445, vii. 250^b.

derived from the fact that he at one time lectured in a shady walk (*peripatos*) of the Lyceum, for his school is loosely styled at one time the Lyceum and at another the Peripatos. The history of the school falls into three periods: (1) that of the earlier Peripatetics to the death of Strato (322-270 B.C.); (2) the long decline from Strato to Andronicius (270-70 B.C.); (3) the last three centuries (c. 70 B.C.-A.D. 230), when Andronicius and his successors devoted their energies mainly to editing and commenting on the Aristotelian writings.

1. **Earlier Peripatetics.**—Scientific research and original thought are to be sought only in the first period, while the impulse given by Aristotle to his immediate circle was still a living force. Their starting-point was of course their master's nature system, which has been elsewhere dealt with (see ARISTOTLE). A few leading tenets, however, may be recapitulated here. Viewed on one side, the system is empirical realism. Particulars exist, but genera and species are abstractions. The natural world is eternal in its present order and works out its own salvation like a physician prescribing for himself. The leading thought is an orderly process of determination, or (if the term could be freed from modern associations) development, envisaged as motion. On the other hand, to Aristotle, the pupil of Plato, knowledge is impossible through sense alone. If the concrete particular claims reality, it is the universal that is the object of knowledge. We must go behind facts to the laws and causes which they presuppose: from motion we necessarily infer a prime mover, from the natural world a transcendent deity whose eternal life is self-thinking thought. So, too, in man creative reason enters from without (*θεῖον*), pure and impassive, free from states or emotions (*πάθος*), such as love, hate, memory, and discursive thinking, which form the texture of individual life. Many difficulties remain unsolved, for as to the relation of God to Nature, of the rational soul in man to the divine reason, or, indeed, of particular to universal, nothing is stated explicitly in the writings of the Stagirate. There is no doubt that his pupils drank deep of their master's spirit and from the first endeavoured to carry on his work by fresh researches in philosophy and science. While content as a rule to amplify and expound with few innovations, they came gradually to show unmistakable signs of a leaning to naturalism. From this tendency Eudemus of Rhodes, a favourite pupil, to whom Aristotle is said to have submitted the text of his *Metaphysics*, was wholly free. Besides courses on physics, ethics, and the categories based upon corresponding Aristotelian treatises, he wrote a history of arithmetic, a history of astronomy, and a history of geometry. Of the last-named work Proclus has preserved a summary, and it is also cited by Simplicius and Eutocius in a way which proves it to have been for centuries the standard work on the subject. In his treatise on ethics (for we have no hesitation in ascribing at least four books of the *Eudemian Ethics* to him), while following Aristotle in all the main positions, he yet displays a certain freedom and independence. He connects human action, which is successful without being due to the intellectual virtue of prudence, with a natural uprightness of will and inclination, a gift from God who is the source of movement in the world. Indeed, prudence itself (*φρόνησις*), being a rational quality, must ultimately be referred to God. Still more striking is his identification of the ethical end with the contemplation and knowledge of God. Hence he can formulate the standard of conduct by saying that everything is a good in proportion as it promotes, or an evil in proportion as it hinders, the know-

ledge of God. This defines right conduct more exactly than Aristotle's mean.

It was not, however, Eudemus, but Theophrastus of Lesbian Eresos, who succeeded Aristotle in the headship of the school, which he held for over thirty eventful years (322-288 B.C.), during which the two new schools of Stoics and Epicureans sprang up. His numerous works served to develop his master's doctrine, increasing its utility as completely as possible on every side. In logic, it is true, he refused to admit that all contraries fall under the same genus and denied that every assertion of possibility implies the opposite possibility. Further, he added to the four moods which Aristotle had assigned to the first figure of the syllogism five new ones out of which the fourth figure was afterwards constructed. Along with Eudemus he introduced the theory of hypothetical and disjunctive syllogisms. His metaphysical problems (*ἀπορίας*), which have come down to us in a series of excerpts, prove that he possessed an acute and subtle intellect and unusual skill in discerning all kinds of objections.

E.g., how, he asks, is the supra-sensible object of first philosophy related to the sensible things with which physics deals? How is a common bond between them possible? The higher principle necessary for the solution of this problem can be found only in God. Thus we are led to a cause of motion acting as an object of desire, the precise doctrine of Aristotle (*Met.* xii. 6.1.). But, continues Theophrastus, if there be only one moving cause, why have not all the spheres the same movement? If several, how are their movements harmonized? Why are there many spheres, and why should they desire motion rather than rest? Does not desire (*ἔφεσις*) presuppose a soul, and therefore motion? Are motion and desire accidental or essential attributes of the heavenly spheres? Another set of objections turns on the necessity of deducing not merely some but all reality from first principles. Can design be attributed to everything, however insignificant? Or, if not, how far does order extend in the world, and why does it cease at that point (*cf.* *Arist. Met.* xii. 10 *ad init.*)? New difficulties surround the conceptions of rest and matter. Is matter endowed with potential reality while non-existent, or does it exist, though void of determinate form? And so forth, as a consideration of knowledge in its varying degrees or again of the chain of causation or the assumption of design in nature raises at each turn its peculiar perplexities.

But we get no hint of any departure from his master's system and are forced to conclude that the purpose of this elaboration of conceivable objections, like that of Aristotle in *Met.* iii., is purely didactic. But it is in physics rather than in logic or metaphysics that Theophrastus shines. As a historian of science he won by his *Physical Opinions* even greater fame than Eudemus by his *Geometry*. This great work, of which only a priceless fragment has been preserved, was the storehouse from which generation after generation drew information in the form of summaries, epitomes, and excerpts respecting the speculation of the past until we trace its last diluted perversions in the Christian writers Epiphanius and Hermias. His two extant botanical treatises, *Historiæ Plantarum* and *de Causis Plantarum*, afford a striking proof of his attainments as a naturalist, of his powers of observation, and of his wise caution in using the testimony of informants. The two treatises so far superseded previous works that later critics even deny that Aristotle ever wrote on the subject, though he certainly does refer to a treatise of his own as already written in *Hist. An.* v. 1, 539^a 20, *de Gen. An.* i. 23, 731^a 29. The eternity of the world in its present order was of course hotly controverted by the Stoics, and the acuteness of Bernays has brought to light from Philo, *de Incorrumpibilitate Mundi*, some of the arguments used by Theophrastus and Zeno respectively. The same scholar has also drawn from Porphyry, *de Abstinētia* (*περί ἀποχρῆς ἐμβόλων*), a defence of vegetarianism which undoubtedly comes from Theophrastus and embodies his views on animal-sacrifice. On the nature of life and the human soul he shows some degree of independence. Thus, while agree-

ing that the lower activities of the soul should be referred to the body (even as to imagination he doubted whether it was not irrational), he differs when he comes to the activity of thought, which he does not hesitate to describe as physical motion. If so, the soul is no longer an unmoved cause of bodily movements. On the relation of the passive to the active reason he unfolds as usual a series of most acute and formidable difficulties, but here again there is no hint of reconstruction, and it seems probable that he quieted his scruples by assuming that various terms, when applied to reason (active, passive, potency, act, form, matter, and evolution or development), bear a different sense from their ordinary acceptation. Yet we are also told that he regarded the souls as well as the bodies of all animals as made up of like elements (*ἀδιδόχοποι*) — sensations, desires, passions, and reasonings — though in some (namely, man) these elements attain a higher perfection. In ethics he was a true follower of Aristotle and refused any concessions to the Stoic doctrine that virtue alone was sufficient for happiness. Indeed, he emphasized the utility and importance of external goods as means and indispensable instruments of virtuous activity in a manner which has led him to be accused, most unjustly, of differing from his master on this head. For the rest, the *Characters* sufficiently attest his study and assimilation of the Aristotelian account of the virtues as well as the keenness of his observation.

Aristoxenus of Tarentum and Dicaearchus of Messene were Peripatetics of the first generation who attained a high reputation, the former as an authority on music, the latter as a writer on politics. Aristoxenus, who had been a Pythagorean, revived the theory combated in the *Phædo*, that the soul is a blending or adjustment (*ἀρμολογία*) of bodily elements, and Dicaearchus not only agreed with him in this but argued against the immortality of the soul. This open breach with the master's teaching (see *de Anima* i. 4) is significant. Strato of Lampsacus followed Theophrastus, and was head of the school from 288 to 270 B.C. His predilection for physics gained him the title of 'the physicist,' and under him a transformation of the system was attempted. He made natural forces suffice for the evolution of the world, thus dispensing altogether with the hypothesis of a transcendent deity. How he carried out his assumption in detail we do not know, except that he was no convert to the atomism which Epicurus had again brought into fashion. On the contrary, he took properties (*συρρέουσιν*), corporeal forces, heat and cold, as his elements, like Empedocles and Zeno the Stoic, with whom Plutarch classes him. It is true that, instead of dividing bodies into light and heavy, Strato as well as Epicurus made all bodies heavy: they press towards the centre, and this pressure explains an occasional upward movement. From Simplicius, in *Physica*, iv. 9 (693. 13 ff., Diels), Strato seems to have argued that without empty interstices the passage of light or heat or any other corporeal property through air, water, or body in general would be inexplicable. Yet he is also cited by Simplicius as refuting the accepted arguments for the existence of empty space (*ib.* 663. 4 ff., Diels). He rejected Aristotle's definition of time as counting of motion (*ἀριθμὸς κινήσεως*), remarking that time and motion are continuous and cannot therefore be counted like discontinuous quantities. Time is continually beginning and ending, whereas parts of number exist simultaneously. Why, again, should not the 'measure of earlier and later' apply as much to rest as to motion? By his own definition (*τὸ ἐν ταῖς πράξεσι ποσόν*) he seeks to distinguish between time (duration of events) and the events which are

in time (*ib.* 789. 34, Diels). As regards motion, again, he confirmed the assumption of its acceleration by simple observation of falling bodies. We have mere information respecting his psychological innovations. He sharply criticized the doctrine of *ἀνδρυνος* in Plato's *Phædo*: Why can there be no knowledge without demonstration? Why can you not play the flute without practice and without instruction (Olympiodorus, 126. 31)? Other Platonic arguments are also rejected. Strato demands that in considering the soul we must adhere to the same conditions as when we are dealing with what is corporeal: if the body needs a substratum, so also does the soul. Following Theophrastus, he defined all mental activity, thought and perception alike, as movement. We cannot think without a sense-image, Aristotle had said (*de An.* iii. 7), and Strato went further by denying any separation between sense and reason. On the other hand, sensation is conditioned by thought, since often when we are thinking of something else we do not attend to impressions of sense. Here he struck out a new path; propounding views on sensation which even now are deserving of respect. Reason or consciousness, which, like the Stoics, he called the ruling power (*τὸ ἡγεμονικόν*), alone had feeling (*ἀνάλωστα γὰρ τὰ λοιπὰ πλὴν τοῦ ἡγεμονικοῦ* [Plat. *Utrum An. an Corp. sit libido*, frag. i. 4. 2, p. 697]). In the central organ, then, objective bodily change is converted into subjective feeling, the rest of the frame, even the sense-organs, having only the capacity of receiving an impression. When we believe ourselves to feel a pain in the part affected, this is merely the same delusion as when we think we hear sounds at a distance outside us. The carrier of the impression and its intermediary with the central organ (which he placed between the eyebrows) is a current of breath or 'spirit' (*πνεῦμα*). If this connexion be broken, we never feel the pain or whatever else the impression was. Aristotle had only spoken of the impression travelling from the periphery to the centre, but Strato also called attention to the fact that the impression is reflected from the centre back to the periphery or the outside world. These positions seem to require that reason should not be confined to man but extended to other animals and that all activities should be held to cease at death.

If, however, we wish to obtain a just view of the early Peripatetics and their scientific activities, there is additional evidence which should not be overlooked. Various portions of the Aristotelian *Corpus* as it has come down to us are proved by internal evidence to be the work of his pupils. Such are the treatises *de Motu Animalium*, *de Coloribus*, *de Audibilibus*, *de Plantis*, and *Mechanica*. In the *Organon* the *Postprædicamenta* (*Categ.* 10 ff.) are a later addition. The second book of the *Metaphysics* was ascribed to Pasicles, the nephew of Eudemus. A collection of *Problems*, relating to a variety of subjects and arranged in 38 books, is of very unequal merit. This collection, undoubtedly the work of numerous authors, has been compared to papers read before some learned academy or the Royal Society. The short tract *de Lineis Insecabilibus* is of great interest to the mathematician, while that entitled incorrectly *de Xenophane, Zenone, Gorgia* is an example of the class of writing called hypomnematic, analogous to memoirs read before the historical department of an academy. Here also it may be mentioned that two most important discoveries, one of the nerves by Herophilus and Erasistratus, one of the electric properties of amber by Theophrastus, fall within the period considered, but bore no fruit at the time. So much error still clung to the 'science' of the ancient world. The taste for antiquarian research produced, besides the histories of science

mentioned above, the Menonian work on the progress of medicine (*Ἱατρικὰ Μενονεία*), brought to light in 1891.

2. The decline.—The school which had staggered on for a time as best it could under the lead bequeathed by its founder seems after the death of Strato to have come to a dead stop. The headship passed successively to Lyco of Troas and Aristotle of Ceos, both eminent for their style, and to Critolaus, who in 155 B.C. accompanied Carneades and Diogenes on the famous embassy which incidentally introduced philosophy to the unphilosophic Romans. After them Diodorus of Tyre and Erymnus were heads. Other Peripatetics of eminence were Hieronymus of Rhodes, who adopted the conception of painlessness, net pleasure, for his *summum bonum*; Prytanis, a trusted agent of Antigonus Doson in State affairs; Phormio, who had the audacity to lecture to Hannibal on the art of war; Heraclides Lembus; Agatharchides, the historian; and Antisthenes of Rhodes. Of all these it is safe to say that they did not rise above mediocrity. For two hundred years there was no Peripatetic who was a thinker of note or even capable of carrying on the scientific researches of his predecessors. In the Alexandrian age, it is true, the various sciences had grown more and more independent of philosophy, but still this school trained no Eratosthenes, no Archimedes. Among its scholars it boasts no name to rival a Chrysippus, a Carneades, or a Posidonius. Instead of science or metaphysics its professors cultivated rhetoric and devoted themselves to grammatical, historical, and literary studies, not excluding popular ethics. Thus Sotion wrote a valuable history of philosophy, and Hermippus and Satyrus collections of biographies (*Bioi*) no less important. The school remained one of the chief centres of the learning of the time and in ethics taught a moderate doctrine, opposing to Stoic apathy a sane indulgence of emotion (*μετρωπάθεια*) and assigning to goods of body and intellect or to external advantages generally a due place beside virtue in the scheme of an ideal life (see Stob. *Ecl. Eth.* vii. 13-26 [pp. 242-334, Heeren; p. 116. 19 ff., Wachsmuth]), an epitome which justifies and explains many references of Cicero and later writers. The *Magna Moralia* in the *Corpus Aristotelicum* is a tolerably faithful summary of what the master and Eudemus had written, whereas the *de Virtutibus et Vitiis*, sometimes attributed to Andronicus of Rhodes, betrays signs of eclecticism, a tendency which invaded all schools in the 1st cent. B.C. The spirit of compromise, coming after the weariness of endless polemics, had produced indifference as to the distinctive doctrines of conflicting sects. It must have been in the air when the spurious work *de Mundo* was written and published in Aristotle's name with a dedication to Alexander prefixed. Its date is certainly after Posidonius, for it combines a large admixture of Stoicism in the form in which he cast it with the genuine tenets of Aristotle.

3. The later Peripatetics.—Strabo (xiii. 608 f.), in his well-known story of the fortunes of Aristotle's library buried in a cellar at Scepsis, distinctly connects the barrenness of the school under the successors of Theophrastus with the loss of these autograph rolls. This cannot be, for even Strabo would not have maintained that the Aristotelian writings remained all this time unpublished; but indirectly the recovery of the originals by Apellico of Teos, who conveyed them to Athens, brought about a momentous change in the aims and studies of the later Peripatetics. Henceforth the task of editing, expounding, and commenting upon the Aristotelian writings absorbed their best energies. Authority circumscribed, where it did not altogether check,

original speculation. In the middle of the 1st cent. B.C. Andronicus of Rhodes was the head of the school, the tenth after the founder. When Sulla brought the library of Apellico to Rome, Andronicus and a grammarian named Tyrannio obtained access to it, arranged the works of Aristotle anew, and did their best to render the edition of them which they caused to be made as correct as possible. It is all but certain that our MSS derive from this edition. From this start Andronicus went on to write commentaries on the *Physics*, *Ethics*, and *Categories*. The impulse thus given to the study, criticism, and exegesis of the founder's works was shared by other members of the school, pupils and contemporaries of Andronicus. Among them may be mentioned Boethus of Sidon, Strabo's instructor in philosophy, who thought that the student of Aristotle should begin with physics and not (as Andronicus held) with logic; Aristo of Alexandria, a convert from the contemporary Academy of Antiochus; Eudorus of Alexandria, who wrote on the *Metaphysics* and the *Categories*; Nicolaus of Damascus, the contemporary and fellow-student of Herod the Great, for whom he compiled a universal history in 144 books; and Xenarchus of Cilician Seleucia, who controverted Aristotle's assumption of a fifth element (*αἰθήρ*)—a remarkable proof of philosophic independence at this epoch. So, too, we are told that Boethus denied that the universal is by nature prior to the particular, and by substance in the strict sense (*πρῶτη οὐσία*) he understood not form but only matter or at best the concrete thing made up of form and matter. In the time of Nero Alexander of Aegæ commented upon the *Categories* and *de Cælo*. In the 2nd cent. A.D. Adrastus of Aphrodisias in Caria wrote a work on the arrangement of the Aristotelian writings, while Aspasius was the author of an extant commentary on the *Ethics* and of other commentaries, now lost, on *Physics*, *Metaphysics*, and *de Interpretatione*. Aristocles of Messene wrote a complete history of philosophy. His fame was eclipsed by his pupil, Alexander Aphrodisiensis, who became head of the school in the reign of Septimius Severus (A.D. 195-211); he dedicated his *de Fato* to that emperor and Caracalla (A.D. 198). Besides Aristocles, Herminius and Sosigenes had been his instructors and he soon won such distinction that the surname of *ὁ ἐξηγητής*, the expositor *par excellence*, was bestowed upon him. His numerous writings included treatises, still extant, entitled *de Anima*, *de Fato*, *de Mixtione*, and *Quæstiones* (*ἀποραι καὶ λύσεις*), as well as the various commentaries on which his fame chiefly rests. That on the *Metaphysics* is the most valuable of what has come down to us, though five books of it alone have retained their original form. His works were a rich mine for later commentators who, like Themistius and Simplicius, name him only when they dissent from him, and pass over their huge obligation to him in silence. He was respected by Plotinus, who mentioned him in his Canon, while Syrianus, another Neo-Platonist, borrowed largely from him. Alexander, however, stood aloof from

the mystical tendency of the age which swept away Plotinus and his successors, and, except Aristocles, he scarcely names any of his contemporaries. In spite of a dry scholastic formalism and divergence in detail, he really wished to follow Aristotle and defend his doctrine, not to set up philosophical principles of his own. He shows his independence when he holds, with Boethus, that the individual is prior to the universal not only for us but also in itself. Even the deity must be regarded as individual substance. He denies the reality of time. Form is everywhere inseparable from matter and reason is bound up with the other faculties in indissoluble unity. At first it exists in man as a disposition or capacity merely (*νοῦς ὑλικὸς καὶ φυσικὸς*) and is afterwards developed into actual intelligence (*νοῦς ἐπικτητός*). This transition is effected by active reason (*νοῦς ποιητικός*), which is no part of the human soul but simply the divine reason acting upon it. The influence of God upon Nature is reduced as far as possible to a mechanical process, a diffusion of force to the first heaven and thence through the different spheres to the earth at the centre, each receiving less the farther it is removed from the source. This identification of *νοῦς* in man with the divine reason involves the denial of individual immortality, although the eternity of one immortal impersonal reason is still tenable. Shortly after Alexander the Peripatetics were absorbed, like all their contemporaries, in the Neo-Platonist school, but the work of exposition and commenting went on briskly for the next three centuries under Porphyry, Iamblichus, Themistius, Dexippus, Syrianus, Ammonius, Simplicius, and Philoponus. Thence it passed to the Arabian philosophers and lastly to the mediæval scholastics. Thus it comes about that Alexander's version of Aristotle was followed in due course by those of Averroes and Aquinas.

LITERATURE.—*Eudemii Rhodii Ethica*, ed. F. Susemihl, Leipzig, 1894 (the best text), ed. A. T. H. Fritzsche, Ratisbon, 1851, tr. J. Solomon, Oxford, 1915; *Eudemii Rhodii Peripatetici Fragmenta*, ed. L. Spengel, Berlin, 1865 and 1870; Theophrastus, ed. F. Wimmer in the Didot series, Paris, 1866, in the Teubner series, Leipzig, 1854-62, *Characters*, tr. R. O. Jebb, London, 1870 (new ed. by J. E. Sandys, do. 1909); F. G. A. Mullach, *Fragmenta Philosophorum Græcorum*, Paris, 1831, iii. 206-578 (contains Aristocles, Eudemus, and Andronicus); for Alexander Aphrodisiensis, Aspasius, and the Neo-Platonic commentators, the Berlin Academy's edd. *Commentaria in Aristotelem Græca*, 1832-1909, and *Supplementum Aristotelicum*, 1885-1903; J. Bernays, *Theophrastus Schrift über Frömmigkeit*, Berlin, 1866, *Über die unter Philon's Werken stehende Schrift über die Unzerstörbarkeit des Weltalls*, 2 pts., do. 1876-83; H. Diels, *Doxographi Græci*, Berlin, 1879, *Simplicii in Physica Commentaria*, do. 1892 (a trustworthy text of fragments of Eudemus and Strato); *Anonymi Londiniensis ex Aristotelis Iatricis Menonitis et aliis medicis eclogæ*, 1893; H. Poppelreuter, *Zur Psychologie des Aristoteles*, Theophrastus, Strato, Leipzig, 1892; H. Usener, *Analecta Theophrastea*, Bonn, 1858. The Oxford tr. of Aristotle's works includes the spurious treatises—e.g., *de Lineis Inseparabilibus* (H. H. Joachim, 1909), *de Motu Animalium* (A. S. L. Farquharson, 1912), *de Coloribus*, *de Audibilibus*, *Physiognomica* (T. Loveday and E. S. Forster, 1913), *de Mundo* (E. S. Forster, 1915). For an extended bibliography E. Zeller, *Die Philosophie der Griechen*, Leipzig, 1869-81, and F. Ueberweg, *Grundriss der Gesch. der Philosophie*, Berlin, 1894-97, should be consulted.

PERSECUTION (Early Church).—I. Introductory.—Persecution consists in making an offence of certain religious beliefs, or of their natural expression in speech, writing, or religious observances. The word may be loosely used of

mob violence, which is sometimes encouraged or connived at by the authorities; but on the whole it is better to take account only of legal action. The sanction may be either positive, in the form of definite penalties, or negative, consisting of dis-

abilities; and it may be imposed only on overt acts, or it may extend to words, or even make inquisition into unspoken thoughts.

Persecution is sometimes defended on principle, on the ground that misbelief is of itself offensive to God and abominable, or that it is a moral pestilence which must not be allowed to infect the faithful. More commonly, however, political reasons are given, as that the heretics are enemies of the State, that the existence of heresy imperils its unity, or that certain doctrines or practices are contrary to its welfare and good order. As there may sometimes be more or less of truth in some of these charges, there may also be some doubt of the exact point where political precaution passes into religious persecution. The principle seems to be that punishment of religious belief is always persecution, and that interference with religious action is also persecution, except so far as it can be justified by real public danger or by gross and public scandal or disorder; also that it is not to be presumed without evidence that the guilt of an individual is shared by others who hold the same religious beliefs.

But the principle is not always of easy application. Take the case of a public speaker. He may be using insult instead of argument, inciting to disorder, or preaching immorality, while his opponents may be endeavouring to suppress by violence opinions differing from their own. At what precise point must the duty of protecting free speech give place to that of preventing scandal and violence? Circumstances will vary; but a wise government will not act till that point has clearly been passed. Again, if the government does well to suppress widow-burning in India and polygamy in Britain, the reason is not simply that the government declares them crimes, for any government might treat the most innocent religious observances as an intolerable outrage on the feelings of orthodox persons, but that these particular practices are considered abominations by the civilized world, not simply by the immediate opponents of the sects incriminated in them.

All this was not thought out in ancient times, or in modern times till fairly recently; and even now it is hard to say how far the professed principles of toleration are fully understood even in the most civilized countries. Ancient society was essentially intolerant. Israel and Persia had gods whom they believed to be lords of all the earth, so that others were not merely gods of their enemies, but enemies of their gods. So the Jews spoke of them as shames, dungs, nothings, or abominations, and were commanded¹ to destroy their altars, images, etc., while the Persians, when they came to Greece, rifled the statues of the gods and burned their temples, and utterly destroyed the shrines of the local deities. The Greek looked with horror and amazement on these 'shameless' outrages.² Deeply religious as he was, zeal for the gods was not his inspiration. Unpopular opinions might be dangerous, as Anaxagoras and Socrates experienced, but even Antiochus Epiphanes contended rather for Greek civilization than for Greek religion.

As Rome was more strongly organized than Athens, so Roman religion was stronger than Greek. Its strength was not intrinsic. Its gods were formless *numina*, of whom nobody cared to know anything but the proper formula of prayer to the particular god required, and there is little trace of hearty worship, except in the ancient rustic festivals. Nor had it a strong hierarchy, for it was a layman's religion, and the punishment of offences came straight from the magistrate. The change to a clerical religion, rather than the

adoption of Christianity, is the greatest change that it has undergone from Numa's time to our own. Nor had it any definite creed, and least of all was it a teacher of morality. The State, the philosophers, the Eastern worships, might be schools of virtue; the old Roman religion was not. Its strength was that it formed part of the discipline of the State. No man was required to believe in the gods, but no man was allowed to refuse 'the Roman ceremonies,' as the emperor Valerian calls them.¹ And not only were these ceremonies fixed in detail, but they referred only to a definite list of gods formally recognized by the State. The law is laid down by the Twelve Tables:

'Nemo privatum habessit deos, neve novos sive advenas nisi publice adscitos privatum colunto.'

And this law was never deliberately ignored till well on in the time of the empire. True, pagan Rome admitted new gods as freely as papal Rome manufactures saints; but they had to be admitted before they could lawfully be worshipped. First came Greek gods in the time of the Tarquins, then the Magna Mater (205 B.C.), and Rome made a practice of worshipping the gods of the conquered peoples, and even boasted that she had won the dominion of the world by bringing into her vast pantheon all the gods of all the peoples of the world.

There was one exception: the Jews were licensed noneonformists. Unpopular and politically dangerous as they were, the operations of Titus were war rather than persecution; and, if so, the only real persecution was under Hadrian after the war of Bar Cochba, when for a short time (135-138) Rabbis were burned along with the rolls of the law. In general, however, Judaism was officially respected as an old national religion, and it could safely be left alone when it ceased to be missionary. There was not much more persecution, except of Christians, under the heathen empire. The druids of Gaul were not persecuted, though some of their practices were forbidden and Tiberius put to death a Roman knight for using a druidical charm. Nor were the Manichæans molested till the edict of Diocletian in 297.

The Christians were first of all unpopular. Their monotheism was barbarous, their 'moroseness' offensive, their secrecy suspicious. They would have nothing to do with the public amusements, and their own secret rites were a cover for the foulest abominations. Worst of all, they were very Jesuits for slipping into houses and perverting their inmates. There was a real bitterness in the family divisions which they caused, and a real panic was often created by the uncertainty as to who was Christian and who was not. They were already unpopular in Nero's time, and scandal imputed to them the foulest orgies; and thenceforward is a long record of mob violence. The riots at Lyons under Marcus and at Alexandria in Philip's time are fair samples, even if they were worse than usual. But in course of time there were no more riots. The last of which we read were under Gallus (251-253), and the later persecutions were purely official. When the Christians became better known, they were found to be decent neighbours, with a few Quakerish scruples, and in ordinary times Christians and heathens lived peaceably together, as they did at Emmeia till the massacre of Diocletian's time.

The Christians were at first a Jewish sect, and as such the Roman government protected them through the greater part of the Apostolic Age. Gallio and Festus refused to decide 'questions of their law.'² But, when the Apostolic Conference decided that Christians need not become Jews,

¹ Dt 12st.

² *Arch. Persæ*, 805-816.

¹ *Acta Proc. S. Cypriani*.

² *Ac 18:15-25:19*.

and Paul taught that they must not become Jews, they ceased to be a sect of a national religion, and sank to the position of an unlawful cult (*religio non licita*). This, however, was perceived only in course of time; but Titus, in 70, was aware¹ that Christians were not Jews, and the difference must have been clear to the next generation. It could not be more than affected ignorance if Christianity in high places was described as 'Jewish superstition.'²

Once the difference was recognized, the Christians became in many ways obnoxious to the law. In the first place, they formed unlawful societies (*hetæriæ, collegia illicita*), and of such societies the empire was always jealous. Next, these societies practised a new and unlawful worship (*religio nova et illicita*), for the Galilæan was neither a national god nor recognized by public authority; and they were also secret societies, and lay under suspicion of magic (*religio malefica*), for which the punishment of burning prescribed by the *Lex Cornelia* was never mitigated by the emperors. Worse than this, they refused the ceremonies which the State required, and reviled its gods. If the Jews would not endure Cæsar's image in the Temple, the Christians were ready to pull down Jupiter's from the Capitol. Hence arose a double charge—of atheism and treason. Atheism, however, was not what we mean by atheism; it meant a denial of the gods of the State. But the real god of the State was the emperor, who was more terrible to his blasphemers than any of the gods. As Tertullian says, 'men forswear themselves more willingly by all the gods than by Cæsar's genius.'³ The Christian might occasionally be called on to worship the gods, but he was far more commonly brought before an image of the emperor and commanded to offer incense. He came into court as a suspected person, and the readiest test was to make him clear himself by sacrifice, incense, or the oath by Cæsar's genius. If he refused, he was guilty of treason (*maiestas*, in the form of *impietas circa principes*), and committed his crime in open court, so that he could be sent straight to execution.

This was the full process, used chiefly for Roman citizens; and even this left a considerable discretion to the magistrate. He might encourage accusations, or he might refuse to receive them, or nullify the usual test of loyalty by allowing the accused to swear by Cæsar's safety—an oath which the Christians were willing to take. His discretion was still freer in the more usual case of *cognitio*, or summary jurisdiction. The Christians were an unlawful society, and might be punished like brigands or any other disturbers of the peace. Then the only question would be whether the accused was a Christian. If he confessed it, he might be executed or tortured either by way of punishment or to make him renounce it.

The number of the persecutions is indefinite. The traditional figure is ten. Orosius counts Nero, Domitian, Trajan, Marcus, Severus, Maximin, Decius, Valerian, Aurelian, Diocletian. But this number is too high for general persecutions, too low for local. Aurelian hardly reached an actual persecution, and (given a Neronian date of the Apocalypse) there is no reason to suppose that Domitian's action extended to the provinces. Others spread farther, but of general persecution known to have been actively carried on throughout the empire we cannot safely count any but those of Decius and Diocletian, and perhaps Valerian. On the other hand, local persecutions were continually breaking out. A governor might be hostile, and almost any accident might start the

cry, 'Christianos ad leonem!' Private malice and trade jealousy would come in, though in the 3rd cent. Christians and friendly heathens could make things unpleasant for an informer. But of fanaticism—genuine enthusiasm for the gods—there is hardly a trace. The priests were not zealous persecutors. They were commonly magnates, like the Asiarchs who warned Paul to keep away from the theatre,¹ and cared more for the dignity of their office than for vindicating the honour of the gods. If a story makes them the prime movers of persecution, it may almost be summarily set aside as a legend. Thus there might be a fierce persecution in one province and perfect quiet in the next. It would therefore be very unsafe to assume that the accounts which have come down to us represent anything like the whole of the persecution which went on. For instance, scores at least must have perished in Bithynia in 112; yet no Christian writer seems to know anything of the matter, except from Pliny's letter.² There may have been any number of similar local persecutions which have left no trace behind.

2. History.—As to the persecutions themselves, we do not need a formal history of them. Our business is not to count up their illustrious victims, or to detail their shames and horrors, but to trace from reign to reign the changes in the character of persecution made by successive emperors in accordance with changes in the state of the empire and the trend of heathen and Christian opinion. For a long time it is almost incidental. Christians are put to death when they turn up in court, and sometimes they are brought into court by mobs, but on the whole the officials are not very zealous in searching for them. The empire is seriously alarmed only by the conversions in high society at the end of the 2nd cent., and by the rapid growth and consolidation of the churches in the 3rd. So from Severus onward we see a series of laws against special classes of Christians or necessities of Christian worship. There is more or less peace in the first half of the 3rd cent., when the Syrian emperors were willing to tolerate, and again in the second, when the Illyrian emperors were too busy to persecute, with a ten years' interval of active persecution. Thus Decius and Valerian link up Severus and Maximin (Thrax) before them with Diocletian and Maximin (Daza) after them, and the whole history becomes a mighty drama, leading up in ordered sequence to the last great struggle (303-313) which left Christianity the religion of the future.

(a) *The 2nd century.*—After the great fire in Rome (July, 64) Nero had to recover the favour of the populace. As the Christians were already odious, they were the most convenient victims. First, individuals were charged with arson, and confessions were obtained by the usual tortures. These implicated a large number of others, and the charge of arson was gradually changed for one of 'hatred of mankind,' by which Tacitus³ means disaffection to the empire and to society generally. The evidence of this would be the practice of magic and secret crimes; but it cannot have been long before the avowal of Christianity was taken summarily as a confession of the abominations ascribed to the Christians, and an administrative order was made against Christians as such. The victims were worried by dogs, or crucified, or burned as lights for the performances in Nero's gardens, with Nero himself in a jockey's dress mixing with the crowd or driving a chariot. The worst of the matter in the eyes of Roman society was that disgust at these vulgar theatricals led to some commiseration for miscreants who richly deserved their punishment.⁴

⁴ *Id.*

There must have been many victims, but we can name for certain only two—the two great apostles. Clement of Rome¹ significantly joins the names of Peter and Paul, and Caius² refers to their tombs on the Vatican and the Ostian Way, while Dionysius of Corinth³ (c. 170) says that they suffered martyrdom at the same time. As regards Peter, the date is not clear. As he does not seem to have come to Rome till late, perhaps not till the persecution was in full course, we can hardly account for the impression which his work made without putting his death considerably later, or even among the occasional executions which went on after Nero's fall (June, 68).

Did the persecution extend to the provinces? The 1st Epistle of Peter is full of allusions to persecution; and, even if the Babylon from which it is dated means Rome, its address to Christians of Pontus, Galatia, Cappadocia, Asia, and Bithynia shows that they were sufferers. If the Apocalypse is of Neronian date, as to the present writer it seems to be, we find patience at Ephesus, tribulation at Smyrna, Antipas a martyr at Pergamus, the saints slain with the axe for refusing to worship the emperor, and Rome drunk with their blood.

Vespasian cannot have been friendly to the Christians, and there may have been executions in his time, though none is recorded, but there is no serious evidence that he troubled himself much about them. The next active persecutor was Domitian (81–96) towards the end of his reign. His action differed widely from that of Nero. Domitian was always jealous, and had now come to a pass when he kept his power only by a series of sudden blows, striking down one suspected person after another. He was never so dangerous as when he seemed most friendly. As the Christians were many in the palace, they were likely to attract his notice, and, as he was a religious man in the heathen sense and a restorer of religion, they would get their full share of his attentions. There must have been a number of victims, for Clement looks back on 'the sudden and repeated calamities which befel us';⁴ but they seem to have been (at least in general) persons of importance. When the grandsons of Jude the Lord's brother were brought before him and he found that they were only humble farmers, he scornfully dismissed them. The only victims known to us by name are his niece Domitilla, who was exiled to Pandateria, and her husband Flavius Clemens, Domitian's cousin and colleague in the consulship of 95, whom he put to death as soon as he was out of office. Domitilla was certainly a Christian, and we may safely read as Christianity the charges against her husband of atheism and Jewish practices, and of contemptible inactivity. To these we may perhaps add Glabrio; but there is no sign of wholesale execution as in Nero's time, and we have no reason to suppose that the persecution extended to the provinces, unless the Apocalypse be assigned to a Domitianic date.

The curtain rises again in Trajan's time, about 112. Christians were brought before the younger Pliny, then governor of Bithynia. Without troubling himself about any particular charges, he simply asked them whether they were Christians, and sent straight to execution those who persistently avowed it, of course reserving Roman citizens for trial at Rome. Whatever their worship might be, obstinacy and unbending perversity deserved punishment. Pliny has no doubt at all that Christianity is worthy of death, apart from the crimes ascribed to the Christians. Difficulties arose only when further anonymous charges were laid before

him, implicating numbers of all ranks in town and country. Some of those cleared themselves by proper worship of the gods and the emperor's image, and by further cursing Christ. Others admitted the offence, but said that they had given it up for three, ten, or even twenty years, and were quite ready now to worship the gods in proper form. They did not seem to have committed any crimes beyond their unlawful worship, and the examination of two deaconesses by torture elicited nothing further. No abominations came to light; only a perverse and arrogant superstition. So Pliny hastened to consult the emperor. Was it good to go on punishing as many Christians as might be found? Might not youth or sex or frank abandonment of Christianity be allowed to mitigate an offence not complicated by further crime? In any case a milder policy might be worth trial, especially in view of the numbers implicated.

Trajan replies that Pliny must use his discretion. The Christians are not to be sought out, but must be punished if accused and convicted; but anonymous accusations are not to be received; and any one who says that he is no longer a Christian, and proves it by worshipping our gods, must be pardoned.

The Christian is here acquitted of abominable charges; but he is none the less a criminal, though he need not be noticed till some accuser brings him into court. Trajan's chief care is to protect the heathen who went wrong in past years and is now in danger from informers. But the Christian incidentally gets some protection too. If his life does not cease to be at the mercy of an informer, the informer is forced to come forward publicly; and the heathens themselves in ordinary times had no great liking for this business. Tertullian is not far wrong when he says that Trajan 'partly frustrated' the persecution.¹

Hadrian (117–138) carried Trajan's policy a step further. When informers renewed their activity in Asia (c. 124), he instructed the proconsul Minnucius Fundanus that accusers must prove some crime in open court, and not try to force a conviction by prayers or clamours. The case was to be tried summarily (*cognitio*) and the offender punished as he deserved; but Fundanus was to take great care that, if the charge proved to be vexatious, the accuser was severely punished (*supplicis severioribus*). Hadrian, like Trajan, was thinking chiefly of protecting good heathens from false charges; but, like Trajan, he gave incidentally some shelter to the Christians. As Trajan forbade Pliny to receive anonymous charges, so Hadrian forbade Fundanus to listen to mobs. The accuser must come forward in open court; if he made good his charge, he was a marked man; if he failed, severe punishment awaited him. This placed the Christians in the most favourable position which they had yet reached; but it was by no means one of tolerable security. If the rescript was strictly enforced, they were still almost at the mercy of any one who ventured to accuse them; and, if it was not, the mobs would have their victims, and hostile governors could encourage accusations.

Titus Antoninus Pius (138–161) merely continued the policy of Trajan and Hadrian; but, as his reign marks a senatorial reaction, the administration of the law was more hostile to the Christians, and the number of martyrs seems greater. But there is no change of general policy till we come to Marcus Aurelius Antoninus (161–180). As a conscientious Stoic, and as a zealous observer of the ceremonies, Marcus had a double dislike of the Christians. He must have known a good deal more of them than he tells us, for his only reference to them is a contemptuous phrase about the

¹ Apol. 5.

bravado (ψιλή παράδειξις) of the martyrs.¹ So the administration became more hostile than ever, and now the Christians were sought out for punishment. Thus the persecution at Lyons and Vienne in 177 began with lawless outrages, was taken up in form by the magistrates and sanctioned by the emperor, and ended with insults to the dead which are rare in Roman history.

So far Tertullian was not entirely wrong in his theory—the fond belief of many Christians—that only bad emperors persecuted them. Nero and Domitian were certainly bad, while the good emperors Trajan and Hadrian were made out to be more friendly than they really were. The policy of Marcus was a difficulty, and Tertullian gets over it by telling the story of the Thundering Legion—how the prayers of a Christian legion obtained rain for the army in its great distress in Germany, and thereupon Marcus stopped the persecution.² In point of fact, he never relaxed it, and it only died out gradually in the early years of his unworthy son *Commodus* (180–192). Now *Commodus* had neither his father's philosophy nor his father's regard for Roman religion. So far as his beast-fights left him leisure for religion, his devotions went to Serapis rather than to Jupiter; and he was further much influenced by his 'devout concubine' Marcia, who was friendly to the Christians. So after a while they had peace for the rest of his reign—excepting only the occasional executions which never ceased till the time of Constantine.

(b) *The Oriental emperors (193–249).*—With *Septimius Severus* (193–211) we enter on the 3rd cent., and with it comes a new phase of persecution. Christianity does not cease to be a crime by what we may call the common law of the empire; and under this there is always some persecution, and often a good deal. It was not without cause that Tertullian wrote his *Apology* in 197, or remonstrated with the proconsul Scapula some years later for burning the Christians instead of beheading them. But now the emperors began to supplement the common law by special enactments against converts or clergy, against Christian worship, or against officials who were Christians. *Severus* himself was no fanatic for the gods of Rome. His belief was rather given to the stars, and he was influenced by his Syrian empress Julia Domna, who was interested in Eastern worships. So for a time he was almost friendly, and even went out of his way to protect people of high rank whom he knew to be Christians. It was not till 202 that he took alarm at the growth of un-Roman worships among the ruling classes. If Christians of high rank were not many, there had always been some since the days of Pomponia Græcina and Flavius Clemens. Ignatius had influential friends who might possibly have saved him from the beasts; the Pomponii, and perhaps the Acilii Glabrones, were Christians in the 2nd cent., and in the time of *Commodus* the senator Apollonius. Christianity had always been strong among the lower officials of the palace, and it was now spreading rapidly in the highest circles. It was time to check that growth, and *Severus* forbade conversion to Christianity—the confession before men in baptism without which no man could be more than a friendly heathen. Hence the distinctive feature of his persecution is that, alike at Carthage and at Alexandria, the stress of it fell on converts like Perpetua and Herais. It was not that older Christians escaped, but that converts were singled out as they had never been singled out before.

The persecution died out after the great emperor

was gone (211), and there was 'peace' for more than thirty years. We catch glimpses of local troubles, but many Christian circles almost forgot that persecution might return. *Caracalla* and *Macrinus* (211–218) were busy with the army, but *El Gabal* (218–222) was a genuinely religious emperor, a fanatic of the foul worships of Syria. He was one who sought first the kingdom of Baal, and strove to bring all the gods of the empire into subordination to the Baal of Emesa. The one thing that connects him with the Christians is his remark that they ought to transfer their worship to the temple of the sun-god. This may have been meant for a friendly invitation; but it was as well for the Christians that *El Gabal* never got further.

His cousin *Severus Alexander* (222–235) sent back the black stone to Emesa, and settled down into what we may call a 'liberal eclecticism.' Christianity could no longer be ignored as *Marcus* had ignored it, and as some of the literary circles managed to ignore it long after *Constantine's* time. *Alexander* felt something of its attraction. A statue of Christ adorned his private chapel, along with the statues of Orpheus, Abraham, Apollonius, and the deified emperors. He commended the Christian custom of *probatii seniores*, and adjudged a piece of waste ground to the Christians rather than the cooks, on the ground that any worship whatever of a god was better than a cook-shop.

With *Maximin* (235–238) we come to a short interval of persecution, though we hear of no executions. So rude a soldier may have had no deliberate policy beyond dislike of *Alexander's* friends; yet he began a new policy of aiming at the officials of the churches. Hitherto they had run no greater risk than others, except in so far as they were likely to be better known than others. Henceforth they were deliberately singled out for attack by *Maximin* and his successors.

Passing over the obscure reign of *Gordian* (238–244), we come to *Philip* (244–249), the last of the Syrian emperors. *Philip* was rumoured to be a Christian, and, though this is certainly false, we may take it that he was as friendly as *Alexander*.

(c) *The interval of persecution (249–258).*—Christianity had now reached the steps of the throne, and a Christian Caesar was no longer an impossible idea. The literary victory had long since been won, for no heathen writer after *Tacitus* (*Plotinus* excepted) will for a moment compare with the Christians, and the political triumph might seem not far off. Yet the hardest of the struggle was still to come. The Syrian emperors had not been a success, and there was now a reaction to old Roman ideals, and therefore against the Christians, who seemed the worst of traitors to the good old customs of their ancestors.

The reaction was heralded in *Philip's* time by savage riots at Alexandria, and the new emperor *Decius* (249–251) began his reign in full determination to stamp out Christianity. Hitherto persecution had been generally local, but now an edict was issued requiring all persons to sacrifice—all persons, for women and boys were not spared. This was systematic and thorough work, and produced more apostates than even the later persecution. At first the object was to avoid martyrs; so some of the earlier victims (not bishops) were set free after all tortures had been exhausted on them; afterwards they were left to die of famine in prison. Thus the *Decian* persecution resumed *Maximin's* attack on the bishops, and assailed Christians with a definite policy throughout the empire. But it does not seem to have had much popular support, for it ceased as soon as *Decius* left Rome for the army in the autumn of 250, and a few riots under his successor *Gallus* (251–253) were the last outbreaks of the old mob violence.

¹ *Comm.* xi. 3. See also art. MARCUS AURELIUS ANTONINUS, vol. viii. p. 410 f.

² *Apol.* 5.

Valerian (253-258) was an old senator, and a model of Roman virtue like *Decius*. But he was still more soldier than senator, and began his reign with marked favour to the Christians. It was not till 257 that he turned against them. The change was ascribed to the influence of his general *Maerianus*; but there was much to which *Maerianus* might appeal. In the midst of calamities which threatened ruin to the empire and civilization the Christians stood aloof, and some of them were half inclined to welcome Goths and Persians as avengers of the saints. Apart from this treasonous isolation, the growth of the episcopate was forming an *imperium in imperio* which might have alarmed the most tolerant of heathen sovereigns. *Valerian's* first rescript (257) is lost, but it followed the lines of *Decius* in ordering all persons to conform to 'the Roman ceremonies,' and in striking at the bishops. But there were two important changes. For the first time the penalty was not death—only banishment even for great bishops like *Dionysius* and *Cyprian*—and for the first time the Christians were expressly forbidden to hold assemblies or to enter the catacombs.

Xystus of Rome replied with a defiance, in the solemn transference (29th June, 258) of the remains of the two great apostles from the Vatican and the Ostian Way to the forbidden catacombs. Thereupon *Valerian* issued a second rescript.¹ The clergy were to be executed forthwith; senators, *egregii viri*, and knights were to lose their rank and property, and their lives too if they still persisted in Christianity; the great ladies were to be deprived of property and banished; *Cæsariani* (almost certainly 'Cæsar's household,' the lower officials) who were or ever had been Christians were to lose their property and to be sent in chains into slavery. This is a new development. The penalty of death is limited (so far as the rescript goes) to clergy and persons of rank, and non-official Christians escape unpunished. The idea is to destroy the Christian corporations and root out Christianity from the higher classes, leaving it a floating superstition among the vulgar.

(d) *The long peace (260-303)*.—*Valerian* perished in the East, and his son *Gallienus* (258-268) cancelled the rescripts, and more than cancelled them, by a public edict. This is lost; but we have the rescript which enforced it in Egypt in 261. It is addressed 'To the bishops,' and the restitution, first of places of worship, then of burial-places, can have been made only to the Christian corporations. Here at last was practical toleration; and, if the common law of the empire was not repealed, there seemed little reason to fear that it would ever again be seriously enforced.

The empire sank to its lowest in the days of *Gallienus*, and the great soldiers who reigned after him were fully occupied with its restoration. Only *Aurelian* (270-275) had any dealings with the Christians. Unfriendly as he was—perhaps only his death prevented active persecution—he had to deal with them as lawful corporations. When a council deposed *Paul* of *Samosata* from the see of *Antioch*, he refused to give up the church property, and the bishops appealed to the emperor. *Aurelian* decided that it belonged to that bishop who was in communion with the bishops of *Rome* and *Italy*. Later ages might have demurred to this 'very reasonable decision'² of a heathen emperor; but the fact remains that, if a church is not put outside the law, questions of property must necessarily be decided by the State; and this means that the State must necessarily determine for itself what it will recognize as orthodoxy.

(e) *The Great Persecution (303-313)*.—It was a work of nearly thirty years, from the election of

¹ *Cyprian*, Ep. 60.

² *Eus. HE VII. xxx. 19.*

Claudius to the peace with *Persia* (268-297), to restore some tolerable order in the empire, and for more than forty (260-303) the Christians had peace, broken only by the threats of *Aurelian* and an occasional military execution, due sometimes to the brutality of a heathen officer, sometimes to the fanaticism of a Christian soldier. So they flourished as they never had flourished before, built stately churches, and overflowed the palace. *Diocletian's* chamberlains were Christians, and his wife and daughter were supposed to be Christians. So, when he took up the sword of persecution, he had a harder task before him than *Decius* or *Valerian*, and it was nearly twenty years before he made up his mind to undertake it. As *Diocletian* was a man of serious religion, and that religion was of the old Roman type, he must always have been hostile to the Christians, even if he was genuinely attached to individuals. But he was too wise to attack hastily their great and strongly organized corporations, even after he was freed from his worst troubles by the peace with *Persia* in 297. There was no want of incitement, for *Maximian* and *Galerius* hated the Christians, and the court was full of soothsayers and philosophers. About 300, when *Diocletian* was in the East, the sacrifice one day was a failure—which the chief *haruspex* ascribed to the presence of profane persons. *Diocletian* at once ordered all persons in the palace to sacrifice on pain of scourging and disgrace, and all soldiers similarly to be dismissed from the service. But this, however ominous, was only a burst of superstitious terror, and seems to have been very imperfectly carried out. Christians continued to hold high office, and it was not till the winter of 302-303 that *Diocletian* decided to persecute in earnest. *Lactantius's* reports that he was worried into it by *Galerius*, who was no doubt importunate; but *Diocletian* was a statesman, and never adopted the ruthless policy of *Galerius*.

The first edict³ (24th Feb. 303) ordered all churches to be destroyed and the Scriptures to be burned. Officials were to lose all civil rights, and *Cæsariani* (of *ex* *officio*) to be reduced to slavery. This is a careful revision of the rescript of *Valerian*. The clergy are not summarily executed, nor the great ladies exiled, nor *Cæsariani* who had ceased to be Christians reduced to slavery. On the other hand, the churches are not only closed, but destroyed, and there is a new clause for the burning of the Scriptures. *Hadrian* had burned the rolls of the law, *Diocletian* himself the books of the *Manichæans* in 297, and now the same measure is dealt to the Christians. Destroy their books, stop their meetings, and root them out of the public service; they will soon be put down, and that without bloodshed.

Then came disturbances and two fires in the palace, which of course were attributed to the Christians. The government was in a panic, and put down the riots in Turkish style. To this period probably belong the great massacre at *Eumeneia* and the wholesale burnings mentioned by *Lactantius*⁴ and *Eusebius*.⁴ A second edict ordered the imprisonment of all Christian clergy, but still no bloodshed. When things quieted down, *Diocletian* issued (about Nov.) a third edict as an act of grace. It allowed the imprisoned clergy to go free if they sacrificed, but it also allowed the use of torture to compel them. Those who refused remained in prison, some till the end of the persecution, like *Donatus*, who was tortured nine times in the interval.

This is as far as *Diocletian* himself went; and it will be noted that no man could lose his life under these edicts, unless it were for refusing to

¹ *De Mort. Pers.* 101.

² *De Mort. Pers.* 15.

³ *Eus. HE VII. II.*

⁴ *HE VII. xl.*

give up the books. There were to be no martyrs, though the punishment of Christians who committed any further offence (such as a sancey answer in court) was atrocious. Then, while Diocletian was laid aside by fourteen months of illness, *Maximian* in Rome (April, 304) issued a fourth edict, commanding all persons without exception in their respective cities to offer sacrifice. This was a new policy. Diocletian had aimed skilful blows at the churches, the books, the clergy; *Maximian's* only idea was to force on every private Christian a plain choice between sacrifice and death.

Cruelty overreached itself, as usual. The heathens themselves were shocked at the horrible scenes which followed. They voted the persecution 'vulgar, and very much overdone,'¹ and at Alexandria they ended by hiding Christians in their houses.² Even the Roman mob which howled for blood when the fourth edict came out was glad to see it abolished a couple of years later. Thus the persecution was very far from being steadily carried out for ten years throughout the empire. In Gaul and Britain *Constantius* pulled down a few churches, but did nothing more. *Maximian* was zealous enough in Italy, but his son *Maxentius* (no friend of the Christians) found in 307 that he could gain popularity by stopping the persecution. Even *Galerius*, who controlled the lands from the Hadriatic to the Taurus, grew slack in course of time, and turned to more innocent occupations. But for ten long years (303-313) the full fury of the persecution fell on Egypt and Syria, which came under *Maximin Daza* after Diocletian's abdication in 305. *Daza* was as cruel as his uncle *Galerius*, even more malicious, and much more shrewd. By 308 he came to the conclusion that public burnings were better avoided, and of his clemency issued a fifth edict, that the Christians were to have the left leg disabled and the right eye cut out and seared, and so to be sent to slavery in the mines, where further cruelty could be used without attracting too much notice. Once thirty-nine were put to death in one day. But public executions did not cease, for the fourth edict was renewed, though they grew rarer, and the last of the recorded Palestinian martyrs was given to the beasts on 3rd March 310.

Of the number of the victims we can only say that it must have been large. Some statements of *Lactantius* and *Eusebius* may be too sweeping, though we have seen one of the worst of them—the wholesale burnings—confirmed by the independent evidence of the inscriptions at *Eumeneia*; but it would be very uncritical to suppose that they have recorded anything like the whole number of martyrs. We know very little of what was going on except in Palestine, and even there we do not seem to have full information. Meanwhile the inscriptions and other incidental hints leave no reasonable doubt that the general impression of murderous ferocity given by *Eusebius* and *Lactantius* is substantially true. But the horrors enacted in open court are a very small part of the mischiefs of persecution. We must take account of imprisonments and hardships from which even death is sometimes a relief, and of the sufferings of those who live in fear of death or yield to fear of death. Worse than this is the brutalizing of the persecutors, and worst of all the demoralization of the persecuted. The strong grow hard, the weak despair, church government is thrown into confusion, and every discord is inflamed to fever heat. There is no more odious chapter of Church history than the inquest which the survivors of the persecution hold upon their fallen brethren.

(f) *The Edicts of Toleration.*—The deliverance was near. *Galerius* was stricken with a mortal sickness, and issued the first Edict of Toleration in April 311.

He tells us how he had formerly endeavoured to bring back the Christians to the old laws and discipline of the Romans, for they had been foolish and self-willed enough to forsake the institutes of perhaps their own ancestors, and were making themselves laws at their own pleasure and gathering congregations from various peoples. 'When, therefore, we commanded them to return to the institutes of the ancients, some had to be overcome by hardship, while others were utterly ruined in resistance, and there was the further evil that, while they would not worship our gods, they could not worship their own. So we extend to them our usual clemency, that Christians may exist again and hold assemblies, provided they do nothing contrary to the discipline. Particular instructions for our officials will follow. And for this indulgence the Christians will make the prayers of loyal subjects to their god.'

Let us put this intensely heathen thought in other words.

We never quarrelled with the Christians for worshipping their God; we quarrelled with them for not worshipping our gods also; and our endeavour to compel them was well meant. But we forgot that our persecution made it impossible for them to worship their own God; and in this we did him wrong. We still regret their undutiful conduct; but, even so, it is better to let them worship their God in their own way than to prevent him from being worshipped at all.

This is quite straightforward, and, from the heathen point of view, quite true. *Galerius* is confessing a serious mistake, and frankly asking the prayers of the Christians. He is not now unfriendly, and the further instructions to officials are not likely to have contained 'many hard conditions.' Christianity is now definitely recognized as a *religio licita*, with all the rights therein implicit.

After the death of *Galerius* there were four emperors. *Constantine* had Gaul and Britain, *Maxentius* governed Italy and Africa, *Licinius* ruled from the frontiers of Italy to the Black Sea, while the Asiatic provinces and Egypt fell to *Maximin*. So the natural alliance was of *Constantine* and *Licinius* against *Maxentius* and *Maximin*; and this corresponded to the religious position. All four, of course, were heathens, but *Constantine* favoured the Christians, while *Maximin* was a bitter enemy; and, though neither of the others had been persecutors, *Maxentius*, standing for Rome and the senate, was hostile, while *Licinius* leaned the other way.

As *Maximin* could not entirely disregard the edict of *Galerius*, he issued it as a mere instruction to the officials that they need not go further in the matter. This was not toleration; and, though it stopped the persecution for the moment, *Maximin* resumed on a new plan less than six months later. Brute slaughter having failed, executions were limited to men of note, and a more subtle policy was adopted for the rest. The municipalities were stirred up to petition for the expulsion of Christians from their cities. Then the strong organization of the Church was copied, and a pagan hierarchy was established with regular services to confront the Christian. It remained to give education a polemical turn by ordering that a slanderous forgery called *Acts of Pilate* should be diligently taught and studied in the schools. These were skilful measures, and they were new; and *Maximin* must have the credit of them.

Meanwhile, after the defeat of *Maxentius* at *Saxa Rubra* (28th Oct. 312), *Constantine* and *Licinius* met at *Milan* (Jan. 313) and issued an edict which is a landmark in history. The original is lost, but *Licinius* recites the substance of it a few months later.

They say that they had long given liberty in religion to all men, but the rescript (of *Maximin*) issued in pursuance of this edict (of *Galerius*) had encumbered it with so many detailed conditions that it was practically useless. Then *Licinius* goes on to say that all these conditions are utterly abolished, so that on every one who desires to observe the Christian religion may do so without trouble or annoyance. The same liberty of confession

¹ *Eus. Mart. Pal.* ix. 3.

² *Atbanasius, Hist. Africanorum*, 64, p. 302.

and of worship is extended to other religions, so that every one may freely practise the worship which he personally prefers. Churches formerly belonging to the Christians shall be restored without delay to the corporation of the Christians, present owners to be compensated from imperial bounty. So also all other possessions which belonged of right to the Christians.

Maximin was in a difficulty now that he had lost his ally, and felt that he must keep the Christians quiet while he made his attack on Licinius. So before the end of 312 he issued another rescript to his prefect Sabinus. It is a strange document, alternately justifying the persecution and apologizing for it, and actually denying that there had ever been any persecution since 305. He showed little of his usual cleverness if he fancied that the Christians could be conciliated by such a mystification as this. But, when the attack had failed, and Maximin was not only expelled from Europe but driven behind Mount Taurus, he had no choice but a real reconciliation with the Christians; and this time there was no fooling. He issued a public edict to all his subjects.

Its purport is that under pretence of the edict of Diocletian forbidding assemblies of the Christians many spoliations and oppressions had been perpetrated by the officials. 'When these abuses (so painful to all good rulers) came to our knowledge, we sent out letters (the rescript to Sabinus) that, if any one wished to follow such a nation or worship, he might do so without hindrance. But even now we cannot help seeing that some of our judges have mistaken our meaning, so that our subjects hesitate to use the liberty we have granted them. In order then to remove all doubt, we publish this decree, that it may be plain to all, that such as wish to follow this sect and worship are at liberty to do so—namely, to adopt and practise this religion. They are also allowed to build Lord's Houses; and, if houses or lands belonging to the Christians have been confiscated by our treasury or by the cities, they shall be restored to them.'

There are lies enough here, but Maximin is quite straightforward, now that he has no choice. He died very soon after, however (c. June, 313), and his death closes the age of persecution. The Christians suffered some vexation from Licinius (before 323) and a good deal from Julian (361-363), but these fall outside our limits, and it must be noted that neither Licinius nor Julian repealed the Edict of Milan, so that the Christians experienced in their time rather a hostile administration than direct persecution.

Comparing the three Edicts of Toleration, we find them agreed in frank allowance of Christian worship. But Galerius allows it on the heathen principle that every god is entitled to the worship of his own people, while Maximin states no principle at all. Only Constantine and Licinius lay down the new principle that every man is entitled to choose his own religion and to practise it in his own way. True, neither of them carried it out consistently; but the principle was declared, the omnipotent State for the first time recognized a reserved domain of conscience, and there was a good deal of toleration in the age which followed. It died out with Theodoric the Ostrogoth, to reappear only in William the Silent.

PERSECUTION (Roman Catholic).—I. Conditions and causes.—The conditions which gave rise to religious persecution lie far back in and even beyond history. It would be too much to say that they are extinct; but they have to so great a degree ceased to be operative that it is only by an effort of imagination that we can throw ourselves back into them and realize what their force once was. Cohesion was the first need of primitive societies; it was more important that the group should cohere than that it should progress. Innovation, therefore, was put down with a strong hand: it introduced disunion and dissipated energy—the argument is not unknown in our own time. The earliest religions, like the earliest civilizations, were tribal and local; the deity could be worshipped only by his tribesmen and on the tribal soil (1 S 26¹⁰). And their demands were ceremonial, not ethical or dogmatic; religion resolved itself into the observance of a traditional ritual which was refused by few. In cases of revolt—such as the mutilation of the Hermæ at Athens in 415 B.C.—the penalty was sharp. But such cases were exceptional, and on a small, i.e. a civic or class, scale.

The Roman empire was tolerant of customary usage. The rulers knew how to make this usage subserve their policy, and, with regard to religion in particular, to employ and even exploit it for secular ends. The cosmopolitanism of the Stoics, which conceived mankind as a unity, accentuated the social bond. Like Positivism, it subordinated the individual to the community. The emperors who were most under Stoic influences were the most hostile to Christianity, which they regarded as a violation of both natural and established order. Judaism, separatist as its tendencies were, had an ancient nationality behind it; the Church was of yesterday, yet Tertullian's rhetoric is scarcely an exaggeration—it had leavened the world. The conception of the supreme and all-inclusive State survived in the Christian empire. The genius of Constantine discerned in the hierarchy of the 4th cent. a unique instrument for the unification of the nations and for the realization of the ruler's political aims. The unity of the Church was the keystone of the unity of the empire and of society; the Trinitarian and Christological controversies of the period were engineered by secular politicians for secular ends. Heresy was the equivalent of what a later age styled 'incivism'; the sporadic persecutions of the past gave way to a settled policy of repression. Constantine, a cool calculator rather than a fanatic, destroyed the images of the gods; Theodosius excluded worshippers from the temples and forbade sacrifice;

Justinian closed the schools of Athens; the shadow of the coming night of the Middle Ages fell upon the world.

Scarcely second to the tradition of the empire in its bearing on the development of intolerance was the authoritative position assumed by the Hebrew Scriptures in the Church. From the beginning the OT had been a stumbling-block. The conceptions of comparative religion and scientific history were unknown; and to Gentile converts much of its content was meaningless and offensive—the barbarous record of a barbarous tribe and age. Marcion and the Gnostics were the outcome of this sense of contrast. They simplified the situation by throwing the OT and the OT God, or Demiurge, overboard; and thus, though they involved themselves in difficulties of another order, they lightened the ship. But, as Græco-Roman civilization declined, the opposition between the Hebrew records and the actual conditions of life was felt less acutely; and by the end of the 2nd cent. the terminology common to Jewish and pagan worship, hitherto studiously avoided by Christian writers, had become naturalized among them; we read of temples, altars, sacrifices, and priests. Originally metaphor, the rhetoric hardened imperceptibly into dogma; the climate changed. This lowering of the temperature did not take place without opposition. But the externalizing process was too consonant with the circumstances and temper of the age to miscarry; the belief in the divine right of the hierarchy and in the duty of imposing submission to it by force—a belief destined to deluge Europe with blood for centuries—was taken over from Hebrew antiquity by the Christian world. The downfall of the empire gave impetus to the movement. The times were rude; a darkness that might be felt descended on the nations; the method of the Church was violence, not persuasion; her rule rested on the two swords of the Apostle rather than on the Cross of Christ. It may be urged that the difference did not go beyond that which separates applied from pure science; it will not be denied that the fall from primitive standards was great.

This fall was brought about by the transformation of primitive Christianity into Catholicism, of the little company of enthusiastic believers into the mixed multitude of a world-Church. Its causes were: (1) what seemed the increasing need of authority in the Christian community; (2) the natural conservatism of the official class; (3) the superstition of the multitude, which feared the indiscriminate vengeance of the outraged deities; (4) the policy of the magistrate, which regarded religious unity as the guarantee of public order; (5) the appeal to OT precedent; and (6), above all, the belief in the exclusiveness of salvation, which was to be had, it was held, only in the Church.

(1) In the dawn of Christianity relapse, or, in general, post-baptismal sin, was not contemplated. The venial faults inseparable from human frailty were met by the instinctive resipiscence of the offender, by the reception of the Eucharist, or by alms and prayer; and, when graver transgressions appeared, they were dealt with either by what was believed to be supernatural intervention (Ac 5) or by the mysterious delivery 'unto Satan for the destruction of the flesh' (1 Co 5², 1 Ti 1²⁰). Later, when the age of marvels had ceased, the treatment of offenders, and especially of the lapsed, became a problem. The good sense of the community solved it on lines which, while in themselves reasonable and moderate, increased the growing power of the official ministry. Mt 18¹⁷—with which may be taken 2 Jn¹⁰ and Tit 3¹⁰—indicates what we may suppose to have been the primitive practice; but, in proportion as society became Christian, this

discipline ceased to be purely spiritual; it passed over into the temporal sphere. The Edict of Constantine (325) makes the possession of the writings of Arius a capital offence; and that of the Three Emperors (380) denounces heretics as 'divina primum vindicta, post etiam motus nostri, quam ex caelesti arbitrio sumpserimus, ultione plectendos.'

(2) An official class is instinctively conservative, and slow to admit reform. This is so in every department of life, and the Church is no exception. Material inducements co-operate with professional jealousy—they which wait at the altar are partakers with the altar' (1 Co 9¹³); and the *esprit de corps* of a privileged class is strong. 'No salvation without the Church' is an abstract proposition; the concrete equivalent, which is seldom far distant, is 'No salvation without the priest.' That higher motives were also at work need not be questioned; the springs of conduct are various. But men do not easily destroy that by which they live.

(3) The populace is and has always been an incalculable element. Its intelligence is low, its knowledge small, its self-control weak; it is easily moved by superstition, by suggestion, by passion, and, above all, by fear. Under Nero the mob of Rome was roused by sheer terror against the Christians; that of Paris in 1792 against the aristocrats; that of Constantinople in our own time against the Armenians; and the distinctive psychology of the Middle Ages, with its emotionalism and its unique openness to suggestion, made the crowd an easy prey not only to designing persons who worked upon its susceptibilities for their own purposes but to its own unreasoning fears. The popularity of the Inquisition has been overstated, but there is reason to think that it was not generally condemned by popular feeling. Heresy was regarded as a danger to the community, and the heretic as a public enemy to be restrained for the public good.

(4) The conception of the State elaborated by Roman law, while it led those who held it to an extreme suspicion of corporations as infringing on its own sovereignty and self-sufficiency—a private society was, as such, an *imperium in imperio*—led them also to be content with an external homage on the part of the citizens to the State gods. The Christian empire was more exacting: it demanded interior conformity to the State worship and interior assent to the State creed. This demand, made professedly in the interests of orthodoxy, was in fact dictated by regard for the public peace. It is difficult to put ourselves in the place of the Byzantine Cæsars. But we are mistaken if we set them down as fanatics; they were for the most part skilful and unscrupulous men of affairs. To us the quarrels of the school and the sacristy which inflamed the dregs of Constantinople and of Alexandria are meaningless. But the thoughts of men vary:

'A latent and almost invisible spark still lurked among the embers of controversy; by the breath of prejudice and passion, it was quickly kindled to a mighty flame, and the verbal disputes of the Oriental sects have shaken the pillars of the church and state' (E. Gibbon, *Decline and Fall of the Roman Empire*, ed. J. B. Bury, London, 1901-03, v2, 100).

And mental climates change slowly. From the impartial standpoint of the magistrate, concerned in the first place for the maintenance of order, there was little to choose between Catholic and heretic, papist and Protestant. The Reformation, beneficent in so many respects, was a leaven of civil dissension. All were for supremacy, none for toleration; nor was freedom of conscience, as we now understand it, possible till the keen air of rationalism had cooled the ardours of religious zeal.

(5) The Church was heir by default of the Syna

gogue; and the inheritance of the OT was a condition of her fulfilment of her mission. But these sacred books steeled the heart of the persecutor; they sharpened his sword and kindled his unholy fires. They were an obstacle to moral and intellectual progress, because, as they were understood and could not but be understood at this period, they stereotyped and canonized the ideas and customs of a semi-civilized age. They contained, indeed, their own criticism: 'The times of this ignorance God overlooked' (Ac 17³⁰). But till yesterday the theologian would have been suspect who attempted to explain them in this way.

(6) The belief in exclusive salvation covered less specious motives with the ægis of piety; under its shelter they worked unsuspected and undisturbed. To this day religious intolerance finds its firmest foundation in the belief that there is no salvation outside the Church. Where this belief is sincerely held, intolerance haunts it as its shadow, though circumstances may determine its method and its degree. In the eyes of the theocratic hierarchy heresy is rebellion, and rebellion of a peculiarly heinous character, being directly against God. The conviction that all who do not accept a particular creed will perish everlastingly, and that God punishes a theological error as if it were the most atrocious of crimes, has two results. (a) It lowers the standard of veracity. If a slight departure from truth—the suppression of an inconvenient fact, the manufacture of testimony, the suggestion or assertion of falsehood, the manipulation of documents or sources—will save souls, promote the cause of religion, and further the highest interests of mankind, the temptation is too great for human nature, and the most fervent are the first to fall. Here is the origin of the Donation of Constantine, of the Isidorian Decretals, of the accumulation of forgeries and fictions which plays so great a part in the history of religion. (b) It leads naturally and inevitably to persecution. Zealots are slow to admit the axiom 'Deorum injuriæ deis curæ'; another maxim, 'Compelle intrare' (Lk 14²³) comes in. It becomes a duty to impose orthodoxy, seeing that men's eternal destiny depends on their professing it; and to hinder error from spreading, because error is the death of the soul. Heretics are more mischievous than ordinary criminals; and to rid the earth of them is a just, beneficent, and necessary work. Their virtues, such as they are, are no defence. 'Splendida vitia' the Fathers of the Church characterized them; an echo of what was once the universal belief of Christians survives in the Anglican Article XIII., which declares of works done before justification that 'we doubt not that they have the nature of sin.'

The earliest Christian apologists urged the rights of conscience. Every sect, when it is in a minority, clamours for toleration; and the language of circumstance is easily confused with that of principle. The Christians of the first two centuries, if not always persecuted, were always liable to persecution; they advanced, naturally enough, the plea of conscience, and argued for the futility of compulsion as a means of ensuring belief. Tertullian's words, which suggest the philosophy of the 18th cent., might have come from Locke:

'Humani juris et naturalis potestatis est unicuique quod putaverit colere; nec alii obest aut prodest alterius religio. Sed nec religionis est cogere religionem, quæ sponte suscipi debet, non vi: cum et hostiæ ab animo libenti expostulantur. Ita etsi nos compuleritis ad sacrificandum, nihil præstabitis diis vestris: ab invitis enim sacrificia non desiderabunt, nisi si contentiosi sunt; contentiosus autem deus non est' (ad Scapulam, II.).

So also Lactantius:

'Religio sola est, in qua libertas domicilium collocavit. Res est enim præter cæternas voluntaria, nec imponi cuiquam

necessitas potest, ut colat quod non vult. Potest aliquis forsitan simulare; non potest velle' (Epitome Div. Inst. liv.).

And again:

'Defendenda religio est non occidendo sed moriendo, non sævitia sed patientia, non scelere sed fide. . . . Nihil est enim tam voluntarium quam religio, in qua si animus sacrificantis averus est, jam sublata, jam nulla est' (Div. Inst. v. 20).

It would be unjust to question the sincerity of such protestations; the content of the legal and dogmatic conceptions destined to take shape in ecclesiastical Christianity was as yet implicit. But the martyrs died for conscience rather than for liberty of conscience; the notion of religion as a fixed quantity incapable of variation—a *depositum* (1 Ti 6²⁰ Vulg.)—led inevitably to its defence, where the State could be enlisted in its service, by the civil sword. 'Quæ pejor mors animæ quam libertas erroris?' asked Augustine (Ep. cv. 10 [PL xxxiii. 400]); in such subject-matter no risks could be run. As time went on, both belief and practice were systematized; and in this process of systematizing the papacy, the greatest systematizing force that the world has known, played a decisive part. But from Constantine to Philip II., and from St. Augustine to Torquemada, the succession is unbroken. At every step of the blood-stained way the advance was necessitated by the logic both of thought and of things. Only when men were sick of slaughter did it dawn upon them that they had taken the wrong turning, and that, till the road had been retraced, those who followed it found themselves in every generation farther astray.

The theological motive of persecution was a conception of religion common to the Christianity of the time and held by orthodox and heterodox alike. This is shown by the fierce intolerance of the heretical sects—in particular of the Arians, who planted in Spain the seeds of that bigotry which found its first fruit in the execution of Priscillian (385) and its most recent in that of Francesco Ferrer (1909). It was in self-defence that Athanasius, Gregory Nazianzen, and Hilary argued for that 'dulcissima libertas' which the last-named (*ad Constantium*, ii. 4 f.) declares to be the one remedy for religious strife. Salvian (430) writes of the heretics of his time:

'Errant, sed bono animo errant, non odio, sed affectu Dei, honorare se Dominum atque amare credentes. . . . Qualiter pro hoc ipso falsæ opinionis errore in die iudicii puniendi sint, nullus potest scire nisi iudex' (*de Gubernatione Dei*, v. 2).

Policy, however, was stronger than piety, logic than philosophy. Scarcely had the Edict of Milan (313), which relieved the Christians from persecution by recognizing Christianity as a *religio licita*, been published when the drift of the new age declared itself. The best and wisest men in the empire—a Symmachus, a Themistius—protested:

'Non uno illicere perveniri potest ad tam grande secretum' (Symmachus, *Relationes*, iii. [Ep. x. 3], in *MGH*, 'Auctores antiquissimi,' vi. 1 [Berlin, 1853], p. 252).

No nobler words ever came from a religious teacher, but protest was in vain. Constantine, whose motive was political in each case, exiled first Arius and then Athanasius, under the pretext—not, it must be confessed, an unreasonable one—of danger to the public peace. His successors, with few exceptions, followed his example, enforcing conformity to the various standards of popular orthodoxy. The more mysterious the tenet, the more embittered, it seemed, was the controversy; at the Council of Chalcedon 'an invisible line was drawn between the heresy of Apollinaris and the faith of St. Cyril'; and it was declared by 500 bishops that its decrees might lawfully be enforced 'even with blood.'

2. History.—The most authoritative name in the black record of intolerance is that of the great Augustine. Both for good and for evil his influence over Christianity has been more powerful

than that of any one man between St. Paul and Luther; few have more emphatically asserted the inwardness of religion; yet, paradox as it is, few have done more to fasten the fetters of ecclesiastical and dogmatic system upon mankind than he. As long as the Donatists had the upper hand in Africa, he stood for the rights of conscience; when the position was reversed, and the balance of material force was with Catholicism, he changed his ground.

'Mea primitus sententia non erat nisi neminem ad unitatem Christi esse cogendum; verbo esse agendum, disputatione pugnandum, ratione vincendum, ne fictos catholicos haberemus, quos apertos haereticos noveramus. Sed haec opinio mea, non contradicentium verbis, sed demonstrantium superabatur exemplis. Nam primo mihi opponebatur civitas mea quae cum tota esset in parte Donati, ad unitatem catholicam timore legum imperialium conversa est; quam nunc videmus ita hujus vestrae animositatis perniciem detestari, ut in ea nunquam fuisse credatur' (*Ep. xciii. 17*).

He proceeds to lay down as a general principle, 'multis profuit prius timore vel dolore cogi, ut postea possent doceri,' and to compare the laws against heretics to the restraint imposed upon lunatics or persons suffering under delirium, who would otherwise destroy themselves and others. The exegesis of the time permitted the 'Compelle intrare' of the parable to be used as an argument for coercion; it was in the premisses, not in the conclusion, that the fallacy lay. His teaching has been summarized by J. C. Bluntschli as follows:

'When error prevails, it is right to invoke liberty of conscience; but when, on the contrary, truth predominates, it is proper to use coercion' (*Allgem. Staatsrecht*⁶, Stuttgart, 1835, vi. 391);

and by Macaulay thus in his essay on Sir James Mackintosh:

'I am in the right, and you are in the wrong. When you are the stronger, you ought to tolerate me; for it is your duty to tolerate truth. But when I am the stronger, I shall persecute you; for it is my duty to persecute error' (*Critical and Historical Essays*, London, 1870, p. 330).

This is the dilemma presented in every age to the mixed State by Catholicism. Logically it is insoluble; and practically in certain states of society it has made Catholic disabilities inevitable. It could be escaped only when the presuppositions on which it is based had ceased to carry conviction. We can afford to-day to smile at them; our ancestors could not.

Meanwhile the enactments of Theodosius II. and Valentinian III., which punished the slightest deviation from the received orthodoxy as a *crimen publicum*, gave the Augustinian theory the force of law, and laid the foundation of the Inquisition (*q.v.*); Europe went back into darkness for more than a thousand years.

The Code of Justinian (529) collects, co-ordinates, and completes all previous enactments against heretics, schismatics, apostates, blasphemers, pagans, and Jews; and Isidore of Seville (636) imposes on the ruler the duty of repressing error in religion. The barbarian invaders of the empire brought with them from their native wilds a high conception of personal liberty. This acted as a check upon the imperial legislation, the use made of which in the earlier Middle Ages was moderate. 'Religionem imponere non possumus, quia nemo cogitur ut credat invitatus,' was the answer of Theodoricus when the Jews of Genoa asked permission to rebuild their synagogue; and Cassiodorus (480) puts into the mouth of the Gothic king Theodatus the fine words, 'Cum divinitas patiatur diversas religiones esse, nos unam non audemus imponere' (*Variae*, x. 26). But the evil root was there; it needed only a favourable season to put forth its fatal growth.

'Entre temps avait commencé la série des meurtres juridiques pour délit d'opinion' (S. Reinach, *Orpheus*, Paris, 1909, p. 383).

The moderation of a Gregory the Great was due to circumstances rather than to principle; paganism was extinct, heresy infrequent—the Latin mind

was not speculative, and the ecclesiastical beliefs and institutions of the period met its needs.

The close of the 10th cent. brought the dawn of a new age. Oriental infiltrations disturbed the slumbers of Western orthodoxy; the wide-spread corruption of the clergy was felt to be intolerable; the Crusades enlarged the horizon and also stirred the passions of Europe. The embers of sectarian hatred were kindled, as in modern anti-Semitism, by the prosperity of the Jews and Saracens; cupidity inflamed religious zeal.

'L'Église ne fut pas si tyrannique pour le plaisir de l'être, mais parce qu'elle avait ses finances à ménager' (*ib.* p. 427).

And on this head there was little to choose between the spiritual and the secular power. Here, as there, the economic motive, if unavowed, was invariable; it lit the brand of the inquisitor; it sharpened the axe of kings. The end in view was submission rather than orthodoxy:

'Disobedience to the Church was sufficient; resistance to its claims was heresy, punishable here and hereafter with all the penalties of the temporal and spiritual swords' (H. C. Lea, *Hist. of the Inquisition of the Middle Ages*, iii. 189).

Of the bloody crusade against the Stedingers (1229-36) a contemporary writes:

'Principalior causa fuit inobedientia, quae scelere idololatriae non est inferior' (*ib.* note).

The duty of inquiring into offences whether against faith or morals was originally part of the episcopal office. But episcopal zeal was fitful. The Capitularies of Charles the Great instruct the bishops 'to make the visitation of their dioceses, to teach truth, to correct morals, to ensure the orthodoxy of the clergy, and, on the Saxon border, to prohibit the celebration of Pagan rites.' Charles the Bald (844) adds the injunction 'ut populi errata inquirant et corrigant.' But this inquiry was superficial; the warrior prelates of the period had little interest in the subtleties of theology, and were not extreme to mark what was amiss in morals. An emergency beyond the powers of the local hierarchy was at hand. Languedoc was an oasis of civilization in a desert of barbarism; and with civilization had come expansion of thought. Intercourse with the Spanish Moors was frequent and easy; Greek travellers and traders had naturalized the speculations of the East on Western soil. The clergy were held in general contempt; the papacy had lost credit and authority; the menace to the Catholic theocracy was imminent and extreme. From this period dates the technical use of the terms 'Inquisition' and 'Inquisitor.' From an episcopal the Inquisition became a papal tribunal. Innocent III. commissioned certain Cistercians to exercise legatine powers in the suspected territories: the result was that carnival of sheer wickedness of which Milman writes:

'Never in the history of man were the great eternal principles of justice, the faith of treaties, and common humanity so trampled under foot as in the Albigenian war' (*Hist. of Latin Christianity*, London, 1872, v. 426).

Arnould of Cîteaux, writing to Innocent, thus describes the sack of Béziers:

'Nostri non parentes ordini, sexui, vel aetati, tere viginti millia hominum in ore gladii peremerunt; factaque hominum strage permaxima spoliata est tota civitas et successa, ultione divina in eam mirabiliter sacvie' (see Lea, i. 154).

Cæsarius of Heisterbach adds that, when the invaders drew back, fearing that certain of their own faction might be involved in the common massacre, the legate urged them on to finish the bloody work.

'Caedite eos: novit enim Dominus qui sunt ejus; eloque innumerabiles occisi sunt in civitate ista' (*Dialogus Miraculorum*, v. 21).

By the middle of the 13th cent. the Inquisition had fallen into the hands of the newly-founded Dominican order, the appeal being only to Rome. This pontifical Inquisition was even more merciless and more atrocious than its better known Spanish counterpart (see INQUISITION and OFFICE, THE

HOLY). It sent to the flames Albigenses, Waldenses, Spiritual Franciscans, Hussites, and so-called sorcerers by the thousand; it was the instrument of political intrigue and of private vengeance; terror and desolation followed in its train. And it was as hypocritical as it was cruel and corrupt. Joseph de Maistre has the effrontery to plead that it shed no blood. No, it left the last penalty to the magistrates, who incurred excommunication if they refused or delayed to inflict it. The form of death by burning was introduced in 1231; indulgences being granted to those who contributed fuel. 'O sancta simplicitas!', said Hus, when a countrywoman threw her faggot on his pyre.

Its procedure was, if possible, more odious than its penalties. The *Directorium Inquisitorum* of Nicolas Eymerich (Rome, 1585) gives a detailed account of the methods employed—the spy system, delation, secrecy, torture, the union in one person of judge and accuser, the hindrances put in the way of the victim's defence, the direct interest of the tribunal in a condemnation which secured the confiscation of the property of the accused. This procedure exercised a corrupting influence on the criminal jurisprudence of the Continent which has not been wholly exorcized even in our own day. Lea, the historian of the Inquisition, writes:

'Of all the curses which [it] brought in its train this, perhaps, was the greatest—that, until the closing years of the eighteenth century, throughout the greater part of Europe, the inquisitorial process, as developed for the destruction of heresy, became the customary method of dealing with all who were under accusation' (l. 560).

England escaped the contagion: its laws reflect the lay, not the clerical, mind.

A relative toleration was extended to Jews—partly from historical, more from economic motives: financial necessity set bounds to religious zeal. And pagans were technically exempt from ecclesiastical jurisdiction, though the exemption was less real than nominal, few, if any, pagans being found where it prevailed. In each case two conflicting theories lay side by side unreconciled. Neither Jews nor pagans, being unbaptized, were subjects of the Church; yet, on the other hand, 'Compelle intrare' applied with no less force to aliens without than to wanderers from within. The inconsistency was solved in practice. The arm of the Church was long, and neither Jew nor pagan who came within its reach had reason to boast that his lot was more tolerable than that of the heretic, though the latter was its more legitimate prey.

In the Middle Ages, as at other times, an undercurrent of rationality ran under the tide of ignorance and fanaticism. In his *Defensor Pacis* (1324) Marsilius of Padua repudiates the dominant OT, or theocratic, interpretation of Christianity.

'Moyse legem Deus tradidit observandam in statu vite presentis, ad contentiones humanas dirimendas, precepta talium specialiter continentem; et ad hoc proportionaliter se habentem humane legis quantum ad aliquam sui partem. Verum hujusmodi precepta in Evangelica lege non tradidit Christus, sed tradita vel tradenda supposit in humanis legibus, quae observari et principantibus secundum eas omnem animam humanam obedire precepit, in his saltem quod non adversaretur legi salutis' (ll. 215; cf. Millman, vii. 408).

The gospel, he says, is the only authoritative law of Christianity; it gives no coercive power or secular jurisdiction to pope, bishop, or priest. The Church is the whole assembly of the faithful. With regard to the clergy, the question is not what power was possessed by Christ, but what He conferred on the apostles, what descended from them to the bishops and presbyters, what He forbade them to assume, what is meant by the power of the keys. The clergy, then, have no coercive power over heretics, Jews, or infidels. Judgment on them is by Christ alone, and in the other world, though they may be punished by the temporal ruler if they offend against the civil law. He remarks acutely that the observance of the divine precepts is by no means invariably enforced by the human legislator, and draws the conclusion that the heretic is punished because he transgresses not divine but human law.

It is a short step from this to the reflexion that liberty of conscience is not properly open to any

restrictions except such as are imposed in the interests of public order and for the safety of the State.

Such speculations, however, were for the few; the many were not ripe for radical solutions; they took, as their custom is, the middle way. The popular mind is liable, generally under the pressure of fear, to sudden accessions of fanaticism; but, at least in the later Middle Ages, while accepting the principle that the heretic was an offender, it resented the execution of the laws against heresy where this execution was exceptionally cruel or on a large scale. Our own attitude to capital punishment is not dissimilar. We acquiesce in the death penalty in extreme cases; but with the proviso, 'odiosa restringenda sunt.' We are ready to find reasons for not inflicting it, and we should resent its being indiscriminately or lightly applied. This temper gained ground, though slowly; and its growth explains the discredit into which, except in Spain, the Inquisition had fallen in the 16th century. This discredit was a condition of the Reformation. Had the Reformers found themselves opposed by the resistless forces disposed of by Innocent III. and Simon de Montfort, the movement would in all probability have gone down in blood and fire.

In Spain, where the unity of the monarchy was of recent date, patriotism and zeal for Catholicism went hand in hand. Three main causes led to the hold obtained by the Inquisition over the Peninsula: (1) the distrust with which the forced converts from Judaism and Muhammadanism were generally regarded; (2) the desire to strengthen the monarchy against separatist tendencies; (3) rapacity—the victims were rich, and the confiscations on a large scale. The tribunal began its work in 1481. Before the year was out, 293 victims had been burned in Seville; and the Jesuit Mariana computes the victims in the two dioceses of Seville and Cadiz at 2000. Llorente gives a total of some 32,000 (Reinach, writing in 1906, more than trebles the figures) sent to the flames between 1481 and 1809, when the last heretics suffered, a Jew being burned and a Quaker hanged. But the executions represent a fraction only of the injury inflicted on the nation. Jews, Moors, and Moriscos, or Christianized Moors, were banished to the number of about 3,000,000; and, as they were the most prosperous and intelligent members of the community, the loss to trade, industry, and agriculture was incalculable; in seventy years the population sank from 10,000,000 to 6,000,000. Spain, once the rival of France and Britain, fell to the rank of a power of the third class.

Both in Madrid and in Rome the Inquisition struck high. An archbishop of Toledo died under a capital sentence, the last Catholic archbishop of Canterbury, Pole—'Carnifex et Flagellum Ecclesiae Anglicanae'—under a charge of heresy. And it had the courage of its opinions. The condemnation of Galileo,

'reo d'aver veduto
La terra volgersi intorno al sole,'

placed the Church in a dilemma from which she suffers to this day. Either the condemnation was infallible, in which case infallibility is shattered, or it was fallible, in which case (for it was not till 1835 that the Copernican teaching was tolerated) for more than 200 years Catholics were bound to give interior assent to what was untrue. A recent apologist urges that one error is an insufficient ground for questioning the competence of so august a tribunal as the Inquisition. He adds, however:

'Malgré tout les "gens de peu de foi" dont parle l'Evangile—et ils sont nombreux—craignent encore instinctivement que ce qui est arrivé une fois ne se renouvelle. Et cette frayeur, cette tentation de doute, qu'on le veuille ou non, est une conséquence

lointaine et durable de la condamnation de Gaïllée' (E. Vacandard, *Études de critique*, 1st ser., Paris, 1906, p. 386).

The historian will hesitate to endorse Vacandard's praise of the 'prudence bien connue des congrégations romaines.' The Inquisition has been as impotent for good as it has been potent for evil.

'It introduced a system of jurisprudence which infected the criminal law of all the lands subjected to its influence, and rendered the administration of penal justice a cruel mockery for centuries. It furnished the Holy See with a powerful weapon in aid of political aggrandizement, it tempted secular sovereigns to imitate the example, and it prostituted the name of religion to the vilest temporal ends. It stimulated the morbid sensitiveness to doctrinal aberrations until the most trifling dissidence was capable of rousing insane fury, and of convulsing Europe from end to end. On the other hand, when atheism became fashionable in high places, its thunders were mute. Energetic only in evil, when its powers might have been used on the side of virtue, it held its hand' (Lea, *iii.* 650).

3. Modern attitude.—When the question of the attitude of the Roman Catholic Church of to-day towards persecution is raised, a distinction must be made. The members of this Church, being men, are involved in the human movement; and, as this is humanitarian, it is natural that they should resent the charge of intolerance, and endeavour to shift the inconvenient burden from the Church to mediæval society and the mediæval State. So argue not only popular writers, but scholars such as Hergenröther (*Catholic Church and Christian State*, Eng. tr., London, 1876, essays xvi. and xvii.). But the Church is precluded by her principles from taking this position: the Decree *Lamentabili*, 1907 (prop. 53 f.), excludes the notion of development or process from religion; and, as the Church stands or falls with the papacy, so the papacy stands or falls with the principle of persecution. The Syllabus of 1864 condemns the proposition, 'Ecclesia vim inferendi potestatem non habet'; and Leo X. condemned among the errors of Luther the proposition, 'Haereticos comburi est contra voluntatem Spiritus'—from which, says Hergenröther, with a certain naïveté, 'it only follows that it is not contrary to the spirit of Christianity to punish heretics with death by fire' (ii. 309). In the words of Lord Acton,

'The Inquisition is peculiarly the weapon and peculiarly the work of the Popes. It stands out from all those things in which they co-operated, followed, or assented as the distinctive feature of papal Rome. It was set up, renewed, and perfected by a long series of acts emanating from the supreme authority in the Church. No other institution, no doctrine, no ceremony is so distinctly the creation of the papacy, except the Dispensing powers. It is the principal thing with which the papacy is identified, and by which it must be judged.

The principle of the Inquisition is murderous, and a man's opinion of the papacy is regulated and determined by his opinion about religious assassination.

If he honestly looks on it as an abomination, he can only accept the Primacy with a drawback, with precaution, suspicion, and aversion for its acts.

If he accepts the Primacy with confidence, admiration, unconditional obedience, he must have made terms with murder' (*Letters to Mary Gladstone*, ed. H. Paul, London, 1913, p. 1471.).

The greatest names of the Counter-Reformation are not free from this stain; the hands of its saints are red with blood. And to argue that these men acted in accordance with their principles and the principles of their religion, as no doubt they did, only throws the difficulty farther back.

The catena of authorities is unbroken. Pius v. and Gregory XIII. were privy to conspiracies against the life of Elizabeth, and Gregory applauded the massacre of St. Bartholomew; Clement VII. denounced the Edict of Nantes; Innocent X. the Peace of Westphalia; Pius VII. protested against the freedom of conscience clauses in the Bavarian Constitution of 1800 and the French Charter of 1814. In the Encyclical *Mirari vos* (1832) Gregory XVI. proclaims:

'Ex hoc putidissimo indifferentismi fonte, absurda illa fuit ac erronea sententia, seu potius deliramentum, asserendam esse ac vindicandam cuilibet libertatem conscientiae';

and the ideas of Leo XIII., though expressed in milder form, do not emerge from the iron circle of necessity in which the Catholic theory of revelation and the doctrine of exclusive salvation compel the received teaching to move. The good faith of the popes—even the popes of the Albigensian Crusade and the Counter-Reformation—need not be questioned; they thought to do God service, by stake, axe, and cord. But, says P. von Hoensbroech (*Das Papsttum in seiner sozial-kulturellen Wirksamkeit*, Leipzig, 1906-07, p. 180), there can be no more conclusive disproof of the divine origin of the papacy than the good faith of the popes in their age-long work of blood.

It is probably safe to say that the Church will never again be able to reduce these principles to practice. The world's tide runs strongly in the opposite direction; and, this being so, the question of what would be her policy under circumstances which are in fact excluded does not arise. But domestic tyranny is more than a possibility. The saner and more moderate elements in Roman Catholicism have suffered, even in our own time, under the tyranny of the hierarchy; and the Church is, and will be for long, so important a social and political factor in European life that this cannot be a matter of indifference either to the civil power or to the community at large. A sect may administer its own affairs unchecked—'de minimis non curat praetor'—but a Church which is a world force cannot be entrusted with unlimited autonomy; the pre-Revolution absolutisms, taught by long experience, saw this more clearly than the new democracies of to-day. Ruffini (*Religious Liberty*, ch. xxi.) gives the modern State the alternatives of separation—as in the United States and in France since the abolition of the concordat of 1801—or what he calls 'jurisdictionalism,' under which, as in England, and in France before 1906, the Church of the majority, while enjoying certain official privileges, is kept under a certain State control. If the former is better adapted to communities in which no religious body possesses a decided preponderance in numbers or influence, there is much to be said for the latter, where the majority of the citizens belong to one communion and profess, or at least accept, one creed. Here 'a free Church in a free State' may be a doubtful benefit: majorities need restraint; and the conscience of the community as a whole is more to be trusted than that of any section of it, clerical or lay. Where the control of the community is absent or ineffective, the clerical caste, experience shows, magnifies its office unduly. The clergy are good servants, but bad masters; the wisest ruler is he who distrusts ecclesiastical liberties most profoundly, and proclaims the sovereign as 'in all causes and over all persons whether ecclesiastical or civil within these his dominions supreme.' But it is less to external circumstances or political arrangements than to the slow growth of the reason and conscience of mankind that we may look for the solution of the problems—many of which, it will be admitted, are still open—which an older world than ours cut by the sword of persecution. The unity of religion, as in general of all that falls under the head of spirit, is a unity not of content, but of idea, of direction, of movement.

PERSECUTION (Modern Christian).—At the close of the 15th cent. Christendom was at a low ebb, geographically and numerically. The once flourishing churches of the Far East had been almost destroyed by the Mongols, those of the Near East subjugated by the Turks. But the northern States of Scandinavia and Britain were in communion with Rome, the kings of France had adjusted their quarrel with the popes, and the Holy Roman Empire seemed again a reality when the vast possessions of Spain were under the same ruler. Western Christendom was compact, united in doctrine and in organization. The Fifth Lateran Council sat without realizing that the whole system was undermined, and that within eight months of its rising the match would be lit.

Two theories which led to persecution as a duty held the field. The one was that a body of truths existed, some still latent, some explicitly stated in dogmas, necessary and vital; so vital that, unless a man accepted them, he would without doubt perish everlastingly. The other was that Christendom formed a single body, with a spiritual arm and a secular; when the former had done its best to reclaim an erring member and had failed, the latter must punish.¹ There was room for discussion as to the precise inter-relation of the two arms, but there was no room to doubt the duty of suppressing every book and person challenging received truth.

The characteristic of the last four centuries is that these theories have been emphatically traversed, that their corollary of persecution has been repudiated, that a counter-theory is now widely held, asserting the soul's direct responsibility to God and the freedom of conscience from the dominion of man. Thus the history of persecution in this period will show it regarded (1) as a religious duty, (2) as a political expedient, (3) as a political blunder, and (4) as a sin against God.

1. A religious duty.—For centuries it had been seen that it was needful not to wait for onward manifestation of error, but to probe into possible sources, and for this purpose there had been many forms of the Inquisition (*q.v.*). As episcopal independence had lessened, diocesan inquisitors had become unimportant, and the Roman Curia had its own agents. Thanks to the zeal of the Spaniard Dominic, the Black Friars were usually the papal inquisitors. In the 16th cent. others came to the front, but, however agents and methods varied, the theories and policy of the Curia remained, with only natural growth.

Hadrian VI. had served an apprenticeship as inquisitor in Aragon before he became pope.

He brought to Rome 'the Spanish idea of rigorous discipline within the Church'—a system of discipline by which the head of the Church was to be guided by the way, head.²

Spain, indeed, had worked out a most effective form of Inquisition, as will be seen; after experience with it Caraffa reorganized the papal Inquisition on its lines. Thus in 1542 a special Congregation of the Holy Office was founded in Rome. Six cardinals—their number was afterwards increased to thirteen—were empowered to arrest and imprison all suspected heretics, and to try all cases of heresy, on both sides of the Alps. They might institute minor tribunals, and thus create a world-wide organization. Within the papal States there was no conflict with civil authorities, and the inquisitors began at once; by negotiation with Italian princes they soon acted more widely; but most rulers declined to admit their jurisdiction, and preferred to deal with heresy by other machi-

nery. The Congregation was quite successful in Italy; eight or nine Protestant congregations were dispersed, and persecution ceased because uniformity was restored.

The Holy Office saw that to deal only with man was futile, and it systematized the censorship of books (see OFFICE, THE HOLY). Caraffa, now Pope Paul IV., drew up an 'Index Librorum Prohibitorum,' which forbade the use of any book from any one of 61 printers, or written by any one of a much longer list of authors, including even Erasmus. This was so drastic that it was discussed at Trent, and a commission framed ten rules to be observed in revising it; the Tridentine Index came out under Pius IV. in 1564. The work proved so great that Pius V. created a special Congregation of the Index (see INDEX).

Spain furnished Rome with another great agency; Ignatius Loyola brought his military ideas to the service of the Church, and the Jesuits (*q.v.*) soon surpassed the Dominicans in zeal and ability. An early instance of their success may be given from Upper Austria, where most of the nobles had accepted Lutheranism.³

Ferdinand gave the Jesuits permission to settle in Vienna, and in a few years they had rejuvenated the universities. In 1592 one of their pupils was made vicar-general of Styria; under instructions from Clement VII., and with the aid of Ferdinand given contrary to his guarantee, the entire Protestant population was forcibly converted or expelled within 24 years.

The Jesuits were the soul of the Counter-Reformation; their methods in Bohemia were of the same type, and equally successful; the Anabaptists were driven into Hungary at a month's notice; the Moravian Church was almost obliterated, and the name of John Hus passed into oblivion.

To trace the activities of these two Congregations and of the Jesuits were needless; their principles are unchanged. Even such mystics as the Spaniard Molinos and the French Fénelon were condemned, and the Jansenist movement was stopped. But, when Jesuit influence became paramount in Rome, the papal assertions deserve record.

Bible societies were in 1816 termed by Pius VII. a 'fiendish instrument for the undermining of the foundation of religion.'⁴ Leo XII. said ten years later:

'Every one separated from the Roman Catholic Church, however unblamable in other respects his life may be, because of this sole offence, that he is sundered from the unity of Christ, has no part in eternal life; God's wrath hangs over him.'⁵

Pius VIII. began his pontificate by denouncing liberty of conscience. Gregory XVI. in 1832, considering the Belgian declaration in favour of religious liberty, pronounced this a mere 'deliramentum.' Pius IX. in 1864 codified many papal principles in his *Syllabus of Errors*:

Error 21 is: 'The Church has not the power of defining dogmatically that the religion of the Catholic Church is the only true religion'; error 24 is: 'The Church has not the power of availing herself of force, nor any temporal power direct or indirect'; error 28 is: 'In certain Catholic countries it is rightly provided by law that immigrants thither shall enjoy public exercise of their own religion.'⁶

Six years later the Vatican Council acknowledged that the authority of the Roman pontiff is immune from error; and in 1878 Leo XIII. declared that the utterances of the *Syllabus* are clothed with that authority. Modernism is denounced; modernists are excommunicated. Pius X. reorganized the Roman Curia into eleven congregations, of which the Holy Office is first and the Index seventh, and they are closely related.

The former, says Benedetto Ojetti, 'judges heresy, and the offences that lead to suspicion of heresy; it applies the canonical punishments incurred by heretics, schismatics, and the like. In this the Holy Office differs from all the other congregations.'⁷

And it is the only congregation of which there is no other president than the pope himself.

The Jesuits, thanks especially to J. P. Roothaan and P. J. Beckx, have won almost complete control of the Curial thought, policy, and machinery. One illustration of summary action may suffice.

Henri Lasserre translated the Gospels into French, and published the version in 1887 with the imprimatur of the archbishop of Paris and the approval of the pope. On 10th Dec. the Congregation of the Index forbade it to be published, and ordered all copies to be surrendered; next day the pope approved this decree, without comment or explanation, in the most solemn form.

Joseph Blötzer¹ justifies such action on the grounds that religious belief is 'something objective, the gift of God, and therefore outside the realm of free private judgment'; that the Church is 'a society . . . whose first and most important duty must naturally be to retain unsullied this original deposit of faith.' James Bridge² states that, 'though the Church exercises that right [of coercing all Christians] for the most part by spiritual sanctions, she has never relinquished the right to use other means.' To a Roman Catholic such action is not technically 'persecution'—this can be inflicted only on the Church, not by the Church; it is simply the lawful and necessary exercise of discipline.

Hitherto we have dealt only with proceedings initiated or approved by the court of Rome, where its responsibility is not denied. Its principles may now be considered as applied by the Hapsburgs in Spain and the Netherlands.

(a) Spain.—Ferdinand and Isabella obtained a bull in 1478 empowering them to establish a royal inquisition to investigate the genuineness of the religion of the 'New Christians' of Jewish descent; the scope of this was soon enlarged to enable those of Muslim descent to be dealt with also. Under Torquemada the Holy Office was allowed to frame its own rules. Soon it became independent of the bishops, entitled to call in the aid of all civil authorities, able to disobey even the pope. Thirty-two years after its foundation an inscription was placed on its headquarters at Seville to the effect that about 1000 people had been burned, and about 20,000 had been condemned to penances. In 1609 Philip III. was persuaded to banish all the Moriscos, or Christians descended from the Muslim Moors; the measure was carried out so thoroughly that more than 2,000,000 are supposed to have been exiled. Thenceforward the Inquisition turned its energies in other directions. It spread throughout all the Spanish possessions, except where special arrangements were made, as in Naples, Sicily, and the Netherlands. Thus all the New World allotted to Spain by the Roman See was under its jurisdiction, and any native who relapsed from Christianity to his ancestral faith was at its mercy.

More dubious were the rights of the Inquisition over foreigners, and an illustration may be given which displays the normal procedure, without any sensational features.³

Hugh Wingfield of Rotherham, with five other soldiers from the 'Gabriel', was captured in the ordinary course of war during 1592, and was put in the royal prison of Tenerife. The promoter fiscal of the Holy Office appeared before the inquisitor, denouncing him as a pirate, heretic, and apostate; a *prima facie* case was established, and he was removed to the cells of the Inquisition. These were so far from being places of torment that the prisoners used to open them after dark and spend the evening together. Within a week Wingfield was examined, and he acknowledged that he had 'never heard Mass, as it is not said, out only the service used by the Protestants of England; and that this is the religion instituted by Calvin.'⁴ Further, he declared that he could not abandon a religion that he knew, and promise to follow one that he did not know; but he desired to know the truth. After instruction for a fortnight, he acknowledged that the new religion of his country was bad, that in her

and all her opinions lay the soul's perdition, and he asked to be received into the Holy Catholic Church. He was then taught the prayers; as he fell ill, he was taken to hospital and nursed; in June 1593 he was released on parole. This he broke, and escaped, and it is recorded sadly that this usually happened. The incident elicited orders from Seville not to deal with such cases, but to take proceedings against foreigners only when they offended against the faith within the dominions of the Spanish crown, or while the ships were anchored in the ports. The local inquisitor disobeyed these orders, and on 21st Dec. 1597 some of Wingfield's companions were among eleven Englishmen dealt with at a public *auto de fé* by imprisonment, confiscation of goods, etc.

The Spanish Inquisition came to be detested by orthodox Spaniards.¹ A young priest named Padron was admitted about 1790 to discussions with Protestant ministers at the house of George Washington in Philadelphia (the date and place are highly significant). Being asked how he could defend a Church that had invented the Inquisition, he attacked the Spanish Inquisition, declaring it to be the work not of the Church, but of the royal power, and to be contrary to the spirit of the gospel. Franklin invited him to preach this publicly, which he did in the Roman Catholic church of Philadelphia. The sermon was translated into English, and repeated by a parish priest to an enormous audience. Padron then toured the States with the same theory. Such was the story told by Padron in 1813, when he was deputy from the Canaries to the Cortes of Cadiz, met to discuss the suppression of the Inquisition. He denounced it there as a spurious growth, a clog upon the Church, an insult to Spanish loyalty to Catholicism, and a usurpation of episcopal authority. Such attention did his speech attract that it was translated by the English admiral and published.²

Meanwhile Joseph Bonaparte, who had suppressed the Inquisition in 1808, turned over the archives to Llorente, its former secretary, that its history might be written. The results were published in Paris, 1815-17, much to the subsequent discomfort of the author. His accuracy was challenged but never disproved, and an English abridgment appeared in 1826. Meanwhile Ferdinand VII. had restored the Inquisition, but it was again abolished in 1820.

The theory propounded by Padron was elaborated and defended by Joseph de Maistre, a Savoyard whose works include a treatise on the Spanish Inquisition, and a book entitled *The Pope; considered in his Relation with the Church, Temporal Sovereignities*, etc.³ The latter work, originally published in 1815, is a classic for Ultramontanes, and the modern starting-point of the development culminating with the Vatican Council. His theory has the great advantage for orthodox Roman Catholics that they can lay the blame of the excesses of the Inquisition on royal shoulders, not on papal. To American readers they can protest:

'The authority of the Inquisition began and ended with the crown. . . . When I denounce the cruelties of the Inquisition, I am not standing aloof from the Church, but I am treading in her footsteps. Bloodshed and persecution form no part of the creed of the Catholic Church.'⁴

It is further possible to praise the pope for 'preventing the Spanish Government from establishing its Inquisition in Naples or Milan, which then belonged to Spain, so great was his abhorrence of its cruelties.'⁵ This appears to imply that the Inquisition in Calabria was not the Spanish, but the papal, as T. M. Lindsay also implies; so that the treatment of the Waldenses at Cosenza from 1555 to 1561 was the work of the Holy Office more directly.

'They were exterminated by sword, by hurling from the summits of cliffs, by prolonged confinement in deadly prisons,

at the stake, in the mines, in the Spanish galleys. One hundred elderly women were first tortured and then slaughtered at Montalto. The survivors among the women and children were sold into slavery.¹

It is regrettable that the sword was used for the effusion of blood, for 'the Popes denounced and laboured hard to abolish its sanguinary features,' says Gibbons.² On the whole theory of de Maistre, be it noted that the Spanish Inquisition was based on a papal bull, and was enlarged by a papal brief of 1571, that popes heard appeals from the Inquisition, exempted whole classes from its scope, and intervened often in its doings. As in 1816 torture had been abolished in all the tribunals of the Inquisition, it is hard to see why the popes had not exercised their authority, which had availed to suppress Templars and Jesuits, to curb the Spanish Inquisition.

(b) *The Netherlands*.—Motley has told in detail how Charles V. and his son Philip of Spain dealt with the Low Countries. In April 1522 Charles appointed Van den Hulst as inquisitor-general, and by brief in June next year Hadrian VI. commissioned him to act concurrently with the episcopal inquisitors. Emperor and pope acted most harmoniously; Clement VII. and Paul III. confirming the successive heads, Charles issuing their instructions. Philip confirmed these instructions before he had been a month on the throne, besides appointing fourteen new bishops, each with two special inquisitors. It was asked why the Spanish Inquisition was not introduced, and Philip explained to his half-sister, 'L'Inquisition des Pays-Bas est plus impitoyable que celle d'Espagne.'³ A few illustrations of his statement may be given; details will be found in T. J. van Braght, *Het Bloedigh Tooneel*, Dort, 1660, Eng. tr., Lancaster, Pa., 1837; and Gorrit Brandt, *Historie der Reformatie*, Amsterdam, 1677, Eng. tr., London, 1720-23.

The town-clerk of Antwerp was obliged to stand on a platform, to retract certain opinions said to be set forth in a preface that he had written, and to burn the book; he was then imprisoned and banished. Jan Walen of Krommenledijk and two friends were bound to stakes with chains, and, a fire being laid round them, they were slowly roasted to death. This form of capital punishment was reserved for Anabaptist men, the women being drowned. When the Anabaptists tried to emigrate, five vessels on which they were sailing were sunk with all on board; the others were taken back, and the heads of the leaders were exposed on poles. After eight years of this the Anabaptists began to defend themselves, and the fall of Münster was the signal for a special edict against them. Men who made converts were to be burnt to death; men who were re-baptized but recanted were to be slain with the sword, women were 'only to be buried alive.'⁴

The papal-imperial Inquisition of the Netherlands must not be confounded with the ancient episcopal Inquisition, nor with the secular Council of Tumults created by Alva in 1567. This dealt not with heretics, but with traitors;⁵ treason was defined so as to include signing petitions against the Inquisition and tolerating field-preaching. By this time there were other heretics than Anabaptists, and these were more defiant. Alva wrote to the king saying that early one Ash Wednesday he had arrested 1500 in bed, and adding, 'I have ordered all of them to be executed.' Before long there was an insurrection, which did not, and does not, seem to be regarded with such horror as the defence of Münster. By 1607 the Spaniards had to own themselves beaten so far that the northern provinces were treated as independent. From that day the Netherlands has been the home of religious freedom, where the new theory assailing the foundations of persecution took shape and whence it was spread abroad.

2. A political expedient.—In the cases considered thus far the impelling motive was religious, the emphasis being laid on the peril to the soul. But persecution has often sprung from another motive—the desire to unify and consolidate the State. This may be illustrated from the history of Germany, England, New England, Russia, France, and Portugal.

(a) *Germany*.—The precedent was set here by the Elector of Saxony in 1528, when he sent Melancthon and other visitors round his domains with instructions to deprive nonconforming priests and to banish dissenting laymen.

'For the prevention of mischievous tumult and other inconveniences, we will suffer neither sect nor separation in our territory.'¹

Three years later Melancthon considered the fate of Mantz, drowned at Zurich by the Zwinglians, and he wrote to Myconius that the Anabaptists were diabolical and not to be tolerated; their leaders everywhere ought to suffer the utmost punishment.² He and Zwingli based their views on the political need of unity, for no Anabaptist had given sign of active resistance. The policy was crystallized into the maxim for Germany, 'Cujus regio, illius et religio.' This was applied against Lutherans in 1731, when some 300 representatives assembled in Salzburg to consider the danger in which they stood. They entered into a salt-covenant to hold fast to the evangelical faith. This was treated as rebellion; soldiers were quartered on all evangelical families; and on 31st October all were ordered to be banished because of the covenant. Most went to Lithuania, and a few to Georgia in America, which was founded for their benefit by Oglethorpe.

(b) *England*.—The Tudors laid stress upon uniformity, which was almost unknown before, as they believed that it was necessary to make and keep England great. Henry VII. applied the method in secular departments, his son in ecclesiastical affairs. A dramatic exhibition was given when on 30th July 1540 six preachers were drawn from the Tower of London to Smithfield, where three were burned for heresy and three were hanged and quartered for treason in denying Henry's supremacy over the Church. Three Acts of Uniformity were passed under Edward and Elizabeth; similar enactments were frequent for half a century after 1640. Ejectments of clergy who failed to change quickly enough were common till the reign of William and Mary. Persecution was most violent under Mary Tudor and Elizabeth. The former acted on the advice of Spaniards, and doubtless from religious motives. S. R. Gardiner³ reckons that in three years 277 persons were burned to death for their religion. Elizabeth reverted to her father's ideal, and aimed at a united England; as she sought a *via media*, she had to deal with two parties. The Roman Catholics, who reckon 253 martyrs from Cardinal Fisher in 1535 to Archbishop Plunket in 1681, claim 189 in the reign of Elizabeth, who must be allowed the benefit of the plea of her father and Alva, that these men were executed for treason; and, further, that most of them came to England knowing the law and intending to defy it; that the pope had by bull deposed her and absolved all persons from allegiance; that most of the accused could be pardoned on taking the oath of allegiance. On the other side, Dutch Anabaptists were burned; English Separatists were hanged, imprisoned, fined, or banished. The legislation of 1593 typifies the Tudor position. Popish recusants were confined to a circle of five miles round their birth-place. The balancing Act

² *Ib.* p. 180, quoting Corp. Ref. II. 542.

³ *Student's History of England*, London, 1892, p. 427.

against Protestants decreed that any person refusing to come to his parish church had the option of forfeiting all his property and going abroad permanently or of being executed. Under this Act six Baptists were condemned to death as late as 1664; it was to avert the scandal of such an execution that Bunyan was illegally detained in prison for twelve years.

The distinction between spiritual and secular was retained. An ecclesiastical court only excommunicated, but, if an accused person did not make his peace within forty days, the fact was signified to Chancery, whence a writ went to the sheriff to arrest and imprison until the ecclesiastical court was satisfied. The last case of burning for heresy occurred in the reign of James I., and it gave such scandal that no later writ of *significavit* is extant. From that time the High Commissions became the favourite courts. Penalties now seldom amounted to death. Roman Catholics were either fined £20 a month or, if that did not affect them seriously, deprived of two-thirds of their lands. For Protestants prison and branding were preferred. Dorothy Trask died in 1645 after having been fifteen years in jail for the crime of regarding Saturday as the Sabbath.

The period 1640-60 must be separately studied. After that the reign of Charles II. showed the intensified difficulty of the situation, which again was met by violent persecution, always under the forms of law. Charles had the task of trying to restore unity, when Dissenters plotted with Holland and Roman Catholics with France, when the navy yard struck if the new Conventicle Act was enforced, and Parliament voted no money till it was carried out. The jails were crowded: in December 1661 there were 289 Baptists in Newgate alone; a year later there were 214 Baptists and Quakers. Even in 1672, on the intercession of a Quaker who had assisted his escape from England twenty years before, Charles found 491 men to deliver from prison, whose sole offence was peaceable worship outside the parish churches. Fearing that his crown was in danger if the persecution continued, the king issued a declaration of indulgence, and licensed 4215 dissenting teachers or houses. Next year, on financial threats from Parliament, he withdrew the declaration. As it was supposed to have been prompted by favour to the Roman Catholics, popular fury turned towards them, and a series of judicial murders took place on the initiative of some perjurers. Then the saw dipped on the other side; more ministers died in jail; and after the abortive invasion of Monmouth the progress of Jeffreys gave rise to a new Western martyrology.

Peace was restored to England only by the compromise of 1689, which conceded a limited freedom of worship at the cost of civil disability. Since then persecution has been either sporadic or illegal, or of the privative kind which confines franchise, office, and emoluments to certain favoured classes.

(c) *New England*.—Much less known is the action of the Pilgrim Fathers. In 1650 they passed a law forbidding people to meet on the Lord's Day from house to house in Plymouth.¹ On 2nd October nine men and women were presented for so doing. There was no suggestion of any riot; they were worshipping quietly. Governor William Bradford, who signed that law, had four years before described the early experience of himself and his friends, keeping 'their meetings every Sabbath in one place or another, exercising the worship of God among themselves.'² He must

have had a very strong sense of the need of keeping his little colony homogeneous. Under his successor the Pilgrims used the stocks, the cage, the jail; they fined, confiscated, whipped, banished, till the Restoration ended their scandalous doings.¹ When such things were done in the green tree of Plymouth, the state of affairs may be readily imagined in the dry tree of Boston. There the persecution culminated in hanging four Quakers on the common early in 1660. But the Puritans at least were thoroughly consistent, and acted from loftier motives. With them the desire for a unified territory was accessory to a genuinely religious feeling, as with Calvin, whose conduct in the case of Servetus had set them the example.

(d) *Russia*.—In few lands is there such close blending between Church and State as in Russia. It arises out of the circumstances in which Muscovy achieved independence. The clergy did much to promote the organization by which the rule of the Muslim Mongols was ended, and the invasion of the Roman Catholic Poles was repelled. Before the 15th cent. ended, a grandson of the Kaiser at Constantinople had as Tsar transplanted the Byzantine traditions to Moscow, whose archbishop he caused to be recognized by the four Eastern patriarchs as a fifth colleague. The royal house soon died out, and a grand national assembly chose a son of the patriarch to be Tsar. In the middle of the 17th cent. the patriarch Nikon instituted many reforms with the support of the Tsar and of all the bishops but one, who was deposed, flogged, and kept in prison till he died mad. The laity and many clergy resisted; persecution led to civil war. In 1667 Nikon was deposed by an ecclesiastical council, but the schism continued; even to-day, after constant oppression, the Old Believers are supposed to number 12,000,000. Peter the Great averted the risks arising from future pretensions of any patriarch by abolishing the office and instituting a holy governing synod, composed chiefly of bishops nominated by himself, and presided over by himself or a lay deputy—very like a Tudor High Commission with Thomas Cromwell at its head. This change was enforced by more persecution, and a new rebellion was subdued.

Two generations later Catherine II. took over all the capital of ecclesiastical property, paying the clergy and monks regular salaries; it was a good precedent for the French National Assembly, though the Ecclesiastical Commission of 1836 applied the principle in England only to the bishops. But Catherine's extension of boundary brought under her sceptre Lutherans of the Baltic and Roman Catholics of Poland, so that the homogeneous province of 1600 has swollen to a heterogeneous empire, with new ecclesiastical problems. To-day in a population of 125,000,000 there are 14,000,000 Muslims and 5,000,000 Jews, the persecution of whom is not here dealt with; in the Christian population Roman Catholics, Lutherans, Old Believers, and Armenians are large factors, though altogether they are not a quarter of the number of the State Church. In theory there is a general toleration; in practice there is nothing of the kind.² Propaganda is forbidden; at the best of times a minister of a sect can be registered only for one building and one congregation, while police frequently attend to watch. Prison, flogging, removal to the Caucasus or Siberia, and exile are the constant experience of such ministers, and also of many lay Dissenters.

(e) *France*.—The religious wars of the 16th cent. resulted in the Edict of Nantes securing a certain privileged position of toleration to the Huguenots

(g.v.). Louis XIV. could not brook such division, and, prompted by others with different motives from his, he set to work to unify his realm. Bitter persecution led up to the revocation of the Edict of Nantes in 1685, the expulsion of all ministers, and the most strenuous measures for the conformity of the laity. The reaction came with the French Revolution a century later, but the proclamation of 'liberty, equality, and fraternity' on 14th July 1789 proved illusory. The National Assembly adopted Catherine's plan with ecclesiastical property, and went farther. The monastic orders were abolished, and a new civil constitution was framed for the Church. Of 136 bishops only four took the oaths, and 79 new prelates had to be found; the parish clergy resisted, and 600 are said to have been massacred at Avignon alone. The Legislative Assembly was anti-Christian. It ordered Paris to be cleared of priests, and three weeks later 300 clergy were massacred in prison, thus ushering in the Reign of Terror. This culminated in November 1793, when Christianity was formally abolished, and the existence of God was denied.

(f) *Portugal*.—This country affords an earlier case when a great Roman Catholic corporation suffered persecution. In 1750 the kingdom was under clerical influence, especially that of the Society of Jesus.¹ A series of economic reforms, the organization of trading companies, and the development of the colonies brought the State and the Jesuits into sharp collision. If Richelieu would not tolerate an ecclesiastical *imperium in imperio*, no more would Pombal. In 1759 the Society was expelled from all the Portuguese dominions, and its funds were sequestered. In extenuation of this action, it may be pointed out that the governments of France and Spain, also staunchly Roman Catholic, felt obliged to take similar steps eight years later, that the pope refused to permit the Spanish Jesuits to land in Italy, that even the Austrians withdrew support, and that the next pope suppressed the whole order for ever. He set in the forefront of his reasons that the Jesuits ruined souls by their quarrels and their compromises with heathen usages. The bull has never been withdrawn. Another pope, equally infallible, reconstituted the order, which silently re-established itself in Portugal, and was a second time expelled in 1834, and a third time in 1910. On neither occasion was any action taken against the Roman Catholic hierarchy and parochial organization or against public worship. The State has thrice been obliged to defend itself against a powerful international organization, whose character was declared by the papacy to be bad. Roman Catholicism is still the religion of Portugal. The constitution both permits the Protestant religion and lays it down that no one can be persecuted for religious reasons so long as he respects the religion of the State and commits no offence against public morals. Nor is this a dead letter; a priest who in 1904 caused a Protestant worker to be assaulted and robbed was sent to prison for 35 days.

3. A political blunder.—When different religious parties were more evenly balanced, the rulers sometimes saw that the only chance of internal peace was a wide toleration, and that persecution would be a mistake. An early example is found in Poland, where, to avert civil war, Calvinists and Lutherans were tolerated from 1552, and Mennonites were invited by the king to come and settle, with the promise of religious freedom. On his death a compact of Warsaw during the interregnum assured on 28th Jan. 1573 absolute religious liberty to all 'dissenters from the religion.' So also in

the Netherlands, where William of Orange, himself successively Catholic, Lutheran, Calvinist, had to insist that there must be mutual concessions as the price of bare existence in the face of Spanish troops. He carried his point first in 1576 with a Pacification of Ghent and again in the Union of Utrecht.

Rulers were assisted to see their way to this, by the wide acceptance of a new political theory originated by Calvin,² published in his *Institutes*, and thus spread over the whole Western world. It reached English readers first in the *Politike Power* of Bishop John Ponet, 1556:

'Men ought not to obey their superior that shall commaunde them to doo anything against Goddes Word. . . . Princes abusing their office may be deposed by the body of the whole congregacion or commonwealth.'

Five years later all could read Calvin's closing words:

'If they [the three estates in every realme] winke at kinges wilfully raging over and treading down the poor communalitie . . . they deceitfully betray the libertie of the people, whereof they know themselves to bee appointed protectors by the ordinance of God.'³

Acting on Knox's exposition of this theory, the Scots deposed the queen regent in 1559, and the parliament ratified the Revolution on that ground. Beza's *Droit des magistrats* (1573) and Philippe de Mornay's *Vindiciae contra Tyrannos* (1579) gave full scope to the theory; and in 1581 the Estates of the Netherlands solemnly deposed Philip, justifying the act in their declaration of independence.

The Italian jurist Hieron Zanehius, teaching in Germany, added to Aquinas's doctrine of passive resistance the obligation to active resistance.

'If for the sake of religion you oppose yourself to the king, you oppose yourself not to power but to tyranny, and unless you do so oppose yourself, you act contrary to divine and human law.'⁴

The doctrine was repeated at Heidelberg by the German David Pareus:

'Inferior magistrates may justly, even by arms, defend the commonwealth and church or religion against a superior magistrate.'⁵

His book had the honour of being burned by James I., who blinded himself to the fact that most of his thinking subjects accepted this theory.

These books were chiefly political, many by lawyers and statesmen; they were widely circulated and translated. England demanded new editions after 1640, and the dogma that persecution for the sake of religion justifies armed resistance and deposition led again to appropriate action. And, whereas the Continental thinkers were from the upper ranks, it was a representative council of the army which in August 1647 drew out sixteen proposals as the basis of a treaty with the king. One proposed to abolish all coercive power in ecclesiastical officers, another to repeal the Uniformity and Conventicle Acts, a third to make the recent Covenant voluntary rather than obligatory. Two months later a body of democrats presented to this council a manifesto styled 'the Agreement of the People,' which they considered and amended. After an interlude of a second war the army presented it formally to the House of Commons in January 1648-49.

The ninth clause deals with religion, and provides 'that, to the public profession so held forth, none be compelled by penalties or otherwise; . . . that such as profess faith in God by Jesus Christ, however differing in judgment from the doctrine, worship, or discipline publicly set forth, as aforesaid, shall not be restrained from, but shall be protected in, the profession of their faith and exercise of religion, according to their consciences, in any place except such as shall be set apart for the public worship.'⁶

This document is the careful definition of 'the Good Old Cause' for which the army declared itself to have fought. In the Instrument of Government (16th Dec. 1653), defining the constitution under which the Commonwealth was governed, the above provisions were incorporated word for word.

The nation was by no means ripe for such ideas, and the six years of the Protectorate did not educate it as the forty-five years of Elizabeth had done. Moreover, from the beginning Cromwell was recreant. When he confined recusants within their radius of five miles, he was only continuing Elizabeth's plan, and availing himself of a special exception in the Instrument. When he heavily fined prelatists who rebelled, he again applied Elizabeth's plan, and might say that rebels came off lightly with only fines. But he forbade ejected ministers to teach in schools, and set new precedents of persecution destined to be used against his supporters. And he turned on them also; orders went to Scotland to see that no Baptist should teach in a school or hold any office of trust. Faithless to his own express announcement a few years earlier that the State regarded efficiency and not opinions, Cromwell did the very thing that he had forbidden Crawford to do, and weeded the army of Baptist officers. Before his death he was persecuting many parties, and was fiercely denounced by the leaders of 1647, some of whom republished the Calvinist doctrine in the pamphlet *Killing no Murder*, in May 1657. After his death 'the Good Old Cause' revived, but its leaders were in a minority, and, with the restoration of the Presbyterians to power in 1659, persecution was both legalized and practised freely for a generation.

The literary campaign continued, dealing with the political aspects of the matter; and it called forth writers of very different types. Sidney and Locke were of the Christian school; the essay *Concerning Toleration* was drafted at Oxford during the cruelties of 1666, but was completed and was first published most appropriately in Holland.¹ Almost immediately Parliament accepted the view that persecution had failed to secure unity and was a political blunder. The Toleration Act was passed in 1689. The Rainbow Club of the Huguenots discussed the matter, and P. Bayle's *Dictionnaire historique et critique* (4 vols., Rotterdam, 1697) leavened Continental thought. Voltaire, after an English sojourn of 1726-29, returned to ring the changes for half a century on the motto 'Ecrasez l'infame!' 'Down with persecution!' The deists and the unitarians took up the cause. It found champions such as Mill, Buckle, and Lecky. A statement from an agnostic standpoint was republished in 1893 by Leslie Stephen in his essay on 'poisonous opinions.'²

4. A sin against God.—There was a momentary glimpse of this view by Luther at Worms, but he soon lost sight of it; and the familiar confessions of the Reformation admit the right of the civil authority to coerce in matters of religion. Specially noteworthy is the general unanimity of Calvinist theologians in affirming not only the absolute independence of the spiritual courts in matters spiritual, but also 'the duty of the civil authorities to carry out their spiritual sentences to their appointed civil consequences.'³ Against such a doctrine the continuous, direct, and elaborate Biblical indictment of persecution begins with Englishmen, enjoying the actual liberty secured at Amsterdam by the wisdom of William in the teeth of the Calvinist ministers.

A group of exiles from Gainsborough set down twenty short propositions in 1609, one stating that excommunicated persons are not to be avoided in what pertains to civil affairs. This was soon complemented by this statement:

'The magistrate is not by virtue of his office to meddle with religion, or matters of conscience, to force and compel men to this or that form of religion, or doctrine; but to leave Christian religion free, to every mans conscience . . . for Christ owleth is the king, and lawgiuer of the church and conscience.'¹

In 1614 a citizen of London residing in Holland presented to King James a small book called *Religious Peace: or a plea for liberty of conscience. Wherein is contained certain reasons against persecution for religion*. Next year appeared another little work, *Objections answered by way of dialogue, wherein is proved . . . that no man ought to be persecuted for his religion, so he testifie his allegiance by the oath appointed by law*. In 1620 another pamphlet came from the same group, *A most humble supplication of many of the king's majesty's loyal subjects . . . who are persecuted only for differing in religion, etc.* Eight editions appeared of these three works, quite apart from antiquarian reprints.²

The next assertion of the principle of liberty was made, not against the Stuarts, but against refugees from them who reproduced their policy on Calvin's principles. Anne Hutchinson arrived in Boston in 1634, was refused admission as a member of John Cotton's church, and so began a conventicle in her home. As Cotton tried to stop it, Roger Williams copied out some extracts from the 1620 book and sent them to him, initiating a war of pamphlets. The Company formally forbade new churches to organize without consent of the officers and of the elders in existing churches; whereupon the elections turned on this prohibition. The sitting governor was defeated, and Henry Vane, the champion of freedom, was chosen; but with 1637 the persecutors returned to power. They secured their victory by expelling Mrs. Hutchinson, Williams, and many other opponents. Others left in disgust, some going to Connecticut, but Vane to England, where he continued his championship against the Scots commissioners in the Westminster Assembly, breaking with Cromwell in 1650 largely on the same issue, and being imprisoned by him in 1656 because he protested against the Protector's persecution of the Episcopalian clergy.

Meanwhile the victorious ministers and elders on Massachusetts Bay followed up many refugees, and tried to assert authority over the Island of Rhodes. Williams was sent to London to secure exemption from the Company's jurisdiction. There he published in 1644 a long criticism dedicated to Parliament and entitled, *The Bloody Tenent of Persecution, for Cause of Conscience, discussed*. This is a standard work, examining the question on a Biblical basis. It led to a long debate in New England.

Old England also was roused to the question. Christopher Blackwood proclaimed that compulsion of conscience was a pillar of Antichrist. Seven London Calvinistic Baptist churches, issuing a confession of faith, were equally clear, and, as the confession was keenly criticized, they revised it, and dedicated it to Parliament, which was about to enforce uniformity. They declared that they would willingly submit to all civil laws, but could not submit to some ecclesiastical laws; therefore they would accept the consequences in persecution.

One of the signatories took stronger ground next year, propounding 50 questions to the Assembly of Divines on the subject of compulsion. Obtaining no answer, he expanded them into a book on the

necessity of toleration, with a long title defying the Assembly and Parliament. This he printed and published without the censor's imprimatur.¹ The same year Rhode Island codified the laws passed hitherto without legal authority. On 10th May 1647, summing up what had been already stated and acted upon for nine years, the four towns enacted under their charter that 'all men may walk as their consciences persuade them, every one in the name of his God.'²

Two years later Lord Baltimore, Roman Catholic proprietor of the colony of Maryland, sanctioned a Toleration Act which drew the line only at two points: reproachful words against the Virgin Mary were punishable with fine, whipping, and banishment; denial of the Godhead of any of the three persons of the Trinity entailed confiscation of goods and death. This law, however, was repealed five years later after a revolution, when the Puritans from Virginia obtained the upper hand; they banned 'popery, prelacy, and licentiousness of opinion.'³ The policy and practice of Rhode Island remained unchanged. Jews were welcomed as settlers, and enjoyed the right of public worship as early as 1658. Five years later a charter was obtained from Charles, with a provision that 'no person within said colony at any time hereafter shall be in any wise molested, punished, disquieted or called in question for any differences of opinion in matters of religion.'⁴ Thus the theories adopted and expounded by Englishmen fifty years earlier had won their way to permanent embodiment under the auspices of the same religious communion. Freedom was won, and was not used selfishly to enslave others, but was held for all as a trust from God.

5. The antithesis in practice.—Issues were now fairly joined, and the results exhibited. Persecution was either a duty to God or a sin against God. The results in a few countries may be glanced at.

The Provincial Congress of Massachusetts on 9th Dec. 1774 resolved in words 'that the establishment of civil and religious liberty to each denomination is the sincere wish of this congress';⁵ but no deeds followed. In August 1789 a committee of the Baptist churches in Virginia memorialized Washington, and next month the first amendment to the draft constitution of the United States declared that Congress should 'make no law respecting any establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press.'⁶ In 1832 even Massachusetts, the earliest and the latest home of intolerance and persecution, gave up the relics of the union of one favoured Church with the State.

Progress was slower in England. Money penalties were exacted regularly in the city of London till a legal decision of 1767. Tithes are even yet payable throughout Great Britain to the Established Churches. Freedom of the press came almost by an oversight, not because of Milton's *Areopagitica*. Persecution under legal forms continued till after the Napoleonic wars, when, at the cost of acquiescing in large money grants to the Church of England, Dissenters obtained the repeal of the Conventicle Act; the Test and Corporation Acts also disappeared in 1823. Only within living memory have the grammar-schools and universities in England been opened again to all, or offices

been made technically available. Still there is a social boycott in many respects; in some towns no one need hope for the mayoralty, whatever eminent services he may have rendered, unless he will be at least an Occasional Conformist.

Latin America was long governed by men imbued with Roman Catholic ideals. After the political revolts last century the opposition was headed by men largely indifferent to religion, if not actively hostile. A typical case is Mexico; the issues were clearly stated, and literally fought out between 1857 and 1867. The *Plan de Tacubaya* upheld the special rights of the Roman Catholic Church, Roman Catholicism as the sole religion, and censorship of the press. The liberals fought for freedom of religion, freedom of the press, nationalization of Church property, and abolition of special tribunals for ecclesiastics. They won, but the temper of the clericals remains. In 1887 the *Defensa Catolica* declared that 'true charity consists in opposing one's neighbour, in injuring him in his material interests, in insulting him and in taking his life, always supposing that it is done for love of God.'¹ This is not empty talk. At Atzala in 1876 a Protestant church was set on fire during service, and, as the worshippers came out, they were hewn down by a fanatical mob. Even in 1898, at Irapuato, a Protestant girl was dragged to the public square and threatened with burning.

Some other States have not yet reached the Mexican position even in theory. The fourth article of the Peruvian Constitution declares that 'the nation professes the apostolic Roman Catholic religion; the State protects it, and does not permit the public worship of any other.'² The penalty is no longer death, but there are severe disabilities. In practice every one doing Protestant work must be prepared to risk his life. In 1909 a colporteur was mobbed at Dorces do Turvo in Brazil, the priest calling on the people to burn him. In Paraguay a priest stirred up the people to kill the heretic if he did not leave, and he was restrained only on an appeal to the government. Nor are such incidents peculiar to the other side of the world. Tales like these are constantly being reported as to Roman Catholic priests on the Continent. In the diocese of Trier a worker finds a priest walking beside him all day and every day, warning the people; in Styria, Italy, and Brittany workers are boycotted, food is refused, and any one who heeds them is threatened with eviction; mobs are raised against them in Carniola and Posen; they are arrested illegally in Lemberg, Spain, and Portugal. So strong is Roman Catholic influence in these countries that protection can seldom be obtained, redress hardly ever. Such conduct is the logical issue of the Roman Catholic theory. Under necessity a Roman Catholic may indeed abstain from molesting a heretic; only, as one of themselves states it, 'if expedient, he would imprison you, fine you, possibly he might even hang you. But be assured of one thing, he would never tolerate you for the sake of the "glorious principles" of civil and religious liberty.'³

Against such dangers the counter-measures of Portugal in 1910 have already been noted. Very similar measures had been constitutionally taken by France between 1901 and 1905. Religious orders were forbidden to teach in school; then they were dissolved; Napoleon's concordat with the Vatican was formally abrogated; liberty of conscience and

the free practice of public worship were guaranteed to all.

But, when a State finds itself confronted by a great international organization like the Roman Catholic Church, powerful enough to defeat Bismarck in fourteen years and make him come to Canossa despite his defiance, then even ordinary legislation seems sometimes insufficient. It is no small tribute to the insight of the Rhode Islanders that in 1638 they drew the line between freedom of worship, assured to all, and the franchise, granted only to those who upheld that principle as fundamental. They were careful to have the distinction made again in their charter of 1663, which guarantees absolute religious liberty to all settlers, whether freemen or not. And substantially the same point is made in the Constitution of 1789; freedom of worship is promised to all, but no one can become a citizen of the United States without acceding to that constitution which promises it. Americans discern that an unlimited toleration risks suicide; those who would persecute, had they the power, are not admitted to power. Roman Catholics therefore try to minimize their principles in the United States. Gibbons has a chapter glorifying civil and religious liberty, which opens thus:

'A man enjoys religious liberty when he possesses the free right of worshipping God according to the dictates of a right conscience, and of practising a form of religion most in accordance with his duties to God. . . . The Catholic Church has always been the zealous promoter of religious and civil liberty.'¹

But two years later the pope declared:

'That kind of civilization which conflicts with the doctrine and laws of Holy Church is nothing but a worthless imitation and a meaningless name.'²

He blamed severely every State which grants 'equal rights to every creed, so that public order may not be disturbed by any particular form of religious belief.' In his encyclical on catholicity in the United States it gave him pleasure to acknowledge that this was exactly the state of affairs there. In another on allegiance to the French Republic in 1892 he declared that the separation of State and Church was equivalent to the separation of human legislation from Christian and divine legislation, an absurdity. Writing on the chief duties of Christians as citizens, he stigmatized it as an act of consummate wickedness to ignore the rights of the Church under pretext of keeping the civil law; in contrast he required 'complete submission and obedience of will to the Church and to the Roman Pontiff as to God Himself.'

American statesmen realize the issues. One vice-president wrote:

'The immigrant . . . must learn that we exact full religious toleration and the complete separation of Church and State.'³

Grover Cleveland declared at his inauguration:

'He who takes the oath to-day to preserve, protect and defend the constitution of the United States, only assumes the solemn obligation which every patriotic citizen . . . should share with him.'⁴

No Roman Catholic has ever been faced with the conscientious problem involved in taking that oath, but every alien who desires naturalization shares the obligation to the extent of swearing to support the constitution. An official message of another president states plainly that against all who come to war upon free speech, a free press, free thought, free schools, the free and unmolested right of religious liberty and worship, the gates must be promptly and tightly closed.⁵

Such utterances of statesmen are based only on

political grounds of expediency. It is well to recur to the fundamental religious differences.

'The true Church,' says Joseph Pöhl of Breslau, 'can tolerate no strange Churches beside herself. . . . She regards dogmatic intolerance not alone as her incontestable right, but also as a sacred duty.'¹

G. H. Joyce states that 'the right of the Church to invoke the aid of the civil power to execute her sentences is expressly asserted by Boniface viii.' This, he adds, is theologically certain, but practically impossible at present.²

The counter-theory was lucidly expressed more than 300 years ago by Leonard Basher:

'It is sin for kings and governors to destroy their subjects for difference of religion, at the persuasion of their bishops.'³

LITERATURE.—This is indicated in the article.

W. T. WHITLEY.

PERSECUTION (Indian).—In the indigenous literature of India, whether Vedic or classical Sanskrit or of more recent date, there is little that would suggest the existence of a state of religious persecution. References are abundant to the rivalry of creeds and systems, giving evidence of conflicting beliefs and the worship of many gods, whose spheres and authority are not always reconcilable. Previous, however, to the irruption of Muhammadanism, whose fierce and intolerant character is reflected in its records, Indian literature shows little trace of religious differences composing themselves by other than peaceful means. This result is perhaps to be anticipated on the basis of two considerations at least. (1) On the one hand are the nature and contents of the literature itself, wanting as it is for the most part in the historical element. The motive power of the persecution may be religious bigotry or zeal, but its conduct and execution are within the domain of history, and, where the records fail, deeds of persecution may also pass unnoticed. Moreover, the early literature is the creation of Brāhman writers, and has been preserved almost entirely in the hands of the dominant caste, and gives expression to their point of view. They would be little likely perhaps to record deeds of violence and wrong done to others whom they regarded as inferiors, especially where religious prejudice entered into the account. Such acts would either be unheeded, as in the natural order of things, or be as speedily as possible consigned to oblivion, as occasion not for boasting but for silence. That the latter argument does not in all instances hold good the example of Muhammadan historians serves to prove.

(2) Indians also, like all Orientals, are naturally tolerant of variant belief. Differences appeal to them ordinarily as basis for discussion and controversy, not for violent repression; and the victory at which they aim is dialectic, and relies upon argument and persuasion, not upon brute force. It is only under the influence of excitement, as at the great festivals, or of pressure from without that they endeavour to put down religious differences with a strong hand, and to enlist authority and the social order in the service of creed and the rights and privileges of an established faith. In this respect the change in Indian feeling and practice within the last half century has been most marked (see below). Under such circumstances all Orientals are liable to passions of frenzy, which exhibits itself in deeds that have little relation to the ordinary rules of conduct and life.

Although the early and successive invasions of the Aryans brought into the Panjāb and N. India a cult differing from and superior to the crude animism of the aboriginal tribes of Dravidian or other origin, in the course of which the latter were either destroyed or more usually became the bondmen and slaves of their conquerors, there is

¹ CE xiv. 766.

² CE xii. 266.

³ *Tracts on Liberty of Conscience*, p. 41.

no indication of religious animosity or persecution. If the *Atharvaveda*, as is probable, gives expression to the thought and religious habit of these primitive peoples, the contact inspired contempt and abhorrence in the minds of the ruling caste, but the ultimate issue was stringent non-intercourse, not forceful repression of distasteful opinions and practices. A broad and simple animism, whether of a more or less advanced character, is indeed little likely to persecute in the name of religion. Neither are its convictions sufficiently deep and strong, nor are they differentiated in sufficiently marked a degree from the beliefs and usages of the surrounding animistic tribes of lower culture. It is the higher religions, with more definite conceptions and securely held creeds, that deliberately adopt a policy of compulsion towards those whose cherished beliefs differ from their own.

There is therefore little or no real evidence of persecution in India even on a limited and local scale prior to the advent of Islām. In the Hindu law-books and elsewhere references are to be found to atheists and heretics, but they hardly convey the impression of an active intolerance, nor do they enjoin repression or interference in any way with heterodox custom or belief. The high-born Snātaka, *e.g.*, is not to honour heretics, even by a greeting.¹ On the other hand, he is not to dispute with them.² Elsewhere atheism is declared to be a minor offence, involving loss of caste.³ The Brāhmana who is an atheist is unworthy to partake of the oblations to the gods and ancestral spirits;⁴ and a kingdom where these prevail or hold rule is speedily ruined;⁵ in such a land the Snātaka should not dwell.⁶ Perhaps the nearest approach to a suggestion of persecution is where the king is enjoined to banish heretics together with gamblers and others from his realm.⁷ There is little indication of ill-feeling, much of the claim to or consciousness of superiority, so familiar in later times. The contact also of ancient Hinduism with the daughter or separatist forms of faith, Buddhism, Jainism, and others, cannot be shown to have been generally, or except accidentally and under unwonted conditions, associated with violence. Orthodox Hinduism has usually been a kindly parent to the numerous rival or reformed sects which have originated from within its broad and tolerant creed during the course of its long history; and most of these after a brief and troubled career have returned into the communion of the faith or church from which they sprang. The mutual relations have been characterized by dispute and controversy, but rarely by active measures of repression, unless these have been provoked by aggressive conduct on the part of the heterodox teachers or communities themselves. Its missionary work also in the days when Hinduism was an expanding force was accomplished, as far as we know, by peaceable means, not by compulsion.

This is essentially true of the relations and intercourse between Hinduism and its greatest rival in India, Buddhism. The causes and history of the disappearance of the latter from Indian soil are obscure. There is no real evidence, however, that it was hastened by persecution from the side of Hinduism. Natural and perhaps inevitable decay, on the one hand, a revival and rekindling of the national faith, on the other, contributed to a result which was consummated by the destructive and persecuting zeal of the Muhammadan invader. The witness of the Chinese pilgrims, especially of Hsien Tsiang in the earlier part of the 7th cent., is the most instructive in this respect. Their testimony to the wide-spread influence and very numerous

adherents of both faiths in India is unequivocal; but the decline in the numbers and prestige of the Buddhist schools in the experience of the later traveller in comparison with the increasing ascendancy of Hinduism is marked. The rivalry of the two faiths, however, was maintained by keen discussion and argument, and the victories won were victories of persuasion, not of authority and force. It is possible, perhaps probable, that sporadic instances occurred of the use of persecuting methods to secure the downfall of a despised or dangerous heresy or heretical teacher. These were of local and transient importance, and do not invalidate the general rule and practice; and, apart from vague tradition, there are no instances on record where the evidence is sufficient to command assent. In the 9th cent. the great constructive teacher and dialectician Śaṅkarācārya, in the course of his extended travels in the north of India, is said on occasion to have used his influence and success in controversy for the forcible silencing of his adversaries; and of an earlier thinker and philosopher, Kumārila-bhaṭṭa, there is a tradition preserved that he promoted a persecution of the Buddhists. It is doubtful whether in either case the tradition has any firmer basis than the natural desire of later times to glorify the zeal and ascendancy of a famous teacher. A more normal and typical example of the relations between the sects is certainly afforded by Hsien Tsiang's account of the great assembly convened at Allahābād by the emperor Harshavardhana (A.D. 643), when friendly discussions took place between the leaders of the different sects and statues were erected on successive days of the festival in honour of the supreme divinities of the several faiths represented.

With the coming of Muhammadanism all was changed; and the various religious faiths, which hitherto had existed amicably side by side, bent and suffered together before the torrent of fanaticism and lust of conquest that swept over the land. Islām made no distinction between the differing forms of belief and creed that it encountered on its onward march. The adherents of all alike were infidels and idolaters, whose conversion by forcible means, if others failed, was a religious obligation; and death was the penalty of refusing to accept the creed of the conqueror. When the early waves of invasion had spent themselves, and fanatic zeal and hatred ceased to be stimulated by the experience of actual warfare against the infidel, there was a gradual relaxation of the tension. Except when a revival of persecution took place under the influence or at the instigation of a stern and fanatic ruler like Aurangzib, the mutual antipathy of conqueror and conquered learned to accommodate itself to the necessities of a common life. And only at the religious festivals or when the people were carried away by extraordinary excitement was there any manifestation of angry feeling or recrudescence of persecuting zeal. It remained true, however, that, in spite of a not inconsiderable degree of reciprocal borrowing of tenet and observance, the fanatic spirit was and is always present, though latent, and an apparently trivial circumstance may at any time precipitate an outbreak. In the early centuries of conflict and persecution Buddhism seems to have suffered most and very many of its adherents were put to death. Thus the final blow to a faith already decadent, and in process apparently of passing away, was administered by Muhammadan persecuting zeal. The cessation of the more active forms of repression came too late to save the Buddhist faith for India. It lives in Bengal and elsewhere only in the permanent mark which it has left on Hindu usage and belief, and in the borrowed figures and names of Hindu gods.

¹ Manu, iv. 30.² *Ib.* 159.³ *Ib.* xl. 67.⁴ *Ib.* iii. 150.⁵ *Ib.* viii. 22.⁶ *Ib.* iv. 61.⁷ *Ib.* ix. 225.

Towards Hinduism the attitude of the conquerors ultimately became changed. To crush and eradicate the Hindu faith proved impossible. Violent persecutions and massacres were ineffective to bring about an alteration either in the spirit or in the passive endurance of an entire people. Very many, however, suffered death for their religion in many parts of India; and the desolation caused, even if the numbers of the slain have been exaggerated in the somewhat boastful records of the Musalmāns themselves, extended over wide areas, and was with difficulty repaired in the course of centuries. More peaceable relations were brought about when the governing race found its need of the assistance of Hindu ministers and officers of State to control the country and to gather in the revenue. Muhammadan usage and law proved to be inapplicable, and could neither be enforced nor made fruitful of good results in the presence of immemorial prescriptive right and custom tenaciously held. Native administrators, judges, and collectors provided the necessary intermediaries; and the asperity of religious prejudice and dislike on either side was softened by mutual intercourse and the felt need of mutual aid. Thus the two creeds learned to live together for the most part in peace, the dominant faith out of self-interest abandoning its weapon of violence and persecution, and the leaders of the subject peoples lending their aid in the establishment of order and the maintenance of civil right. Fanatical manifestations of the dormant spirit with their accompaniment of strife and murder were never entirely checked. On both sides, however, men of influence were found sufficiently wise and strong to see the evil and discourage the use of force against religious belief. The occasional rioting and outrage which harassed and hindered the growth of tolerance and mutual understanding were due to special religious excitement or the sinister promptings of self-interested and bigoted men. With the extension of inter-communication and with a wider sympathy and knowledge such dissensions will become more rare, and will finally altogether cease. It is probable that the influence of wise and far-seeing leaders of both parties is already sufficiently strong to frustrate other than merely local expression of the persecuting spirit and the lust to destroy.

It is remarkable that the Muhammadan aggression, which completed the ruin of the Buddhist faith upon Indian soil and its expulsion from India, although it took full effect upon the kindred community of the Jains, left the latter with greatly impaired vigour and diminished numbers, but in possession of a religious life and organization which have endured to the present day. Mrs. Sinclair Stevenson, in her recent book,¹ makes the interesting suggestion that the Jain survival and the effective if passive resistance which the community offered to the creed and power of the conqueror were due in part at least to the provision made by them for the participation of the laity in the recognized order and life of the church. Official Buddhism took cognizance only of the monastic rule and estate, and found no place for those who did not feel themselves called upon to assume the monastic vow, or to undertake the duties and share the privileges and hopes of the monk. Jainism recognized and made legal the position of the layman in the ecclesiastical scheme equally with the monk, and thus entered into the national life and secured such a hold upon the affections of the people that it survived the onslaught when less firmly founded Buddhism was overthrown.

Perhaps the most striking example in India of the effect of a cruel persecution in consolidating and defining the religious life of a community is

that of the Sikhs in the Panjāb. Originating in the 15th cent. in a protest against Hindu laxity in morals and idolatry in worship, they found themselves ultimately brought into conflict with the dominant power of the Mughal emperors, and were forced in self-defence to take up arms to maintain their existence and religious liberty. With definite and fixed convictions which they had learned partly from Islām itself and partly from a reformed and purified Hinduism, they were confronted with the alternative of acceptance of the formula and creed of the ruling faith or destruction. They refused to submit to either, but endeavoured rather to maintain their freedom and rights with the sword. The persecution which ensued had the effect of welding a community and organization in its origin purely religious into a militant order and a nation of soldiers, tenacious of military right and norm no less than of creed and faith, who proved their prowess later against the British themselves and in warfare in many lands.

Thus Islām is responsible for the introduction into India of the conception of persecution for the faith, and of its application in the most terrible form of fire and slaughter. When these methods proved ineffective to break the spirit of Hinduism or destroy a national religion, a practical truce was made, due in part to the discovered need for mutual help and support, and the two faiths learned to live more or less amicably together and to tolerate differences of belief and observance. The history of the other great monotheistic religion which found its way to India was altogether different. Christianity in India has never been in a position to persecute, even had the will been present. A weak and scattered minority of the population, insignificant in numbers, the Christians were of necessity apologetic in attitude, and their complete civil and political aloofness left them no choice but to profess and practise toleration of all alien faiths. That this was consonant with their wishes and ideals, and in harmony with their truest interests, is, of course, correct. Nevertheless the aggressive spirit and action of the new religion, and its denunciation of popular religious customs and festivals when these were contrary to true morals and purity of worship, provoked a counter persecution, which in many instances was carried out with the utmost concentration of bitterness and dislike. Moreover, the Indian Christian from the lower castes, whence the great majority of the converts were derived, learned to assert his rights, and refused to render that abject deference to the Brāhman priest or high-caste landowner which for centuries these men had been accustomed to exact. His principles also, the conception of duty with which he had been imbued, and the obligations of his faith, if realized and consistently discharged, forbade him to rest satisfied with freedom to worship God in his own way, but urged him to press upon others with all the force and insistence at his command the acceptance of his own creed and submission to all the rules which his code of faith and morality affirmed. Thus in two respects especially the Indian convert to Christianity found himself in conflict with the usages and beliefs of the people among whom he lived: he refused to recognize the gods whom they revered, but claimed, on the other hand, to have learned the better way of worship of the one true God; and in regard to social relations it was impracticable for him to take part in a family and village life which in nearly all its ramifications was so intimately associated with idolatrous conceptions and practices, or to share the burdens, financial or other, which custom required of the community. His new status, moreover, entailed various civil and legal disabilities, especially in

¹ *The Heart of Jainism*, Oxford, 1915.

regard to marriage and to funeral ceremonies; and these were generally found to press upon him most heavily in the Native States, where the legal code had not yet been advanced to the degree of religious tolerance and strict impartiality enforced in the parts of the empire directly administered by the Crown. These disabilities were the result of loss of caste. The Christian convert was *ipso facto* out-casted, and thereby became unable to fulfil the duties and obligations which were or seemed to be essential to the maintenance of the fabric of Hindu society. In all these instances the initiative in persecution and in a social boycott which entailed very serious consequences and was frequently accompanied by violence was taken by the Hindu leaders themselves. The Muhammadans as a rule stood aloof, and regarded the movement towards Christianity with indifference; they at least took no overt part in opposition or persecution, unless a co-religionist were involved, when the vitality and strength of the old fanatic spirit quickly reasserted themselves. Thus the rôle of the religious persecutor seemed, curiously enough, to have been transferred from the hands of the one community to the other. The Hindu actively resented his neighbour's change of faith, and exerted all the power which custom or a defective law or administration put into his hands to make the convert feel the weight of his resentment. The Musalmân was more in sympathy with the Christian standpoint and belief, and saw no need for forcible intervention or repression, unless the prestige of his own creed or the loyalty of a member of his own faith seemed to be endangered.

Most of the records of this persecuting movement, which is practically co-extensive with the entire Indian peninsula, are contained in the published literature and reports of the Christian missionary societies. The experience of every missionary includes instances of attempts to deprive native Christians of village rights, of unjust oppression and eviction by high-caste Hindu landlords, of fictitious charges in the law-courts sustained on ingeniously concocted evidence and sworn to by false oaths, and of violence and cruelty employed towards young converts to induce them to recant. Where these attempts are successful, restoration to caste and Hindu society is gained only by way of degrading ceremonies.¹ In the principal towns the force of public opinion is already sufficiently strong and enlightened to discountenance such methods. In the country districts, however, remote from European influence, where ancient prejudice and custom reign supreme, and where Christianity has endeavoured to obtain a footing, incidents of this character are of common occurrence. In part at least the persecuting action of the dominant religion is prompted by the instinct of self-preservation. The Christian faith is aggressive; and a true instinct warns the loyal adherent of Hinduism that between his own system and creed and the new religion which lays claim to universal acceptance no compromise is possible. A similar claim had been made, it is true, in the past by Islâm, and supported with even greater insistence and vehemence. But Islâm was too powerful to be resisted, and the persecuted Hindu suffered for the most part in silence and resignation. Christianity, weak in numbers and social prestige, lay open to reprisals, and it seemed that religious animosity might with impunity gratify itself in the oppression of its adherents. Moreover, the rapidly growing influence and popularity of

the latter faith did appear to threaten Hinduism with disaster. But the persecuting spirit is not natural to the Hindu, nor in accord with the precepts of his faith. In all probability, however, it will be only by degrees, and coincidently with the spread of enlightenment and the growth of a better understanding and public spirit, that a barrier will be raised against open manifestations of fear and dislike. The ancient fanatical and persecuting tendencies of Muhammadanism may then wake again in the presence of a powerful and progressive rival, and a new chapter in the strangely one-sided history of Indian persecution be written. For the present the Indian Christian is the only sufferer from the spirit which he has himself by his attitude and convictions of necessity evoked in the ancient Indian faiths.

LITERATURE.—The Muhammadan historians themselves furnish the evidence for the relations of victorious Islâm to the subjected Indian peoples. For the rest the relevant literature is to be found almost exclusively in the reports, etc., of the missionary societies. See also Julius Richter, *A Hist. of Missions in India*, Eng. tr., Edinburgh and London, 1903.

A. S. GEDEN.

PERSECUTION (Muhammadan). — The theory of the Muslim State draws a clear distinction between the true believers who accept Islâm and the protected communities (*ahl al-dhimma*, *dhimmî*) who follow other faiths. This twofold division is employed in the following article.

x. **Muhammadans.**—The early Arab conquerors appear to have been satisfied with a formal acceptance of Islâm and to have made no inquisition into private opinions; but, as their empire became more firmly established and sectarian divisions made their appearance, the bitterness of controversy evoked a fanatical spirit, and open hostilities broke out between the adherents of differing theological opinions; and, as these often denied the validity of established authority, the history of Muhammadan sectarianism became largely political in character, and in some cases, especially in those of heresies arising within the boundaries of the old Persian empire, represented a revolt against Arab domination. The vicissitudes of such movements thus belong rather to political history, and the conflict of the ruling power with the Khawârij (*q.v.*), the various 'Alid factions, etc., can hardly be described as persecution. The effort to suppress religious opinion as such, apart from political opinion, would seem to have begun with the persecution of the Mu'tazilah. Hishâm (724-743) put to death Ghaylân al-Dimashqî for maintaining the doctrine of the freedom of the will; first his hands and feet were cut off, and, when he continued to inveigh against his persecutors, his tongue was cut out (Tabarî, *Annals*, ed. M. J. de Goeje, Leyden, 1879-1901, ii. 1733; Ahmad b. Yahyâ b. al-Murtadâ, *Al-Mu'tazilah*, Leipzig, 1902, pp. 15-17). The same *khalifah* ordered the execution of Ja'd b. Dirham for teaching that the Qur'ân was created (Ibn al-Athîr, *Kâmil*, ed. C. J. Tornberg, Leyden, 1851-76, v. 196 f.). Hârûn (786-809) sought to check freedom of theological speculation by throwing into prison the Mutakallims, or scholastic theologians (Ahmad b. Yahyâ, p. 32). But the first systematic inquisition into heresy was the *mi'hnah* ('test') instituted by Ma'mûn in 833 for the conviction of those who denied the doctrine of the creation of the Qur'ân. Ahmad b. Hanbal and other learned theologians were subjected to cruel sufferings to induce them to give assent to the doctrines accepted by the *khalifah*. Ma'mûn defended his position in a letter to the governor of Baghdâd (Tabarî, iii. 1117), by maintaining that God expects a ruler whom He has entrusted with the care of His servants to instruct his subjects in the way of salvation, define for them the limits of their faith,

¹ A Sûdra community in the Deccan has, within the last few months (1916), led the way in a formal declaration that no one of their members shall be penalized or in any way made to suffer for becoming a Christian, or be debarred from re-entrance into caste and the full exercise of caste rights should he return to the Hindu faith.

remove their doubts and explain their difficulties, and bring back to the truth those who have gone astray. This persecution of those who denied the creation of the Qur'an was continued by his successors until 848, when Mutawakkil forbade the holding of this doctrine on pain of death, and the Mu'tazilah in their turn became the victims of the persecution of the State; in 1029 Qādir-billāh summoned all the 'ulamā to his palace and made them sign a confession of faith, especially condemning Mu'tazilite doctrines. A rigorous persecution was also carried on against the Zindīqs (or crypto-Manicheans), who appear to have been numerous in cultivated circles under the early 'Abbāsids (Al-Nadīm, *Kitāb al-Fihrist*, p. 338, gives a list of them). Mahdī crucified a number of them in the city of Aleppo in 780 (Tabari, iii. 499), and during the last two years of his reign instituted an inquisition in Baghdad and other towns, under the direction of 'Umar al-Kalwādhi, who hunted down many victims (*ib.* 519-522, 538); his successor, Hādī, continued the persecution during his brief reign of thirteen months (*ib.* 548 f.).

As the political power of the 'Abbāsids declined, the fanaticism of the 'ulamā appears to have increased. Abū Ḥanīfah († 767) had already declared that death was the penalty for the Muslim who apostatized from the faith as taught by Muḥammad, and later theologians spread the net wider, demanding the blood of any Muslim who denied the prophetic mission of Muḥammad or even doubted a single letter of the Qur'an, or maintained that God did not speak with Moses ('Iyād, *al-Shifā*, Cairo, 1272, ii. 259 f., 337). Under Mutawakkil (847-861) the orthodox 'ulamā had the support of the government in the persecution of every form of heresy, as well as the sympathy of the fanatical mob; in his reign a certain Ibn 'Asim, accused of reviling the companions of the Prophet, was scourged with 500 stripes and left in the sun until he died, his body being afterwards thrown into the Tigris (Tabari, iii. 1424 ff.); he also put to death a man named Maḥmūd b. al-Faraj, who claimed to be a prophet and maintained that the angel Gabriel had revealed to him a Qur'an (*ib.* 1349). But, apart from such individual cases of heresy, the zeal of Mutawakkil was directed against whole sects, such as the Shī'ahs, whom he persecuted throughout his reign; he destroyed the graves of 'Alī and Ḥusain, and forbade pilgrimage to their site.

This persecution is typical of the treatment that Shī'ahs have from time to time had to suffer at the hands of a Sunnī government (for a summary of such persecutions see Hammer, *Gesch. des osmanischen Reiches*, i. 706-708). In 1029 Qādir-billāh drove the Shī'ahs out of the mosques and installed Sunnī preachers in their place, and put Shī'ahs to death for heresy on several occasions in his reign. Two centuries later Musta'sim instituted another persecution against them. The general recognition by Shī'ah theologians of *taqiyyah* (lit. 'fear', 'foresight'), i.e. concealment of a man's real beliefs through fear of the consequences of an open profession of faith, and their approval of such a practice, are evidence of the dread which the Shī'ahs had of being persecuted by the Sunnis (I. Goldziher, 'Das Prinzip der Takijja im Islam,' *ZDMG* lx. [1906] 219-222). Ibn al-Mutahhar al-Hilli, a Shī'ah controversialist († 1326), maintains that in most periods the Shī'ahs have hidden themselves 'in the corner of *taqiyyah*' in terror of the rulers of their time (Goldziher, *Beiträge zur Literaturgesch. der S'ā*, Vienna, 1874, p. 469). But the most appalling persecution of the Shī'ahs was that organized by Sultān Salīm I., who made a search for them throughout the Turkish dominions, and had 40,000 either

massacred or imprisoned for life (Hammer, i. 709; de la Jonquière, *Hist. de l'empire ottoman*, i. 139).

After their triumph over the Mu'tazilah the followers of al-Ash'ari (*q.v.*) had themselves to suffer persecution. In 1046 the Seljūq sultān Tughril Beg was persuaded by his *vazīr*, Abū Naṣr Maṣnūr al-Kundurī, to forbid the Ash'arites to preach in the mosques or to teach their distinctive doctrines; many learned men of this sect fled from the sultān's dominions, but some were captured and imprisoned (Schreiner, *ZDMG* lii. 488).

The orthodox reaction of the 11th cent. fostered a spirit that was as dangerous to philosophers as to heterodox theologians. Mu'tadid (in 892) had forbidden the sale of all philosophical books, and Qādir-billāh (in 1018) issued an edict against all free-thinkers and heretics (A. von Kremer, *Culturgesch. des Orients*, Vienna, 1875-77, ii. 465 f.). Under the Almohads in Spain a storm of persecution burst upon the philosophers, particularly in the reign of Ya'qūb al-Manṣūr (1184-99), who banished Ibn Rushd from Cordova.

Several of the Sūfī mystics under Muhammadan rule suffered martyrdom under the charge of heterodoxy. Hallāj was cruelly put to death in 922, after having been scourged with a thousand stripes and having his hands and feet cut off (E. G. Browne, *A Literary Hist. of Persia*, London, 1902-06, i. 430). Abū'l-Qāsim al-Qushayrī, the author of an important treatise on Sūfism, was imprisoned during the persecution under Tughril Beg (1046). Shihāb al-Dīn Yahyā al-Suhrawardī, reputed to be the most learned man of his time, was imprisoned and then strangled by order of Malik al-Zāhir, son of Saladin, in 1191, though this prince had at first extended to him his patronage; but the orthodox clergy in Aleppo succeeded in convicting him of heresy (A. von Kremer, *Gesch. der herrschenden Ideen des Islams*, Leipzig, 1868, p. 89 ff.). The founder of one of the Sūfī sects, the Ḥurūfīs, Faḫr-ullāh Tabrizī, was put to death by Mirān Shāh, son of Timūr, in 1393; one of his disciples, the Turkish poet, Nasīmī, was condemned to be flayed alive in 820 (1417-18), having been found guilty of blasphemy by the 'ulamā of Aleppo, and a few years later some Ḥurūfīs were burnt alive in Adrianople (E. J. W. Gibb, *Hist. of Ottoman Poetry*, London, 1900-09, i. 346, 381-383, 387).

It is not possible here to give an account of the numerous individuals put to death for heresy—e.g., Muḥammad b. 'Alī al-Shalmaghānī, who taught the transmigration of the soul and was considered by his followers to be an incarnation of the divine, and other false prophets (Schreiner, p. 472 f.)—nor of the many claimants to be the promised Mahdī (*q.v.*) at various periods of Muhammadan history (for instances of such persons put to death in Turkey see Hammer, i. 798, ii. 694, 639, iii. 172; J. Darmesteter, *Le Mahdi*, Paris, 1885).

2. Protected communities.—(a) *Christians*.—The Qur'an, and the prescriptions of Muslim jurists based upon it and the practice of the Prophet, granted to the followers of other faiths a certain measure of freedom of religious life and practice; but Muhammadan history is full of examples of persecution, especially of the various Christian sects. One of the earliest instances¹ of such persecution is that of the Banū Taghlib. The members of this Arab tribe who remained Christian had been treated with special consideration and allowed to pay tribute in such a form as to make them appear as equals of the converted Arabs and not as a subject people. But it seems to have irked the Muslims that any members of one

¹ The expulsion of the Christians of Najrān by 'Umar I. appears to have been prompted by purely political considerations (L. Cestani, *Annali dell'Islām*, Milan, 1895-14, iv. 253 ff.; H. Lammens, *Le Califat de Yazīd I^{er}*, Beirut, 1913, p. 251 ff.).

of the great Arab tribes should continue to stand aloof from what had become the national faith of the Arab people, and tradition attributes to 'All the expression of a savage wish to put all the males of the tribe to death and enslave the rest of the population (Cætani, iv. 228). Even the tolerant 'Umar is said to have ordered Ziyād b. Hudayr to deal roughly with them (Abū Yūsuf, *Kitāb al-Kharāj*, p. 69), and Walid put Shamālāh, the chief of the tribe, to death because he refused to accept Islām (JA IX. iv. [1894] 438 f.).

With this exception the Christians enjoyed an ample toleration under the early Umayyads, but severe measures began to be taken against them by 'Umar b. 'Abd al-Aziz, induced either by zeal for his own faith or out of umbrage for the failure of the assault on Constantinople in 717. He decreed that no Christians should be appointed as magistrates or allowed to ride on saddles; that, if a Muhammadan killed a Christian, the penalty should be not death, but a fine; that Christians should not be allowed to bear witness against Muslims in the courts;¹ nor were they to uplift their voices in prayer; at the same time he abolished the tax levied on houses, land-rents, etc., for the benefit of churches and monasteries, ordered all crosses in public places to be pulled down or effaced, and forbade the Christians to wear silk or fine linen (Michael the Elder, *Chronique*, ii. 489; Abū Yūsuf, p. 73; Theophanes, in PG cviii. 808).

But hatred of the Christians appears first to have taken a popular form under the theocratic rule of the 'Abbāsids, who looked upon the State as a religious community and themselves as invested with spiritual as well as temporal power. To the later period of this dynasty belongs the compilation of the so-called Pact of 'Umar, which was often appealed to when restrictive measures were imposed upon the *dhimmīs*; in accordance with this document, no new churches were to be built, and no proselytism attempted; outward respect was to be shown to the Muslims, and their dress, etc., was not to be imitated; the Christians were not to ride on saddles, bear arms, display their crosses on the churches or in the streets, or celebrate religious worship in a loud voice; a distinctive dress, particularly a girdle round the waist, was to be worn, and so on (Gottheil, in *OT and Semitic Studies in Memory of William Rainey Harper*, ii. 382-384, where references are given to the various versions of this document). These regulations certainly did not exist in the time of the ruler whose name they bear, nor were they put into force rigidly or consistently; they represent the more intolerant practice of a later age, and some outburst of fanaticism was generally needed for any demand to be made for their application. In a period of persecution even more vexatious measures were sometimes enforced, as in the reign of Mutawakkil (in 850 and 854), who ordered the *dhimmīs* to affix wooden images of devils to their houses, to distinguish them from the houses of the Muslims; their graves were to be levelled with the ground; their children were not to be taught in Muslim schools, nor by any Muslim teacher; as well as the girdle, they were to wear yellow scarves, and have two patches of cloth, each of a different colour, sewn on the back and front of their dress; they were to ride only on mules and asses, with wooden stirrups, etc. (Tabari, iii. 1389 f., 1419).

In such periods of persecution there was generally some destruction of churches, especially of such as had been erected since the Muslim con-

quest. Walid (705-715) appears to have been one of the first *khalīfahs* to order churches to be pulled down (Michael the Elder, ii. 481); but under the 'Abbāsids such instances became more common, beginning with Hārūn (Tabari, iii. 712) and culminating in the violent persecution set on foot by Mutawakkil (847-861). Numerous instances are found scattered throughout the pages of Christian and Muslim historians; but for no country do we find so long a series as for Egypt, beginning with the 2nd cent. of the Hijrah down to the troubled days of Mamluk rule (*Hist. of the Patriarchs of the Coptic Church of Alexandria*, ed. B. Evetts, Paris, 1904 f.; Magrizi, *Khitat*, Bulāq, 1853, ii. 492-500).

Forceful conversion to Islām was frequently the accompaniment of such persecution. One of the earliest instances was that of the Christian Arabs of the tribe of the Banū Tanūkh in the reign of Mahdī (775-785); seeing a number of them who lived near Aleppo and learning that they were Christians, he angrily ordered them to accept Islām; under compulsion they complied, to the number of 5000, but one of them suffered martyrdom rather than apostatize (Gregorius Abulpharagius, *Chronicon Syriacum*, ed. P. J. Bruns and G. G. Kirsch, Leipzig, 1789, p. 134 f.). A long series of such compulsory conversions might be given from the history of various parts of the Muhammadan world; as the power of Muhammadan governments declined, so such compulsion tended to assume a character of greater ferocity; e.g., during the persecution of the Christians of Crete in 1670, 15,000 Christian boys are said to have been circumcised in a single day, and most of them died in consequence (A. D. Kyriakos, *Gesch. der orientalischen Kirchen, 1455-1855*, Leipzig, 1902, p. 12).

The death penalty for apostasy (see APOSTASY [Muhammadan]) was often imposed in a cruel manner, in the case of Christians who had promised to become Muhammadans in a moment of weakness or despondency, or even in jest, or under the influence of drink, or through some misunderstanding (Dozy, *Hist. des Musulmans d'Espagne*, ii. 51; de la Jonquière, i. 34; M. Febvre, *La Turchia*, Venice, 1684, p. 39 f.). The martyr, Elias, was held to have become a Muslim merely because he had thrown away his pipe when dancing to amuse his master's guests, and was put to death because he refused to abandon the Christian faith (F. Combefis, *Christi martyres lecta trias*, Paris, 1666, pp. 156-192).

The persecution of the Christians was connected with economic conditions—of the prosperity and wealth of individual Christians (E. Renaudot, *Hist. Patriarchatus Antiocheni et Andrinorum Jacobitarum*, Paris, 1722, p. 607; Nāsir-i-Khusran, *Safar-nāma*, I. C. Schefer, Paris, 1881, p. 155 f.; M. Febvre, ii. 498; Shedd, *Islam and the Orient*, pp. 117 ff., 247 f.), or resentment at the high offices of state were given to Muslims (Arnold, *The Preaching of Islam*). From the earliest days of the Arab conquest new rulers had found it impossible to dispense with the complicated machinery of government, and, in spite of frequent protestations, have been similarly employed. But, in deference to popular feeling, of theologians, such non-Muslims were removed from the administration. Mansūr (754-775) issued decrees to the effect that the Mamluk *sultāns* of administrative changes by much suffering for the

¹ Dionysius of Tell Mahrē (*Chronique syriaque*, ed. J. B. Chabot, Paris, 1896, p. 18) attributes this regulation to the son of 'Umar, Yazid II. (720-724), who decreed that the testimony of a Syrian should not be accepted against that of an Arab.

In some cases (but these the less frequent) the persecution originated in a decree of the Muhammadan government; in others it was stirred up by the fanaticism of the mob (Shedd, pp. 244-246) or the bigotry of the 'ulamā. Some of the later Muslim theologians went so far as to ascribe to the Prophet forged traditions, expressly contradicted by his own conduct and by his authentic utterances; e.g., an Egyptian jurist of the 14th cent. puts forward as sayings of the Prophet the following intolerant principles:

'No church shall be built in a Muslim land, nor shall those that have fallen in ruins be repaired,' and 'No churches (are to be permitted) in Islam' (JA iv. xviii. [1851] 513).

Similarly, they sometimes attempted in vain to force the hands of the government that protected the tolerated communities; e.g., a theologian of the 18th cent., after enumerating the enormities of the Christians, exclaims:

'The 'ulamā consider this state of things; they weep and groan in silence, while the rulers who have the power of checking these criminal abuses only shut their eyes to them' (ib. xix. [1852] 109).

It is not possible here to give in detail the annals of the sufferings of the Christians under Muhammadan rule, but certain epochs may be referred to as signalized by special severity of persecution. One of these was the period of the conversion of the Mongol princes to Islām; the Muhammadans remembered their sufferings during the Crusades and the overbearing conduct of the Christians after the destruction of 'Abbāsid rule by the Mongols in 1258; e.g., when the city of Damascus surrendered to Hūlāgū in 1260, the Christians destroyed the mosques in the neighbourhood of their churches, made the Muslims bow to the cross carried in procession, and sprinkled with holy water the clothes of the Muslims and the doors of the mosques that were spared (H. H. Howorth, *Hist. of the Mongols*, London, 1876-88, i. 210). Such behaviour stirred up a resentment that led to terrible reprisals when the reins of power again passed into Muslim hands. Consequently we find that, as the Mongol princes adopted Islām, the condition of the Christians under their rule tended to grow worse; e.g., the conversion of Ghāzān, the Ilkhān, in 1295 was marked by a cruel persecution of the Christians (ib. iii. 396-398).

In the Turkish dominions the various revolutionary movements among the subject races, which began early in the 19th cent. with the struggle for Greek independence, were largely stimulated by a feeling of exasperation at the religious repression from which they suffered under the corrupt Turkish administration of the time, and the reprisals and the administrative measures taken by the ruling power were acerbated by religious fanaticism, and often took the form of religious persecution, as in Serbia, Bulgaria, and Armenia (see Parliamentary Papers on the conditions of Christians in Turkey from 1854 onwards).

(b) *Jews*.—Despite the opposition of the Jews to the mission of Muhammad and the severe references to them in the Qur'an (ii. 70-73, v. 64-69, etc.), their condition under Muhammadan rule appears to have been generally more tolerable than that of the Christians. But in periods of persecution they ran the risk of sharing the sufferings of the other *dhimmīs*; the restrictive regulations of the Pact of 'Umar were applicable also to them. Along with the Christians they were victims of the bigotry of Mutawakkil and Hākim.

In Spain they were tolerated until the arrival of the Almoravids, when Yūsuf b. Tāshfin threatened to compel the Jews of Lucena to become Muhammadans, but was persuaded by rich gifts to let them retain their old faith (Dozy, iv. 254 f.). The Almohad 'Abd al-Mu'min, after his capture of Morocco in 1146, gave the Jews the choice

between Islām and death, but was afterwards persuaded to let those who wished to remain Jews go into exile; he promulgated a similar edict and destroyed the synagogues in all the cities of N. Africa conquered by the Almohads, and, when he extended his dominion over Spain, meted out the same treatment to the Jews there (Graetz, iii. 367 f.).

In Persia the Jews had enjoyed a brief prosperity under the Mongol Arghūn (1284-91). On his death the Muhammadans wreaked their vengeance upon the Jews for the humiliations which they had suffered from the Mongol conquerors (ib. iii. 672); and, when Arghūn's son, Ghāzān, was converted to Islām, the Jews suffered as much as the Christians (see above). They were persecuted also in the reigns of Shāh 'Abbās († 1629) and his great-grandson, 'Abbās II. († 1667), and under the rule of the Afghan conquerors (1722-29). Persecutions occurred also during the 19th cent., in Hamadan (1892), Kirmanshah (1896), and Tihiran (1897).

In N. Africa they had to suffer arbitrary treatment and frequent persecution from the barbarous Moorish population (ib. iv. 417). Mulai Yazid, in 1790, ordered their houses to be pillaged (*REJ* xxxvii. [1898] 120; Budgett Meakin, *The Moors*, London, 1902, pp. 431 f., 451 ff.). In 1840 a fierce persecution broke out in Damascus, as the result of the Jews being accused of a ritual murder, and spread into a number of towns of Syria and Turkey (Graetz, v. 677 f.).

(c) Among the religions that were tolerated as having been mentioned in the Qur'an (ii. 59, v. 73) was that of the Šābians; but they too were exposed to persecution: at the beginning of the reign of Mahdī, in 775, the great temple at Edessa in which they met for religious worship was destroyed, and many Arabs practising Šābiism were put to death (JA viii. xix. [1892] 84).

Although the Zoroastrians are not expressly mentioned in the Qur'an, the Muslim legists included them among the *dhimmīs*, and granted them the same degree of toleration (q.v.). Persecution seems to have been rare up to the close of the 'Abbāsid period; but they fell upon evil days in the 18th cent., under the rule of the degenerate descendants of Shāh 'Abbās (who had himself been generally tolerant to his non-Muslim subjects), and many of the Zoroastrians of Isfahan were forced to embrace Islām (Cornille Le Bruyn, *Voyages*, Paris, 1725, v. 170 f.); those of Kirman and Yazd who welcomed the Afghan invaders suffered cruel reprisals when the Afghans were expelled from Persia in 1730. Fresh troubles befell them under Nādir Shāh, and in the terrible sack of Kirman in 1794 by Agā Muhammad Khān (the founder of the present dynasty) their quarter of the city was entirely destroyed. By the 19th cent. the condition of the Zoroastrians in Persia was very low, and they were almost exclusively confined to Yazd and its neighborhood. The extortionate manner in which the *jizyah* was collected led to great suffering, and some Zoroastrians apostatized to save themselves from torture, until this tax was abolished in 1882 (D. F. Karaka, *Hist. of the Parsis*, London, 1884, i. 55 ff.; D. Menant, 'Les Zoroastriens de Perse,' *RMN* iii. [1907] 205 ff., 421 ff.; and art. GABARS). In 1888 the Zoroastrians were still subjected to many petty annoyances: they had to wear a yellow raiment to distinguish them from true believers; 'they are not permitted to wear socks, or to wind their turbans tightly and neatly, or to ride a horse; and if, when riding even a donkey, they should chance to meet a Muslim, they must dismount while he passes, and that without regard to his age or rank' (E. G. Browne, *A Year amongst the Persians*, London, 1893, p. 370 ff.).

There were some other non-Muslim religious

bodies, numerically of less importance, who suffered persecution on account of their faith. The Yazidis of Mesopotamia were subjected to a series of persecutions during the 19th cent. with the object of compelling them to conform to the faith of their Turkish rulers (O. H. Parry, *Six Months in a Syrian Monastery*, London, 1895, pp. 256 ff., 358; J. Menant, *Les Yézidis*, Paris, 1892, p. 164 ff.; *Al-Mashriq*, ii. [1899] 834 f.). For the persecution of the Bábis, Druses, and Manichæans, see artt. BĀB, SECTS (Christian), MANICHÆANS.

The severe condemnation of idolatry in the Qur'ān (iv. 115-120, xxi. 98-100, lxvi. 9, etc.) seems to make it impossible for any Muslim ruler to grant toleration to idol-worshippers, and Ma'mūn once stated very clearly that idolaters must choose between the acceptance of Islām or one of the religions recognized by the Qur'ān and death (Al-Nadīm, p. 320); and it was a commonly accepted principle that war should be waged against the people of the Book until they paid *jizyah*, but against idolaters until they accepted Islām (Yahyā b. Ādam, *Kitāb al-kharāj*, ed. T. W. Juynboll, Leyden, 1896, p. 12). Consequently the heathen races that have come under Muhammadan rule have generally suffered harsh treatment, and, even when political policy has prompted a more considerate treatment of their religious observances, they have been constantly exposed to outbursts of fanaticism.

The political and social disabilities from which the non-Muslims suffered were directly connected with the fact that their creed was different from that of their rulers, and, when the Muhammadan government was weak or corrupt, religious intolerance found easy victims. When money was to be extorted, the *dhimmī* had the least power of resistance, and justice could be denied him, since his evidence was not accepted in a Muslim court of law. Some fanatical theologians interpreted in a brutal spirit the last word of the verse in the Qur'ān (ix. 29):

'Fight against such of those to whom the Scripture has been given, as believe not in God nor in the last day, nor declare unlawful what God and His apostle have declared unlawful, nor profess the religion of the truth, until they pay *jizyah* out of hand, being humbled.'

The *dhimmī* must be kept standing a long time when he comes to pay the *jizyah*, he must bend his head and back low, and the Muslim official who receives it must seize him by the beard and strike him on both cheeks, so that his humiliation may be complete. This contemptuous attitude towards the non-Muslim reaches its culmination in the offensive burial permits which were issued in the 18th and 19th centuries when a Christian died (Denton, *The Christians of Turkey*, p. 117; H. C. Lukach, *The City of Dancing Dervishes*, London, 1914, p. 181; G. B. Chirkov, *Dva Lyubopytnykh arabskikh dokumenta k istorii vnutrennyaya byta vostochnykh christian*, Moscow, 1900, p. 2).

The non-Muslim has thus run the risk of being exposed to a constant series of petty annoyances, reminding him of his inferior status, at the hands of unjust officials and vicious persons of all kinds, throughout most periods of Muhammadan history, though organized persecution by the government has been rare (see art. TOLERATION [Muslim]).

LITERATURE.—No separate work has been devoted to the subject of Muhammadan persecution; the facts are to be found scattered throughout the annals of Muhammadan historians (e.g., Tabari, Ibn al-Athir, etc.) and the Christian historians (e.g., who have lived under Muhammadan rule (e.g., Barhebraeus, Eusebius, Māri b. Sulaymān, Severus, etc.). The following works may also be consulted: Abū Yūsuf, *Kitāb al-Kharāj*, Cairo 1302 A.H.; Al-Nadīm, *Kitāb al-Fihrist*, ed. G. Flügel, Leipzig, 1871; Michael the Elder, *Chronique de Michel le Syrien*, 4 vols., ed. J. B. Chabot, Paris, 1900-10; Ahmad b. Yahyā b. al-Murtadā, *Al-Miftāḥ ila' al-haqiqah*, ed. T. W. Arnold, Leipzig, 1902; 'Iyād b. Mūsā al-Yahsubi, *Al-Shifā fi ta'rif huquq al-murtafa'a*, Cairo, 1922; M. Belin, 'Fetoua relatif à la condition

des Zimmis' (tr. from Arab., in *JA* xv. xviii. [1851] 418 ff.); W. M. Patton, *Ahmed ibn Hanbal and the Miḥna*, Leyden, 1897; R. J. H. T. W. ARNOLD.

PERSEVERANCE.—The subject of perseverance may be treated either (1) from the doctrinal point of view as an element in a system of theology, for which a basis may be sought in the teaching of Scripture confirmed by reason and experience; or (2) from the practical and ethical point of view, as a virtue to be striven after by the Christian, the ethical conditions of which may be inquired into and set forth.

1. Doctrinal.—From the doctrinal point of view, the assertion of the perseverance of the saints is the affirmation that those who have become once truly regenerate, or united to Christ by genuine faith, 'can neither totally nor finally fall away from the state of grace; but shall certainly persevere therein to the end, and be eternally saved' (*Westminster Confession*, ch. xvii.; *Larger Catechism*, 79; cf. *Canons of Synod of Dort*, ch. v. can. 3). This is a characteristic doctrine of the Augustinian and Calvinistic theology, flowing logically as it does from the Augustinian and Calvinistic conception of the salvation of sinners as due to unconditional election and irresistible divine grace. This doctrine is rejected by the Roman Catholic Church, which teaches the possibility of a man once justified falling away from grace.

'If any one maintain that a man once justified cannot lose grace and therefore that he who falls and sins never was truly justified, let him be accursed' (Council of Trent, sess. vi. ch. xv. can. 23).

Similarly, the Arminians and the Lutherans teach that those who were once justified and regenerated may, by neglecting grace and grieving the Holy Spirit, fall into such sins as are inconsistent with true justifying faith, and, continuing and dying in the same, may finally fall into perdition (*Confession of the Remonstrants*, xi. 7; *Formula Concordiæ*, p. 705). In support of the doctrine of the certain final perseverance of the saints various passages of Scripture are adduced:

Jn 10:27-29 'My sheep hear my voice, and I know them, and they follow me; and I give unto them eternal life; and they shall never perish, and no one shall snatch them out of my hand. My Father, which hath given them unto me, is greater than all; and no one is able to snatch them out of the Father's hand'; Ro 8:35-39 'Who shall separate us from the love of Christ, etc.; 11:29 'The gifts and the calling of God are without repentance'; Ph 1:6 'Being confident of this very thing, that he which began a good work in you will perfect it until the day of Jesus Christ.'

The doctrine is inferred also from the nature of regeneration and renewal as a work of divine grace. All those passages of Scripture which lay emphasis on the working of the Holy Spirit, or on divine grace, as the cause to which the spiritual life in individual human persons, alike in its beginning and in its progressive continuance, is due, seem to lead logically to the doctrine of certain final perseverance as guaranteed by the steadfastness of the Spirit's working and the victorious power of divine grace (e.g., Eph 1:12-14, 1 P 1:12, Jn 14:16, 2 Co 1:12 etc.).

If the beginning of Christian life in the indi-

vidual is due solely to unconditional divine election (Ac 13⁴⁸, Ro 8³⁰) and its continuance is due entirely to the inward working of the Holy Spirit (Ph 2¹³), then it stands to reason that perseverance unto the end is certain in the case of all who have become regenerate, because no room seems to be left for any possible falling away or any failure to attain. But the responsibility of the individual for the development of his character and the issue of his life seems also to be done away with on this conception of the matter. The free exercise of will power by the individual as a morally responsible agent seems to be ignored or left out of account.

So argue the Romanists, Arminians, and others, who are so anxious to safeguard human freedom as a factor in determining the issues of life for individuals that they feel constrained, not only to deny unconditional election and irresistible grace as the determining factors in regeneration and conversion, but also to leave room for a possible final falling away from grace, through subsequent perversity, of those who were once justified and regenerated. They are wont to charge those who advocate the doctrine of the certain final perseverance of the saints with thereby fostering a dangerous and unwarrantable sense of security in Christians, in place of that 'fear and trembling' with which it becomes them to 'work out their salvation' as persons liable to fall away and therefore needing to exercise continual watchfulness (Ph 2¹²). Besides the exhortations to diligence (such as 2 P 1¹⁰) and the warnings of danger in case of carelessness (such as Rev 3², 1 Co 10¹²) addressed in the Scriptures to believers, apparently implying the possibility of their falling away from grace, those who reject the doctrine of certain final perseverance are wont to quote such passages as Lk 14³⁰, Mt 13^{20L}, Jn 15⁶, 2 P 2^{20L}, and especially He 6⁴⁻⁶ 10^{26L}, in favour of their view, and to point to experience as furnishing examples of those who once were professing Christian believers but have fallen away into unbelief or ungodliness (Jn 17¹², 2 Ti 4⁹, Rev 2⁴). The issue in dispute, in so far as it is of a psychological character, turns on the question whether a man's will, in order to be and to remain free, must always remain unstable or uncertain as to its choices; or whether it is possible that the human will may become established in goodness without ceasing to be free, so that its free choice of good will become a certainty. The will of God is conceived of as free, yet as invariably choosing with certainty the right and the good and rejecting the evil. If the will of man can, in any way, attain to a similar stability in goodness, while still remaining free, the certainty of his final perseverance is assured; so that certainty of final perseverance is not inconsistent in idea with the retention of freedom of will. It is psychologically possible. The question then comes to be whether, and by what means, a man's will may become permanently established in goodness in this life, so as to guarantee his final perseverance.

Calvinists affirm that this is effected when the individual becomes truly united to Christ through freely yielding to the Spirit's gracious influence in regeneration and conversion; for thereby the individual becomes a member of Christ's Body, linked to Him by a vital bond of union, and the whole power of Christ and of the Spirit becomes pledged to ensure his perseverance (1 Co 6¹⁷). The remnants of indwelling sin in the believer may lead to temporary lapses or backslidings; but the dominion of sin over that individual has been finally broken (Ro 6¹⁴), and his ultimate perseverance in choice of right is assured. This seems theoretically sound and conclusive. But, in practice, an overweening

confidence or a careless security is excluded by two considerations of a practical kind. (a) Even if final perseverance is assured through God's working in us, care and watchfulness are needed to prevent temporary lapses or backslidings, which are deplorable and hurtful to the soul. Many exhortations to watchfulness and prayer and earnest moral effort addressed in Scripture to believers may be taken as counteractive warnings against such lapses and backslidings to which Christians are liable (e.g., Mt 24⁴² 25¹³ 26⁴¹, Ph 2^{12L} etc.). (b) Further, the conditions of true regeneration and union with God through Christ are such that it is possible for individuals to be self-deceived as to their true standing, and to assume a security which is not warranted by their real condition. Hence the need for the exhortation given to professing Christians to 'give diligence to make your calling and election sure' (2 P 1¹⁰). The falling away of some who at one time had a place among professing Christians is explained in various passages of Scripture as due to the fact that, notwithstanding the fair appearance of spiritual life in the sight of their fellow-men, they were from the beginning without that real power of godliness which comes from vital union with Christ (1 Jn 2¹⁹, Rev 3¹). Where 'regeneration' is minimized or robbed of its true ethical significance and transformed into something of a magical or mechanical nature effected through an external rite, it is easy to understand why the possibility of the 'regenerate' falling away should have to be insisted on as borne witness to by experience. The possibility of men being self-deceived as to their real standing, through being content with what is merely formal and ritual or external, and failing to realize the high ethical and spiritual significance of regeneration and all that it implies, should serve to counteract any danger of a too easy security in connexion with a doctrine of final perseverance.

In view of these possibilities of self-deception, as well as the possibilities of deplorable and hurtful temporary backslidings on the part of the truly regenerate, the apostolic exhortations and warnings addressed to professing believers are not without justification, even though the doctrine of the certain final perseverance of the truly regenerate be a sound doctrine. Even such solemn warnings as we find in He 6⁴⁻⁶ 10²⁶ (which furnish the strongest Scriptural support of those who contend for the amissibility of grace and deny the doctrine of certain final perseverance) may be interpreted as needful warnings addressed to a concrete practical situation and not necessarily involving any theological implication inconsistent with a doctrine which seems to be well founded in Scripture and in reason, and from which many bumble Christians have derived comfort and help in fighting the good fight of faith. The doctrine of the certain final perseverance of those whose wills become established in goodness through freely yielding to the Holy Spirit's gracious influence in regeneration and renewal is usually held in conjunction with the Calvinistic doctrines of particular and unconditional election and the irresistibility of divine grace in conversion. It may, however, be held by those who reject these other doctrines as unethical and inconsistent with human freedom and responsibility. Thus Martensen, though he accepted the Lutheran position on most points of doctrine, professes his adherence to the Reformed, in opposition to the Lutheran, doctrine on this question of final perseverance (*Christian Dogmatics*, §235). It is in the free act of yielding to the drawings of the Spirit and the influences of divine grace in regeneration and renewal, which leads up to the gradual establishing of the will in goodness, that place is found for human responsibility and for human

freedom as an important factor in determining the issues of life (Mt 23³⁷, Jn 5⁴⁰, Ro 2⁴).

2. Ethical.—Regarded from the more purely practical point of view as a virtue or grace to be aimed at by earnest moral endeavour, perseverance is a duty to which Christian believers are urged in Scripture by many and varied considerations. Thus our standing as sons of God, together with the assured hope of being like Christ when He appears, is adduced by St. John as a stimulus to the Christian to 'purify himself, even as he is pure' (1 Jn 3³). St. Peter also adduces the believer's position as 'purified' in soul by 'obedience to the truth' through the Spirit as a reason why we should 'love one another with a pure heart fervently' (1 P 1²²). St. Paul, too, frequently bases his exhortations to believers to perseverance in holy living on a consideration of the believer's position as justified by faith and in union with Christ (Ro 6⁶⁻¹¹ 12¹¹ 13⁸ 10¹⁴ etc.), while he urges the consideration that 'God is working in us' to ensure the success of our efforts, not as a reason for sloth or easy security, but rather as a stimulus and incentive to earnest moral endeavour (Ph 2¹²).

The writer of the Epistle to the Hebrews also makes strong appeal to those to whom he writes, because of their past experiences of gospel grace and privilege, and the indications which they have shown of true spiritual life, to 'shew the same diligence unto the fulness of hope even to the end' (6¹¹), while he enforces his appeal by a solemn warning as to the danger of those who fall away after having gone a certain length and gained some experience of the influences of prevenient grace (6⁴⁻⁶; cf. 1 Co 10¹²). Earnest moral endeavour, therefore, grounded in faith, and stimulated by hope and love, is one of the ethical conditions of perseverance unto the end, viewed as a Christian virtue. But it is not the sole or main condition. Indeed, moral struggle and effort are apt sometimes to beget a spirit of independence and self-reliance which is alien to the true spirit of the Christian life. For that is essentially a life of conscious dependence on a power greater than ourselves which is working for us and in us—the power of God as manifested in the crucified and risen Christ, and in the Holy Spirit who applies the Christian redemption to us. Hence the main ethical condition of perseverance as a Christian grace is represented in Scripture as being 'abiding in Christ' through steadfast and continuous exercise of the will in faith and self-surrender (Jn 15⁴). Or, inasmuch as the function of the Holy Spirit is to take of the things of Christ and show them unto us (Jn 16¹³), the main condition of perseverance in holy living is represented as being a continuous yielding of ourselves in believing self-surrender to the motions and promptings of the Holy Spirit given to us by God as an 'earnest' of our salvation (2 Co 5⁵, Ro 8¹⁴). Perseverance in holiness may call for moral effort and striving, but it is not the effort of self-reliant independence or self-sufficiency, but rather the effort to keep ourselves in touch with Christ through faith (Ph 3¹⁰, Gal 2²⁰), to 'walk in the Spirit' (Gal 5¹⁶) and allow ourselves to be 'led by the Spirit' (Ro 8¹⁴). The main condition of perseverance as a Christian virtue is indicated by St. Paul in 2 Co 3¹⁸:

'We all, with unveiled face reflecting as a mirror the glory of the Lord, are transformed into the same image from glory to glory, even as from the Lord the Spirit.'

With a view to thus keeping themselves in the 'fellowship' of Christ (Ph 3¹⁰) and in 'the love of God' (Jude 21), and so making their 'calling and election sure' (2 P 1¹⁰) and securing their perseverance unto the end, believers are exhorted to make a diligent use of the means of grace—the Word (Eph 6¹⁷), the sacraments (1 Co 11²³), and prayer

(Eph 6¹⁸)—and not to forsake the assembling of themselves together for common worship (Ho 10²⁵). Thus abiding in Christ, and having Him abiding in them through constant faith and watchfulness and willing self-surrender to the Holy Spirit's leadings, believers are enabled to bring forth the fruit of the Spirit and are 'guarded by the power of God through faith unto a salvation ready to be revealed in the last time' (1 P 1⁵).

PERSONAL IDEALISM.—See PLURALISM.

PERSONALISM.—1. History and definition.—The earliest suggestion of the relationship between personality and nature was made by Anaxagoras, whose 'thought-stuff' was conceived as the self-moving purposive force in natural phenomena. Aristotle laid the foundation for personalism by affirming self-consciousness as the highest being, but Hollenism generally considered personality limiting and not to be predicated of the supreme being. Augustine first held fast to the experience which personality has of itself as its highest principle. The uniqueness and individuality of the human soul or the inner experience were to him vital to any true theory of God and the world. Descartes found in personality alone the basis of union between thought and thing. Up to this point personality had been considered in the light of fundamental truth rather than of fundamental reality.

The idea of personality as the foundation of knowledge was further developed by Berkeley, Leibniz, Kant, Fichte, Hegel, and Lotze. They agree that the immediateness of self-consciousness is the starting-point of philosophy. In this sense Eucken, Howison, Bergson, James, F. C. S. Schiller, Ward, Royce, and others of the modern school may be called personalists.

From the metaphysical point of view, we may distinguish between those personalists of pluralistic turn to whom the ultimate reality is a system of related selves and those of monistic temper to whom the ultimate reality is a single person which differentiates itself into the many personalities and objects of the world. Neither of these types of thought leads to a consistent personalism. The latter tends towards pantheism, and the former leaves us in an impossible pluralism.

Personalism, in the proper sense of the term, asserts a system of selves related through a supreme personality. It conceives of the supreme person as existing in and through the concrete continuous exercise of his personality, thinking, willing, and sustaining all things. This personality, far from being subject to analysis, is the ultimate fact which alone makes the world as a whole intelligible. Lotze affirmed personality of the divine being, but neglected to carry out the implication to its deeper theistic conclusions. Renouvier, who first employed the term 'personalism,' thought it necessary to escape pantheism by assigning the world of being to a single primary creative act. Bowne, however, insisted upon a supreme personality creatively present in the on-going of the world.

Personalism in this stricter sense is closely allied

with the thought of Augustine, and accords with the Christian demand for a personal relationship of man to the infinite world-ground which is a person.

Personalism may then be defined as that system of philosophy which views personality as the active ground of the world, and as containing in the mystery of its own unique being the key to all the antinomies of metaphysics. It is the latest form of theism and has been most completely worked out in the writings of the American philosopher, Borden Parker Bowne. It occupies a mediating position between pure empiricism and pure idealism, and is to be judged by its definition of reality, its doctrine of knowledge, and its conception of space and time.

2. The personalistic definition of reality.—The real is that which can act or be acted upon. The materialist, assuming that the seat of reality is in the atom, negates the validity of all mental processes. He is faced by the double problem of how the atom can produce mistaken perceptions and how it is possible to account for reflective knowledge. Pure idealism, approaching the question from the opposite direction, encounters difficulty with the problem of evil. If all that we see is the manifestation of the divine, whence comes evil in the world?

The personalistic interpretation of reality is designed to meet these difficulties. The world of things is not a mere succession of phenomena, but depends upon the causal activity of a divine personality. The mutual relations and interactions of the world spring from the unity of the supreme will. The mind grasps a true world because both thinker and thing are included in the one creative harmony. This truth is foreshadowed in the experience of causal efficiency by the human personality.

Out of this definition of reality flows the personalistic definition of being. Being is neither abstract supreme idea nor unknowable substance lying behind phenomena. Being is implied in the capacity for intelligent causal action, or in the capacity for being acted upon. All that exists is the result or manifestation of a supreme, active, purposive intelligence which creates and sustains the world of lesser intelligences and things. It has no meaning apart from this purpose which is its ground. Mind can understand the movement of matter because both proceed from the same source. The mind grasps the meaning of the world because it owns kinship with the intelligence which creates the world. It is itself purposive, self-directive, and causal within the world-order. By this definition personalism escapes the pantheistic conclusions of absolutism and the mechanical determinism of empiricism.

Personalism is saved from the vagueness of most forms of idealism by its pragmatic requirements. *E.g.*, the purposive causal intelligence is not taken as pure abstraction existing independently of the world. As the very essence of human personality lies in its self-directive freedom and causal efficiency, so these qualities are affirmed of the divine personality. The divine being exists in, and not apart from, his activity.

If the question is raised how, on such an assumption, we escape the dilemma of a fore-ordered universe, or a fatal dualism raised by man's freedom to do evil, it may be replied that human freedom is a part of the divine purpose within certain limits allotted to man. If it be asked what then becomes of the divine purpose and foreknowledge when man acts contrary to the will of God, it may be answered that foreknowledge does not include those individual facts which lie within the range of human action, but applies rather to that larger purpose, the development of character, which

would be impossible apart from freedom. It may well be that from the eternal view-point an eventual world of voluntary righteousness is of vaster importance than a world of involuntary sinfulness. The thing desired seems to be a growing moral personality in man like that which exists in God. Personality, then, which we must believe to be the supreme treasure of the eternal consciousness, is likewise the supreme gift and task of man.

3. The personalistic definition of thought.—Thought is that form of mental activity the aim of which is knowledge or truth. Its fundamental conditions are an enduring self-conscious thinker, the possibility of common understanding of terms used, and a sure correspondence between the thinker, the thought, and the thing.

Continuing the thought of the mediating character of personalism, let us apply the definition of knowledge. Empiricism endeavours to trace mental images to movement in nerve-cells. But, when the perception of roughness has been traced from the resistance of matter to the cells of the brain, we are forced to explain how the shocking of nerve-cells becomes an idea of roughness. It is no answer to assume a 'double face' to nervous action; for then each nerve-cell must be endowed with all the magic powers of brain and personality. The only way to bridge the gap is to assume an enduring personality which interprets the nervous shock as roughness in the object. Were the movement of nerve-cells to cover the whole process, there would be no place for error, for one man's sensation of the fundamental reality would be as good as another's. But empiricism meets its greatest difficulty in the problem of reflective knowledge. If we try to think of nerve-shocks stored in the cells of the brain to be called forth by sensation or association, we are forced to explain how reflective knowledge can be more than a hodge-podge of sensational memories. What power is present to produce a new result in reflective knowledge? Would a physical mixing of the cells of old sensations produce reflective knowledge? If, on the other hand, there be a self-identifying personality interpreting impressions according to a growing knowledge, misled often, but coming by repeated experience to enlarging conceptions, we have the crucible in which matter and mentality may come together.

This interpretation is also far removed from the view of the absolutist to whom the fundamental in thought is an abstract divine idea. To the personalist knowledge exists only in the concrete. Thought is not the mere replica of the divine idea. It is a self-realized result of individual action and freedom. It may be tinged with error or ignorance, but its distortion cannot be laid to the charge of the supreme thinker.

How may we know that there is a reality corresponding to our knowledge? We succeed only as we assume that the world of things and persons is created and upheld by a purposive intelligence. In this supreme personality, source of thinker and thing, lies the final unity.

4. Personalism and other philosophical problems.—(a) *Space and time*.—Until the days of Kant space and time had been generally conceived as fundamental realities existing independently of all intelligence. It was Kant who set them forth as merely the forms under which the thinking mind relates the world of things and events to itself and to each other. Personalism agrees with Kant in his view of the subjective nature of space and time, but goes on to assert an objective validity as well. I may say that time and space are only the forms under which I think, but are they peculiar to me? If purely subjective, as Kant taught, there is no way of granting them

general validity and no assurance that our calendars or geographies will agree. Both time and space must be given objective validity to free them from the disjunctive caprice of the individual and make possible a world united in space and time relations. The forms of time and space gain a validity universal for intelligent beings through a supreme personal intelligence who creates and upholds all.

(b) *Causality*.—With materialism the mind can never grasp the real thing, but only its phenomena. Hence, in dealing with causality materialism is for ever hiding its processes under a figure of speech. Reality is shifted from mass to molecule, from molecule to atom, from atom to æon, from æon to electron, and always that which is invisible. Out of these imagined actions and reactions all causation is said to spring.

Idealism sweeps this whole world of phenomena into subjectivity. But by subjective we may mean either one of two things. We may mean that which is peculiar to the individual alone or that which is true for intelligence anywhere and which has no existence apart from it. Failure to make this distinction is fatal to idealism. Unless it is made, the system of experience becomes the fiction of the individual.

In describing causality personalism makes a distinction between phenomenal and efficient causality. Phenomenal causality has reference to the true order or succession of events. We name this succession 'cause and effect.' We say that the effect can be traced to its cause, which is correct enough for practical purposes; if we speak of efficient causation, it is not adequate. Retracing from effect to cause in the phenomenal world, we are committed to the infinite regress. Moreover, we have a closed system, as all effects are potentially present always. There is no place for the new. We are finally forced back upon the assertion of the unknowable. We might be satisfied with this affirmation of nescience, did not two considerations arise to disturb us: (1) that the human spirit revolts against such a conclusion, and (2) that our own experience of personality gives an example of efficient, uncaused causality. Human laws are founded upon this fact. The human personality is not the prey of driving molecules and brain-storms. In the recesses of personality lies the possibility of starting new successions of cause and effect. If, then, we are to have efficient causation, we must find it not in unthinking atoms, nor in their combination, nor in impersonal laws of succession, but, rather, bound up with the purpose and intelligence of a personality.

Phenomenal causation is the succession of appearances common to all. We can mark the pre-existences and successions which hold universally in the world of experience, and we can formulate their laws without granting them causal efficiency or assuming anything concerning their metaphysical ground. Efficient causation, on the other hand, deals not with the order of succession but with the ground of being itself.

Causal explanation must be in terms of personality or it must vanish altogether. Any world-ground capable of real causation, not itself involved in the atomic flux, must be both personal and intelligent.

(c) *Change and identity*.—With materialism change is impossible. What we call change is a re-arrangement of atoms. Even thought can be no more than that. We have a static universe with its prescribed number of atoms, and all possibilities lie in their permutations and combinations. With absolutism change is a mere appearance. In the ultimate reality, the divine thought, all is static.

Entertaining a lively sense of this problem, Bergson posits duration as the abiding element in change. Change can mean something only to that which retains its identity through all changes. But abstract terms have no way of relating events. This can be done only by an abiding personality. If, then, the human personality is to locate itself in the universe or to image that which survives the passing world of events, it is driven to affirm a supreme enduring personality, in which the world and all lesser personalities find a common unity.

(d) *Unity and plurality*.—Driven by criticism to acknowledge the dualism that exists between thought and thing, and with no basis of mediation, some minds are turning to the affirmation of pluralism (*q.v.*). But a disjunctive universe is as much an impossibility for thought as a world predetermined by a divine idea. The pluralist cannot make his world disjunctive enough to be consistent. Unless he preserves a certain amount of unity—the unity of a mind able to grasp the fleeting events of time and the baffling appearance of change—knowledge is meaningless.

Personalism affirms that the only real unity of which we are directly aware is the unity of the free and conscious self. The self survives the passing events of experience, relates them to itself under the forms of time and space, and makes itself the centre of its changing world. That there is any higher unity is due to the fact that one is not alone, but is surrounded by a world of self-conscious intelligences, themselves comprehended in synthesis by a supreme personal intelligence. Through self-conscious and self-acting personality alone can the world be brought into substantial unity.

Thus are we rid of the conflict between mind and matter, noumena and phenomena, and the disjointed world of pluralism. This is done also without resort to an idealism which, though grand in conception, is death to the maintenance of freedom.

R. T. FLEWELLING.

PERSONALITY.—What is a self, and how are we conscious of it? The words 'self' and 'person' may be taken as equivalent, and, as 'personality' is a more familiar term than 'selfness,' we may put our question in this form, What is personality, and how do we know it?

The quality of personality is known to me because I have perception—in the strict sense of the word—of one being which possesses the quality, namely, myself. The view that I perceive myself is not a very common one, especially in recent philosophic thought, but a discussion of it is absolutely essential for the comprehension of the nature of spirit.

In this article the word 'perception' is used to denote that species of awareness which we have of the existent—awareness being a mental state which is not a belief, though it is knowledge. It is of great importance to be clear as to what is meant by 'awareness' and 'perception.' The present writer uses both terms in the manner introduced by Bertrand A. W. Russell, and explained by him in his paper on *Knowledge by Acquaintance and Knowledge by Description*.

I am aware of an object, or am acquainted with an object—the phrases are used as synonymous—when 'I have a direct cognitive relation to that object. . . . In fact, I think the relation of subject and object which I call acquaintance is simply the converse of the relation of object and subject which constitutes presentation. That is, to say that S has acquaintance with O is essentially the same thing as to say that O is

presented to S. . . . When we ask what are the kinds of objects with which we are acquainted, the first and most obvious example is *sense-data*.¹ When I see a colour or hear a noise, I have direct acquaintance with the colour or the noise. We are also acquainted, in introspection, with 'objects in various cognitive and conative relations to ourselves. When I see the sun, it often happens that I am aware of my seeing the sun, in addition to being aware of the sun, and when I desire food, it often happens that I am aware of my desire for food. . . . The awarenesses we have considered so far have all been awarenesses of particular existents, and might all in a larger sense be called *sense-data*. For, from the point of view of theory of knowledge, introspective knowledge is exactly on a level with knowledge derived from sight or hearing. But, in addition to awareness of the above kind of objects, which may be called awareness of *particulars*, we have also what may be called awareness of *universals*. . . . Not only are we aware of particular yellows, but if we have seen a sufficient number of yellows and have sufficient intelligence, we are aware of the universal *yellow*; this universal is the subject in such judgments as "yellow differs from blue" or "yellow resembles blue less than green does." And the universal *yellow* is the predicate in such judgments as "this is yellow," when "this" is a particular *sense-datum*. And universal relations, too, are objects of awarenesses; up and down, before and after, resemblance, desire, awareness itself, and so on, would seem to be all of them objects of which we can be aware.¹

This, then, is what 'awareness' means. By 'perception' is meant the awareness of what Russell calls 'particulars,' or *sense-data* in a large sense. All of these are substances. And we can, of course, be aware of them only when they exist. Perception, therefore, is always awareness of the existent. But awareness which is not perception need not be of the existent. If I know what any simple characteristic means, I am aware of it. But my awareness, *e.g.*, of yellow, does not prove that there is any existent thing which has the characteristic of yellow.

Perception, however, is not limited to the perception of substances. There is, indeed, no perception except when a substance is perceived, but, along with the substance, we are able to perceive some particular characteristic of the substance. This is proved by the fact that we make judgments, which no one would assert were in all cases incorrect, that a substance has certain characteristics, for which our only evidence is our awareness. And, since the judgment is that a particular existent substance has the characteristic, the awareness on which it is based must be perception. Since the characteristics of the existent themselves exist, the best definition of perception will be that it is awareness of the existent.

What existent things do we perceive? It is clear that I do not perceive physical objects (as opposed to *sense-data*) or other people's minds. My only ground for believing in them is by an inference from the *sense-data* which I do perceive. This does not mean that every belief in them is a deliberate and conscious inference from a premiss about *sense-data*. On the contrary, I often judge that there is a table in the room, or that I have met a friend, without making any judgment whatever that I have perceived any *sense-data*. But, although my judgment that there is a table in the room is not an inference from *sense-data*, it will not be a judgment which I have any right to make unless I have experienced *sense-data* such that the existence of the table in the room could be legitimately inferred from them. And, if any doubt is thrown, by myself or others, upon the correctness of my judgment as to the table, the only way in which it can be justified is by an inference from *sense-data*.²

¹ Russell, pp. 1-4. The present writer cannot accept, without some reservation, the account of what objects it is that we are aware of by introspection, but this does not affect the meaning of awareness.

² In the same way the only way of justifying my belief that another person exists will be by an inference from *sense-data* which (except for a Berkeleyan) will lead first to a belief in his body (or a reality appearing as his body) and then to himself. Of course the *sense-data* which are the basis of such an inference need not be as closely connected with the object inferred as to be a case of what is commonly called seeing, touching, etc., the

We do perceive, then, *sense-data* (using this word in the larger sense, to include our perception of mental events by introspection). We do not perceive physical objects or other people's minds. But one question still remains. Does each of us perceive himself?

The present writer believes that this is the case. The reasons which have led him to this view were suggested by a passage in Russell's paper already quoted above.¹

I am certainly aware of certain characteristics—*e.g.*, the characteristic of equality. I know, then, the proposition, 'I am aware of equality.' If I know this proposition, I must know each constituent of it. I must therefore know 'I.' Whatever we know must be known by acquaintance or by description. If, therefore, 'I' cannot be known by description, it must be known by acquaintance, and I must be aware of it.

Now, how can 'I' be described in this case? The description must be an exclusive description, *i.e.* one which applies to nothing but 'I,' since I do not know what 'I' means unless I know enough about it to distinguish it from everything else. I am aware, as already said, of equality, and I am aware, by introspection, that there is an awareness of equality. Can I, by means of these, describe 'I' as that which is aware of equality? But it is obvious that this is not an exclusive description of 'I,' for it could not be that unless it were certain that I was the only person who ever possessed awareness of equality. It is obvious that this is not certain, and that it is possible that some one else besides me was, is, or will be aware of equality. (In point of fact, I have overwhelming empirical evidence for the conclusion that some other persons *are* aware of equality.) Thus we cannot get an exclusive description of 'I' in this way.

It may be thought that an exclusive description could be reached by going a step further. I am not only aware, it may be said, that there is an awareness of equality, but I am also aware that there is *this* awareness of equality, the particular mental act which is my awareness of equality here and now. Now, if 'I' were described as that which is aware of *this* awareness of equality, should we not have reached an exclusive description? For no one else, it may be argued, could be aware of *this* awareness of equality except 'I' myself who have it. Of course, in order that this may be an exclusive description of 'I,' I must know what I mean by *this* awareness of equality. But this would be a case of knowledge by awareness. This awareness of equality would be a *sense-datum*, of which we could be aware by introspection, since no one denies that *sense-data* can be known by awareness. Thus, it is said, we can dispense with the necessity for awareness of self, and hold that the only awareness of the existent—the only perception—is of *sense-data*.

This argument, as has been seen, has, as one of its steps, the assertion that no one can be aware of an awareness of equality except the person who has that awareness. To this point we shall return later. But first we must point out that, even if this step were correct, the argument would not be valid.

The judgment which we are now considering is the judgment, 'I am aware of *this* awareness.' Now this is [not merely a judgment that some person, however identified, is aware of the awareness. It also asserts that the person who is aware of the awareness is the person who is making the object itself. I never saw the Andes or the death of Caesar, but my belief in them is an inference from visual *sense-data* in reading books about them.

¹ Russell did not, however, work out his contention in detail which was not essential for the main design of his paper.

judgment. And how can I be entitled to assert this identity if 'I' can be known only by description? In that case I am aware of this awareness, and of making a judgment, and I may be entitled to conclude that there is some one who is aware of the awareness, and that some one is making the judgment, since both awarenesses and judgments require persons to make them. And it may be the case that 'the person who is aware of this awareness' is an exclusive description of the person to whom it applies. But how do I know that the person thus described is the person who makes the judgment? If I am not aware of my self, the only thing I know about the person who makes the judgment is just the description, 'the person who makes this judgment.' And, granting that this is an exclusive description, I am still not entitled to say, 'I am aware of this awareness,' unless I know that the two exclusive descriptions apply to the same person. If the person is known only by these descriptions, or by other descriptions, it does not seem to me possible to know anything of the sort. Thus, if 'I' can be known only by description, it seems impossible that we can know that I am aware of this awareness, or of anything else, since the judgment, 'I am aware of X,' always means that the person who is aware of X is also the person who is making the judgment.

On the other hand, if I do perceive my self, there is no difficulty in justifying either the judgment, 'I am aware of this awareness,' or the judgment, 'I am aware of equality.' There is no need now to find an exclusive description of 'I,' because I am aware of it, i.e. know it by acquaintance, and therefore do not require to know it by description. And I can now justify the assertion, implied in the use of 'I,' that the person who is aware (whether of *this* awareness or of equality) is the person who makes the judgment. For in perceiving my self I perceive also, as was said above, some of the characteristics of my self. And, if I perceive it to have the character of being aware, of equality, or of an awareness, and also perceive it to have the characteristic of making this judgment, I am justified in holding that it is the same person who is aware and who makes the judgment.¹

We have thus good reason to assert that I can perceive my self—i.e., if I can know my self at all. For it would be impossible for anyone who believed that the self could be known to deny the truth of some proposition which takes the form 'I am aware of X.' And we have seen that such propositions cannot be justifiably accepted unless I can be aware of—i.e. perceive—my self.

Thus the attempt to describe the self which is aware of equality by its identity with the self which is aware of *this* awareness of equality has broken down, even if we grant the premiss which it assured—that 'that which is aware of *this* awareness of equality' is an exclusive description of the substance to which it applies. But we must now examine into the truth of this premiss, for, although the argument would not hold even if it were valid, the question of its validity is important in itself.

It is very commonly held that it is impossible for any person to be aware of any mental state except the person who has the state, and, therefore, that only one person can be aware of it. With regard to awareness which is not perception, it is universally admitted that more than one person can be

aware of the same thing. It is only by awareness that we can know what any simple characteristic means—since, being simple, it cannot be defined—and the meaning of compound characteristics depends on the meaning of simple characteristics. If, therefore, two people could not be aware of the same simple characteristic, it would be impossible for one person ever to communicate his thoughts to another.

Opinions differ with regard to sense-data in the narrower sense of the word—excluding those admittedly gained by introspection, and including only those which come, or appear to come, from the external senses. Some thinkers regard them as such that two people can perceive the same sense-datum. Others, however, hold that each sense-datum can be perceived only by one person, although sense-data perceived by different people may be caused by the same object and may justify inferences as to the existence of that object.

But that which falls wholly within a mind is usually denied to be perceptible by any mind except that in which it falls, whether it be a state of the mind, a relation between two states of the mind, or a relation between the mind and one of its own states. Thus those thinkers who hold, as some do, that sense-data in the narrower sense are states of the mind are invariably to be found among those who hold that each sense-datum can be perceived only by one person—who is, of course, the person of whom they are states. And, in the case of the remainder of sense-data in the wider sense—those which are admittedly mental, and reached by introspection—it is generally held, or, rather, tacitly assumed, that they can have no other perceiver than the mind within which they fall. Among these, of course, are all awarenesses.

Now it does not seem that we are justified in asserting this as an absolute necessity. No doubt it is the case that I do not perceive any state of mind of any person but myself. I have good reason to believe that none of the persons whom I know, or who have recorded their experiences in any way which is accessible to me, has ever perceived the states of mind of any other person than himself. Nor have I any reason to believe that any other self in the universe has done so. But the fact that there is no reason to suppose that it does happen is very far from being a proof that it could not happen. Is there any reason for supposing that it could not happen? Even if it is asserted that we have no reason to suppose that any self does perceive anything but its own states (a view which involves that sense-data in the narrower sense are states of the self), there is no impossibility in its doing so. That relative isolation of a self (of course it is not complete isolation) which would prevent it from entering into a relation of perception with anything outside itself need not be essential to the self because it is true of it throughout our experience. If, on the other hand, sense-data in the narrower sense are not parts of the self, then I can perceive something which is outside me, which is one step towards perceiving what is inside another self. The fact that in our experience this second step is never taken does not prove that it is impossible.

It must be remembered that, if A should perceive a state of B's, that would not make it a state of A's or any less exclusively a state of B's. To have a state and to perceive it are two utterly different things. In our present experience, as we have just said, no one does the second who does not do the first. But the first often occurs without the second. I often have a state, even a conscious state, without being aware of that state,¹ and this does not

¹ If this were not so, every conscious state would start an infinite series of perceptions, since a perception is itself a state,

¹ It may possibly be said that the awareness is never simultaneous with the judgment asserting the awareness. The present writer would be inclined to doubt this. But at any rate it is clear that the judgment can succeed the awareness very rapidly, and in that case we are probably justified in asserting that the self which is aware and the self which judges the awareness are the same self. This point will be discussed later.

make it any the less my state. Since the two are so distinct, A might perceive a state of B's, which perhaps B himself did not perceive, and yet it would be B's state and not A's. Confusion on this point has had a good deal to do with the prevailing belief that one self cannot perceive a state of another self.

It is, therefore, not intrinsically impossible that one self should be aware of a state of another self (or that more than one self should be so), and, as a self can be aware of its own state, it is not intrinsically impossible that two selves should be aware of the same awareness. We cannot, therefore, be certain that 'the person who is aware of *this* awareness' is an exclusive description of a person of whom it is true. And, if 'I' can be known only by means of this description, I cannot be certain who 'I' is, and cannot be certain that I know the meaning of the proposition, 'I am aware of *this* awareness,' or of the proposition, 'I am aware of equality' (since the 'I' in the latter was to be described by means of the former). But it is certain that I know the meaning of these propositions, and it is certain that I am certain of their truth. Thus, for a second reason, the attempt to show that 'I' can be known by description in this manner has broken down.

An attempt might be made to know 'I' by description which would not be liable to the second objection. For it might be said—and truly—that, while it is not impossible for more than one self to be aware of a particular awareness, it is impossible for more than one self to *have* the same particular awareness. If I am aware of X, it is not impossible that you, as well as I, should be aware of my awareness of X, but it is impossible that my particular awareness of X should also be your awareness of X, or anybody else's, since what is a state—i.e. a part—of one self can in no case be a state of another self.

This view the present writer believes to be correct. It has been denied, both on the ground that my awareness of X is not a part of me and on the ground that two selves might possibly have a common part. But it is not necessary to decide these points here, as it can be shown that, even if the view is correct and no two selves can have the same awareness, it will still be impossible to know 'I' by description.

The attempt to know it by description on this basis would be as follows. If we start from 'I am aware of equality,' and wish to describe the 'I,' we must proceed to the further proposition, 'I have *this* acquaintance with equality,' which will always be true if the other is. Then the 'I' in the latter proposition can be described as the self which has *this* acquaintance with equality. This description cannot apply to more than one thing, and is therefore an exclusive description of it. And the thing so described is the 'I' in both propositions. And in this way we do avoid the second objection. But our new attempt is still open to the first objection—that it involves that two descriptions apply to the same self, and that we have no right to make this assumption. For, when I assert the proposition, 'I have this awareness,' it means that the self who has this awareness is the same as the self who asserts the proposition. Now, I can only describe the one—if it is to be described at all—as the self which has this awareness, and the second as the self which makes this judgment. Both of these are exclusive descriptions. (Of course, by 'this judgment' is meant the psychological fact of judgment, not the proposition which is asserted.) and I should have to be again aware of that, and so on. We know that this is not the case. We do not very often perceive a perception, and perception of a perception scarcely ever happens except when we are engaged on epistemological or psychological investigation.

But I have no reason to suppose that they refer to the same self, and therefore I am not entitled to say, 'I have this awareness,' or, consequently, 'I am aware of equality.'

If, on the other hand, I am aware of my self, I am entitled to say, 'I have this awareness,' because I am aware of my self with the two characteristics of having the awareness and of making the judgment. Once more, then, we are brought back to the conclusion that, if I am entitled to make any assertion about my awareness of anything, I must be aware of my self.

Nor is this all. The same line of argument will show that, unless 'I' is known by awareness, I am not justified in making *any* statement about my self, whether it deals with awareness or not. If I start with the proposition, 'I am angry,' and then, on the same principle as before, describe 'I' as that which has *this* state of anger, my assertion will involve the assertion that it is the same self which has this state of anger and which is making this proposition. And, if 'I' can be known only by description, there is no reason to hold that it is the same self which both has the state and makes the assertion.

It is not, of course, impossible for us to have good reasons for believing that two descriptions both apply to some substance which we know only by description. I know other people only by description, but I may have good reason to believe of my friend X that he is both a socialist and a post-impressionist. But the case now before us is not analogous to this. My beliefs about X depend for their correctness on the correctness of various inferences from sense-data of which I am aware—perhaps auditory sense-data which I hear, and which I infer to be due to his desire to communicate his opinions to me. But, when I judge that I am angry, the conclusion that it is I who am angry is not an inference from my awareness of a state of anger whose characteristics are such that it can only belong to a particular person. I am as directly certain that it is I who am angry as I am that the state of anger exists. And, if 'I' is not known by awareness, the only alternative is that 'I' should be described as that which is involved in the simple fact of the existence of the state of anger—the only element in the proposition of which, on this hypothesis, we are aware. That is, it must be described simply as the self which has this state of anger. And in this description there is nothing from which we can legitimately conclude that this is the same self as that which makes the assertion.

Our conclusion, then, is that, if 'I' can be known at all, it must be known by awareness, and that, if it cannot be known by awareness, we are not justified in asserting any proposition in which the term 'I' occurs. Unless we take this extremely sceptical alternative, we must admit that 'I' is known by awareness.

It may be asked why this result has not been accepted by so many—perhaps most—recent philosophers. The explanation may be partly that they saw that 'the self which has this state' is an exclusive description of a self, when this state is known by awareness, and that they did not see the further point that this description gave us no ground to identify the self which has the state with the self making the assertion, and that this identity is implied in the use of 'I.' But probably the chief reason is that they looked for the awareness of the self in the wrong way. They tried to find a consciousness of self which had the same *positive* evidence for being an awareness as is found in an awareness of equality or in an awareness of some particular sense-datum. And this attempt failed. For the 'I' is much more elusive

than the other realities of which we are aware. It is divided into parts which are not themselves selves (unlike the parts of sense-data, which, if perceptible, are also sense-data); and of these parts we can be aware, and generally are, or can be, when we are aware of the 'I.' It is easy, therefore, to suppose that it is only the parts—the actual states—of which we are aware, while the 'I' is known only by description, and the belief in it can be justified only by inference from the states. This view also gains plausibility from the fact that 'I' has no content except parts of this sort. For it is natural, though erroneous, to argue that, if all the parts of the 'I' can be perceived separately, it is impossible to perceive the 'I' as a whole except by perceiving all those parts. And, of course, in perceiving the 'I' we do not perceive all its parts.

Thus, if we merely inspect our experience, the awareness of the 'I' is far from obvious. The only way of making it obvious is that suggested by Russell and employed in this article. We must take propositions containing the 'I,' and, to test the view that 'I' is known by description, endeavour to replace 'I' with its description. Only then does the impossibility of knowing 'I' except by awareness become clear.

Our conclusion is that 'I' must be known by awareness, if it is to be known at all. The alternative remains that it is not known at all, and that no statements which contain 'I' as a constituent are justifiable.

Of those philosophies which, without falling into complete scepticism, deny the reality of the self the two most important are Hume's and Bradley's. Hume (*Treatise of Human Nature*, 1. iv. 6, ed. T. H. Green and T. H. Grose, 2 vols., London, 1909, i. 533 ff.) seems to take the view that we must be aware of the self if we know it at all, since he contents himself with proving to his own satisfaction that we can have no 'impression' of it, and does not discuss the possibility that I might have a 'compound idea' of it, as I have of the death of Cæsar, which I did not see. He offers two arguments against the possibility of an impression of the self. The first is that the impression, if there were one, must be the same throughout life.

'But there is no impression constant and invariable. Pain and pleasure, grief and joy, passions and sensations succeed each other, and never all exist at the same time. It cannot, therefore, be from any of these impressions, or from any other, that the idea of self is deriv'd; and consequently there is no such idea.'

In answer to this we may say, in the first place, that it is not necessary that the impression should be the same throughout life. If I had it for a minute, it would be enough ground to believe in the self then. Whether there was any reason to suppose that the same self existed before and afterwards would be a matter for further argument. But, whether it did or did not, a self that lasted for a minute would still be a self. As for the passage quoted, no one would deny that no impression of 'pain and pleasure, grief and joy, passions and sensations' could be an impression of the self. But to conclude at once, as he does, that no other impression can be an impression of self is entirely unjustified.

His grounds for making this illegitimate step are probably the fact that, if there is a self, it has parts, all of which are pains, pleasures, griefs, joys, passions, sensations, or something else which is not a self, and his supposition that, in that case, there can be no impression of the self which is not an aggregate of these. And this becomes explicit in his second argument.

Mankind, he says, 'are nothing but a bundle or collection of different perceptions, which succeed each other with an inconceivable rapidity, and are in a perpetual flux and movement.'

Without accepting the detail of this, we may agree that all the content of a self falls within various mental states, not selves, and that—at any rate, within certain limits—these change while the self remains the same self. But it does not follow from this that the self is not an existent reality, any more than it follows that a college is not an existent reality, because it is made up of men who are not colleges, and who join and leave the college while it remains the same college.

Moreover, Hume's attempt to account for the arrangement of the mental states without accepting the reality of the self, when looked at more closely, seems to involve the very reality that it was meant to exclude. For what is meant by saying that the perceptions which exist form different 'bundles or collections'? It does not mean that those which form the same bundle are connected in space with one another more closely than they are with those in other bundles, for Hume does not regard the perceptions as being in space. Nor can it be that they are connected more closely in time, or by resemblance. For, if there is really a bundle wherever there is, on the ordinary theory, a self, then similar and simultaneous perceptions are found in different bundles, and dissimilar and non-simultaneous sensations in the same bundle. It seems impossible to avoid the conclusion that the contents of each bundle must be determined to be parts of that bundle by their relation to, or inclusion in, some reality which is not any one of the contents, nor the aggregate of these taken as a plurality, but is something as ultimate as, say, one of the contents. If we reach this, we have reached the self.

It is not necessary to consider in detail all the stages in Bradley's searching and brilliant analysis of the various possible meanings of the self, on which he founds his conclusion that the self is not absolutely real. It is clear that, if the view which we have taken is to be refuted in consequence of any of his criticisms, it will be by those which he offers in respect of the sixth sense of the word which he discusses—that in which the self is a subject which becomes an object (*Appearance and Reality*, London, 1908, ch. ix.). For the self which, as we have decided, each of us knows by awareness as his 'I' is, as we saw, that which is the subject which perceives and judges. We do not say that it is only that, that it does nothing else. On the contrary, it is that which loves when my judgment, 'I love,' is true, and which is angry when my judgment, 'I am angry,' is true. But it is also that which is the subject in all knowledge. If Bradley has succeeded in disproving the reality of a self which is the subject of knowledge, he has disproved our conclusion. But, if he has not done this, he has not weakened our conclusion at all, since none of the other senses of self which he discusses is such that its validity is involved in the validity of self in our sense.

The self, Bradley says, is a concrete group. With this we may agree, since Bradley apparently means by it only that there is a plurality of parts in the self. He then points out that most, if not all, of the content of the self can become an object, and from this he concludes that very little, if any, of the content of the self can belong to it essentially. His view is that what becomes an object becomes *ipso facto* part of the not-self, and that what is not-self cannot be the self, or part of it. If Bradley is right in holding that whatever becomes an object must be removed from the self, then it is clear that no self can know its own existence. For no self could know its own existence without being an object of knowledge to itself, and a self cannot be its own object if the object *ipso facto* ceases to be self. Thus not only must we abandon

the view that I know my self by awareness—which we had found reason to think was the only way in which I could know myself—but, more generally, all knowledge of my self by my self is directly shown to be impossible.

But what reason is there for holding that a self cannot be its own object, remaining all the time the self which has the object? There appears to be no reason whatever. The presumption is certainly that it can be its own object, for, if it could not, I could never know my self (whether by awareness or by description), and consequently could never know any proposition in which 'I' occurs. Now, there are propositions in which 'I' occurs which I do assert, and which are *prima facie* true. The present writer can see no ground why this presumption should be rejected. It cannot be denied that there are certain relations in which a substance can stand to itself, and what is there in the case of the relation of knowledge which should make us reject the *prima facie* view that this is one of them? So far from that being the case, the more we contemplate our experience, the more reason we find for holding that it is impossible to reject knowledge of self. If we are right in this, Bradley's objection to the reality of the self, in the sense in which we have taken self, falls to the ground.

I am, then, aware of my own self. We now pass to a question of considerable importance—the relation of the self to time, or to that real series which appears as a time-series. It is a common view that the definition of substance should include permanence in time, or, at least, persistence through a certain amount of time.¹ But it is better to adopt a different definition, by which that which existed at a single and indivisible point of time would also be a substance. With regard to selves, the view that nothing is a self unless it is persistent through time is still stronger. Indeed, many refutations of the reality of selves confine themselves to showing, or attempting to show, that a self, defined in whatever way is being criticized, could not persist for the period covered by the life of a human body.

What can we say, on our theory, as to the persistence of the self? I know my self by awareness, and I can therefore be certain only of those of its characteristics of which I am aware, or which are involved in those of which I am aware. Am I aware of the persistence of my self through time? It seems to me that I am. For awareness lasts through the specious present. At any point of time, then, I may perceive my self at that point of time, and also my self at any previous point of time within the limits of a specious present. And if, between these points, I begin or cease to perceive something else, I shall, if I attend to the relation between the two perceptions, be aware of my self as persisting while other things change, and so as persisting in time.²

This period of time is, of course, very short relatively to the life of a human body. Have we any reason to suppose that the self which we perceive through a specious present persists itself through any longer time? It has been held by some writers that, for past periods which are earlier than any part of the specious present, but yet relatively near, our memory gives us absolute

certainly that the things which we remember did occur. If that is the case—it is not necessary for us to discuss whether it is or not—I can have absolute certainty that I existed at a time which falls within the limits where memory is absolutely trustworthy. If, at the present moment, I remember that I was aware of myself in the past, then the 'I' who now remembers and the 'I' who was then aware must be the same 'I,' unless the memory is erroneous—which it cannot be, by the hypothesis, within these limits—and therefore the same 'I' must have persisted from the moment of the remembered awareness to the moment of the remembrance.

Beyond this, there is no *certainty* of the persistence of self. If, outside the limits of certain memory, I remember that I did or was certain things in the past, that professed memory may be deceptive in two ways: It may, in the ordinary sense, be false, as when, in a dream, I remember that I committed a murder ten years ago. In the second place, even if the events which I now remember did happen to some one in my body, I may be in error in thinking that I experienced them. There may then have been another self related to my body, whose experience I now know and mistakenly judge to have been my own. The latter alternative is not at all probable, but it is not impossible. But, although there is no absolute certainty that my present self has lasted longer than the specious present and the short preceding period of certain memory—if there is such a period—yet there may be very good reason for holding that it is extremely probable that it has done so. There is very little reason to doubt that the feelings with which I now remember that I saw Benares really did occur more than twenty years ago, and the self which experienced them was the same one which is now remembering them. And there is very little reason to doubt that the same 'I' of which I am now aware did have various experiences ever since the birth of my present body, although I have no memory whatever of most of them. On similar grounds there is very little reason to doubt that, unless my body dies within the next week, the 'I' of which I am now aware will still exist at the end of this week.

The grounds on which we come to such conclusions will, of course, be empirical. But the results which we have reached as to the nature of the self, and as to my absolute certainty of my own existence within certain temporal limits, will have an important bearing on the validity of the conclusions as to further persistence. For, when objections have been offered to the common-sense view that each self—at any rate under usual circumstances—persists through the whole life of a living body, they have generally been made on the ground either that we do not know what the self is which is said to persist or that its persistence is incompatible with the changes in the 'bundle' of mental events. But we are now able to say that by the self we mean something of which the 'I' of which I am aware is an example. And so the question of any self existing to-day, whether it existed twenty years ago, is a perfectly definite question, whatever may be held about the true answer. We are also now able to say that, within the specious present, we are aware of a self which remains the same while changes occur among the mental events.

We have thus justified the statement at the beginning of this article. The quality of being a person is known to me because I perceive one being which possesses the quality, namely, myself. To be a person is a quality which I perceive in 'I,' when I perceive 'I,' and which I do not perceive in anything else which I do perceive, though I believe,

¹ For the sake of brevity, 'time' is used as an equivalent to 'time, or that real series which appears as a time-series,' whenever the context removes any danger of ambiguity.

² It does not, of course, follow that a thing begins or ceases to exist because I begin or cease to perceive it, but at any rate the perceptions will begin and cease. Since the perceptions are parts of the self, it follows that the same self can contain parts which exist at different times. It is also obvious that it can contain parts which exist simultaneously. If I know that I am angry, my self contains simultaneously a state of anger and a state of awareness (of the anger). Again, I am sometimes aware that I am both hot and happy.

rightly or wrongly, that it is possessed by other substances which I do not perceive. But is it a compound of various other qualities, or is it simple and indefinable? It would appear that it is the latter. There is a quality of personality, which, like redness, is made known to us by our perception of substances which have it, and, like redness, is simple and indefinable.

What is the relation of consciousness to personality? When we say that a self is conscious, we mean that it is conscious of something, i.e. it knows something. It would be a difficult question to decide whether the possession of personality necessarily involved the possession of consciousness, and, if so, whether a self had to be conscious at all times when it was a self, or whether its personality could continue during intervals when it had not consciousness.

A self-conscious self is one which knows itself, which, by our previous results, involves that it is aware of itself. Must a self be self-conscious? It has been maintained that it must be so. Sometimes it is said that consciousness is essential to the self, and that no being could be conscious unless it were self-conscious. Sometimes it is admitted that a being might be conscious without being self-conscious, but then, it is said, it ought not to be called a self. The present writer disagrees with both these views. It seems to him quite possible for a being to be conscious without being self-conscious. It is true that the only conscious being of whom I am ever aware is necessarily self-conscious, since it is myself. But I am not always self-conscious when I am conscious. Memory gives me positive reason to believe in states when I am not aware of myself at all—not states that are either abnormal, on the one hand, or mystic, on the other, nor states in which in any sense I am not a self, or am less a self than at other times, but a perfectly normal and frequent state in which I am conscious of other objects and am not conscious of myself, because my attention does not happen to be turned that way. I seem to remember such states. And, even if I did not remember them, it would still be perfectly possible that there should be such states, though there might be no reason for supposing that there were. And there is no reason why there should not be beings who are always in the condition in which I am sometimes, of being conscious without being self-conscious.

In answer to such considerations as these, it is sometimes said that self-consciousness is always found when consciousness is found, but that the self-consciousness is so faint that it escapes observation when we try to describe the experience which we remember. If there were any impossibility in the existence of consciousness without self-consciousness, it is doubtless to this hypothesis that we should be driven. But there seems no reason whatever why I should not be conscious of something else without being conscious of myself, and therefore no reason why we should conclude to the existence of this faint self-consciousness, of which, by the hypothesis, we can have no direct evidence.

Again, it is said that there is always implicit or potential self-consciousness. By this is meant that a conscious self could always be self-conscious if circumstances turned its attention to itself, instead of away from itself, that there is no intrinsic impossibility of self-consciousness. This is doubtless the case with me, and selves like me, at the times when we are not self-conscious. But it does not alter the fact that, at those times, we are just as really not self-conscious as at other times we are really self-conscious. Why should there not be beings who were conscious but whose nature was such that they could never be self-conscious?

It has also been maintained, as we said above, that, even if there could be beings who were conscious without being self-conscious, the name of self should be reserved for those who are self-conscious. This usage, it seems, would not be so convenient as the one which we have adopted. To call a conscious being a self only when it was self-conscious would involve that each of us would gain and lose the right to the name many times a day. It would be less inconvenient if the name of self were given to those conscious beings which are ever self-conscious, even at the times when they were not so. But there is a more serious difficulty. We are invited to define personality as being conscious of self. And consciousness of self is a complex characteristic which can be defined only when it is known what we mean by a self. Therefore, if self means the same on the two occasions when it enters into the statement, 'a self is that which is self-conscious,' we have a circular and unmeaning definition of selfness. But, if we avoid this by self not meaning the same on each occasion, it is obvious that we are using the word in a very inconvenient manner. On the whole, therefore, it seems better to say that selfness does not involve self-consciousness.

We have now determined what is meant by self, and how it is that we have the characteristic of personality. Spirituality may be defined as the quality of having substantial content all of which is the content of one or more selves. From this it follows that all selves are spiritual substances, but that they are not the only spiritual substances. Parts of selves, such as thoughts and volitions, or the parts of thoughts and volitions, would be spiritual. And so would groups of selves, whether those groups are important, such as a nation, or trivial, such as a bridge-party, or purely arbitrary, such as the group made up of Louis XIV., Sir Nathaniel Wraxall, and Sir Isaac Newton. (So, also, we may note for the sake of completeness, would be a group made up of some selves and some parts of selves. But this has no practical importance.) These are all spiritual substances, but they would not all be called spirits, since usage confines the phrase 'a spirit' to what is also called a self.

It would sometimes be maintained that our definition of spirit is too narrow. Whatever falls within the substantial content of any self, it would be said, is certainly spiritual, but spirit also includes content which is not part of any self. There is, or may be, knowledge, volition, emotion—in a word, experience—which does not fall within any self, and is not the experience of any self, and all this, it would be said, falls within spirit.

It might perhaps be admitted that, if there were such non-personal experience, it would have a good claim to be called spiritual. But the present writer submits that it is impossible that there should be. This is not a question about names. The assertion is that we mean the same thing by the names 'knowledge,' 'volition,' and 'experience' as is meant by the advocates of this view, and that we mean the same thing by the term 'self.' (At any rate, any slight difference that there might be in the meanings of the words would not account for the difference of opinion about impersonal experience.) The assertion is that there cannot be experience which is not experienced by a self because it seems evident, not as part of the meaning of the terms, but as a synthetic truth about experience. This truth is ultimate. It cannot be defended against attacks, but it seems beyond doubt. The more clearly we realize the nature of experience, or of knowledge, volition, and emotion, the more clearly, it is submitted, does it appear that any of them are impossible except as the experience of a self.

Nor are we led to doubt this conclusion by finding that it leads us into any difficulties. For nothing that we know suggests to us in the least the existence of impersonal experience. We never perceive it, since each of us perceives only himself and his own sense-data—and none of the facts that we do perceive is better explained on the hypothesis that there is non-personal experience than on the hypothesis that there is not.

All substantial content of spirit, then, must fall within some self. But now another point arises. Can any substantial content fall within more than one self? In that case either one self would form part of another or two selves would overlap, having a part common to both. Is this possible? It seems impossible that any part should be common to two or more selves. When I contemplate, to begin with, what is meant by an act of knowledge, a volition, or any other part of my experience, it seems as impossible to me that such a state should belong to more than one self as it is that it should not belong to a self at all. It may be said that this still leaves open the possibility that there should be parts of a self of which that self is not and cannot be aware—which are, in the ordinary phrase, unconscious parts of the self—and that these may be common to more than one self, though conscious parts could not be.

It is doubtful whether this view, that unconscious parts can be common to two selves though conscious parts cannot, has ever been maintained. Whenever it has been held that two selves could have a common part, it has always been held that one self could be part of another. And, since all selves are always held to have some conscious parts, this would involve that some conscious parts were parts of two selves. But, whether the view has been maintained or not, it seems false. From the nature of the case I cannot observe an unconscious state of a self, and all that I could know about it would be that it was a state of a self, and an unconscious state. But this is enough. For, when I consider what is meant by a self, it seems to me clear that a self is something which cannot have a part in common with another self. The peculiar unity which a self has puts it into a relation with its parts which is such that a part could not have it to two selves. Or, to put it the other way round, any relation which a substance could have to two wholes, of each of which it is a part, cannot be the relation of the state of a self to the self.

Since selves persist through time, each self is divided into parts persisting through the parts of the self's persistence. (And these parts it would have, even if we were wrong in our view that acts, of knowledge, volition, and the like, are parts of the self who knows and wills.) It seems equally impossible that any part in this dimension should be common to two or more selves.

The impossibility of any part of any self belonging also to any other self is, we may say, an ultimate truth, and cannot be proved. But it can be indirectly supported by discussing various ways in which it has been said that it is possible that one part should belong to more than one self. In the first place, it is often said that one self (and so the parts of it) can be part of another, if the included self is a manifestation of the inclusive self. This view has always been popular, because one of the chief grounds for wishing to show that one self can be part of another has been to make it possible for man to be part of God. For various religious motives many people have been anxious that a personal God—a God who is a self—should be the whole of what exists, or the whole in which all spiritual life falls. And, if man is to be part of God, it is a natural and attractive view to regard man as manifesting God's nature. If a self could

be part of another on condition of its being its manifestation, it would cover those cases in which people are generally most desirous to show that one self is part of another. Now, it is no doubt true that a self can manifest the nature of a whole of which it is a part. Thus we may say that Dante manifested the nature of the society of the Middle Ages, and that Chatham manifested the nature of England. But England and the society of the Middle Ages are not selves. Again, one self can manifest the nature of another. Thus a theist, who was not a pantheist, might say of a good man that he manifested the nature of God. But the manifestant is not part of the self whose nature he manifests. It seems that in many cases in which it is said that one self can be part of another the assertion is based on a confusion about manifestation. It is said that the inclusion can take place, if the included self manifests the other. And, because a self can be conceived to manifest the nature of a whole of which it is a part, and can be conceived to manifest the nature of another self, it is confusedly held that it can be conceived to manifest the nature of something which is *both* a whole of which it is a part and another self. But this, of course, is an illogical inference.

In the second place, it is suggested that, if a self A perceived a self B, and all its parts, and had other contents besides those perceptions, then B would be a part of A, and the parts of B would also be parts of A. This suggestion also applies chiefly to the inclusion of man in God. For we know of no case where a man can perceive another man, or his parts, and it is generally said (though, as said above, probably erroneously) that this would be impossible. But in the case of God it is often thought that this limitation need not apply. It is possible, no doubt, that B and its parts might be perceived by A, whether A was God or not. But this will not make B and its parts into parts of A. B perceives its own parts, or some of them, but the relation of having them as parts and the relation of perceiving them are quite different relations, and, if A should have the second, it does not follow that it will have the first. The confusion is probably due to the fact that, in our ordinary experience, no one perceives the part of a self except the self of which it is a part, and it is therefore mistakenly assumed that anything which did perceive it must be a self of which it is a part.

These considerations diminish any doubt which might fall on the truth of our position that the inclusion in selves of other selves or their parts is impossible. If it really is an ultimate truth, it may be said, why have so many thinkers believed that it is not true at all? But any force that there might be in this objection is diminished when we see that many of the people who asserted that the inclusion was not impossible had confused it with one of various other things which are quite possible, but are not the inclusion in question.

It is sometimes asserted, not only that such an inclusion is possible, but that we have empirical evidence that it does occur in those comparatively rare instances usually known as cases of 'multiple personality.' The most striking of these, and the one best adapted to prove the contention, if any of them could do so, is the case recorded by Morton Prince in his well-known work, *The Dissociation of a Personality* (New York, 1906). It does not seem to the present writer that any of the most interesting facts recorded in this book, or any other facts of the same class of which he has read, are incompatible with the view that only one self is, in each case, concerned with all the events happening in connexion with any one body, the characters, and the events remembered by that

self, suffering rapid oscillations, due to causes not completely ascertained. That such oscillations do take place has been certain since the time of the first man who became quarrelsome or maudlin when drunk, and reverted to his ordinary character when sober. The oscillations in such a case as we are now considering differ in degree, no doubt, from those seen in every-day life, but they introduce no qualitative difference.

Whether all the facts recorded of multiple personality can be explained in this way is a question into which we cannot now enter. But, if there were any of such a nature as to be incompatible with the theory that a single self was concerned in them, they would necessarily be of such a nature as to be compatible with the theory that they were caused by two selves, neither of them including the other, or any part of the other, which happened to be connected with the same body—

a connexion which we do not come across in any other part of our experience, but which has no intrinsic impossibility.¹ Thus any fact of multiple personality, whether the divergence of personality were slight or great, could be accounted for without requiring the hypothesis of inclusion, and no doubt can arise from these facts as to the correctness of our view that the impossibility of the hypothesis of inclusion is an ultimate truth.

Since such inclusion is an impossibility, it follows that, unless I am the whole universe, the universe cannot be a self. For I am aware of myself as a self, and, if I am not the whole universe, I am part of it. And the whole of which a self is part cannot be a self. This result is the same whether, of that part of the universe which is not me, all, some, or none consists of other selves.

PERSONIFICATION (Introductory and Primitive).—Personification may be defined as the act of attributing a living, conscious, and active personality to inanimate natural objects (from the smallest object to complete portions of the physical world, and even the whole world itself), to forces and phenomena, to manufactured objects, or to abstract ideas and words.

There are two great difficulties in studying a subject like personification: (1) to discover the exact significance to primitive man (or, failing him, uncivilized man) of what we call 'personality'; and (2) to reconstruct, as far as possible, the psychological mechanism behind the process of personification. The first of these problems need not be treated here (see LIFE AND DEATH [Primitive], PERSONALITY). With regard to the second, there are so many examples of personification collected by modern bibliography that our only practicable plan here seems to be to arrange the facts roughly in classes and, noting as we go along the partial explanations that they suggest, try to come to a general conclusion. The examples in each class are so numerous that only a few can be mentioned. For further details see the literature at the end of the article.

I. **CLASSIFICATION.**—1. Inanimate natural objects.—The forces of nature and portions of the physical world (as primitive man imagines them) everywhere form the most important subdivision of the first class of personifications. It is impossible to draw up a complete list of all the varieties in use among the extinct primitive religions, and of those of which present-day uncivilized races give us a poor and distorted idea. But we may present a list in which the order followed is that corresponding, roughly, to the principal divisions of the universe as conceived by the most typical of those religions.

First there are the elements themselves, or, rather, what primitive man imagines to be the principal elements forming this universe. Water, fire, and earth we find universally conceived as persons. But this generalization presupposes an effort of fairly far advanced synthetic conception. A rougher or more childish subdivision is usual, the more elementary naturism generally resulting in the following classes:

(a) The sky, or (much more frequently) the

different skies or portions of the world that is conceived as above the earth and separated from it by the world of air. These are sometimes superimposed regions and sometimes real separate worlds. For the process of personifications of this class see art. SKY-GODS.

(b) The intermediary space between the sky, conceived as a solid world, and the terrestrial world is formed by air or airs. See art. AIR AND GODS OF THE AIR.

(c) The terrestrial waters form one of the commonest classes of personification. The sea or the different seas (e.g., the ocean of Dahomey, the glacial sea of the Eskimos, the Onajit Orit of the Egyptians) are wide-spread types. These personified waters are quite different from the waters of lakes and rivers (see below, I. 2 (c)). They are maritime waters. A point to be noticed is the general predominance of a special personification for the water which forms the boundary of the inhabited world—e.g., the old *Ὠκεανός* of Homeric Greece. In most cases it serves to connect the mass of terrestrial waters with those held up by the sky or those of the 'abyss' on which the earth rests. This notion throws light on primitive cosmogony, and on the primordial water of so many mythologies, from which every thing and every personified spirit, even the Supreme Being, came forth in the beginning (cf. art. WATER-GODS).

(d) The personified earth (not as an element, but as an expanse) has a place in most ancient myths; it appears at the very dawn of cosmogony in its creator rôle. Almost all the religions which reached the stage of outlining a world-history show the earth in this rôle, either alone or, more frequently, with the co-operation of the personified sky (see SKY-GODS). Usually the earth is conceived as female and consequently as a mother (cf. EARTH-GODS), but in exceptional cases (e.g., in Egypt) it is personified as a man. He engenders, and the rôle of giving birth to the world is reserved for a female sky. The necessary concurrence of the two elements is identical; but the maternal rôle of the sky shows a more philosophic idea of origins.

¹ No great difficulty is represented by the fact that, on this theory, one self would sometimes 'remember' what had happened to the other. Two such selves would have an important and unusual connexion, in the occupation of the same body, which might well be sufficient to account for this.

(e) Quite distinct from the person of the earth are the chthonic personifications of the under world. They correspond to various conceptions among primitive peoples, and concern not the superficial living layer of the soil, but a region quite different from the earth, about whose structure and extent races have had very different ideas (see DEATH AND DISPOSAL OF THE DEAD, STATE OF THE DEAD). It is sometimes regarded as a single division, sometimes as a series of divisions of the organized world. For these underground regions see UNDER WORLD.

(f) At the foundation of the series of personifications created by naturism we find the 'abyss,' or the primordial mass, usually imagined as liquid. In some cosmogonies it is the oldest of all persons, before the sky and the earth, which are only its emanations or persons sprung from it (see SKY-GODS)—e.g., the Egyptian *nun* and the Sumero-Chaldean abyss in advanced religions, and 'the waters' of the Bushongo and of the myths of S. Africa at the earlier stage.

Such a series of personifications is the product of an advanced naturism. It presupposes a complete view of the supposed subdivisions of the world, and, consequently, quite a power of generalization. We may therefore reasonably suppose that it is far from representing the primitive stage of the personification of nature. Much more ancient, to all appearance, are the fragmentary personifications found in every part of the universe. Before the sky was personified as the one universal sky, man personified separately, and as so many distinct entities, the different parts of the firmament, the various regions of the different skies (not to mention their inhabitants [see below, I. 2 (a)]); he imagined and personified the 'lower sky,' the 'upper sky' (as still seen in the Pyramid Texts at a much later date), the sunset sky and that of the sunrise, the 'skies of the horizons,' etc.; in the same way the spaces of the air were divided into quarters and domains, each of which was a person. As for the waters which sleep or roll on the surface of our planet, the enumeration of their personifications would be endless—springs, fountains, brooks, streams, rivers, ponds, lakes, marshes, etc. Their characteristic traits also suggested other personifications, viz. cascades, torrents, rapids, and cataracts. It should be noticed that the pre-historic religions of the valley of the Nile and those which we find to-day on the Black Continent or in Polynesia point towards the same conclusion: it is in springs and especially in remarkable irregularities of surface (rapids, cataracts, etc.) that the most ancient personifications of water seem to occur; i.e., the notion of force or energy superseded that of expanse. The phenomena peculiar to an aquatic region, like Morbihan in Brittany or the lagoons on the west coast of Africa (cf. R. E. Dennett, *At the Back of the Black Man's Mind*, London, 1906, and *Nigerian Studies*, do. 1910), reveal a similar mechanism for the particular cases.

The same infinite variety of persons is found for the solid element. The whole book of Nature is included, from the great peaks and high mountain-summits and the promontories and headlands on the coast to isolated rocks, from forests to isolated clusters of trees, from the great Arctic iceberg to isolated islands of ice.

The personifications of the chthonian domain have less numerous manifestations: grottoes, caverns, and especially passages supposed to be entrances to the other world. The *akir* and *amentit* of ancient Egypt have their equivalents in many a semi-civilized race in Africa at the present day, just as the various 'passages' in the subterranean domains of ancient Chaldaea or of

Homeric Greece have theirs in the remains of uncivilized religions.

2. Natural forces and phenomena.—The long list of personifications of physical nature shows us a constantly-recurring fact: among the objects most frequently personified we always find in the first rank those which attract man's attention either by their characteristic, exceptional, or abnormal appearance or by their apparent activity and its direct effects on man for good or ill. And if, as is probable, the understanding of the first causes and of the general manifestations of physical phenomena is beyond the intellectual power of primitive man, we again reach the hypothesis that personification originated not in the great divisions of the material universe, but in its very small fragments or portions when they seem to attract attention by an exceptional activity or power. It is therefore by isolated things, or small portions of space, of the earth or of the waters, and especially by manifestations of their energy apparent to the senses, harmful or beneficent, that personification must have arisen. This seems to be proved by an examination of the various personified natural forces, which we shall class, for convenience' sake, in the same purely artificial order as before.

(a) Thus, in the domain of the celestial we find personified alongside of regions of the heavens having no apparent rôle, like the Milky Way, all bodies whose movements and courses attract attention, and especially those whose activity seems to influence terrestrial phenomena or the state of human beings. This process of personification seems anterior to real deification and to any astrological system (see SUN, MOON, AND STARS). The personification of the solar or lunar eclipse as a hostile monster is a universal religious phenomenon and is everywhere of first importance. As a general rule we notice the pre-eminence of comets over fixed stars in their normal aspect, that of planets over the constellations, and that of the moon over the sun (generally found among uncivilized races). Here we get fresh light on the origins of personification. We also see the importance attached to the personified thunder-bolt, lightning-flash, or thunder-peal, as to all fragments of meteorites and fire-balls, and especially to the rainbow, to which so many primitive religions give an important place among sacred personifications. It is only at the second stage of religious evolution (e.g., in N. Africa, in Nigeria, among the Gallas, among the Hereros, in Ethiopia, and in Egypt—to mention only the African region) that these manifestations of the world above are connected with the personal activity of the sky-god; they become his voice, his appearance, or his material fragments (cf., e.g., the thunder-god or the ram-god of Dahomey).

(b) In the personification of air phenomena we find the same state of affairs, sometimes with more definiteness. *Æolus* in classical mythology and the Chaldean Demon of the South Wind are only two among many survivals of a great number of persons who, before being gods or spirits, in the proper sense of the word, were the 'animation' (see ANIMISM) of the most violent and remarkable phenomena of the air. The north winds of the savages in northern regions, the tempests of the Ainus, the winds of the whole of pre-Columbian America, the storms, great rains, hurricanes, cyclones, and water-spouts of so many savage races throughout the world did not become real gods until a much later stage (China, Kandhs, Melanesia, New Zealand, W. and S. Africa). Later still they became the attributes or the manifestations of great gods. But that is not to say that they were always directly personified for their own sakes. A careful examination of cases shows that these activities are usually connected with a fixed and

visible point of the material world; it is with a peak, a summit, an iceberg, or a headland that the gusts of wind, storms, and hurricanes are connected (e.g., Lake Tanganyika and Lake Victoria Nyanza, the Cameroon summits and the Ruwenzori mountains), and not with the spirit dwelling on these peaks or headlands, but, on closer examination, with the personified peaks or headlands. The problem is more difficult in personifications of phenomena such as the *aurora borealis* among races of cold countries, the St. Elmo fire, and the zodiacal light; and great caution is necessary here.

(c) But the region of 'persons' of the water (torrents, rapids, cascades, cataracts, etc.) shows the same facts (see above, I. 1 (c)), as do also the chthonian manifestations. Points where earthquakes are frequent, the volcanoes of Kilimanjaro in Africa and those of Mexico, Fujiyama in Japan, and the Icelandic geysers were personified for their own sakes, and as distinct persons, from the very fact of their activity, before becoming simply the habitat of a spirit or a god who shows his particular energy through them.

This review of the inanimate physical world and its chief manifestations of power seems to lead to the conclusion that personification (without considering yet whether it proceeds from pure animism or from a kind of dynamism) originated in man's encounter with a series of objects, and in phenomena attributed to those objects, and supposed to be endowed with will and intelligence, or at least passions, and consequently forming a personality, as primitive man understands it. But this explanation is only partial, and, as a matter of fact, the process of formation of the personality is much more complex. The naturistic world is only one part of the domain of personification.

In the very undeveloped stages of non-civilized societies we find a complete group of personifications which apparently cannot be explained in this simple way. Such an abstraction as time, e.g., seems *a priori* likely to escape personification, in the concrete sense of the word (the only acceptable sense in the case of primitive or non-civilized man). But we find that this personification is of general occurrence, in pre-Columbian America (e.g., Aztecs and Mayas) as well as in proto-historic Africa (the Nile Valley) or non-civilized Africa (Yorubas, Ashantis, Dahomans, etc.), where the 'persons' of the chief seasons or divisions of the meteorological year, of the type of the American Nipumukho and the Pipunikhe, the Egyptian *taru*, etc., play an important part. And these are real personifications, not rôles or 'appearances' assumed by the spirits or gods, of whom these divisions of time would be simple emanations.

The problem thus becomes very complex. At first there may have been the conception of persons whose activity shows itself in a group of regular phenomena, classified by the human mind under such simple terms as 'months,' 'seasons,' etc. From this a generalization would take place in time and space of those more humble personifications which we find in the forms of personifications of germination and maturity, of the return in spring of certain vegetable or cereal species, or more commonly in the form of the 'grain-spirit' or the spirit of the crops or harvest. These minute personifications, arising partly from animism and partly from dynamism (see below, I. 4), would proceed, as in the cases mentioned above, by more and more extensive generalizations up to an elaborate series of phenomena considered in their complete evolution. But the explanation becomes very doubtful in a case of personification of larger divisions of time, such as the year (cf. PERSONIFICATION [Egyptian]), cycle, period, etc. The stellar explanation is not sufficient, for it is evident that

these 'persons' have a real existence, independent of the stars and the celestial movements to which they ultimately adapted themselves.

Taking time-divisions in descending order, we find personifications of the divisions of the season; of the month and its subdivisions into four weeks or shorter periods; then of the day and its parts, hours or their equivalents. The complicated systems of the non-civilized Far East, of Central America, and of W. Africa show independent (and sometimes ingenious) types of these groups of personifications. But here we must notice: (1) the purely conventional and artificial character of many of them, and (2) their dependence, real though often difficult to prove, on spirits or deities; these pseudo-persons are in reality dependences or 'virtues' of deities or spirits far offener than entities with an existence of their own.

A similar reservation must be made with regard to the divisions of space, not the natural divisions which are enumerated above (I. 2 (a)), but the symmetrical ones invented by the half-knowledge of savage races or those of a proto-historic stage—e.g., the four cardinal points of the compass, or 'celestial houses' personified. Careful inquiry shows that, in the cases studied up to the present, these divisions are always 'functions' of some spirit or deity. It may be held, on the contrary, that the spirit or god assumed the personifications, or that he was originally subordinate and became detached from them. But closer examination shows that, as a general rule, he is anterior to them. The personifications, then, always slightly artificial, depend on the god from the very beginning, and not the god on them.

3. Manufactured objects.—We now reach a new set of personifications, which cannot be entirely explained by dynamism any more than by direct animism—artificial divisions of the earth made by man himself, or inanimate things which man has produced or shaped with his own hands. The most characteristic examples of the former are the personified State, province, or domain; of the latter the personified human constructions (city, town, village, fortress, isolated buildings, and, most naturally, temple or chapel). Another important group of 'persons' is the vast crowd of objects worked on or manufactured by man, from the gathered sheaf of grain or bunch of plants to implements, weapons, machines, and instruments of all kinds. The most remarkable group of personifications of this type consists of constructions such as bridges, or cult-objects such as tabernacles, altars, etc. (cf., e.g., art. ALTAR, BRIDGE), in which the distinct personality is clearly seen. We must reserve the examination of the mechanism controlling the formation of this class in the meantime; the following groups may help to explain it.

4. Abstract ideas.—Perhaps we may find new light in another class of personifications, which seem at first sight to proceed from a kind of animism grammatically applied by human language to pure abstractions. The personification of good or evil forces and of harmful qualities or powers, such as will, force, justice, order (e.g., the Egyptian *Mâ'et*), health, illness, death—in a word, abstractions—is a religious phenomenon not only of universal occurrence but also of the greatest antiquity. Although our data have been enriched by hundreds of excellent new examples since the facts and arguments of Max Müller and E. B. Tylor were advanced, the theory itself does not seem to have made corresponding progress. It is wise to regard as a kind of 'disease of language' a great many personifications, which in any case do not appear to be primitive—e.g., functions or functional qualities of an intellectual kind (calculation, architecture; e.g., the Sakkhet-abui of Egypt) or of a physical kind (hunting, fishing)—and to consider many of these personified activities or characters as detached *apart*, so to speak, of certain demons, spirits, or gods, with whom they are constantly associated in all religions; and, lastly, we must reject as artificial and purely conventional all that is comprised to-day under the very vague name of 'allegory'—vices, virtues, arts, sciences, commerce, industry, etc.—as these are late inventions to which a real personality has never been seriously accorded outside of rhetoric or poetry.

But, even after these eliminations, there remains an imposing number of abstract persons who defy any single interpretation. Is time, considered in *abstracto*, a person? The Greek *Χρόνος* points to an affirmative. Space and Destiny figure as personalities in more than a hundred religions, from the most humble to the classical systems of antiquity, and not only distinct from all the divine persons, but often superior to them or hostile towards them. Matter (Egyp. *nun*) exists in several non-civilized systems. Neither pure and simple animism nor animism working through language can explain these abstract entities satisfactorily.

Some light, however, is thrown on them by the present-day religions of some savage races. If, *e.g.*, we look at the personification of the idea of disease, we find that abstract generalization is beyond the conception of primitive man. There are diseases, but not disease in the abstract. Every affection or pain is either the definite work of a spirit or demon or a definite person. The wealth of amulets, fetishes, and attempts at images (painted, carved, and sculptured) establishes this fact beyond all doubt. Now, fetishism proceeds from dynamism as much as from animism; *e.g.*, in W. Africa malaria, sleeping sickness, abscesses, gastric derangements, and smallpox have special representations or separate fetishes and form persons having no connexion with each other. Similarly, Oro, the Dahoman disease-god, is originally the personification not of disease in general, but of internal bodily pain (probably lumbar or intercostal pain). There were as many real personifications as there were localized diseases and pangs, including hunger and thirst, which are real beings. It is only at a much more advanced stage that we find the personification of disease or pain in general; and still later (needless to say) that of beings such as Evil, etc. We may say that such fictions as Death holding in her hand Anxiety, Pain, and Misery (*e.g.*, the Hel of N. European myths) are purely literary and belong to the period of the creation of myth and folklore.

Here also we apparently come to the same conclusion as in the case of the cosmographic and cosmogonic personalities: the earliest personifications were not inclusive or general, but myriads of small personalities born from objects, events, or fragmentary experiences. More thorough research into the metaphysics of the non-civilized will probably lead to the same conclusions for personalities such as Force, Health, Knowledge, etc. The religious texts of proto-historic and pre-historic Egypt are valuable here as the only written evidence of primitive thought. From them we see that there was not one physical force, but several; more than one kind of health and productiveness; twenty kinds of 'knowledge'—of deceit, of 'cleverness,' of 'magical powers,' etc.—and not one Knowledge. And everywhere the tendency of primitive personification to form separate entities reappears.

This leads us to the very important personification of death. There is hardly a single race among whom Death, under the most diverse forms, has not been a person and had its place in myth. We need not consider the stage during which it is a purely allegorical figure, as in classical and modern literature. Death personified, and a real person, is found almost everywhere. Are we to think that it also is a later generalization, and that originally there were ten or twenty different kinds of death, forming as many personalities? The nature of death among the various races (see DEATH AND DISPOSAL OF THE DEAD) seems to lead to a different conclusion. To primitive man death is not annihilation, but a rupture of several elements, all more or less perishable, but each keeping, at the

moment of what is called death, its own separate life, capable of being prolonged. Death is therefore not a state, but an energy or an act. It is always the act of a person, every kind of death being the result of the evil activity of one of these persons. Death is thus an effect, a consequence, and yet it has become, at the same time, a single personality like each of the other personified energies.

We find in many religions a Death with its kingdom, a Death with its court, ministers, and army; and this at first gives the idea of a power as ancient and as distinctly personal as the oldest gods and spirits. But the Death of so many myths and religious literatures does not belong to primitive soil. The study of African, shamanist, or Australian death shows that the earliest stage had no conception of the huge formidable figures created later by the great semi-civilized mythologies of Polynesia and S. America, the learned religions of the classical world, or the systems of N. Europe. It is even doubtful whether the Death of pre-Columbian Mexico is a distinct personification; it is more probably an attribute, a force belonging to a deity, as is the case with the supreme god of a region of Black Africa. And it should be noted here that ancient Egypt (which kept so closely to the ideas of non-civilized races in many respects) is not acquainted with a personified Death; the monster Tiat is not death, but the destruction which consumes ghosts.

It has seldom been remarked that death has always been personified, while life has not been personified to the same extent. There are few indications so valuable as this fact in reaching by synthesis the conception of death that prevailed among primitive men. Life was not the opposite of death. When death became a personification, it was by the ordinary process of personifying acts and energies. But life defies definition by the savage mind; it seems to be neither a state nor an energy, but, in the majority of the cases examined, a thing inseparable from various fragments of matter, and, consequently, impossible to personify separately. We can only mention this peculiarity in passing; it is common among non-civilized peoples, and may lead to important results in the study of primitive psychology.

II. CONCLUSIONS AS TO ORIGINS AND PROCESS.

—I. Personification forms.—However incomplete our enumeration of the various kinds of personifications may be, its first result is to show the (perhaps preponderating) importance of the notion of force. But how was this notion expressed? The material forms given by man to the various personifications supply important elements for the consideration of the origin and nature of personification. And, while the material classification of so many hundreds of persons is difficult, the bibliography at our disposal gives a sufficient number of distinct types for the various religions.

(1) The first category comprises anthropomorphic forms. The sex of these personifications is determined sometimes by the material objects which are their corporeal essence, sometimes by their activities, and sometimes by language. The Sun, man or woman, the Moon, of male or female sex, the Stars, of different sexes, the Father or Mother Earth, are examples which might be supplemented throughout the whole of the cosmographic series examined above (I. 2 (a)).

(2) Animal forms (apart from the difficult questions of zoolatry and totemism [*q.v.*]) constitute the second of the great classes. The ram-thunderbolt, the serpent-rainbow, the dragon-tornado, the dragon-eclipse, the white-bear-tempest, are among hundreds of examples. As a general rule, animal figures seem to be the form preferred for personifications of awe-inspiring energies, rapid action, and terrible aspect. 'Mixed' forms, *i.e.* half-animal and half-human, do not seem ever to be direct formations, but result from the union of two or more personalities originally distinct.

(3) Lastly, monstrous or fantastic forms, of strange or horrible aspect (*e.g.*, the South Wind in

the Chaldean religion), for very simple psychological reasons, are reserved for wicked personifications. An examination of the chief forms of persons of this category, as represented in the iconography of N. Europe, Polynesia, Africa, and pre-Columbian America, yields abundant facts in support of this.

But do these three forms (anthropomorphic, zoomorphic, and monstrous) represent the really primitive way of expressing personalities? An affirmative answer amounts to admitting that idolatry preceded fetishism. The study of the crudest forms of personification among savages shows a different mechanism, which at the same time gives us a closer view of the manner in which a great many of these personalities are elaborated.

Of course, we must eliminate all the personifications introduced by a later age—the purely poetical, allegorical, conventional, or grammatical—as artificial and without foundation. They are often simple pictographic devices, if we may say so, implying no real belief in a positively existing person. We shall also omit the various personalities that are merely hypostases (see below, II. 4) of deities of superior rank. They are simply linguistic or pictographic means of expression and not truly primitive.

In the first place, then, the process of pure and simple animism, as Tylor defines it (*PC*³ i. 425), and the psychological mechanism by which Keane (*Man, Past and Present*, pp. 279 f., 421, 502 f.) explains anthropomorphism (*q.v.*) are contradicted by an increasing array of facts, and it would be most incorrect to assume here (as has been so improperly done in many other problems) that the mentality of the savage is the same as that of the child. Pure and simple animism is perhaps reconcilable, strictly speaking, with the statement that in nativist personifications the spirit is independent of the object or thing which it personifies (the system of inflexions of the Bantu languages is a striking example of this conception); but it clashes with the personifications of acts, forces, and energies. If it connects them with specifically distinct spirits or gods, it at the same time destroys the real existence of these personifications. If it allows them to exist, it cannot explain, in the majority of cases, either their characteristics or their material appearance. It is undoubtedly true that for primitive man everything lives, and that there is no such thing as an inanimate object. Everything has an *anima* (or several), and each thing manifests by its real or imagined activity the existence of a conscious voluntary principle endowed with instincts, feelings, and passions. But what do we find to be the favourite material means employed to express or fix these personalities and make them real? As a rule the forms have no direct connexion with the forms that we should expect to result from the helioids attached to the personalities. Theriomorphism or zoomorphism, *e.g.*, is proved to be the result of most complicated processes (as is usually the case among savages, because they cannot see the simple, the general, or the synthetic); it is manifestly the product of ultra-conventional, symbolical conceptions, as far removed from the real nature of the personality which they express as, *e.g.*, the Christian representation of the dove is from the theological idea of the nature of the Holy Spirit. The most common and most ancient practice of uncivilized races was to translate and incarnate their personifications in aniconic objects.

The great number of personifications of plants, fruits, stones, pebbles, animal or vegetable debris, and especially the fantastic combinations of them made by the hand of man, are indications of vital importance. It is well known that even in the

fetishes with human or animal form (real semi-idols) the force or virtue—in a word, the soul or the person of the fetish—does not depend on the form or the characteristics of the puppet of wood (or any other material), but on the collection of bones, feathers, hairs, nails, leaves, grasses, or other substances that cover it or are fixed in its head, on its back, or in front of it. Now these medleys are not magically connected with the spirits or demons of the beings from whom they proceed; it is an entirely different personality that is named and fixed in the fetish by such collections. The relation, therefore, is not animistic. It may be objected that the fetish itself is not a person, but the momentary shelter, the abode, of a person. But even this objection (supposing it to be true for all so-called fetishes, which is far from being the case) would tend to confirm the dynamist character of the origin of personification in the instances examined so far.

2. Symbolical representations. — We shall examine briefly the methods of the dynamist expression of personifications. They are extremely varied. Sometimes primitive man proceeds by allusion to the supposed affinities of the entity to be personified with the whole class of substances the separate members of which produce part of the energies belonging to it; this is the origin of fetishes. Sometimes he proceeds in the same way, but by antinomy or antiphrasis. Sometimes he employs the animal or vegetable forms, simple or complex, by means of which the person usually manifests one of his activities (this process is quite different from direct animistic representation of the ordinary habitat of a personality; that has to do with animism properly so called, zoolatry, dendrolatry, and, later, idolatry). In other circumstances he proceeds by symbolism or sympathetic magic, representing the objects whose virtues or characteristics most resemble those of the personalities which he wishes to express (*cf.*, *e.g.*, J. Henry, *L'Ame d'un peuple africain: les Bambara*, Paris, 1909, p. 212 ff.). Sometimes there are allusions (very difficult for us to understand) to the virtues expressed by colours, personifying some superior force, or by lines, strokes, or geometrical combinations, or by stones whose clearness, brilliancy, and texture are the material expression of the qualities of the personality. Easier to understand are the processes which express the conception of the personality in lifelike representations, by association of ideas, the effect for the cause, or *vice versa*—*e.g.*, the effects of inundation, fire, death, or disease—by material allusions or by symbolical parallels, by means of objects that suggest to the mind their first causes or, on the other hand, their results; examples are the personification of thunder by fragments of stone or meteorites (which later become the basis of litholatry), the use of horns to personify strength, and of all kinds of brilliant objects to personify light, etc., or the representation (in Dahomey) of a pole painted blue, with red dots, to personify smallpox (because the body of a black-skinned person suffering from this disease assumes that appearance). In the anthropomorphic class the different personalities of the various pains and physical ills (including hunger and thirst) are translated by the representation of the result of their energy—a man with a twisted neck to personify wryneck, a man as thin as a skeleton to personify consumption, etc. This class is unlimited and includes all kinds of expressions of good and bad personifications. It leads, by extension, to the representation of the personality by the figure of a being who, in character or powers, comes nearest the activity imagined in the personality represented—an important process, as it is the origin of fully half

of the zoomorphic or theriomorphic figures. A still more curious development is the materializing of the personification in the representation of an object which produces effects similar to those produced by the personality to be expressed; the stick, the sword of hard wood, the arrow, the lance, the stone axe, and the imitation of lightning are the most remarkable examples of this class. It has had a most important result, in the much later idea of placing these representations in the hands, on the head, or on the body of images with human features, in order to complete, by gesture or attitude, the manifest expression of the activity displayed, and it has contributed in large measure to anthropomorphism and idolatry.

3. Personification of energy.—These examples are perhaps sufficient to throw a little light on the difficult question of the origins of personification. The originating elements are many, and there is every appearance that all have been active separately and from the very beginning. It cannot be denied that pure and simple animism was first responsible for a large number of the persons believed to exist in the physical world of rocks, mountains, waters, winds, etc.—in a word, of nature broken up into thousands of objects. Direct animism also explains the personality given to the products manufactured by man. The need of concrete images of words, even the most abstract, the need of giving them, so to speak, flesh and bones and visible attributes, was also the source of a number of personifications, and for this grammatical animism the views of Tylor, correcting the exaggerations of Max Müller, are an excellent scientific basis.

But, besides these forms, and at the same time, another feeling led primitive man to personification. Neither the *mana* nor the *orenda* of recent theories seems to define it exactly, any more than the 'feelings of immensity' or of 'incoercible force' of F. B. Jevons's ingenious theory (*Introd. to the Study of Comparative Religion*, p. 114 ff.). Conceptions so strongly synthetic are beyond the mentality of the savage. If we may make an attempt at a more correct explanation, primitive man seems to have confusedly guessed the existence of an impersonal force, united to matter, distinct and different from spirits, demons, or gods, whose existence and activities he also recognized. He never attempted to define this force theoretically; he did not even try to conceive it in its unity any more than he could, in the case of matter itself, do anything but perceive some of its fragments or aspects. But here and there he discerned its manifestations, either in duration (e.g., the seasons) or in space (e.g., the celestial regions or quarters of the sky), or in both at once (e.g., germination), or, lastly, in the encounters with invisible forces which he experienced. Whenever he discerned these more or less fragmentary manifestations, he detached them from the mass of the inaccessible and the unknown, and by this very act he created a personification. It became detached from the whole with the same ease which in developed religions gives so many multiple souls, essences, or attributes to one and the same god.

4. Personification and syncretism.—This capacity of breaking up into different personifications a single force confusedly surmised (but never seen) justifies one of the most noteworthy characteristics of the evolution of the savage's notion of personality.

Such personalities were naturally, and by previous definition, deprived of all moral character. They had, for good or ill, only the qualities which best explained the physical manifestations whose activity had led man to imagine as first causes of

such activity the existence of certain persons. Now, this is something entirely different from anthropomorphism—though many writers (e.g., Jevons) have imagined it to be so originally—viz. that man proceeded by first imagining beings like himself, and then endowing them with passions and manifestations of energy similar to his own. Certainly, when primitive man, in order to define the appearance of these personifications, tried to realize their desires, appetites, instincts, passions, and beneficent or harmful emanations (benevolence, anger, pity, resentment), he had no other resource in his thought, still less in his spoken thought, than to use as models the images and words which he used of himself. We often do the same when our poor terminology forces us to say 'God hears,' 'God sees,' He 'understands,' He 'is grieved,' or He 'pardons,' or even when we say that He 'knows.'

A discussion on this point would be useless, as it is merely a question of terminology. At the bottom the process of ascribing a character to a certain personality has resulted chiefly from the supposed experience and the knowledge claimed of its material manifestations, by observing the most characteristic phenomena of the life of nature—its winds, its waters, its various aspects, and its apparent convulsions. These are the essential characteristics of all these personifications; and the inevitable consequence was that they must have been originally totally indifferent to the human being. They were neither friendly nor hostile to him (these words are devoid of meaning to primitive man). They lived and showed their powers in the direction which satisfied their aptitudes and needs. Where man felt their activity to be helpful or harmful, they were in the end classified as good or bad. But this process was very slow, for the effects of the activity of those persons on the human being determined the relations of reverence and fear, and suggested inveigling them long before men thought of loving or hating them. Such relations, aiming at self-protection or utility, were neither hostile nor friendly; they were utilitarian. They were not measured by the theoretic power of the persons, but by the frequency of the relations with man. A far-off and quasi-inactive personification, like the sky, e.g., may be among many uncivilized races the most ancient, powerful, and remarkable of personifications, while at the same time it is the one with which they are least concerned, and to which they pay only the most meagre of reverential or propitiatory rites.

This simple formation of the characters of personifications from observation explains syncretism—in a way which at first sight is almost paradoxical—much more easily than it could be explained if the question of moral qualities had to play a part. As a matter of fact, the conferring on a certain personification *par excellence* of a separate definite activity, then later of a permanent activity (equally definite), has given rise to specifically functional personifications. But, in proportion as the complexity of an activity of nature was better understood by man, he detached from the first personification separate new personalities, corresponding to the separate new forces which he understood. But such a mechanism, by its very facility, must just as easily work in the opposite direction. For at the same time the advance of thought and research on the principle of causality was constantly connecting with each other successions of activities at first believed to be separate, so that, alongside of the continual multiplication of personifications by more complete knowledge of the complexities of life, there was found in the world a gradual (and not less continuous) uniting

of personifications originally separate. Thus new persons constantly appeared, and the former ones at the same time gradually merged into each other, by the play of the multiple souls of a single being or by the theory of 'aspects' or that of hypostases of one and the same person. In this incessant double process a sort of primitive syncretism tended to evolve. Sprung at one and the same time from the various animisms and from what, for want of a better name, we must call dynamism, primitive personification, having reached this point, enters the sphere of semi-civilized and advanced religions (for which see the following comparative articles).

GEORGE FOUCART.

PERSONIFICATION (Egyptian).—I. Scope of the article.¹—In this article it is intended to deal only with those deities which can reasonably be called 'personifications'; and these are deities of which we have reason to believe that they were suggested more by inward reflexion than by observation of external things—deities, in fact, in which the conceptual or thought element looms larger than that of sense or perception. The distinction is an artificial one, for the act of deification obviously implies a highly conceptual view of the thing deified; the sun, *e.g.*, though an object of perception, could not have become a god except through certain qualities of power and the like attributed to it. The value of the term 'personifications' as a means of classifying our facts is that it enables us to attack the problem of god-making at its nearer and more easily explorable pole. Starting with gods of a highly abstract character like Hiko, 'magic,' we thence pass on to more concrete deities—*e.g.*, personified geographical terms like Amenet, 'the west.' At the borderline of our subject are certain psychical entities like Bai, 'soul,' Khaibet, 'shadow,' and symbolic deities like Shesmu, the god of the 'oil-press' and 'wine-press,' and Meskhenet, the goddess of the 'birthplace.' Beyond the border we find it convenient to place nature-gods, animal-gods, fetishes, and all classes of gods whose names immediately evoke the image of particular objects or phenomena in the visible world.

The propriety of including symbolic gods under this head might be questioned on the ground that their names, unlike those of other personifications, do not correspond to the precise thing that it is intended to personify, but symbolize it by a connexion with it, to *e.g.*, Hiko, 'magic,' is the god who is, but his name is not 'magic,' but 'press' used in connexion with them. From the Egyptological point of view, however, it would be inadvisable to separate this category of deities from those which can more justly be called personifications; Meskhenet, 'birthplace,' *e.g.*, is usually found associated with Shay, 'fate,' or Renenet, 'nursing.'

The ground to be covered in this article has been demarcated in reference to the psychological notions of perception and conception, but we might equally well have defined personifications in terms of 'things' and 'names.' The Egyptians seem themselves to have regarded the matter in that light, for the following words are put into the mouth of the god Hiko: 'I am that name which the Sole Lord created, when as yet there were no two things upon the earth' (P. Lacau, *Textes religieux égyptiens*, Paris, 1910, no. 73, line 5 f.).

¹ The writer is deeply indebted to Dr. A. Wolf for valuable criticism and advice in the use of terms.

2. Personification and language.—Language is full of metaphor from personal life, and, since the meaning of every name is coloured by the predicates and epithets used in connexion with it, a sort of animatism is involved in all speech, as, indeed, it is in all thought. But, when the Egyptian says that a fire 'gives' warmth, or that right 'brings' its venture safe to port, it is hardly correct to cite this as sufficient evidence of personification; the speaker may have been utterly unaware that his expressions implied the attribution of personality either to fire or to right. A second Egyptian, on the other hand, in the moment of pronouncing the same phrases, may have had a dim mental image of fire and right as persons, in which case personification of a rudimentary and momentary kind would undoubtedly be involved. Language, then, using personal metaphors, does not necessarily attribute personality, though it provides a fertile soil out of which a more real because more conscious and permanent personification springs up almost inevitably.

3. Causes of personification.—(a) *Analogy*.—We are not here seeking the origin of the earliest gods, and are therefore entitled to start our inquiry at a point of time when the Egyptians already possessed a multiplicity of deities. It seems obvious that in such an atmosphere new deities would be created with the utmost ease, if only to sustain the character and style of a mythological passage. When it was related that the sun-god Ré emerged upon a lily from the primeval waters, called Niu or Nūn, it became almost inevitable that those waters should be spoken of as engendering Ré, and the repetition and variation of the same theme would soon convert Nin or Nūnu into a fully-fledged deity, whom Ré addressed as 'my father,' and who was accounted 'the eldest god.' In quite different contexts analogy and close association might work very similar results: thus in one Theban tomb the 'lifetime' (*ahē*) of the deceased owner and the 'false door' (*abē*), where offerings were laid before him, are exceptionally co-ordinated with 'his soul,' 'his fate,' and other entities both here and elsewhere considered divine; and in the next sentence all the substantives thus co-ordinated are referred to as 'these gods' (N. de G. Davies and A. H. Gardiner, *Tomb of Amenemhêt*, London, 1916, p. 99 f.). This is an instructive instance of the way in which gods were artificially multiplied.

(b) *Pictorial art*.—A second highly important cause of personification was the wide extension given to painting and sculpture as a means of recording ideas and facts. The inability of pictorial representation, as such, to meet all the exigencies of expression imposed by thought and language early led to its bifurcation into the two separate branches of illustrative art and hieroglyphic writing (*Journal of Egypt. Archaeology*, ii. [1915] 71-75). These two branches pursued their development *pari passu* and in constant combination with one another, and it not seldom happened that one of them encroached upon the domain of its fellow. There can be little doubt that the actual step involved in personification was often due to an encroachment of this kind; sculpture encouraged personification by usurping the function of writing and by attempting to express pictorially things which in reality rather called for expression in language or writing; *e.g.*, a frequent theme in the adornment of early tombs was the bringing to the deceased of funerary supplies by his country estates; the latter, however, could hardly be depicted otherwise than by allegorical methods; the word for 'estate' (*nēet*) being feminine, it was natural to represent the list of contributing estates as a procession of women with offerings in their hands. The adoption of the pictorial method

thus have been the accidental means by which the image of a personal agent became perpetuated in the minds of the Egyptian in connexion with names of things that had hitherto evoked no very definite or tangible images. In the early temples this procedure was extended. The obvious analogy between the fruitfulness of the provinces and the fertility of the Nile was seized upon by the artists, who depicted the provinces in the image of the Nile-god, giving to them, as to him, the head of a male deity but the milk-laden breasts of a mother. Nor did this artificial multiplication of gods end here; material prosperity could almost equally well be attributed to such abstract causes as 'riches,' 'peace,' or 'health,' or else to general conceptions like 'seed,' 'summer,' or 'creative command'; all of these might accordingly be represented in human shape, their sex being determined by the grammatical gender of their names. It is noteworthy that these wholly artificial beings are apt to be associated in the sculptures with deities of a far less dubious character—a fact which could not fail to assist the legitimization of their existence; by this are meant a readiness to consider them on the same footing as the old, universally-recognized gods, and an absence of any feeling that they were mere inventions of the mind, not to be taken seriously.

For some early and typical representations of this kind see L. Borchardt, *Das Grabdenkmal des Königs Sahu-ré*, Leipzig, 1913, vol. ii. plates 20, 29, 30, with the comments by K. Sethe, pp. 99 f., 108 f.

(c) *Writing*.—Egyptian hieroglyphic writing, being born in the fashion described above (b), never succeeded in purging itself entirely of its original pictorial elements. These survived, in particular, in the class of signs known as 'determinatives,' which are simply picture-signs placed after phonetically written words in such a way as to determine or suggest their meaning. All written

names of gods are followed by the sign , repre-

senting an ordinary male deity, or else by , the

falcon-god Horus, the type of the gods, upon a standard such as was carried in religious processions; the latter was the earlier method. Goddesses similarly were indicated by the presence of

the sign , for which is sometimes substituted

either one of the two determinatives of male deities or else the image of the typical serpent-

goddess, Buto, . Now this very habit of writ-

ing, together with the fact that only few words were allowed to dispense with determinatives, would naturally tend to bring the question of personification or non-personification actively into the field of consciousness. For Egyptologists the presence or absence of such determinatives is the most natural test: when, e.g., we find the word 'life' with this clear meaning and determined with a sign of divinity, then we can hardly refuse to speak of it as personified.

(d) *The fundamental cause*.—The causes of personification considered hitherto are, however, contributory rather than fundamental. At the root of all god-making lies a respectful attitude of mind towards certain phenomena, physical or mental, arising from a consciousness that they are sources of power difficult to control, yet necessarily to be reckoned with. It is in connexion with either the practical or the intellectual interests of mankind that this respectful attitude of mind manifests itself, and a broad survey of the concepts personified will show that they represent either

facts that have a direct bearing upon human welfare or notions that appeared essential to a mythological interpretation of the world. Of course personification did not always necessarily follow immediately upon the realization of the importance of a conception; it is a definite, more or less conscious step taken at a given moment. Psychologically considered, personification appears to be the reaction against the vagueness and consequent elusiveness of conceptions as compared with perceptions—in other words, the tendency, upon realizing the forceful, influential nature of a phenomenon, to form a mental picture of it more vivid and therefore more in accordance with its supposed importance. The method in which this was done will be explained below; meanwhile it must be said that, looking beyond this general statement, we cannot really account for the selection of the concepts personified except as due to chance, i.e. to causes too complex to be summed up in one general formula. Certain points, however, stand out clearly. There is sometimes an alternative to personification: attributes deemed of importance may attain to a sort of personal reality by being made characteristic of one or other of the great gods. Thus Thôth became the god of learning, Ptah the god of handiwork, Min the god of procreation. Personification and attribution may co-exist; e.g., Mā'et, the goddess 'right,' is found beside Ptah, 'the lord of right' (*neb mā'et*). Affiliation often serves as a means of reconciling the two; the sun-god Rē had a clearly-marked ethical aspect, and in consequence Mā'et was described as his daughter. A point of a different kind worth noticing is that, on the whole, the personification of evil things was avoided in Egypt; Sôd, 'fear,' is one of the rare exceptions. This reluctance to attribute power and importance to what is bad speaks volumes for the optimistic outlook of the Egyptians.

4. *Personification and visualized form*.—All personification, by definition, involves a certain change of appearance, visual or other. Let us consider what happens when the sky is personified, though strictly this example lies beyond the scope of the present article. Language and thought being unable to escape from the human analogy, it follows that the more 'meaning' the sky acquires, i.e. the more numerous the attributes and functions ascribed to it, the less able will the perceived physical reality be to do justice to the augmented conception as a whole. Clearly the deliberate positing of a personal agent in place of or beside the perceived reality will provide a much better peg upon which to hang the previous and subsequent conceptual accretions, and will allow of the expression of these in much more vivid, because more personal, language. The visual sense being by far the most important of the senses, personification usually manifests itself in a visual form, whether this be actually externalized (sculpture or painting) or merely implied by verbal imagery. Sometimes one word is kept for the physical reality, like *pet*, 'sky,' while an old synonym is employed for the personified concept, like Nut, the heaven-goddess. In the visual forms that personifications assume the specific characteristics of the things personified tend to be indicated: the Nile-god has the swelling breasts of a mother and a body covered with wavy lines suggesting water; Nut, the heaven-goddess, forms an arch with her body, supporting herself with hands and feet above the recumbent earth-god, Geb; the 'external manifestation,' *bai*, is a bird with human face, the bird-like appearance apparently being intended to symbolize the ease with which the *bai* could ascend to heaven and take a place among the stars; the *ka*, or 'character,' being nothing more than the

spiritual image of a man, follows the changes of his growth, the *ka* of the child being a child, and the *ka* of the grown man being a grown man. Elsewhere cruder methods are used for representing the specific character of a personification: Sokhet, the marsh-goddess, is sometimes shown with a plantation of reeds and flowers placed upon

her human head; Mâ'et, 'right' () wears

the feather which for some unknown reason is the symbol of right; Sin', 'understanding,' either has his name written in hieroglyphs over him or else

has the characteristic phonetic sign  in the

written word *sin'* actually touching his head. Personification, seriously enough, does not always demand that the deities which it forms should be depicted outwardly in the form of a person; all that is demanded is that there shall be some concrete and easily visualized rallying-point round which the attributes of personality can group themselves. The harvest-goddess Ernûtet is represented either as a woman with the head of a cobra or as completely a cobra; this is doubtless because that snake was so frequently found among the ripe corn. The names of certain personifications may suggest concrete symbols of this kind (symbolic gods); thus Shesmu, the god of the wine-press and of the oil-press, really personifies the making of wine and oil, which is symbolized under this mental image; the picture of the wine-press occurs incidentally in the hieroglyphic writing of his name, and it is doubtless mere accident that the god himself was not pictorially represented in that form.

5. Degrees of personification. — In its most rudimentary form personification was, for the Egyptians, little more than a natural mode of emphasis, analogous to our use of capital letters in writing. But between this embryonic form of deification and the most fully developed personifications almost every stage of growth can be observed and exemplified, until at last there is no distinction between them and the principal gods of the pantheon. Indeed, the main interest in the study of personifications is the prominence which it gives to the fact that the vast majority of gods¹ differ from them not in kind but only in degree, that their characteristics are not those of real persons, as the language of the older school of mythologists would often seem to imply, but that, since they are merely concepts decked out in the semblance and trappings of real persons, their individuality is at all times of a very precarious, unstable, and indefinite kind. Their gradual acquisition of substance and externality can nowhere better be seen than in the evolution of a personified abstraction. The metaphors of language, as we have seen (§ 2), give the primary impulse; but it is to sculpture and, in a less degree, to ideographic writing (§ 3 (b) (c)) that is largely due the definite creation of a personality that is visualized with some clearness and even with a certain measure of consistency (§ 4). Around this nucleus the theologians and the myth-makers weave their tissue of legends and adulatory epithets, each new tale and each new title adding to the appearance of objective reality, making the personification more lifelike. At last men may be prevailed upon even to worship it. The history of Hiko', 'magic,' may serve us as an illustration. Originally perhaps a mere descriptive term predicated of individual acts of a certain mysterious

quality, it first becomes a collective term for a number of such acts, and then a designation of the particular quality that they possess in common.¹ As sneh Hiko' is described in the Pyramid Texts as speaking threats against unfriendly gods. Thanks to exaggerated verbal imagery of this kind, Hiko' is next found in the Vth dynasty, depicted upon a temple wall as a male deity at the head of a procession of personified districts. This development marks his definite entrance into the pantheon; henceforth it is easier to describe the functions of magic in reference rather to the vividly remembered image made familiar in sculpture than to the remote and somewhat elusive concept, and mythical traits now tend to be invented which have but little relation to the observed facts that gave rise to the word 'magic.' The process, we must be careful to observe, is one not of substitution, but of differentiation; the old general term *hiko'* continues to exist and have its uses, but side by side with it is the conception of a god Hiko', which comes into play when the mind, so to speak, is differently attuned, when the imaginative, emotional tendencies are being given more rein. In a Middle Kingdom text Hiko' figures as a deity created by the sun-god Rê-Atum 'when as yet no two things existed'; and from his activity as deputy of the sun-god sprang all living things. The fantastic idea now gained currency that dead men might become reincarnate in the likeness of so potent a divinity, and spells having this end in view were invented. Next Hiko' is found escorting Rê through the nether world, as he sails by night underground from west to east; in the temple of Luxor we behold him in attendance at the birth of a new Pharaoh. Lastly, in Græco-Roman times, he is discovered at Esneh as the son of the god Khnum and the goddess Nebun, actually receiving a cult under the name of Hiko'-pe-khrôd, 'magic-the-child'; here doubtless his image, visible and tangible and as living as any god can ever become, was preserved in its own shrine and attended by his own priestly servants. It is not maintained, of course, that Hiko' ever took a place among the highest gods of Egypt, but in the end he appears to be hardly at all more spurious than the best of them.

On Hiko' see an article by the present writer in *PSBA* xxxvii. [1915] 253-262, also *ib.* xxxviii. [1916] 129.

6. Instability of personifications. — (a) *Instability of visual form.* — There was very little stability as regards the outward forms of personifications; nor were human shapes necessarily prior to animal or other shapes. The goddess of the harvest, Ernûtet, was a cobra-goddess from the start. A good instance of a god with secondary and variable animal shapes is Shay, 'fate,' who in his earliest occurrences—e.g., in the papyrus of Ani (ed. E. A. W. Budge, London, 1913, vol. i. pl. 3)—is human-headed. Later, and perhaps through assimilation to the creator-god, Khnum, he is represented as a goat (Budge, *Greenfield Papyrus*, London, 1912, pl. 108); and later still the writing of his name shows him to have been imagined in the form of a serpent, or else in the semblance of the animal of Seth (see G. Möller, *Die beiden Totenpapyrus Rhind*, Leipzig, 1913, p. 54, no. 370). Symbols can likewise be secondary. The spelling of the

god , Sekhem, 'power,' in the

Pyramid Texts shows that he was not at that time invariably considered to manifest himself in the outward appearance of a sceptre (a word for sceptre is *sh̄m*); but in the temple of Abydos we see sculptured upon the walls a sceptre accompanied by the words 'Thôth, *sh̄m* of the gods,'

¹ Some gods, of course, were really persons. The Pharaoh was a god, and a certain number of human beings, both kings and private persons, were deified after their death. See art. *HEROES AND HERO-WORSHIP* (Egyptian).

¹ This is mere hypothesis; see below, § 8, ad finem.

where *sh̄m*, 'sceptre-power,' is the abstraction 'power' visualized in the form of a sceptre, imbued with personality, and finally identified with Thōth.

For references to *sh̄m* see W. Spiegelberg, in *RTAP* xxviii. [1908] 164.

(b) *Singularity and multiplicity*.—The very individuality of personifications was of a dubious quality. We have just seen that Sekhem, 'power,' could be merged into Thōth and so lose its identity and independent existence. Some different examples of a similar variability must now be quoted. Meskhenet, goddess of the birthplace, at some moments appears with a single, distinct personality of her own, as a deity accompanying the other divinities of birth (Khnūn, Heget, etc.) from childbed to childbed, there determining the length of life decreed for the new-born babe. Elsewhere, however, we gather that every man possesses his own Meskhenet (Davies-Gardiner, *loc. cit.*); according to Abydene tradition, there were four goddesses of the name (R. Lepsius, *Todtenbuch der Ägypter*, Leipzig, 1842, ch. cxlii.), who were sometimes identified with Tefenet, Nut, Isis, and Nephthys respectively (e.g., Lepsius, *Denkmäler*, iv. 82a). So too we have Sia, 'the god of understanding, but elsewhere we read of the personified understanding of every god (K. Sethe, *Die altägypt. Pyramidentexte*, Leipzig, 1908, no. 411).¹ Even old-established gods might multiply their personalities in a similar way. Khnūm, e.g., not only acquires a new and separate personality for every new locality in which he was worshipped, but he is also on rare occasions named as a private creator-god of whom every man might possess an example of his own (Davies-Gardiner, pp. 99, 113). In short, the world of deities reflects, on the one hand, the unity, on the other hand, the infinite variability, displayed in the mental world; it can differentiate and identify in the same manner as thought can distinguish and compare. No rule can be set up as to whether a god will first manifest himself as a unique or as a multiple being: in the case of Khnūm we can hardly doubt that Khnūm, absolute, preceded 'his (particular) Khnūm.' On the other hand, personified *ka*, 'character,' clearly started as a general term, innately deified and varying with each individual possessor of a *ka*; nor is it until the New Kingdom, and then only very rarely indeed, that *Ka* is found as an absolute, single deity, equivalent almost to our 'Providence' and apt to be equated with the Nile as the fount of all well-being. About the same time it became usual to attribute to the sun-god Rē and to his descendant the Pharaoh a stereotyped list of fourteen *kas*, or attributes, each of which had its own specific nature and name, such as 'power' or 'brilliance.' They are often depicted, together with a series of female counterparts, in the late temples.

The hitherto unrecognized meaning 'Providence' for *Ka* (e.g., J. F. Champollion, *Monuments de l'Égypte et de la Nubie*, Paris, 1835, pl. 254; H. Brugsch and J. Dümichen, *Recueil des monuments égyptiens*, Leipzig, 1862-85, iii. 92) is due to the same order of ideas as that which connected the *ka* with *shay*, 'fate,' Gr. *ψαίς* or *Ἀγὰθος Δαίμων* (see W. Spiegelberg, in *ZÄ* xlix. [1911] 126). For the fourteen *kas* of Rē see *PSBA* xxxviii. 83-89, 94 f.

Singular personifications were viewed under two aspects: (1) as forces acting at the moment in which they are spoken of, and (2) as historical characters whose existence lay in a far distant past. To these is sometimes implicitly added a third and future aspect—e.g., when we find the hope expressed that a dead man may assume shape as some personified being like Hike' (§ 5).

7. *Personification and cult*.—There is no inherent reason why personifications even of abstract ideas should not become the objects of a cult, but as a matter of fact few of the deities dealt with in this article were ever honoured in that way. The one really important exception is the *ka*, the personified character or individuality of a man; this was

supposed to cleave eternally to the tomb after the death of its owner, and from the earliest times both kings and their subjects possessed 'servants of the *ka*,' or '*ka*-priests,' who administered to their cult. Of Renenet and Meskhenet (§ 9 (a) 5, (2) 1) we read in the XVIIIth dynasty that offerings were made to them among other gods at Speos Artemidos (Sethe, *Urkunden des ägypt. Altertums*, Leipzig, 1906, iv. 389). Hike', as we have seen, was in Greek times worshipped at Esneh (§ 5). Seshat, the goddess of writing, seems to have had a cult even in the earliest periods. When, however, priests of Mā'et and Hike' are mentioned in Old Kingdom tombs, it must not be at once concluded that those deities possessed temples and an organized cult of their own; it is clear from the contexts that the holders of these titles were always judges or doctors respectively, and it may well have been merely the exercise of these secular functions that constituted the ritual of their priesthood.

8. *Personifications and epithets*.—We now return to a subject touched upon already in § 3 (d). In the light of the last paragraphs personifications now appear as conceptions inflated with a new and spurious mode of being, which they enjoy, so to speak, in their own right, not by virtue of a parasitic existence as attributes or epithets. The most perfect examples are infinitives personified, like 'Onekh, 'life,' 'Aut-yeb, 'elation of heart,' 'joy,' for the infinitives are by their very nature abstract and withdrawn from the actual objects, here living creatures and joyful beings, from which they derive their essential characteristics. In Egyptian texts, however, a technical difficulty prevents us from recognizing such personifications as easily as we could wish; no vowels being written, it is seldom possible to discriminate personified infinitives from other personified parts of speech. Hence it is usually necessary to examine the context very carefully in order to decide whether an apparent personification is really such or is an epithet. Epithets may be participles, adjectives, or common nouns, or may be paraphrased by expressions like 'lord of right' instanced above (§ 3 (d)). The important feature of epithets is that they serve to qualify, not the idea inherent in themselves, like personifications, but deities whose existence is quite independent of them, resting upon wholly different postulates. Thus, when we come across the god Sh̄m, the question arises whether this means 'power' in the abstract or 'the powerful one,' referring allusively to Osiris or to some other god. This the context alone can settle.

The above statement must not be read to mean that all personified abstractions are in the infinitive. On the contrary, Egyptian, like other languages, often conveys the idea of the abstract through the concrete; e.g., the name of the goddess Mā'et, 'right,' is probably a feminine participle, 'she or that which is direct,' Gr. *τὸ δίκαιον*, the Egyptian language expressing a neuter sense by means of the feminine gender. Why 'writing' should have been personified as a goddess and not as a god is obscure; the name Seshat possibly, but not certainly, means 'she who writes.' Hike', 'magic,' is a substantive personified; but whether the nominal formation involved in this name is one appropriate to common nouns or to abstractions is beyond our knowledge. On symbols see above, § 4.

9. *The more important personifications*.—Completeness is here out of the question, and the following enumeration is intended merely to give some idea of the field covered, and of the various degrees reached by personification in different cases. The vocalization of the names is usually quite hypothetical, and the classification makes no pretence to have a scientific principle.

(a) *Life, death, fate, etc.*—(1) 'Onekh, 'life,' depicted as a Nile-god (J. E. Gautier and G. Jéquier, *Fouilles de Licht*, Cairo, 1902, p. 25, XIIth dynasty). He is also named on the Turin altar (*TSBA* iii. [1874] 112), a monument of quite late date, not of the VIth dynasty, as sometimes supposed. Elsewhere he appears with head of *crux ansata* and body and limbs of a man, carrying a divine banner (e.g., A. St. G. Caulfield, *The Temple*

¹ Hereafter quoted as *Pyr*.

of the Kings at Abydos, London, 1902, pl. 14, XIXth dynasty); this is a mere decorative device.

(2) Mout, 'death,' only once in a poetical passage of late date; see art. LIFE AND DEATH (Egyptian), § 4.

(3) Sonh, 'health,' as Nile-god (Gautier, *loc. cit.*); in an incantation where parts of the body are identified with various duties, 'thy intestines are health' (A. Erman, 'Zaubersprüche für Mutter und Kind,' verso, 5, 4, in *ABAW*, 1901; see also *Pyr.* 1190).

(4) Shay, 'fate,' Gr. *ψαῖς* and *Ἀγῶς* *δαίμων*, in one place described as *ὁ μέγας δαίμων ὁ φρονεῖς θεός* (see Möller, *loc. cit.*, and, for his various visualized forms, § 4). For the shay of individuals see Davies-Gardiner, *loc. cit.*; 'his shay' is later sometimes substituted for 'his ka.'

(5) Kenehet, 'nursing,' personified as a woman; to be carefully distinguished from Ernēt (I (3)); often coupled with Shay (a (4)) or with Meskhenet (I (1)); at Edfu identified with Seshat, the goddess of writing (Lepsius, iv. 41c). For the *renenet* of individuals see Davies-Gardiner, *loc. cit.*; for her cult, above, § 7.

See also 'Ab'e, 'lifetime' (§ 3 (a)); Meskhenet, 'hirthplace' (below, I (1)); and, for the creator-god Khnum, § 6 (b)).

(6) *Attributes of living beings.*—(1) Ma'a, 'seeing,' and (2) Sözem, 'hearing,' in late times depicted as male deities; there was also a combined deity Ma'a-Sözem, 'seeing-hearing.' Cf. *PSBA* xxxviii. 85, n. 18.

(3) Hu, 'commanding utterance,' and (4) Sia, 'understanding,' two personified abstractions of considerable importance (see *PSBA* xxxviii. 43-54, 83-95). They are represented as male deities in the train of the sun-god, who created them by an act of self-mutilation. According to one fable, it is to them that the universe owes its existence—a Memphite variant of the tale makes out Ptah to be the cosmic god, from whom emanated Horus as 'tongue' and Thöth as 'heart,' i.e. intellect. Among the fourteen *kas*, or attributes, of Rē Hu, as an active agency to whom material prosperity can be ascribed, is coupled with Zefa, 'plenty,' whence Hu has often been misunderstood to signify 'food' or 'taste.' When associated with Zefa, and rarely, too, when associated with Sia, Hu is one of a pair of Nile-gods; hut Sia, as the more passive attribute of the two, is seldom regarded as a source of material prosperity and only once is found named among the *kas* of Rē. Hu and Sia are two of the chief attributes of royalty, and as such are often associated with Mā'et. Lastly, Hu seems to have been one name of the Sphinx—the image in which the power of Pharaoh and that of the sun-god Atum often found expression.

(5) Sekhem, 'power' (see above, § 6 (b), 8).

(6) User, 'influence,' and (7) Nakhṭ, 'victory,' are names of two of the fourteen *kas* of Rē.

(8) 'Aut-ych, 'elation of heart,' 'joy,' as a woman (Borchardt, pl. 30, Vth dynasty); also on the late Turin altar (*TSBA* iii. 112).

(9) Hāb, 'sport' or 'festivity,' as son of Sökhet, 'country' (j (8)) (*Pyr.* 555).

(10) Sond, 'fear,' depicted in human shape on the sarcophagus of Sethos I., hut with lion's head on later monuments (R. V. Lanson, *Dizionario di mitologia egizia*, Turin, 1884, p. 1079f.; *RTAP* xxv. [1903] 30). At the festival of Osiris his image occupied one of the thirty-four illuminated boats used in the ceremonies (*RTAP* iv. [1883] 23).

(c) *Attributes of living persons and their actions.*—(1) Hike, 'magic' (see above, § 5). He is also named as one of the fourteen *kas* of Rē.

(2) Mā'et, 'right,' the most frequently mentioned of all personifications. Her name appears to mean 'that which is straight or direct' (Lat. *rectum*), whether ethically ('right') or intellectually ('truth'); this suggests that this conception of her may have been born in the law-courts, where both aspects come into play at the same time. Sometimes we find the goddess conceived of as double (Mā'ty, 'the two rights' [already in *Pyr.* 317]), perhaps in allusion to the rival claims of two litigants. Mā'et is figured as a goddess, either sitting or standing, with a feather on her head. In mythology she is the daughter of Rē and closely related, probably as spouse, to Thöth, the god of regularity, law, and learning. There are no clear indications that she possessed a real cult in early times (see above, § 7). On Mā'et see A. Wiedemann, in *AMG* x. 561 ff.; Lanson, pp. 278-280; H. Brugsch, *Religion und Mythologie der alten Ägypter*, Leipzig, 1890, pp. 477-482; Budge, *Gods of the Egyptians*, London, 1904, i. 416-421.

(3) Seshat, the goddess of writing. Her name may mean 'she who writes' or 'she who paints' (the verb has both senses), but she was more often referred to by the epithet Sakhket-*abui*, 'she who puts off the two horns.' This epithet would appear to hint that she was originally a cow-goddess, who had taken to a less bovine occupation; hut her identity with Isis-Hathor, though well attested for late times, is not proved for the Old Kingdom. If such were her real origin, she could hardly rank as a personification in the sense of this article. Seshat possessed priests of her own at a very early date, and appears to have been associated with Thöth at Hermopolis Magna, though for this the evidence is not very early. She was the goddess of painting as well as of writing, and presided over the ceremonies connected with the planning of temples and other buildings. She was represented reed in hand and usually sitting. She wears a skin and has on her head a kind of rosette with seven or five rays (*ssk*: can mean 'seven'), above which and separated from which is seen what may be interpreted as the horns rejected by the goddess; the combined head ornament is perhaps a mere *rebus* for the name Sakhket-*abui*. See the very detailed art. 'Seshat' by G. Roeder, in *Pauly-Wissowa*.

(d) *Attributes of the external world.*—(1) Hetpet, 'peace,' depicted as a woman (Borchardt, ii. pl. 80, Vth dynasty).

(2) Zefa, 'plenty,' depicted as a Nile-deity (ib. pls. 25, 23, Vth dynasty; Gautier, p. 24, XIth dynasty; E. Naville, *The Temple of Deir el Bahari*, London, 1901, iv. 110, XVIIIth dynasty); in all three cases together with Hu, 'commanding utterance' (above, b (3)). Hu and Zefa occur later also as two of the fourteen *kas* of Rē (see above, § 6 (b), *ad fin.*). For Zefa as a Nile-god associated with Hāpy, 'this Nile,' see Gautier, p. 34.

(c) *Attributes peculiar to the sun-god.*—Among the fourteen *kas* of Rē enumerated in late times are (1) Khu, 'glory,' (2) Pesd, 'shining,' and (3) Tehen, 'sparkling' (§ 6 (b), *ad fin.*).

(f) *Names connected with generation and growth.*—(1) Muvt, 'seed,' of human beings and animals, depicted as a woman (Borchardt, pl. 29, Vth dynasty).

(2) Nekhet, 'hudding,' depicted as a woman (ib. pl. 30; mentioned also *Pyr.* 4, 1451).

See also the gods of birth above (a (4) (5)) and below (I (1)).

(g) *Products, natural or artificial.*—(1) Nepri, 'corn' (*Pyr.* 1065), frequently depicted as a Nile-god (Borchardt, pls. 25, 26, 30, Vth dynasty; Gautier, p. 34, XIth dynasty), and named as the patron of harvests (e.g., *ZA* xxxiv. [1890] 46; *PSBA* xviii. [1896] 202); failed to be the son of Ernēt, the harvest-goddess (I (3)), and born on the first day in the summer or harvest season (Brugsch, *Recueil des monuments*, i. 67); sometimes identified with Osiris; a spell to enable a dead man to become reincarnate in his image is occasionally found (Lacan, no. 58). A goddess Nepri sometimes takes the place of the god Nepri (see G. Maspero, *Hist. ancienne des peuples d'Orient*, Paris, 1894, i. 81, n. 2, where further references are given).

(2) Nough, 'gold,' occurs as a goddess from the Middle Kingdom onwards. Presumably she must have originated as a separate personification; in our existing sources, however, she is always found identified with Hathor, the goddess of beauty, dance, and ornament (see T. Devéria, *Mémoires et fragments*, Paris, 1890, i. 1-25).

(3) Tayt, 'clothing,' a goddess often named as the maker or giver of clothing or the bandages for mummification (e.g., *Pyr.* 68, 737, 739, 741; *PSBA* xviii. [1896] 202; *RTAP* xxxiii. [1911] 92). The name, which also appears in the more fully developed form Taytet (*Pyr.* 68, 2004), seems to be derived from a word meaning 'garment' (*RTAP* xxxii. [1910] 84) or in a more special sense 'awning' (Budge, *Book of the Dead*, London, 1893, i. [text] 206).

(4) Dua-wēr, 'the great morning-god,' is depicted in human form (Borchardt, pl. 19). His name is written with the symbol

, and Sethe has shown (text *ad loc.*, p. 97) that he is

nothing more or less than the royal headdress personified. In the Pyramid Texts (1820, 1423, 2042) his name is associated not only with this act of shaving hut also with other incidents in the morning toilette—e.g., face-washing—and this royal barber appears to have been called 'priest of Dua-wēr.'

(h) *Cosmic and similar deities.*—Over this topic we shall pass lightly, omitting all reference to the air-god Shu, since our object is to deal rather with the later and more artificial gods whose beginnings are not completely shrouded in darkness.

(1) Eaku, 'darkness' (male), and (2) Kaket, 'darkness' (female), are a pair out of four pairs of frog- and snake-headed divinities that play a part in the cosmogonical legend of Hermopolis Magna (Khmunu, 'eight-town'), where there suddenly emerged from the primeval waters a hill upon which lay the solar egg. The names of the other pairs were: (3) Nūn and (4) Nūnet, 'the primordial waters,' (5) Hehn and (6) Hehnet, 'space' (7), and (7) Nūn and (8) Nūnet, 'negation' (various *Götter* and *Götter*). Some violence has been done to these conceptions by the attempt to make them square with the early Greek cosmogonical ideas; nor has sufficient attention been paid to their negative character, from which point of view they appear to be aspects of a primitive, undifferentiated *chaos*. Offerings were made to these eight gods at *Speos Artemidos* in the XVIIIth dynasty (see Sethe, *Urkunden*, iv. 23). For the detailed discussions of these gods see Lepsius, 'Über die Götter der vier Elemente,' in *ABAW*, 1856; Brugsch, *Ägypten*, pp. 123-146; Budge, *Gods of the Egyptians*, i. 222f.

(3) Ikhekhu, 'dusk,' is occasionally personified—e.g., *Pyr.* 751.

Here a purely mythological goddess must be mentioned; she illustrates in a striking manner the legend that the Egyptians were prepared to go in their artificial manufacture of deities. As cosmogonic god Atum was originally without a wife (cf. *Pyr.* 1065) he created the first pair of gods (the *Te'tnet*) by an obscene action of his hand (*Pyr.* 1065). In the Middle Kingdom a goddess (10) Zaiet, 'his hand,' was introduced as wife of Atum; she was perhaps a personification of the goddess of Lycopolis, and she is merely named for the purpose of providing Atum with a spouse (*Bulletin de l'Association française d'Archéologie orientale*, x. [Calro, 1912] 117).

(i) *Conceptions of time.*—Only direct personifications of time are here considered. The months (*Götter*, ii. 221f.), the deans (ib. p. 221), and the hours (ib. pp. 220-223) had tutelary gods of their own, who were deities familiar in other countries. The names of particular stars, and goddesses, clearly the deities of the *zodiac*, were to be no deity 'day,' month, or year. Unet has been claimed (*Sphinx*, iv. 1904, 1905).

(1) Ronpet, 'year,' represented as a goddess on whose head is seen the shoot , the hieroglyphic symbol for 'year'; not of

very early occurrence, for the Turin altar (TSBA iii. 112) is late, and not early, as Wiedemann (PSBA xxxvi. 203) supposes. This goddess of the year is usually found identified with Isis, Hathor, or Sothis (see Brugsch, *Thesaurus inscriptionum aegyptiacarum*, Leipzig, 1883, pp. 215-230).

(2) Rôkeh, 'burning,' name of the hot period of the year, covering the seventh and eighth months. These are named the 'great burning' and the 'little burning,' respectively, deities depicted in the Ramesseum with human heads, and with hippopotamus heads at Edfu (see E. Meyer, 'Nachträge zur ägypt. Chronologie,' in ABAW, 1907, p. 16).

Of the three seasons (3) 'Akhet, 'inundation,' (4) Prôet, 'spring' (our winter), and (5) Shômu, 'summer' (the harvest-season), the first two are figured as goddesses and the last as a Nile-god in sculptures of the Old Kingdom (ZA xxxviii. [1900] 107) and later (Meir, unpublished, XIIth dynasty; Brugsch, *Recueil*, vi. 180, Ptolemaic), in agreement with the grammatical gender of their names; but sometimes all three are represented as Nile-gods (Brugsch, *Geographische Inschriften altägypt. Denkmäler*, Leipzig, 1857-60, iii. pl. 4; above, § 3 (b)). Shômu, 'summer,' as more fertile than the other seasons, is the one most often represented (e.g., Gautier, p. 25, XIIth dynasty).

(3) *Geographical terms*, merging into nature-gods, which are excluded from this article (see NATURE [Egyptian]).

(1) Ti-mehy, 'Lower Egypt,' and (2) Shema, 'Upper Egypt,' very frequently depicted as Nile-gods (e.g., Borchardt, pls. 24, 29, 30, Vth dynasty; Gautier, pp. 24, 25, 33, XIIth dynasty; Brugsch, *Recueil*, vi. 129, 131, 134, etc., Græco-Roman period).

(3) Sôkhet, 'country,' a goddess with the hieroglyph for field

 upon her head, often seen among the nome-gods shown bringing offerings in procession (§ 3 (b)) (e.g., Brugsch, *Recueil*, vi. 129, 132, Græco-Roman period). In earlier times she is usually named in connexion with scenes of fowling in the marshes (P. E. Newberry, *Beni Hasan*, ii., London, 1894, p. 24), and fowling is called her 'craft' (Borchardt, p. 68). She is already mentioned in Pyr. 555, where Hâb, 'sport' (b (9)), is called her 'son.'

(4) Hâ, an early god whose name is written with the desert-sign upon a standard , and in whom it is tempting to

see a personification of the desert; in this case hâ' would be an obsolete word for 'desert.' The alternative is to regard the desert as merely an attribute or possession of this god, whose origin then might be quite different. Hâ was worshipped in the Xoite nome; for the evidence bearing upon him, together with some theories that cannot here be discussed, see Newberry, in *Annals of Archaeology*, Liverpool, 1903, i. 24-29. A deity whose name is written similarly, and who from his association with Hâ'py, Hu, Ka', and the nome-gods must personify the desert, is named (Brugsch, *Recueil*, iii. 92, XIXth dynasty).

(5) Amentet, 'the west,' a goddess on whose head is seen

the symbol for 'west' (e.g., Borchardt, pls. 1, 29, Vth dynasty; Davies-Gardiner, pls. 10, 27, XVIIIth dynasty; and often). The dead being by preference buried in the west, she early becomes the goddess of the necropolis, and as such is named or depicted as welcoming or protecting the dead, as she does for the sun. She is very frequently identified with Hathor. Plutarch (*de Is. et Osir.* 29) gives Ἀμένθης as the name of the place whither the souls of the dead pass, and his fanciful etymology, 'he who gives and takes,' implies that he believed the corresponding personification to be a male deity, like the Greek Hades.

(6) Yebtet, 'the east,' a goddess with , the sign for 'east,' on her head (Davies-Gardiner, pl. 27, XVIIIth dynasty).

(7) Waz-wêr, 'the great-green,' i.e. the sea, depicted like a Nile-god (Borchardt, pl. 30, Vth dynasty; Gautier, p. 24, XIIth dynasty; Naville, *Deir el Bahari*, v. 128, XVIIIth dynasty).

(8) Hâ py, 'the Nile,' is too ancient and important a god to be dealt with here.

It is hardly necessary to illustrate in detail the personifications of nomes, towns, and villages, which are frequent both in the temples and in the tombs. The existing nome-lists are enumerated by G. Steindorff in ASG xxvii. [1909] 864-868; admirable statues of certain nomes as deities, male or female, were found by G. Reisner in the pyramid-temple of Mycerinus (see Maspero, *Essais sur l'art égyptien*, Paris, 1912, pp. 27, 29, 31, IVth dynasty).

(c) *Psychical entities*.—These are by their very nature multiple, that is to say, deemed to be as numerous as the individuals to whom they belong, though they may also sometimes, like Ka, 'Providence' (§ 6 (b) ad fin.), become single and universal. For a popular account see A. Wiedemann, *The Ancient Egyptian Doctrine of the Immortality of the Soul*, Eng. tr., London, 1895. Here only two of the principal kinds of 'soul' will be dealt with, since the present writer dissents from the ordinarily accepted views.

(1) The ka () is usually explained either as the 'double'

(Maspero) or as the 'genius' belonging to a man or a god; for the discussions that have arisen over this question see the literature quoted in Davies-Gardiner, p. 89, n. 7, and RTAP xxxvii. [1915] 78. The view here favoured is that enounced by H. Brugsch (*Hieroglyphisch-demot. Wörterbuch*, supplement, Leipzig, 1882, p. 1230), according to which the ka is a man's individual 'character'—the sum of his attributes. Not only gods but also men are sometimes named as possessing a plurality of kas, their 'attributes' then being meant. These two renderings are naturally too modern and too specific to cover the whole meaning of the term, and in certain contexts it may be better translated 'psychic self,' 'nature,' 'genius,' 'double,' or even 'master'; the best course of all is to retain the original word. The objection to the renderings 'double' and 'genius' is that they lay excessive stress on aspects of the ka which are connected less with the conception which is personified than with the bare fact of personification and its consequences. For the visualized form of the ka see § 4, and for its cult § 7. The prominence of the sepulchral aspect of the ka was perhaps due to the belief in the changeability, after death, of the other principal constituents of a man's personality; for, while his 'incarnation' or 'external manifestation,' namely (2) the *ba*, might assume various new forms, his ka, i.e. his individuality (with which his name was very nearly identical), remained constant, and was believed to persist in the tomb. The *ba* could, by definition, assume many shapes; as a volatile, visible being, capable of ascending to the heavens, its most ordinary form was that of a human-headed bird. Râ possessed seven *ba*, but no man appears to have had more than one at a time. Naturally, the *ba* received no cult, as its essential characteristic was that of a 'living' thing, able to look after itself. On the ka see, further, above, § 6 (b). In connexion with the ritual of the dead it is exceedingly important to bear in mind that this was based on the belief that the man himself continued to live after his physical death; it is he, and not his ka, who is primarily the recipient of the funeral sacrifices. The speculations which hypostatized the ka and the *ba* may, for all we know, be as old as the funerary ritual itself; the latter, however, is comprehensible without it, for it arises, not from any intellectual self-analysis, but simply from the passionate refusal to acknowledge the possibility of death. See art. LIFE AND DEATH (Egyptian).

(2) *Symbolic gods* (see § 1).—(1) Meskenet, 'birthplace,' the name of the brick or pair of bricks upon which women crouched in giving birth, was personified under the form of a goddess with

the sign  (bicornate uterus) on her head. In the texts

she is coupled with Khnum or Renenet (a (5)), and can be either single or multiple (§ 6 (b)); we read of 'thy Meskenet' already in Pyr. 1183 (see W. Spiegelberg, *Aegyptologische Randglossen zum Alten Testament*, Strassburg, 1904, pp. 19-25).

(2) Shesmu, 'press,' whether for the making of oil or for the making of wine; the word is determined by the ideograph sign of the press (e.g., Pyr. 402). As god of wine he appears already in Pyr. 1552: 'Shesmu comes to thee with liquid (?) wine.' For Shesmu as the god who prepares the ointments and oils for embalming see the references given by Möller, p. 80, n. 50; RTAP xxxvii. 76. Shesmu must be carefully distinguished from the god Shesmet and the goddess Shesmetet—forms of Horus and Sekhmet respectively—who derive their names from the land Shesmet, perhaps the region of Kosselr (Sethe, in Borchardt, p. 82).

(3) Ernûet, 'cobra,' in later times exclusively the goddess of the harvest, 'lady of the granary' or 'lady of sustenance,' who gave her name to the ninth (inter eighth) month Pharmuthi (see Lanzoni, pp. 472-477, where, however, there is some confusion with Renenet (a (5)); see, too, under g (1) above). The earliest references to Ernûet (Pyr. 302 and Erman, 'Hymnen an das Diadem,' in SBAW, 1911, col. 7, l. 4) appear to have no reference to the goddess's function in connexion with the harvest; she is there apparently identified rather with the snake-goddess upon the brow of the Pharaoh. If this be her original nature, then she cannot be considered as essentially a symbolic deity on the same footing as Meskenet or Shesmu.

LITERATURE.—This has been given in the body of the article.

ALAN H. GARDINER.

PERSONIFICATION (Greek).—1. Introduction.—The habit of assigning a conscious and active personality to all kinds of natural objects, and even to abstract ideas, seems to be almost universal at a certain stage of human development. The tendency is nowhere, perhaps, more prevalent than among the Greeks, whose intensely anthropomorphic imagination here finds full scope. The word 'personification,' in its narrower sense, is often used to imply a more or less artificial and allegorical invention, such as Apelles' picture of Calumny with her attendants Ignorance, Suspicion, and the rest, or figures such as Peace and Britannia in a modern cartoon; and some even of the earlier Greek personifications may be of similar nature. But it is convenient to use the word here in a wider sense, as referring also to persons who have acquired a definite religious or mythological char-

acter, without, however, losing the direct significance of their names.

2. *Classes of personifications.*—Personifications may be conveniently divided into three classes: they may be (a) of natural objects, localities, etc., (b) of collective bodies, such as cities or peoples, or (c) of abstract ideas, such as Fear, Strife, Justice, etc.

(a) *Natural objects.*—The sun-god (Helios) and the moon-goddess (Selene) are hardly to be regarded as impersonations, since they have a definite mythological character in some regions; but there is a general tendency in Greece for their mythological and religious side to be merged in Apollo and Artemis, while Helios and Selene come to be mere personifications of the sun and moon, often used in art to give a cosmic setting to a scene—as in the east pediment of the Parthenon. A good example is offered by the Blacas vase in the British Museum, where sunrise is depicted by Helios rising out of the sea in his chariot, preceded by Eos (the dawn, Aurora), while Selene rides away on her horse, and the stars, in the form of boys, dive into the sea.

A similar conception occurs in the personification of times and seasons—Day and Night with her children, Death and Sleep; and the hours or seasons (*ῥῆται* [see *HORÆ*]). Later artificial inventions of the Hellenistic age were the Year (Eniautos) as a man and a Four-year Cycle (Penteteris) as a woman. Chronos, too (Time), sometimes confused with Kronos, and Æon were included in some Orphic beliefs later developed by the Gnostics. It is doubtless the result of Greek influence that in Christian times the days of the week come to be personified, especially *Ἁγία Παρασκευή* and *Ἁγία Κυριακή* (St. Friday and St. Sunday), who are represented as richly draped female figures. On later mosaics personifications of the seasons of the year, with their distinctive attributes, are a favourite subject.

Personifications of place are commoner than those of time. Earth (Ge or Gaia), in early times a distinct goddess and the mother of the giants, becomes later a merely allegorical figure or personification. Ocean, as distinguished from various sea-gods, has virtually no mythological character, though Homer calls him the origin of the gods; he appears on the François vase, and on the Pergamene altar. On the Tower of the Winds at Athens the eight winds merely serve to indicate the quarters of the sky. Earlier we find winds personified as winged figures; but none of them, except Boreas, acquires any mythological standing. The clouds in Aristophanes' play are evidently a meteorological personification; the name of Nephelē (Cloud) occurs as that of a mythical character also. In the case of rivers, again, we find two distinct usages. River-gods in early times are important and efficient deities; but figures of rivers come frequently to be used as mere allegorical representations of localities. This was the case, according to Pausanias (v. x. 7), on the east pediment of the temple of Zeus at Olympia, where the recumbent figures of the Alpheus and Cladeus define the boundaries of the Altis at Olympia; the Kephalis (or Ilissus) of the west pediment of the Parthenon offers another similar example; but both identifications have been disputed. Later we often find figures of rivers, such as the Nile with his sixteen cubits playing around him as little children. Similar personifications are common in later art, mountains, springs, meadows, etc., being represented by human figures, often in the form of nymphs. Nymphs or personifications of places are sometimes more individual in locality, when they represent well-known places such as Nemea; and the eponymous hero or heroine of

any place or district is in a certain sense an impersonation, as in the case of Ægina or Corinthos. In some instances the eponymous hero or heroine was really an earlier god or goddess; e.g., Cyreno has a relation to her city more like that of Athene to Athens. But other representatives of cities and peoples fall rather into class (b), collective personifications.

(b) *Collective bodies.*—This class differs from class (a) mainly in the fact that, even when the personification is local in character, the people rather than the actual locality is typified. The Demos of Rhegium, a dignified bearded figure, appears as a personification of the people of the city on its coins early in the 5th cent. B.C., and about the same time the coins of Tarentum represent the Demos of that city 'who is conceived in the likeness of Taras the founder of Tarentum, and so is figured as a youth.'¹ Similar personifications of the Demos of cities are not uncommon in later art; another example of the hero as representing the people is offered by the figure of Corinthos already quoted on a bronze mirror;² he appears seated, while a standing female figure, the colony Leucas, places a wreath on his head. The Demos (of Athens) is introduced as a character in the *Knights* of Aristophanes, and was doubtless represented as a typical citizen. Boule, the Senate, appears as a draped female figure on an Attic relief, and similar representations are very common on late coins. The reliefs heading treaties or decrees often contain figures representing the people concerned; but these are sometimes the deities of the cities; e.g., Athens and Samos are represented by Athene and Hera. In later times a city or country is commonly personified in the form of a female figure, often wearing a mural crown. Sometimes the personification takes a more definite form as the Fortune of the city (*Τύχη πόλεως*); the best known example is the figure of Antioch by the sculptor Eutychides, made at the time of the foundation of the city about 300 B.C.; this is said to have been worshipped with divine honours in the district. The figure of Megalopolis, in a group with Zeus and Artemis in that city, is also a clear instance of personification. It was by Cephisodotus and Xenophon; unfortunately it is not certain whether the Cephisodotus was the elder, of the early 4th cent., or the later, the son of Praxiteles; it cannot be earlier than 370 B.C. Figures of Hellas and of Salamis appeared on the screens of the throne of Zeus at Olympia (c. 430 B.C.). Similarly, Hellas and Asia are seen among gods and other allegorical figures on the well-known vaso at Naples, representing Darius preparing for his war with Greece. Perhaps the most extreme example of such a personification is the (habited) Earth (*Οἰκουμένη*), on the relief of the Apotheosis of Homer in the British Museum, representing 'ecumenical' assent—a conception very far removed from that of Earth (Ge or Gaia) on early monuments. Ætolia, as a warrior-maiden or Amazon, with one breast exposed, appears seated on coins of the Ætolian league; and this or similar figures suggested the type of the goddess Roma on coins. The statuary type of this goddess was based upon that of Athene, which, as we have noticed, was used sometimes as a personification of her chosen city Athens.

(c) *Abstract ideas.*—The third class of personifications is very miscellaneous in character, but is not easy to subdivide either chronologically or by subjects. A distinction might be drawn between such as actually have a place in worship and ritual and such as are merely creations of a poetical or artistic imagination; but among the Greeks we

¹ P. Gardner, *Types of Greek Coins*, Cambridge, 1883, p. 101.

² *Monuments grecs*, I. (Paris, 1878) pl. 8.

find many in the former class which we should rather expect to belong to the latter only. Thus in Athens there were altars to Eleos, Aidōs, Phēmē, and Hormē (Pity, Shame, Rumour, and Impulse); in Sparta were sanctuaries of Gelos (Laughter) and of Phobos (Fear). Again, Cephisodotus's statue of Peace (Eirene) nursing the infant Wealth (Plutos) looks like a transparent allegory, yet both divinities had a share in the State worship of Athens. At the other end of the scale are such deities as Eros (Love) and Nike (Victory), though these are by no means of the same nature. Eros, in some places, notably at Thespizē, was a primitive and independent god; elsewhere he was worshipped mainly with his mother Aphrodite. In these cases, apart from the direct significance of his name, he can hardly be called a personification. But he has practically no mythical character or personality in early times, though in the Hellenistic age tales about him become common; the best known is that in which he is joined with another allegorical personification, Psyche (the soul). This, however, belongs to the region of romantic invention rather than genuine mythology (see LOVE [Greek], I. 3). Nike, on the other hand, has hardly any place in myth, and, when she is worshipped, it is usually as a particular form of another divinity—e.g., Athene Nike in Athens. Several similar personifications occur in apposition to the names of deities, almost as epithets—e.g., (Athene) Pronoia, (Artemis) Enkleia, (Artemis) Eupraxia, (Aphrodite) Euploia; most of these also occur independently. Tyche (Fortune) was in many places worshipped, apart from her impersonation of certain cities mentioned above (b), as a great goddess, sometimes in the form of Ἀγαθή Τύχη. A common class of personifications are those that occur as companions of Aphrodite or of Dionysos. These are common on artistic representations. With Aphrodite, besides Eros, we also find Himeros (Desire) and Pothos (Yearning for the absent), Peitho (Persuasion), who has a more distinct mythical personality, Eunomia, Harmonia, Paidia, Endaimonia, etc. Dionysos is accompanied by several of these, as by Dithyrambos, Tragedia, Komos (Revel Ront), Methe (Drunkenness), and even Kraipale (its after effects). Telete seems to be a personification of the mysteries. Ethical personifications are found not only in worship—e.g., Dike, Dikaiosyne (Justice)—but also in literature and art. In early art Dike smites Adikia, her opposite, in the form of a hideous woman; the symbolism continued into the Christian virtues and corresponding vices. Eris (Strife) plays an important part in early myth, as also does Ate, in the belief 'quem deus vult perdere, prius dementat.' A similar rôle in the drama and in art derived from it is played by Lyssa and Oistros (Madness). Nemesis, also, may in certain cases be regarded as a personification, though at Rhamnus she had a temple where her cult as a goddess was primitive. A well-known Homeric passage (*Il.* ix. 502) describes the *Airai* (Prayers) as daughters of Zeus, who halt after the steps of Ate. *Apai* also (Curses) are often personified; but in this case they tend to be identified with the Eumenides, or Furies, and so to pass from personification to definite mythical personality. Kratos and Bia, Strength and Violence, who fetter Prometheus in Æschylus's play, have their place in systematic genealogy. Even in the case of personifications which appear to be mere inventions of the poet's or artist's imagination we often find some reference to accepted worship or belief. Perhaps the clearest instance of such invention is to be found in a picture like Apelles' Calumny, already mentioned, or a relief such as the Apotheosis of Homer. Here the allegorical figures include the

Iliad and Odyssey, Myth, History, Poetry, Tragedy, Comedy, Nature, Virtue, Memory, Faith, Wisdom, Time, and the World. Another example, of earlier date, is seen in the dedication of Micythos at Olympia, where, besides various gods, were Agon (Contest) with ἀλγῆρες, or jumping-weights, and Ἐκεχειρία (the Sacred Truce of Olympia) crowning Iphitus, the founder of the games; this group was set up early in the 5th cent. B.C. Logos (the Word) and Sophia (Wisdom) are prominent in the mingled Hellenistic and Oriental philosophy which finds expression in apocalyptic writings, and, through their influence, in some forms of early Christianity.

3. Conclusion.—These instances are necessarily somewhat miscellaneous; but they suffice to show the manifold developments of personification in Greece. It is by no means surprising to find the tendency so common in the literature and art of a people endowed with so intensely anthropomorphic an imagination as the Greeks. But, considering the highly developed and systematized polytheism of their religion, the existence and recognition in State worship of so many personifications of places, of communities, of physical or mental conditions, and of moral qualities call for some comment. There even seems at first sight some resemblance to the many *numina* that preside over every action in the Roman *Indigitamenta* (*q.v.*); but there is, on the other hand, the essential distinction that the Greek personifications are thought of as in human form, and have attributed to them a human character. It has been noted how some of them come to be closely associated with the chief gods or goddesses, sometimes as companions or attendants, sometimes, so to speak, as incarnations or manifestations. In this way they found their place in the polytheistic system. Moreover, the anthropomorphic imagination of the Greeks filled every region of earth and sea, rivers and springs, mountains and trees, with beings of human form, Nereids or nymphs or river-gods. These were not originally personifications; but the belief in their existence facilitated the creation of imaginary beings of a similar character to personify the various ideas that have been enumerated. And, in later times, as a belief in the actual existence of these supernatural beings waned, it became easier to invent personifications of all sorts, and to give free scope to a poetical and artistic imagination. Such later examples in Greece are not essentially different from those which we find in more recent literature and art. But the earlier personifications are of a different nature, and arise from the same anthropomorphic tendency that gave so clear and personal a character to the chief Olympian gods.

LITERATURE.—H. Steuding, 'Lokalpersonifikationen,' and L. Deubner, 'Personifikationen,' in Roscher; P. Gardner, 'Countries and Cities in ancient Art,' in *JHS* ix. [1889] 47 ff.
E. A. GARDNER.

PERSONIFICATION (Roman).—Personification is a psychological process which plays an important part in the development of religious concepts. In a general sense it is the process of conceiving of inanimate and even immaterial and abstract objects as possessed of life and soul. This primitive form of personification, which might be called 'vivification,' lies at the base of that early religious stage known as animism. As animism passes over into anthropomorphism, so vivification develops into personification, as we are accustomed to think of it; but the change is quantitative rather than qualitative, and the power which in pre-historic times endows Janus, the physical door, with a heavenly counterpart Janus, the spirit of the door, and the power which develops Janus, the spirit of the door, into Janus, the two-faced bearded god, are one and the same. It is simply a question of development. Owing to

certain tendencies in the psychological constitution of the ancient Roman, personification plays an especially important part in Roman religion. In fact an intimate study of personification is perhaps the best means of obtaining in this latter day a fruitful idea of the essence of ancient Roman religion. It is almost the only road through the thickets of conventionalism and formality which have always hidden the heart of Roman religion from the vision of the moderns.

The earliest concept of the divine among the Romans was in the nature of a function; they believed in divine powers, *numina*, unseen, unknown, unnamed. These powers were possessed of life and soul, and were thus in the primitive sense personified. Gradually out of the thick mist of cosmic forces the Romans began to see gods as men walking, and they straightway equipped these gods made in the fashion of men with all the functions and attributes which had originally belonged to the unknown *numina*. Each god, therefore, had many powers and attributes, and these were expressed by what were called *cognomina*, adjectival (more rarely nominal) addenda to the name itself (on these early *cognomina* cf. J. B. Carter, *De deorum Romanorum cognominibus quaestiones selectae*, Leipzig, 1898). Thus Jupiter as the patron god of freedom was called Jupiter Liber, and as the god of victory Jupiter Victor. The Roman genius from the very beginning was characterized not so much by imagination as by the power of abstract thought. This was characterized in its turn by an extraordinary ability to transfer the abstract into the concrete and back again. The Roman mind found one of its favourite employments in sending ideas, like free balloons, into the void of abstract, and then making them captive and concrete by attaching them to earth again. But there was also a great continuous fermentation in the realm of the gods. The Romans took a pre-eminently practical interest in their gods in spite of the fact that gradually the anthropomorphic concept had won the day; they cared for their gods not so much for what they were as for what they did; hence the adjective attached to the god, describing the function, was so much emphasized, and the god relatively so neglected, that the adjective or noun often took the primary place and in many cases eventually broke off from the god and set up an independent existence of its own (e.g., Portunus as originally Janus Portunus, Mercurius as originally Hermes Mercurius, Discepsiter as originally Jupiter Discepsiter). In certain cases, however, the Roman mind, with its extraordinarily keen development of the philosophical-philological sense, realizing that the adjective was the expression of an abstract idea, changed it into an abstract noun and, personifying the noun, worshipped it as an independent deity.

In all this material, attempts at chronological determination meet with great difficulty. We can only say that certain abstracts seem to go back to pre-historic times, and among these is undoubtedly the goddess Fides. She seems to be the earliest illustration of the process just described. Jupiter as the god of oaths and fealty became very early known as Diouis (or Dios) Fidius (Ζεύς Ἰδίων), and out of the adjective Fidius by constant accentuation came the goddess Fides, who is said to have had her own cult even in the mythical regal period and her own sanctuary on the Capitoline in the immediate neighbourhood of the chapel of Jupiter Lapis (the patron deity of international good faith). This much at least is certain, that in 254 or 250 B.C. a temple was dedicated to her on the Capitoline by Atilius Calatinus.

FIDES.—On the oldest sanctuary cf. Dion. Hal. ii. 75; on the temple dedicated by Calatinus, which was restored in 115 B.C. by M. Aemilius Scaurus, Cic. de Nat. Deor. ii. xxiii. 61, de Off. iii. xxix. 114; cf. de Leg. ii. xl. 28; apocryphal temple, Fest. p. 269. 8; festival of Fides, 1st Oct., Fast. Arr. Atil. Paul.; peculiar ritual, Livy, i. xxii. 4; Serv. AEn. i. 292, viii. 639; Hor. Carm. i. xxxv. 21 f.; military records in her temple, CIL iii. 926. 10; dedicatory inscriptions, comparatively rare, Ib. ii. 4497, vi. 148=xiv. 5, ix. 5422, 5845, 5848, x. 8775, 5903; Eph. Ep. iv. 79; head of Fides on republican coins; also frequent on imperial coins.

Apparently younger, but still of very great age, are two other personifications, Libertas and Victoria; like Fides, they both grew out of Jupiter. Jupiter Liber was originally the god of plenty rather than of freedom, but the word *liber* gradually changed its meaning and came finally to express individual freedom and to stand by itself as Libertas. Probably the goddess goes back to the very beginning of the republic, even though our earliest date is the second half of the 3rd cent. B.C., when Ti. Sempronius Gracchus (consul, 238) dedicated a temple to her on the Aventino.

In similar fashion Jupiter Victor seems to go back at least to the early republican times, and has his place in the ritual of the Arvales immediately after the Capitoline triad. As early as 295 B.C. Q. Fabius Maximus vowed him a temple. As for Victoria, we do not know when she began her independent existence, but she has a temple dedicated to her in 294 B.C. on the Clivus Victoriae on the Palatine—a temple which ninety years later served as the first home for the Magna Mater on her arrival in Rome. With the coming of the empire the importance of the worship of Victoria was immensely increased. Each rival claimant for the supreme power thought of her in personal relation to himself, so that the goddess became the 'Victory of Caesar,' or the 'Victory of Vespasian,' etc. Here imperial coins give ample testimony. Finally, the statue which Augustus had caused to be erected in the senate-house in 29 B.C. became the symbol of all that was old and conservative in the religion of the Romans, and the last battles of official paganism against Christianity were fought under its shadow.

LIBERTAS.—On the temple, Paul. p. 121: 'Libertatis templum in Aventino fuerat constructum'; dedicated by Ti. Sempronius Gracchus, Livy, xxiv. xvi. 19; festival, 13th April, cf. Ovid, Fasti, iv. 623 f.; sanctuary on the site of Cicero's house, erected by Clodius, Dio Cass. xxxviii. xvii. 6; Plut. Cic. 33; Cic. de Domo, 108 ff., 131; cf. de Leg. ii. 42; in 40 B.C. Julius Caesar decreed a temple, Dio Cass. xum. xlv. 1; statue in the Forum under Tiberius, Ib. lviii. xii. 5; Libertas Restituta and Libertas Publica.

VICTORIA.—On the temple on the Palatine, Livy, i. xxxiii. 9; cf. xxix. xiv. 13; Fest. 262; *Notitia* and *Curiosum*, 10th region; near the temple was a chapel of Victoria Virgo dedicated by M. Porcius Cato in 193 B.C., Livy, xxxv. ix. 6; on the statue in the senate-house, Dio Cass. li. xxii. 1 f.; Fast. Mart.; on the rôle of this statue in the closing years of paganism cf. Ambrose, Ep. i. xvii. 18, xviii. 82, lvi. 4-6; Symm. Rel. iii. 4; many inscriptions from the empire (see indices to CIL); represented on the so-called 'Victoriatii' of the republic, and frequently on imperial coins.

Somewhat similarly the cult of Mars seems to have given birth to the closely connected pair of abstracts, Honos and Virtus. Here, however, we are not able to trace the process with any degree of accuracy, but the connexion is undoubted. Their most important temple was outside the Porta Capena in the immediate neighbourhood of the temple of Mars, and they were so identified with Mars that, e.g., in referring to the starting-point of the parade of the knights, writers refer indifferently to the Mars temple or to the temple of Honos. This temple of Honos was vowed by Q. Fabius Maximus Verrucosus in 233 B.C., and later dedicated. It was subsequently restored by M. Claudius Marcellus, who wished at the same time to change it into a temple of Honos and Virtus, but the pontiffs objected on technical grounds. He was able, however, to compromise matters by adding a separate temple for Virtus,

which was dedicated by his son in 205 B.C. The two temples were famous for their art collections. Later these two goddesses enjoyed special favour at the hands of Pompey, who gave them shrines at the top of his stone theatre.

HONOS and VIRTUS.—On the temple outside the Porta Capena, *Cic. de Nat. Deor.* ii. xxiii. 61; *Livy*, xxvii. xxv. 7ff., xxix. xl. 13; cf. *Val. Max.* i. i. 8; *Plut. Marc.* 28, *de Fort. Rom.* 5, p. 318 E; restoration under Vespasian, *Pliny*, *HN* xxxv. 120; references to the parade of the knights, *Dion. Hal.* vi. xlii.; *Victor, de Vir. ill.* xxxii. 3; on the art treasures in the temple, *Livy*, xxv. xl. 2, xxvi. xxxii. 4; *Cic. Verr.* iv. 121; *Ascon.* p. 11 (Kießling); *Pliny*, *HN* xxxv. 120; another temple outside the Porta Collina, *Cic. de Leg.* ii. xxlii. 58; cf. *CIL* vi. 3892; still another temple, built by C. Marius, *Fest.* p. 344; *CIL* i. 2 p. 195, xviii. 16; shrines in Pompey's theatre, *Fest. Amit.*, 12th Aug.; shrine of Virtus founded by Scipio Numantinus, *Plut. de Fort. Rom.* 5, p. 318 D; temple of Honos at Puteoli (105 B.C.), *CIL* x. 1781; Collegium Honoris et Virtutis at Narbo, *ib.* xii. 4371; Collegium Virtutis at Nepes, *ib.* xi. 3205; games at Tarracina, *ib.* x. 8260; numerous inscriptions from all parts of the empire, both singly and together, on republican and imperial coins.

It is important to notice that this ability to emphasize a specific side of a deity's activity, by changing the adjective into an abstract noun and making an independent deity of it, was not confined to the earlier and more child-like period of Roman religion, but was still present at the close of the republic. Here we have the following remarkable instance. Sulla's belief in his own fortune and his fondness for the cult of Venus caused him to worship Venus Felix; when Pompey came to power, he in turn preferred Venus Victrix, but he avoided offending Venus Felix by worshipping Venus Victrix and Felicitas; finally Julius Caesar chose to honour Venus Genetrix, but he joined to her Victoria and Felicitas. In this case we are not justified in saying that Felicitas came into being as the result of the breaking off of the cognomen Felix from Venus, for she existed long before this time, having received a temple in the Velabrum at the hands of L. Licinius Lucullus in 146 B.C. Her real prominence began with Sulla, who called himself Sulla Felix. Pompey's temple to Felicitas was connected, as we have seen, with one to Venus Victrix on the top of his stone theatre, and a similar combination occurred on the Capitoline. Julius Caesar influenced M. Aemilius Lepidus to build a temple to Felicitas on the site of the old senate-house, the Curia Hostilia. Under the empire Felicitas was much sought after and was a special favourite of Augustus, and under Tiberius the senate caused a statue of Felicitas to be erected at Tiberius's birthplace, Fundi. In all the subsequent empire she was invoked in behalf of the emperor, both in public and in private.

FELICITAS.—On the temple in the Velabrum, *Strabo*, viii. vi. 23, p. 881; *Dio Cass. frags.* lxxv. 2 (Müller), xlii. 21; cf. *Suet. Ces.* 37; shrine in Pompey's theatre, *Fest. Urbini.*, *CIL* i. 2 p. 339; shrine on the Capitol, *Fest. Ant.*, 1st July and 9th Oct.; temple on the site of the Curia Hostilia, *Dio Cass.* xlii. v. 11.; on the connexion with Augustus, *Cum. Fer.*, *CIL* x. 8375, 16th April; *Fest. Præn.*, 17th Jan.; cf. *Mommsen*, *CIL* i. 2 p. 308; statue at Fundi, *Suet. Tib.* 5; frequent sacrifices by the Arvales, cf. *G. Henzen, Acta Arvalium quæ supersunt*, Berlin, 1874, pp. 71f., 74, 84f., 168.

Thus far we have discussed six abstracts—Fides, Libertas, Victoria, Honos, Virtus, and Felicitas. We have dealt with them first because they illustrate the close connexion of abstract deities and adjectival cognomina. All six go well back into the republic, and certainly one of them (Fides) goes back into the kingdom. In addition to these six, there are thirteen other abstracts which arose certainly before the 2nd cent. B.C., and eight seem to go back into the kingdom.

Of these eight, Ops and Salus occupy a peculiar position. The very great antiquity of Ops is guaranteed by her old cognomen, Consiva, connecting her with the old Roman god Consus, in whose control lay the blessing on the harvest. The existence of Ops is thus proved for the earliest stratum of Roman religion, but Wissowa makes the sugges-

tion that Ops may be there, to be sure, but not as an abstract deity. This point of view the present writer considers incorrect, and merely the result of reading into primitive conditions our sharp distinction between abstract and concrete. Ops as the guardian of plenty and Ops as the idea of plenty—the essence, and so the essential abstract quality of plenty—would be scarcely distinguishable in a world where all inanimate things had life and soul, and soul consisted in the exercise of functions always practical and yet often abstract. In the old calendar Ops had two festivals—the *Opiconsivia* of 25th August and the *Opalia* of 19th December. In those days she had no special sanctuary of her own, but the sacrifice took place in the chapel in the Regia, accessible only to the pontifex maximus and the Vestal virgins. In fact she was such a secret and retired goddess that the legend soon arose that she was the mysterious guardian of the city of Rome, whose name no man dared to betray. Later she received two temples—one on the Capitoline (first mentioned 186 B.C.) and one in the Forum, probably the temple dedicated between 123 and 114 B.C. by the pontifex L. Cæcilius Metellus Dalmaticus. On 10th Aug. A.D. 7 an altar to Ops was dedicated in the Vicus Jugarius. Ops had a temple at Præneste; as Ops Augusta she appears on the coin of Antoninus Pius, and as Ops Divina on the coins of Pertinax.

OPS.—Relation to Consus, *Varro, de Ling. Lat.* vi. 21; *Fest.* p. 180; *Macroh.* iii. ix. 4; sacrifice in the Regia, *Varro* and *Fest. locc. cit.*; *Fest. Arv.*, 25th Aug.; on the secret name, *Macroh. loc. cit.*; temple on the Capitoline, cf. *H. Jordan, Topographie der Stadt Rom im Alterthum*, Berlin, 1871-1907, vol. i. pt. ii. p. 43; *Fest. Vall.*, 25th Aug.; the matrons met at this temple for the Ludi Sæculares of Augustus, *Eph. Ep.* viii. 254; the Arvales met here on 7th Dec. A.D. 80, *CIL* vi. 2059, 11; another temple to Ops, as Ops Oplera, dedicated by Metellus Dalmaticus, *Pliny*, *HN* xl. 174; sacrifice on the Volcanalis, 23rd Aug., *Fest. Arval.*; altar of Ops Augusta la Vicus Jugarius, *Fest. Amit.*; temple at Præneste, *CIL* xiv. 3007.

Salus, like Ops, belongs also to the oldest period, and the proof is similar, the presence of Salus Semonia proving that Salus is the counterpart and companion of the old god 'Semo Sancus dius Fidius.' It is probably no accident, therefore, that dedicatory inscriptions to Semo Sancus have been found on that part of the Quirinal which was commonly called Collis Salutaris, with the Porta Salutaris. Her cult is therefore much older than her temple, founded in 302 B.C. by the dictator C. Junius Bubulcus. This old Roman goddess was doubtless the Salus Publica, the Commonweal, and is to be kept quite distinct from the later identification of Salus with the Greek goddess Hygieia. The old Salus was preserved even into the latest times as the 'Salus publica populi Romani Quiritium' in connexion with emperor-worship, or as Salus Augusta in the same connexion.

SALUS.—Salus Semonia, *Macroh.* i. xvi. 8; cf. *Arch. epigr. Mitt. Oesterr.* xv. [1892] 77ff.; 'Salutes pocolom', *CIL* i. 49, from Horta; votive inscription in the grove of Pisaurum, *ib.* i. 179; old altar at Præneste, *ib.* xiv. 2392, with very ancient *lex aræ*; temple on the Quirinal, *Livy*, ix. xliii. 25, x. i. 9; dedication day, 5th Aug., *Fest. Vall.*; temple founded by Nero after the conspiracy of Piso, *Tac. Ann.* xv. 74; temple at Ferentinum, *ib.* xv. 53; cf. *CIL* x. 5821; many inscriptions from provincial cities; found on both republican and imperial coins.

Two more abstracts, Fas and Fines, the concept of righteousness and the deification of the boundary-line, can lay claim to a venerable age because they are invoked in one of the formulæ of the ancient priesthood of the Fetiales, who gave to the Roman world the primitive concept of international law.

FAS and FINES.—*Livy*, i. xxxii. 8: 'audi Jupiter, inquit, audite Fines—culuscnmq; gentis sunt, nominat—audi Fas!'; cf. the soldier's dedication from Vinxbach near Brohl: 'Finbu(e) et Genio loci et I. O. M.', *CI Rhen.* 649.

Much more difficult to understand is the story of the next two abstracts, Fors Fortuna and Fortuna. They are unquestionably connected, and they are both associated in legend with the name of Servius Tullius.

Fors Fortuna had an old shrine on the right bank of the Tiber in Trastevere. Later, in 293 B.C., the consul Sp. Carvilius vowed a sanctuary to Fors Fortuna; the older sanctuary was situated at the first milestone of the Via Portuensis and the second one at the sixth milestone. Both had a festival on 24th June, in which the lower classes took special part (notice the coincidence of date with the modern popular festival of San Giovanni). Fors Fortuna seems to have been at first an agricultural goddess, the personification of the attendance on chance which characterizes a farmer's life. Gradually the special agricultural relation was forgotten, and she became in general the goddess of blind uncontrollable chance. It is probably in this more general sense that the third temple in Trastevere—that of Tiberinus in the gardens of Caesar—is to be understood.

FORS FORTUNA.—Old temple in Trastevere, Varro, *de Ling. Lat.* vi. 17; Dion. Hal. iv. xxvii. 7; Ovid, *Fasti*, vi. 783 f.; Carvilius's temple, Livy, x. xvi. 14; cf. Mommsen, *CIL* i. 2 p. 326; on the festival of 24th June, *Fast. Amit.*; Ovid, *Fasti*, vi. 775 f.; cf. Cic. de Fin. v. 70; Varro, ap. Non., pp. 144, 425; votive inscriptions found at the sixth milestone, *CIL* vi. 187-189; on Tiberius's temple, Tac. Ann. ii. 41 (Dio Cass. xlii. 28, wrongly sets the temple in 47 B.C.); cf. Plut. *Brut.* 20, de *Fort. Rom.* 5, p. 319 A; 'Schola Fortis Fortunae' from Vell. J. C. von Orelli, *Inscr. Lat.*, Zürich, 1823-50, iii. 5701; altar at Aquileia, *CIL* v. 8219; dedication by a soldier 'nūminali Fortis Fortune', ib. vi. 170.

Akin to and yet distinct from Fors Fortuna is the goddess Fortuna, who seems to have gone through very much the same development, beginning as an agricultural goddess and developing into the representative of the general concept of chance in the world. Her oldest temple stood in the Forum Boarium and was associated with Servius Tullius. Her cult in later times grew to extraordinary proportions, and her functions were specialized and emphasized in a multitude of cognomina. For fuller details the reader is referred to art. FORTUNE (Roman); J. B. Carter, *De deorum Romanorum cognominibus*, and, 'The Cognomina of the Goddess Fortuna,' *Trans. of the Amer. Phil. Assoc.* xxxi. [1900] 60 f.

FORTUNA.—Three temples to Fortuna in the general sense, without special adjectives: (1) in the Forum Boarium, Ovid, *Fasti*, vi. 560 ff.; Dion. Hal. iv. xxvii. 7; Val. Max. i. viii. 11; Pliny, *HN* xxxvi. 163; (2) in the region of the Circus Maximus, *Nefitia*, 11th region; (3) 'ad lacum Aetia', *CIL* vi. 9664.

The following are the more important cult-titles: *anephoros*, sanctuary ascribed to Servius Tullius, Plut. *Quaest. Rom.* 74, p. 281 E; *augusta*, frequent dedications and sanctuaries; also frequently on Imperial coins; *balnearis*, *CIL* ii. 2701, 2763; Fronto, de *Orat.* S. 157 (Naber); cf. also *balnearum*, *CIL* vi. 182; *barbata*, Aug. de *Civ. Dei*, iv. 11, vi. 1; Tertull. ad *Nat.* li. 11; *bona*, inscriptions and Imperial coins; *brevis*, sanctuary ascribed to Servius Tullius, Plut. *Quaest. Rom.* 74, p. 281 D; *conseratrix*, *CIL* iii. 1033, vii. 211, 954, iii. 4289, 4558; *dubia*, Bas. Capitol., 18th region, 'vico Fortunae dubiae'; *dux*, A.D. 214, sacrifice by the Arvales, *CIL* vi. 2103 b. 71; cf. *CIL* ix. 2194; on Imperial coins; *equestis*, temple near the theatre of Marcellus, vowed in 180 B.C. by Q. Fulvius Flaccus, Livy, xl. xl. 10, xlv. 0; dedicated 173 B.C., Livy, xlii. x. 5; Vitruv. iii. lii. 2; Obseq. 113; templo at Antium, Tac. Ann. iii. 71; *euboea*, sanctuary attributed to Servius Tullius, Plut. *Quaest. Rom.* 74, p. 281 E; altar, Plut. de *Fort. Rom.* 10, p. 323 A; *felix*, on Imperial coins; *huiusce diei*, a temple in the Campus Martius, dedication day, 30th July, *Fast. Afric.*; cf. *Fast. Pinc.*; cf. Closely connected with Fortuna is Bonus Eventus, a sort of masculine parallel to Felicitas. He seems originally to have been a deity of agriculture, in whose power lay the success or failure of the crop. Hence he is included by Varro in his famous list of the twelve deities of the farmer. But his scope soon broadened and became general, and it is in the general sense that he is the recipient of many inscriptions from the provinces. These inscriptions indicate the private worship of individuals rather than a State cult. But a State cult must also have existed, because Bonus Eventus had a temple in the Campus Martius. The head of the god with inscription occurs on denarii of Caesar's time, and frequently on coins of the empire. The statues of the god represented him somewhat in the type of Triptolemos, as a youth making libation at an altar, and holding in his left hand stalks of wheat or a cornucopia. It is interesting to note that the statue in the symbolism harks back to the primitive agricultural side of his nature.

BONUS EVENTUS.—On the early agricultural character cf. the prayer in Gato, de *Agric.* 141: 'cum divis volentibus quodque bene eveniat, . . . uti tu fruges grandire beneque evenire siris'; Varro, de *Re Rust.* i. 6; provincial inscriptions, *CIL* ii. 1471, 2412, 3095, 4812, iii. 1123, 6223, suppl. 8244, v. 3218, 4208, vii. 77, 97, 425, viii. suppl. 10360, 17213, ix. 1560, xi. 622; *CI Rhen.* 933, 1034; Roman inscription, *CIL* vi. 144, 795; temple in Campus Martius, *Ann. Mare.* xxix. vi. 19; on the statue, Pliny, *HN* xxxiv. 77, xxxvi. 23, and cf. O. Marucchi, *Bull. Arch. Com.* vi. [1878] 205 ff.

There follow three abstracts, which give every appearance of being very old cults, though we have no definite date. Iuventas had a little chapel in the *cella* of Minerva, in the old Capitoline temple of Jupiter. For every boy who came to man's estate and assumed the *toga virilis* a tax was paid into the treasury of Iuventas, while at the same time an offering was brought to Jupiter Optimus Maximus. She was the goddess of incipient manhood, the 'dea novorum togatorum,' patroness of those who had put on the toga for the first time. What was true of all young men was pre-eminently true of the emperor; hence Inventas Augusta and the special imperial festivals in this connexion. This was the old Roman Iuventas, quite distinct, though often difficult to distinguish, from the Greek Hebe, who was present in Rome at least in the time of the Second Punic War and took part in the *lectisternium* of 218 B.C. It was Iuventas, the Greek goddess, to whom M. Livius Salinator vowed in the battle of Sena (207 B.C.) a temple, which was dedicated at the Circus Maximus by C. Licinius Lucullus in 191 B.C.

IUVENTAS.—Chapel in the Capitoline temple, Dion. Hal. iii. lix.; Pliny, *HN* xxxv. 103; cf. Livy, v. lix. 7; Flor. *Epit.* i. 1. 71; Aug. de *Civ. Dei*, iv. 23; tax for all *novi togati*, attributed to Servius Tullius, Dion. Hal. iv. xv. 6; cf. Plut. p. 104; Cic. ad *Att.* i. xviii. 3; supplicatio on 19th Oct., anniversary of the days when Augustus put on the *toga*, *Cum. Fer.* *CIL* x. 8375.

On Iuventas-Hebe: temple by M. Livius Salinator, Livy, xxxvi. xxxvi. 5; Dio Cass. liv. xix. 7; *Mon. Anc.* iv. 8; Pliny, *HN*

xxix. 57; *lectisternium* of 218, Livy, **xxi.** lxii. 9; occasional provincial dedications to Iuventas.

It is open to question whether Pudicitia formed a part of the State religion during the republic; she certainly did during the empire, and was worshipped by private persons during the republic. Under the name of Pudicitia Plebeia she had an old chapel in the Vicus Longus, in connexion with which there arose a legend of the cult of Pudicitia Patricia in the Forum Boarium. It is, however, extremely doubtful whether Pudicitia Patricia ever existed. Pudicitia was the special protectress of the purity of married life, and was worshipped therefore only by married women living in first wedlock (*matronæ univiræ*), or by widows who had married but once. During the empire she naturally became the patroness of the empresses, from Plotina onwards.

PUDICITIA.—Pudicitia Plebeia, Livy, **x.** xxiii. 6ff.; cf. Juv. vi. 308; Prop. ii. ii. 25; the legend of Pudicitia Patricia, Livy, **x.** xxiii. 3; Fest. p. 242; *Matronæ univiræ*, Livy, **x.** xxiii. 9; for connexion with Plotina see her coins with altar and inscription 'ara Pudicitiae'; dedication of a statue of Pudicitia Augusta in a temple of the Dea Caestis in Karpis (Africa) by a 'flaminica divae Plotinae,' *CIL* vii. 993; comparison of Pudicitia and Livia, Val. Max. vi. 1.

Quies is another goddess whose official worship seems to have begun under the empire, but who had a private cult during the republic. We hear of a sanctuary outside the city on the Via Labicana. After they had abdicated, Diocletian and Maximian caused medals to be struck with the inscription 'Quies Augustorum.'

QUIES.—Livy, **iv.** xli. 8: 'iam consul via Labicana ad fanum Quietis erat'; Aug. *de Civ. Dei*, iv. 16: 'Quietem, cum aedem haberet extra portam Collinam, publice illam suscipere noluerunt,' seems to rest on a misunderstanding of the passage in Livy; on the coins cf. J. H. von Eckhel, *Doctrina Numorum veterum*, Vienna, 1792-98, viii. 14.

Another group of abstracts which go back well into the republic consists of Concordia, Spes, and Pietas.

Concordia has an interesting and important history. She makes her first appearance in our records in the year 367 B.C., when the dictator, M. Furius Camillus, founded a temple at the northern end of the Forum in celebration of the cessation of strife between patricians and plebeians. In 121 B.C., at the close of the tumults connected with the Gracchi, L. Opimius restored the temple. On 16th Jan. A.D. 10 Tiberius dedicated this temple anew, under the name of Concordia Augusta; and about this time Livia dedicated a shrine to the goddess in the newly-built Porticus Livia on the Esquiline. In 218 B.C., in connexion with a military revolt in Gaul, the prætor, L. Manlius, vowed a temple to Concordia, which was erected on the Capitoline and dedicated 5th Feb. 216 B.C. Near the main Concord temple in the Forum a small chapel to Concord had been erected nearly a century before (304 B.C.) by the ædile, Cn. Flavius, in gratitude for the ending of the quarrels which the censorship of Appius Claudius had called forth. In 164 B.C. the censor, Q. Marcius Philippus, erected a statue of the goddess in the hope that by her favour his censorship might be a peaceful contrast to the stormy times preceding. At the beginning of the fateful year 44 B.C., when it looked as though civil war had ceased, the senate decreed to build in Cæsar's honour a temple of Concordia Nova. In 10 B.C. Augustus erected an altar to Concordia, and ornamented it with a statue. In A.D. 16, after the suicide of Scribonius Libo, the senate gave thank-offerings to Concordia. Nero sought her favour, and under him Concordia appears in the list of deities to whom the Arvales make sacrifice. From this time onwards Concordia Augusta or Concordia Augustorum figures frequently on imperial coins. Finally, Concordia is the recipient of dedicatory inscriptions in many parts of the

empire, connecting her with collegia, municipalities, provinces, armies, etc.

CONCORDIA.—Camillus's temple, Ovid, *Fasti*, i. 637 ff.; Plut. *Cam.* 42; restoration by Opimius, Plut. *C. Gracchi*, 17; Appian, *de Bell. Civ.* i. 26; Aug. *de Civ. Dei*, iii. 26; rededication by Tiberius, *Fast. Præn.*, *CIL* i.2 p. 308; Ovid, *Fasti*, i. 645 ff.; Dio Cass. *Fast.* viii. 2, lvi. xxv. 1; Livia's chapel, Ovid, *Fasti*, vi. 637; Manlius's temple, Livy, **xxiii.** 7, **xxiii.** 21; *Fast. Præn.*, *CIL* i.2 p. 309; Flavius's chapel, Livy, **ix.** xli. 8; Pliny, *HN* xxiii. 19; Philippus's statue, Cic. *de Dom.* 130 f., 186 f.; temple in Cæsar's honour, Dio Cass. *xlv.* iv. 5; altar by Augustus, *ib.* *xlv.* xxxv. 2; Ovid, *Fasti*, iii. 881 f.; senate's thank-offering (A.D. 16), Tac. *Ann.* ii. 32; Nero and the Arvales, *CIL* vi. 2089, 10, 2041. 17, 2041. 31, 2042. 6; sacristans of the Concordia temple, *ib.* vi. 2204 f., 8703; altar in Syracuse, Livy, **xxv.** xxii. 1; temple in Gales, *CIL* viii. 757; statue in Cora, *ib.* i. 1154=x. 6503; dedication from Casinum, *ib.* x. 5159; frequent dedications to Concordia Augusta or Concordia Augustorum; noticeable are the Concordiales Augustales of Patavium, *ib.* v. 268; on coins of both republic and empire.

Possibly the cult of Spes goes well back into the republic. An indication of this would seem to be the existence of a region called 'ad spem veterem,' outside the city near the later Porta Labicana. The earliest temple, vowed by A. Atilius Calatinus during the battles of the First Punic War, with its dedication day, 1st Aug., stood in the Forum Holitorium. This temple was destroyed by fire in 31 B.C., and dedicated anew by Germanicus in A.D. 17. In addition, we have a reference to the existence of a 'templum Spei novum' in the seventh region. There was a special festival to Spes and Iuventas on the anniversary of the day when Augustus put on the *toga virilis*. In A.D. 63, when Nero and Poppæa returned to Rome from Antium, Spes appears in the list of the goddesses to whom the Arvales make sacrifice. This Spes Augusta occurs frequently in inscriptions and on coins, also as Spes Populi Romani and Spes Publica. See, further, art. HOPE (Greek and Roman).

SPES.—'Ad spem veterem,' Livy, **ii.** li. 2; Dion. Hal. **ix.** xxiv. 4; cf. Frontin. *de Ag. v.* 19 ff., 65; *CIL* xv. 5929; temple in Forum Holitorium, Cic. *de Leg.* ii. xi. 23; Tac. *Ann.* ii. 49; Dio Cass. **i.** x. 3; Livy, **xxi.** lxii. 4, **xxv.** vii. 6; *Fast. Vell.* to 1st Aug.; the *templum novum*, in the supplement to *Notitia*, 7th region; festival to Spes and Iuventas, *Cum. Fer.*, *CIL* x. 8375; sacrifices by Arvales, *CIL* vi. 2043. 2, 10; temple at Ostia, *ib.* xiv. 375. 32 f.; priestess at Gabii, *ib.* xiv. 2804; 'cultores Spei Augustae,' in Antium, *ib.* x. 6645; cult at Aricia, *ib.* xiv. 2158; at Capua, *ib.* x. 3775; statue with inscription, *ib.* vi. 757; cf. T. Schreiber, *Villa Ludovisi*, Leipzig, 1850, no. 292; *simulacra* are mentioned, *CIL* xiv. 2353, 2367, ix. 4663, x. 8295.

Pietas is, strictly speaking, the ideal of the relationship between parents and children. Judging from the great emphasis laid upon the sacredness of this relationship among the Romans, it seems highly probable that Pietas existed in private worship from very early times. In 191 B.C., at the battle of Thermopylæ against Antiochus, the consul, M. Acilius Glabrio, vowed her a temple. Ten years later his son, also M. Acilius Glabrio, carried out this vow and dedicated the temple of Pietas in the Forum Holitorium. We do not know what incident in the battle gave rise to the vow—possibly, as Wissowa suggests (*Religion und Kultus der Römer*², p. 331), an incident similar to that between P. Cornelius Scipio and his son, Scipio Africanus Major, at the battle of Ticinus. In the absence of facts, legend copies a Greek model, telling of a daughter who by the milk of her breast had nourished her mother in prison. The only connexion with the temple was, however, that the prison had formerly stood on the same site. This temple gave place in 44 B.C. to the theatre of Marcellus. Another temple of Pietas, with its dedication day 1st Dec., was situated near the Circus Flaminius. On the coins of M. Antoninus (41 B.C.) and also on those of the empire Pietas is represented accompanied by a stork. This is probably a reference to the cult statue of one of these two temples. In the course of the empire the sharp edge of the meaning of Pietas was worn off, and she came to mean the general harmonious

relationship between the members of the imperial family. Cf. art. FILIAL PIETY, vol. vi. p. 18^a.

PIETAS.—On Acilius Glabrio's temple, Livy, x. xxxiv. 4 ff.; cf. Val. Max. ii. v. 1; destroyed by the coming of the theatre of Marcellus, Dio Cass. xliii. 49; Pliny, HN vii. 121; temple in the Circus Flaminius, Fast. Amit., 1st Dec., CIL i. 2 p. 835; Obsequ. 54 (114); Cic. de Div. i. 98; on the coins of M. Antonius, E. Babelon, Monn. Consul., Paris, 1885, i. 1781; altar vowed by senate on account of the illness of Livia, Tac. Ann. iii. 64; dedicated by Claudius, A.D. 43, CIL vi. 562; Pietas Augusta (or Augustorum) on imperial coins from Antoninus Pius and Faustina on; dedication from Rome, ib. vi. 563; a 'pontifex perpetuus domus Augustae' (in Batia), ib. ii. 1663.

Mens occupies a peculiar and rather interesting place in our list of abstracts. We have seen Roman abstracts influenced by Greek ideas, as, e.g., in the case of Iuventas-Hebe, but we have not met as yet an abstract which arose entirely through Greek influence. This is the case with Mens. In 217 B.C., after the terrible defeat at Lake Trasimennus, the Romans, in addition to other propitiatory acts, vowed two temples, one to the Venus of Mount Eryx in Sicily and the other to Mens. These temples were built close together on the Capitoline, and were dedicated in 215 B.C. One hundred years later M. Aemilius Scaurus restored the temple of Mens. Mens was introduced into Rome at the command of the Sibylline oracles, and this, entirely apart from her close connexion with the Greek goddess, Aphrodite of Mount Eryx, is sufficient proof of Greek origin. A goddess, Bona Mens, occurs on the coins of Praetium, and we have several inscriptions from Central and Southern Italy to Magistri Bonae Mentis. The Bona Mens was what was lacking at Trasimennus, and, interpreted in this sense, she would be the equivalent of Σωφροσύνη.

MENS.—The Capitoline temple, Livy, xxi. ix. 10, x. 10, xxiv. xxxi. 9; Ovid, Fasti, vi. 241 ff.; Lact. Div. Inst. i. xx. 13; restoration by Scaurus, Cic. de Nat. Deor. ii. xlii. 61; Plut. de Fort. Rom. 5, p. 818 E; later dedication day, 8th June, Ovid, Fasti, vi. 241 ff.; Fast. Venus., Fast. Maf.; Mens Bona at Praetium, CIL x. 472; at Cora, ib. x. 6512-6514; at Caes., ib. x. 4636; at Puteoli, ib. x. 1550; at Tibur, ib. xiv. 3561; at Alba Fucens, ib. ix. 3910 f.; inscriptions by private persons; Luna, ib. xi. 1827; Aquileia, Arch. epig. Mitt. Oesterr. xix. (1896) 200; Lugdunum, CIL xiii. 1673.

Beginning with Julius Caesar and extending through the empire, we have a large and apparently constantly increasing number of abstracts; but here, as always, we must take account of our general inability to date inscriptions within a century, and of the probability that in many cases the goddess in question may have existed long before, and these by chance may be our first references. Let us consider the more important of these deities in alphabetical order.

Aequitas.—We meet with her first in an archaic inscription from Vulci, 'Acetina pocolom'; her statue is dedicated to Fortuna Primigenia at Praeneste; Arnobius (iv. 1) mentions her as a goddess; and she occurs on coins from Galba to Maximianus Herenles.

Aeternitas.—Her name and a picture of her temple occur on the coins of Augustus and Tiberius. Aeternitas Imperii soon became the official form, and Nero performed special games 'pro aeternitate imperii.' Thus in A.D. 66, after the discovery of the conspiracy of Piso, the Arvales sacrificed to her.

Annona.—The personification of the crops, along with Ceres as the giver of them, and sometimes without her, occurs on coins from Nero onwards. She has a dedicatory inscription from Rome, 'Annonae Sanctae,' and possibly two others, one from Spain and one from Ostia.

Clementia is the personification of mercy and pardon as illustrated in the emperor. She received a temple in honour of Caesar in 44 B.C., and later an altar in honour of Tiberius; in A.D. 39 a regular yearly sacrifice was decreed in honour of Caligula,

and in A.D. 66, when Nero was kind to Tiridates, the Arvales sacrificed to her. On imperial coins she appears as Clementia Augusta, and later as Clementia Temporum, the only form from Gallienus onwards.

Copia is, Wissowa thinks (p. 332), merely the personification of the copia of cornu copiae, and he denies her existence in actual worship; but an inscription from Avignon, and the fact that two Roman deities, one at Thurii (193 B.C.) and one at Lugdunum (43 B.C.), were named Copia, seem to point clearly to a real cult.

Disciplina is at least as old as Hadrian. She occurs on the coins of Hadrian (as Disciplina Augusta) and in inscriptions from Africa and Britain.

Fecunditas appears first in A.D. 63, when the senate ordered a temple to be built in her honour, in gratitude for the successful delivery of Poppaea in childbirth. Probably at the same time the Arvales made sacrifice to her. The name and the representation of the goddess are found on coins beginning with the older Faustina. She is represented as carrying a child in one arm and a sceptre in the other, and sometimes as carrying a child in each arm. Under the name of Fecunditas Temporum, she appears on the coins of Barbia Orbiana and Otacilia.

Gloria is the recipient of a dedicatory inscription from Numidia; she appears as Gloria Exercitus on medallions of Constantius II. and Constantine II., and as simply Gloria on many imperial coins.

Indulgentia seems to come into existence under Hadrian; Marcus Aurelius dedicated a temple to her; she was the recipient of a chapel with a bronze statue in Ciria, Africa; and she appears frequently on imperial coins, usually as Indulgentia Augusta.

Iustitia, as Iustitia Augusta, received a statue in Rome on 8th Jan., A.D. 13; we have mention also in Rome of a 'sacerdos Iustitiae,' a dedicatory inscription from Ancona, and a reference to a statue from Aequiculi.

Pax, a blessing which can best be appreciated after a long period of war, appears on the denarii of L. Aemilius Buca in the year of Caesar's death. After this premature appearance she disappears again, to return under Augustus, when her cult was definitely established. In 13 B.C., when Augustus returned from his expedition to Spain and Gaul, the senate decreed an altar to Pax, which was dedicated on 30th Jan., 9 B.C. In the meantime (10 B.C.) Augustus himself had dedicated altars to Pax Augusta, Salus Publica, and Concordia. Under Caligula the Arvales sacrificed to Pax on the anniversary of the dedication day of the Ara Pacis; and in A.D. 66, when Nero closed the temple of Janus, they made an offering to her. Finally, under the Flavian emperors the great Templum Pacis in Vespasian's Forum was built.

Providentia goes through an interesting development, beginning probably as early as the Augustan age. She is the personification of the foresight of the emperor himself, by means of which perils and disasters are fortunately avoided. Offerings were made to her after the fall of Sejanus, after the murder of Agrippina, after the discovery of the conspiracy of Piso, and after Galba had assured a successor to the throne. Gradually, however, the concept shifted, and Providentia began to be thought of as the protecting power of the gods. It is to Providentia thus thought of that the Arvales sacrificed in A.D. 183 for the health of Commodus. The same Providentia Deorum occurs at intervals on coins from the time of Hadrian onwards.

Securitas, as Augusta, Publica, or Temporum, is the deification of the abiding sense of peace and

security. On 10th Jan., A.D. 69, the Arvales sacrificed to her because Galba, in adopting Piso Licinianus, seemed to guarantee the security of the empire; on another occasion the people of Præneste dedicated an altar to her; and we have an inscription from Cirta, in Africa, recording the erection of a statue. She is, of course, frequent on coins.

Tutela, the goddess who unites in herself all the ideas and concepts of protection, seems to belong to the empire, but to have come into existence in a fashion similar to that in which the oldest abstracts were made. Thus she bears a splendid testimony to the absolute conservatism of all the religious processes of ancient Rome. In a word, she seems to have grown up out of the idea of the *genius loci*—the 'deus in cuius tutela hic locus est'—the *deus tutelæ*, or *genius tutelæ*. Finally, Tutela broke off and became an independent deity, and a rival of the *genius*. The Tutela Augusta thus is equivalent to the Genius Augusti, and is often preferred by the empresses. In the closing years of paganism we meet with Tutela in household worship, in connexion with the *lares*, as a sort of female *genius*.

Valetudo belongs to the circle of Salus. The name appears in republican times on the denarii of M'. Acilius Glabrio, in connexion with a representation of Hygeia (Salus is on the obverse of the same coin). She is also the recipient of several dedicatory inscriptions from the provinces.

ÆQUITAS.—Vulci, *CIL* i. 43; Præneste, *ib.* xiv. 2860; Arnob. iv. 1.

ÆTERNITAS.—On the coins of Augustus and Tiberius cf. H. Cohen, *Médailles impériales*, Paris, 1890-92; on the phrase 'æternitas imperii,' *CIL* vi. 2084. 45, 2065, 2067. 40; cf. Pliny, *Ep. ad Trat.* 69, 83; Nero's games, Suet. Nero, ii. 18; sacrifice of A.D. 66, *CIL* vi. 2044. i. 6.

ANNONA.—Rome, *CIL* vi. 22; Spain, *ib.* ii. 4976. 1; Ostia, *ib.* xiv. 45.

CLEMENTIA.—Temple (44 B.C.), Plut. *Cæs.* 57; Applan, *de Bell. Civ.* ii. 106; Dio Cass. xiv. vi. 4; altar for Tiberius, Tac. *Ann.* iv. 74; yearly sacrifice for Caligula, Dio Cass. lxx. xvi. 10; sacrifice of A.D. 66, *CIL* vi. 2044. 1.

COPIA.—On the cornu copiae, Plaut. *Pseud.* 671, 676; Hor. *Carm. Sæc.* 60, *Epist.* i. xii. 28; inscription from Avignon, *CIL* xii. 1023; for Thuri cf. B. V. Head, *Hist. Numorum*, new ed., Oxford, 1911, p. 88.

DISCIPLINA.—Eckhel, vi. 503; *CIL* viii. 9832, 10657, vii. 896.

ÆCUNDITAS.—The temple of A.D. 63, Tac. *Ann.* xv. 23; cf. Henzen, p. 85; for the coins cf. Cohen², nos. 205 (Faustine Mère), 93-106 (Faustine Jeune), 18-26 (Lucille), 17 (Crispiane), 84-45 (Julie Domne), 39-46 (Salonine), 8 (Orblane), 18 (Otaclie).
GLORIA.—*CIL* viii. 6949: 'Gloria Aug. Sacrum'; W. Fröhner, *Méd. de l'emp. rom.*, Paris, 1878, p. 361; Cohen², nos. 131, 132 (Constantin II. le Jeune).

INDUGENTIA.—Possible connexion with Hadrian, *CIL* viii. 88131; temple of Marcus Aurelius, Dio Cass. lxxi. xxxiv. 3; inscription from Cirta, *CIL* viii. 7095; for the coins cf. Eckhel, vii. 183, 190, 204.

IUSTITIA.—The statue of A.D. 13, *Fast. Præn.*; 'sacerdos Iustitiæ,' *CIL* vi. 2250; Ancona, *ib.* ix. 5890; Æquiculi, *ib.* ix. 4133; the altar from Capua (*ib.* x. 3812) dedicated to 'Iustitiæ, Nemesi, Fatis' belongs to Greek and not Roman religion.

PAX.—Denarii of Emilius Buca, Babelon, ii. 23; on Augustus cf. in general the Augustan poetry, Tibull. i. x. 45; Hor. *Carm. Sæc.* 57; on the Ara Pacis, *CIL* i. 3 p. 320; *Fast. Amit.*, 4th July; cf. *Fast. Ant.*; *Fast. Præn.*, 30th Jan.; cf. *Fast. Cæs.*; *Mon. Ancyr.* ii. 37 ff.; Dio Cass. liv. xxv. 3; Ovid, *Fasti*, i. 709 ff.; on Augustus's dedication (10 B.C.), Dio Cass. liv. xxxv. 2; Ovid, *Fasti*, iii. 881 f.; sacrifice under Caligula, *CIL* vi. 2028 h. 8-10; A.D. 66, *ib.* vi. 2044. i. 12; cf. Henzen, pp. 78, 82; Vespasian's temple, Dio Cass. lxxvi. xv. 1; Suet. *Vesp.* 9.

PROVIDENTIA.—Coin of Augustus with altar and inscription, Eckhel, vi. 12, 128; an 'ara Providentiæ Augustæ' in the *Acta Frat. Arval.*, *CIL* vi. 2028 d. 15, 2033. 5, under Caligula and Claudius; Sejanus, H. Dessau, *Inscr. Lat. selectæ*, Berlin, 1892 ff., i., nos. 157, 158; Agrippina, etc.; cf. *Acta Frat. Arval.*, *CIL* vi. 2042 n. 14, 2044 i. A, 2051 i. 29; Trajan, *ib.* x. 5310; the Severi, *ib.* iii. 1439; 'Providentiæ Augustæ,' *ib.* vii. 1871, viii. 841; offering for Commodus, *ib.* vi. 2099, iii. 18; on Providentiæ Deorum cf. Eckhel, vi. 507; Pliny, *Paneg.* 10.

SECURITAS.—Securitas Publica, Tac. *Agr.* 3; Arval sacrifice (A.D. 60), *CIL* vi. 2051; Præneste, *ib.* xiv. 2899; Cirta, *ib.* viii. 7095, 98; Securitas Perpetua from Viminacium (Serrla), *Oest. Jahreshefte*, iv. [1901], Beiblatt, p. 115.

TUTELA.—Henzen, p. 146: 'deus in cuius tutela hic locus est'; *CIL* ii. 3021, 3377, 4092: 'deus tutelæ'; *ib.* ii. 2991: 'genius tutelæ'; *ib.* iii. 4446, vi. 216: 'Tutela huius loci'; cf.

ib. vi. 777, and Petron. lvi. 105; 'Tutela Tarraconensis,' *CIL* ii. 4091; 'Tutela domus Rupillanæ,' *ib.* v. 3304; 'Tutela Candi-diana,' *ib.* vi. 776; Tutela alone, *ib.* ii. 2533, 3031, 3226, 4090, v. 4932, vi. 774 f.; on Tutela Augusta cf. *CIL* iii. 3349, 4056, v. 4982; Tutela in late household worship, Hieron. in *Esai.* 67; cf. relief, *Annali d. inst.* [1866], Taf. K. 4.

VALETUDO.—Dedication from Noricum, *CIL* iii. 5149; from Lecce, *ib.* ix. 3812 f.; from Mauretania, *ib.* viii. 9810; on republican coins.

There are nine abstracts which seem all to have been the recipients of a cult, for in each case we have either a dedicatory inscription or a reference to an altar. For most of them we have only one reference, but of course this state of affairs is doubtless largely accidental. They are as follows: Amicitia, to whom in A.D. 28 an altar was erected in honour of Tiberius; Civitas (dedicatory inscription from Rome); Dies Bonus (dedicatory inscription from Cæsarea in Mauretania); Fama (dedicatory inscription from Cologne), Fama Augusta from Bætica; Maiestas (dedicatory inscriptions from Rome and from Halicarnassus); Natio, said to have been worshipped in the region of Ardea; Sanctitas (dedicatory inscription from Antiana [Pannonia Inferior]); Ultio (altar under Tiberius in A.D. 20); Vis (dedicatory inscription from Aquileia).

Finally, there are several abstracts which occur only on coins or in the poets, and regarding which we are justified in being very sceptical as to the actual existence of a cult: Abundantia, on coins from Elagabalus to Valerius Maximus; Constantia, on the coins of Claudius and his mother Antonia; Hilaritas, on imperial coins, also as 'Hilaritas Augusta, populi Romani, temporum'; Iucunditas Augusta, on a coin of Alexander Severus; Lætitia, on imperial coins, also as Lætitia Augusti, Augustæ, Augustorum, Fundata, Publica, Temporum; Liberalitas, on imperial coins, also as Liberalitas Augusta; Moderatio, on imperial coins; Patientia, on coins of Hadrian; Tranquillitas, on imperial coins, also as Tranquillitas Aug., Augg., Beata Tranquillitas; Ubertas, on imperial coins, also as Ubertas Sacculi.

In connexion with personification an interesting piece of work remains to be done, namely a study of the various pictorial types, with special attention to the language of symbolism. The basal concept is practically always the same (except in the case of Spes and Virtus), a draped female figure, but the variations in attributes and their permutations and combinations suffice to indicate a multitude of distinct deities. This language of symbolism, which was spoken fairly consistently at least until the time of Hadrian, merits diligent study, and such an investigation will throw much additional light on the history of personification among the Romans.

LITERATURE.—On the general subject cf. W. Warde Fowler, *Roman Ideas of Deity*, London, 1914; G. Wissowa, *Religion und Kultus der Römer*, Munich, 1902, 21912. These are both most reliable. L. Deubner's art. in Roscher, iii. 2, 2063 ff., needs considerable correction, but contains much valuable material. For individual abstracts consult the separate art. in Daremberg-Saglio, Pauly-Wissowa, and Roscher. R. Engelhard, *De personificationibus quæ in poetis atque arte Romanorum inventuntur*, Göttingen, 1881, is of no value.

JESSE BENEDICT CARTER.

PERSONIFICATION (Semitic).—1. Primitive form.—Animism, the primitive form of religious personification, underlies the Semitic religions. W. Robertson Smith (*Rel. Sem.*², pp. 54, 86 f., 131, 134) is explicit on this point.

Among the Semites, as elsewhere, primitive man 'feels himself to be environed by innumerable dangers which he does not understand, and so personifies as invisible or mysterious enemies of more than human power' (p. 54).

Such men ascribe to all material objects a life akin to their own; an unseen life is supposed to inhabit the heavenly bodies (sun, moon, stars) and natural objects upon earth (animals, trees, stones, wells,

brooks). Thus, these sacred objects come to be thought of as living beings, persons—in other words, they are personified. This process was not confined to objects; it is also found in connexion with forces and activities—e.g., winds and diseases.

'Wherever the spontaneous life of nature was manifested in an emphatic way, the ancient Semite saw something supernatural' (ib. p. 134).

All this, however, is instinctive and unconscious, and so to be distinguished from the deliberate, elaborate personification of later Semitic theology.

(a) *Babylonia and Assyria*.—This primitive form of personification was doubtless found in the early stages of Babylonian religion. Thus A. H. Sayce:

'Deep down in the very core of Babylonian religion lay a belief in what Professor Tylor has called animism. It belonged to the Sumerian element in the faith of the people, and, as we shall see, was never really assimilated by the Semitic settlers.' Sayce, therefore, does not regard this primitive personification as an original element in Babylonian religion—a view not generally held and by no means certain. We need not, however, discuss the point, for, as Sayce says: 'In spite of Semitic influences and official attempts to explain it away, it was never eradicated from the popular creed, and it left a permanent impress upon the folk-lore and superstitions of the nation' (*The Religions of Ancient Egypt and Babylonia*, Edinburgh, 1902, p. 270).

Traces of it abound in Babylonian and Assyrian remains. Many of the innumerable demons are personifications of diseases, winds, etc.—e.g., Namtar, the demon of plague, and Ashakku, the demon of wasting disease (M. Jastrow, *Rel. of Babylonia and Assyria*, p. 260).

(b) *Syria and Palestine*.—There was much in common between the primitive ideas of the Aramaeans, Canaanites, Israelites, and other inhabitants of Syria. Probably our evidence for Israel is wholly derived from a period subsequent to the settlement in Canaan; it is especially difficult to decide which elements of the popular religion are characteristic of Israel and which are borrowed from the Canaanites, but we need not discuss the problem here. What Israel appropriated of this kind was congenial to its religious temper and in accordance with the principles of its primitive faith. The natural objects which we find sacred in Israel had doubtless been sacred earlier to the Canaanites, but Israel had known such while it was still a group of nomad tribes. Among these are the wells, trees, and stones associated with the patriarchs, and the pillars, stone *massēbhāh* and wooden *asherāh*, erected at the sanctuaries, notably Jachin and Boaz that stood before Solomon's temple (1 K 7²¹). A typical instance is the *massēbhāh* at Bethel, associated with Jacob (Gn 28²²). Originally the stone itself is the house of God (*Bēth Elōhim*); the spirit, the *genius loci*, actually dwelt in the stone, was the stone personified. So, again, Robertson Smith:

'The old Hebrew fables of trees that speak and act like human beings (Jg 9⁸, 2 K 14⁹) have their original source in the savage personification of vegetable species' (p. 133).

This ascription of personal qualities to natural objects easily passed to a somewhat higher stage in which spirits were thought of as embodiments of the life supposed to dwell in natural objects and phenomena—the spirit as distinguished from the stone in which it dwelt.

(c) *Arabia*.—Similar forms of thought can be traced in the remains of pre-Muhammadan Arabia, and still survive in the East.

2. Later developments.—So far we have been speaking of the naïve personification of primitive peoples, but by a gradual transition it becomes more conscious and elaborate. We need not commit ourselves to the complicated theories of Winckler, Zimmern, Jeremias, etc., as to the wholesale dependence of the developed religion of Babylonia and Assyria on astronomy, but there can be no question that these systems are largely dependent on the personification of heavenly

bodies and phenomena, of natural objects, processes, and forces. Such personification in some cases originated in the primitive animism; in others it may have been suggested by it. Note, e.g., the fact that the animals that furnish names and imaginary outlines for the constellations of the zodiac appear in mythology as monsters in the train of Tiamāt, the dragon of the abyss. The personifications connected with the greater deities probably represent a more advanced stage of thought.

Tammūz is 'the personification of agricultural activity' (Jastrow, p. 58). Shamash was 'the personification of the sun par excellence and the sun as a whole' (p. 68). Ea was the personification of wisdom. Anu, 'from being merely the personification of the heavens, . . . is raised to the still higher dignity of symbolizing, as Jensen puts it, the abstract principle of which both the heavens and earth are emanations' (p. 165 f.)—obviously not a primitive idea.

Such examples might be multiplied almost indefinitely.

3. Eponymous ancestors, etc.—There is also another species of personification, according to which a deity or legendary hero originates through the personification of a city, tribe, or nation. Possibly the Assyrian deity Ashur is an example of this.

According to Jastrow (p. 195), 'one is bound to confess that the evidence does not warrant us in regarding Ashur as anything but the patron of the city of Ashur. Nowhere do we find any allusion from which we are justified in concluding that he originally represented some elemental power or phenomenon.'

Others, however, regard Ashur as a form of the name of an ancient deity, after whom the city was named. In any case, this kind of personification was common among the Israelites and Arabs, and, indeed, among primitive nations generally. A frequent example is the setting forth of the political, racial, and geographical relations of peoples in the form of genealogies of persons. Gn 10 is a striking illustration; the geographical contiguity, and possibly also the political connexion of Ethiopia, Egypt, and Canaan, are indicated by speaking of them as 'brothers.' In the same way, the narratives of the patriarchs are largely tribal history in the form of accounts of persons; it is impossible now to say how far this method has been carried. According to some, Israel and the Twelve Patriarchs are 'eponymous ancestors.' How this method was understood by the ancients is doubtful. Skinner writes:

'When a writer speaks of Lydians, Lybians, Philistines, etc., as "sons" of Egypt . . . it is difficult to think . . . that he believed the Lydians to be descended from a man named "Lydians" . . . ; and we may begin to suspect that the whole system of eponyms is a conventional symbolism which was as transparent to its authors as it is to us. That, however, would be a hasty and probably mistaken inference. . . . On the whole it is safer to assume that, in the mind of the genealogist, they [the names] stand for real individuals, from whom the different nations were believed to be descended' (JCC, 'Genesis,' Edinburgh, 1910, p. 100).

It is not, however, safe to lay down any general rule; there are instances where it is clear that the writing of tribal history in the form of personal narrative is a mere convention. For instance, when Jg 1² states that 'Judah said unto Simeon his brother,' it is clear, both from the context and from the chronology, that the writer cannot mean that the ancient patriarch Judah said to the ancient patriarch Simeon (see also the present writer [*Chronicles*, London, 1894, p. 876] on 1 Ch 7²²). Possibly Skinner's words are specially applicable to genealogies.

4. Influence on theology, etc.—It is important to recognize that personification, being closely connected with anthropomorphism and anthropopathism, has exercised great influence on both popular religion and official theology. This being a matter where language largely controls thought, the relations between persons and other personal qualities and activities have been automatically transferred to the deities, to their relations with one another,

and to their relations with their worshippers, individual and collective. The various Semitic gods have their wives; the Babylonian Nebo is the son of Merodach. The more important the deities, the more various are the relationships ascribed to them: the Babylonian Ishtar is the daughter, sometimes of Sin, sometimes of Anu; according to Jeremias (*OT in the Light of the Anc. East*, Eng. tr., i. 127), Ishtar is variously the bride, wife, mother, or sister of Tammūz, besides having other lovers. Relationships arise out of political changes; when two cities are connected by conquest, alliance, or amalgamation, the god of the one may become the master, husband, or father of the other. Similar relationships arise between eponymous ancestors: thus, when the tribe of Joseph was divided into Ephraim and Manasseh, Joseph was said to be the father of Ephraim and Manasseh. Similarly, the deity is said to be the father, mother, or husband of the people. So Jahweh is the father (Hos 11¹), or the husband (2¹⁶), of Israel.

5. Personification of divine attributes.—Again, there is the personification in Jewish literature of the attributes, activities, and manifestations of God, and perhaps even of abstract qualities. In the later books there is doubtless pure literary personification, consciously used as a figure of speech and nothing more (see below on 'Wisdom,' etc.). But figures are apt to be popularly understood in a literal instead of a literary sense, and what is merely personified to the man of culture is a person to people generally. The most notable examples are the spirit of Jahweh, the Word, and Wisdom.

The ideas connected with the spirit (*rūah*) of Jahweh would be partly determined by the fact that *rūah* in the concrete meant 'breath' and also 'wind,' and that man had a *rūah* both in the sense of 'breath' and in that of 'principle of life,' etc. These facts would make for understanding the spirit of Jahweh as an emanation or manifestation or even a part of Jahweh. But other passages speak of the spirit of Jahweh in terms commonly used of persons; in the early literature it 'rushes' or 'leaps' upon men; in Gn 1² the spirit of Elohim broods over the waters as a mother-bird over her young. In Is 48¹⁶ RV we have: 'The Lord Jahweh hath sent me, and his spirit,' which is sometimes understood as AV, 'The Lord God, and his spirit, hath sent me'; but both text and meaning are doubtful. On such passages Piepenbring writes:

'It is evident that in these passages the spirit and the word of God are personified, but that these personifications must be placed on the same level with others of the same kind' (*Theol. of the OT*, Eng. tr., p. 251).

The OT passages just referred to dealing with the Word are numerous—e.g., Ps 33⁶: 'By the word of the Lord were the heavens made.' The advance of the Word, through personification, to the status of a person belongs chiefly to post-Biblical Jewish literature, in which the Jewish idea is influenced and ultimately dominated by the Logos of Greek philosophy. Thus in the Targum of Onkelos the action of God is frequently ascribed to the Word (*mēmrā*); e.g., Ex 19¹⁷, Moses at Sinai brought forth the people to meet the Word of God. Again in Philo the Logos is 'Son of God,' 'God,' 'high priest,' 'archetypal man' (B. F. Westcott, *Gospel of St. John*, London, 1908, p. xxxiv). But in these matters Philo, Jew though he was, was the disciple of Plato rather than of the Rabbis.

In the OT and the Apocrypha the tendency to personify is most strongly marked in connexion with Wisdom, *Hokhmāh*, Sophia (Job 28, Pr 8, Wis, *passim*, Sir 24, Bar 3³⁷). In some of these passages Wisdom seems to be spoken of as a person (cf. Marti, *Gesch. der isr. Religion*, p. 328, with

special reference to Wis 7^{25ff.}), as 'Hypostase' representing the aggregate of the divine attributes (cf. also Pr 8³⁰, where Wisdom is made to say of the time when Jahweh created the world: 'Then I was by him, as a master workman'). Similarly, in the *Secrets of Enoch*, xxx. 8, Wisdom is commanded to create man. The identification of Wisdom with the Tōrāh (Sir 19²⁰ etc.) exemplifies a tendency to personify the law which is more marked in later Judaism. Thus W. O. E. Oesterley:

'The idea of imputing personality to the Torah . . . receives actual expression in *Shemoth Rabba*, c. 29, where it says that the Torah stands before the Holy One and intercedes for Israel' (*Jewish Doctrine of Mediation*, London, 1910, p. 69).

In some directions the process upon which we have touched reached its climax in the Chalcedonian doctrine of the Trinity; and, in a very different way, in the Gnostic systems, with their æons, Sophia, Nous, etc.; and the Jewish counterpart of Gnosticism, the Kabbālā, with its *sefirōth*, or emanations, Wisdom, Intelligence, etc.

6. Various examples.—In view of the elasticity of the idea of personification and its frequent use as a literary figure, it would be easy to multiply further examples, but it may be sufficient to mention a few which possess special interest.

We note first various terms for God or for activities or attributes of God which are sometimes spoken of in a quasi-personal fashion: 'the glory of Jahweh' (Ezk 10⁴); 'the divine name' (Ex 23²¹); 'the divine presence,' lit. 'face,' *pānim* (Ex 33¹⁴). In the Rabbinical literature we find 'the Name' (*sh'mā*), 'the Place' (*māqōm*), and 'Heaven' (*shamayim*). In this connexion we may also mention the *sh'khīnāh* and the *bāth qōl*. *Sh'khīnāh*, 'dwelling,' as an abstract noun, is used with great latitude; it is sometimes the radiant manifestation of God in the concrete 'dwelling,' the Tabernacle, *mishkān*, but it is by no means confined to this usage.

It is sometimes practically equivalent to *Menrā*, λόγος, but we may distinguish between the medium of a *passive*, the other one as creative, the other as . . . (C. Taylor, *Sayings of the Jes* . . . p. 44).

The *bāth qōl*, 'the daughter of the voice,' is a name for a species of oracular utterance, supposed to be heard by men:

'Every day Bath Qol goes forth from Mt. Horeb, and makes proclamation and says, Woe to the creatures for contempt of Torah' (*Pirqē Abhōth*, vi. 2).

The voice from heaven in Mk 1¹¹ would have been described by the Rabbis as *bāth qōl* (cf. 'Daughter of Zion,' for the city and its inhabitants [Is 1⁸ etc.]).

The 'angel of the Lord' (*mal'āk Jahweh*) may possibly be regarded as in some sense a personification of a manifestation of Jahweh; perhaps, too, at some stages of thought, angels and demons, together with the Muhammadan *jinn*s, may have been, or been regarded as, personifications of natural objects or forces, like the *numina* of primitive religion whom they replaced. Satan, at any rate, has at times become the personification of the powers of evil, and this view does not seem foreign to some aspects of Semitic thought.

The suggestion is sometimes made that Aaron (*Aharōn*) is simply the personification of the Ark (*Ārōn*), and this is not impossible.

A curious example of personification is found among the Enlilshas, or Abyssinian Jews; they worship the Sabbath as a goddess.

A beautiful example of purely literary personification is Ps 85¹⁰:

'Mercy and truth are met together;
Righteousness and peace have kissed each other.
Truth springeth out of the earth;
And righteousness hath looked down from heaven.'

LITERATURE.—Morris Jastrow, *The Civilization of Babylonia and Assyria*, London, 1915, pp. 190-236, *Hebrew and Babylonian*

W. H. BENNETT.

PERU.—Our knowledge of the religion and mythology of Peru is gleaned chiefly from the writings of its Spanish conquerors, in whose records we are confronted with a bewildering array of religious types—animism, stone-worship, totemism, and fetishism appearing singly and simultaneously in different areas. A pantheon more or less developed exists side by side with these, and, if certain writers are to be believed, even monotheism and agnosticism made some headway in Incan times.

If it be admitted that the first four classes alluded to all fall to be included under the head of animism, then we may say that at the period of its destruction Incan religion had succeeded in evolving a pantheon possessing at least several anthropomorphic figures from an animism which still flourished side by side with it. This circumstance should render Peruvian religion a study of profound interest to students of comparative religion, as it exhibits a phase of peculiar value to the student. Moreover, there is perhaps no mythology in which compound myths exhibiting definite religious strata are so well exemplified.

At the time of the Spanish conquest Incan animism had reached the agricultural stage. The food compact with the crop-gods was not so well marked as in the case of ancient Mexico, but, although human sacrifice was rare, it is a mistake to consider it as altogether absent from Peruvian ritual. It is only reasonable to suppose that totemism, some relics of which remained, had preceded this agricultural cult, but there is perhaps no progression of existence of type in early religion, and two types may exist side by side and even overlap. Be that as it may, we are informed by Garcilasso de la Vega that in 'the idolatry of the first age' each district, family, village, and house possessed its own god, each different from the others, and that these were generally material objects, such as herbs, plants, trees, mountains, caves, precipices, large stones, small pebbles of different colours, and animals—jaguar, puma, bear, ape, fox, lynx, and cougar. The list includes examples of fetishistic, animistic, and totemistic worship, the first of which certainly survived until late times. Caves and precipices were worshipped as *paccariscas*, or places of origin, plants as the homes of animistic spirits, stones as fetish objects, and animals as totemic eponyms.

All things sacred were known to the Peruvians as *huaca*. The most common visible objects of veneration among the agricultural portion of the population were the *ccompas*, or gods of the irrigation channels to be found in every maize-field. The *ccompa* was sacrificed to at the planting of the seed and earnestly invoked during the growth of the plant, and no type of pagan worship was extirpated with greater difficulty. Others called *huancas* were situated in each plantation and were carved out of stone to represent a gigantic corn-stalk, which was placed there for the purpose of encouraging the plant to grow to the greatest possible size. 'Maize-mothers' were known as *saramama*, 'potato-mothers' as *acumama*, and 'coco-mothers' as *cocamama*. These remained

1 *Historia general del Peru*, Lisbon, 1617, bk. I. ch. ix.

mere rustic fetishes and did not blossom into anthropomorphic gods of vegetation.

This arrestment was probably due to the fact that throughout Peru there existed a definite conception of a universal spirit of animated things (*Pachacamac*) and the close association of this conception with those of a creator-god (*Pacharurac*) and a ruling or directing god (*Pachayachachue*).

The *Pachacamac* was the great spirit from whom proceeded the lesser spirits of animistic type who inhabited the various vegetable plants, whilst his consort *Pachamama* was supposed to have originated all those who haunted larger physical objects such as mountains and rivers. *Pachacamac* came to be identified with the creative agency (*Pacharurac*) from the circumstance that the function of both was regarded as the bestowal of the breath of life. He was represented in the *ccoricancha*, or temple, at Cuzco by a stone statue in the form of a man, and his evolution into the form *Pachayachachue*, in the late Incan period, may safely be ascribed to the growth and stability of Incan rule. Indeed, Inca Pachacamac built for the new god a separate shrine at Cuzco, known as the *Insuareancha*, in which he is said by Molina to have placed a golden statue of the universal deity, thus, perhaps, attempting to further a monotheistic ideal. Older forms died hard. *Viracocha*, a deity representative of water and its powers of fertilization, was sometimes identified with *Pachayachachue*, and is perhaps anterior in origin to the cult of *Pachacamac*, as was *Con*, or *Cun*, the thunder-god of the Collao. Fish deities were also prominent in the coastal districts.

Sun-worship.—It remains only to mention sun-worship in a sketch of a religion which has already been dealt with in art. **ANDEANS**. The name 'Inca' means 'people of the sun.' They gave the sun an anthropomorphic shape, but did not derive racial or royal descent from him, calling themselves 'children of the sun' *honoris causa*; and it was only at a comparatively recent date that this connexion with the sun was embodied in a religious form, having probably been introduced by the great-grandfather of the *Apu-Ccapac-Inca*, who ruled at the conquest. The figure at Cuzco representing the sun was attired in the robes of a monarch, and a special ritual was attached to its worship. The warrior class practised a private and esoteric worship of the sun, totally distinct from the popular form, the idol which they adored being called *Huana-Punchau*, 'the young sun,' representing an infant a year old moulded in solid gold.

LITERATURE.—See literature at art. **ANDEANS**.

LEWIS SPENCE.

PESSIMISM AND OPTIMISM.—These rival interpretations of existence have one circumstance in common: both are designated by superlatives; and the loose employment of the terms in ordinary phraseology renders it needful to point this out. To justify their use in a philosophical sense it is not enough that a given view of things should dwell by preference on their more forbidding or more engaging aspect respectively. The terms are more strictly opposed than this, and each is to be understood in its literal sense. For pessimistic theory this is the worst of worlds; if it were to be a world, it could not have borne to be worse than it is. Some rudiments of order and well-being Schopenhauer himself will allow to it, since otherwise it could not cohere or continue in existence at all. But, so much being granted, the contention is that its irrationality, misery, and worthlessness could not be more than they are. And optimism also expresses itself in the same unqualified way, maintaining that all is for the best in this best of all possible worlds.

The facts on which the former of these views rests are many and undeniable. Whatever a maturer reflexion may suggest, man and his environment do not, superficially regarded, seem to be well fitted to each other. By the essential conditions of his existence man is subjected to hindrance and disappointment, to suffering, decay, and death, and necessarily his awakening consciousness is painfully arrested by such experiences. An anxious and resentful attitude to life may be said to be the natural reaction of the mind's first contact with reality, and spiritual growth thereafter to signify, at least temporarily, a deepening sense of the unsatisfying nature of the world, its instability, its evanescence, and the inconsideration which it manifests for ends humanly felt to be desirable. Hence not only the elegiac note which pervades so much of the world's most moving literature, but also the strain of world-weariness present in the thinking of every people which has risen above the most elementary level of culture. Every age supplies its instances, more especially among the poets, from Homer, who, for all his healthily-mindedness, can find it in his heart to say that 'there is nothing more wretched than man of all things that breathe and are' (*Il.* xvii. 446 f.), and Sophocles, from whom is wrung the cry that 'not to be born is the most to be desired; but, having seen the light, the next best is to go whence one came as soon as may be' (*Ced. Col.* 1225 f.), to our more passionate modern singers of the pitiless sway of wrong and pain and death. And yet such utterances may be expressive merely of a subjective attitude or mood which is transcended in a larger view. The writer, while not fundamentally rebellious, may derive a pensive satisfaction from the indulgence of morbid feeling, and may even find life worth living while he displays before the world the pageant of his bleeding heart. Or, again, his seeming despair may bring otherwise its more express correction with it. The Hebrew teaching on life, e.g., owing to the intensity of the religious belief present throughout, is in the main of a finely robust and hopeful temper, yet in one signal instance it betrays a different character. Koheleth takes rank as one of the classics of the literature of reflective melancholy; nowhere are the bewilderment, dismay, and exhaustion of human nature, baffled by the contradictions of its lot, realized more poignantly. Nevertheless, there is no sign of spiritual collapse in the book. The conclusion reached does not suggest either the despairing or the immoral mind. On the contrary, the ground-tone of the writer's view is furnished by the spiritual tradition which he has inherited. His faith, though semi-paralyzed, holds out, and at least a working solution of the world-riddle is arrived at: if man do not ask too much from life, a sober degree of worthiness may be found in it still. And ultimately his chastened trust in existence expresses itself thus: 'Fear God, and keep his commandments, for this is the whole duty of man; for God will bring every work and every secret thing into judgment, whether it be good or whether it be evil.'

For the most part, then, the instinctive sense of the incongruity between the spirit and its environment, together with the depression of feeling thus occasioned, does not in point of fact give rise to the sceptical view of life, but is, consciously or unconsciously, taken up into a more comprehensive estimate of things. Where, however, this is not the case, the result is pessimism, the doctrine that existence is fundamentally and essentially evil. The theory is found both in Eastern and in Western thought. Optimism, on the other hand, in the proper sense of the term, belongs to one special period in the development of the latter only. It

will be convenient to deal with the various phases of each in the order of their historical appearance.

1. Buddhist pessimism.—In its earliest form pessimism appears, singularly enough, as the characteristic and determinative feature of a popular religion. As a doctrine of redemption Buddhism starts from a comprehensive assertion of the evil and pain inherent in human existence. Life is misery, misery undiluted and unrelieved, from which there is no deliverance so long as personal consciousness persists. This grievous condition is not accounted for by anything external to life itself. It cannot be construed as penal, nor is it consequential upon anything else. Human agents, it is true, may themselves, in some degree, add to its burdensomeness; as, similarly, they may lighten it. But in the main it is life itself that is at fault. Its radical conditions do not permit of happiness, and, if its sorrow is to be cured, these must first be altogether altered or removed.

Little is to be said for the suggestion that would trace this belief to an experience of accumulated distress which had during long ages oppressed the Indian mind, and finally generated so despairing a conviction. Historical evidence is entirely lacking; and, besides, so deeply considered an attitude to existence could scarcely be the outcome of accidental circumstances. Its roots are to be found in that monistic tendency of thought which made its appearance so early, and which is expressed in the *Upanishads* with so rigorous finality. If only the *ātman* (q.v.) is real, it follows that existence otherwise must be illusory and evil. In the language of the Vedānta philosophy it is *avam*, 'emptiness,' 'vanity'; it is *māyā*, 'mirage.' To think otherwise is the supreme error and the source of all further error and sin. On the other hand, to realize this truth is wisdom and salvation. He is a fool who takes the reflexion for the substance, and expends himself on objects essentially shadowy and deceptive. The instructed man knows better. How the world around him came into quasi-existence, indeed, he comprehends no more than another: it is a spectral projection, a shadow cast by the sole divinity, an evil dream which even so is powerless to disturb the blissful repose in which Brahman is wrapped eternally. Yet the wise man is at least aware of its unsubstantial and evanescent character, and, being disillusioned, may cherish the hope of ultimate escape from the meshes of its infinite deception into the unbroken peace of the one-and-all whence he came.

Now from such a doctrine the pessimistic judgment upon life is a direct, if not a necessary, inference. The pantheism which once and again has emerged in the history of European thought has tended for the most part to the enrichment and glorifying of existence. Identifying God with the world, it has greatly quickened the instinctive sense of the wonder and beauty of nature and added a new sacredness to life in its meanest forms. But the Hindu mind—not in all its phases, but prevalently—solved the problem of the one and the many in the more strictly logical or acosmistic fashion. For it the world is pure appearance; it is unreal, phantasmal, wholly lacking in validity and value. The creation, or rather the emanation into being, of nature and man is the fundamental mystery and catastrophe. As making up the varied, ever-perishing scene that offers itself to perception, they must be conceived to be in a state of diremption from that to which they properly belong or in which they inhere. And while, accordingly, essential deep distraction is seated at the heart of the world, pervading its members in every part, this rises into consciousness in man, in whom the phenomenal world pronounces judgment upon itself as altogether worthless and wrong.

It is important to note that to the speculative ideas involved here early Buddhism was professedly indifferent. In the eyes of Gautama, as would appear, all dogmas of the thinkers were vain: for himself he sought only a practical *askesis* by the adoption of which the soul might effect its emancipation from life's ills. Nevertheless, the ultimate presuppositions from which his doctrine is derived are unmistakable; and further, just in so far as he departs from these does its pessimistic character become still more pronounced and thoroughgoing. Thus from the metaphysic of the past he discards entirely that idea of an absolute reality of the world, the inner core or substance of all phenomena, which, indeterminate though it was, had seemed to offer the mind something positive to rest in, and retains only the correlative thought of the instability and evanescence of the finite. The original illumination which broke upon him under the *bo*-tree already betrays this: 'Coming to pass, coming to pass—at that thought there arose in me a vision into things not called before to mind' (*Digha-Nikāya*, ii. 1); and to the same effect is the saying which tradition reports to have been his last, and which summarizes all his teaching: 'That which came into being dissolves into non-being again; work out your own salvation' (*SBE* xi. [1900] 114). That is, the apprehension of the impermanence of things is fundamental in the system. It is indeed the sole philosophical principle on which it is all built up. If earlier reflexion had asserted the being that is behind all becoming, the Buddhist doctrine maintains that the only reality of being is becoming—no sooner has anything begun to be than it has begun to lapse into non-being again. Hence its insistence on the weary round of birth, old age, and death which all life treads perennially. In other words, life is change; mere change or process unqualified, aimless, and endless. Again, if Gautama ignores the conception of man as properly a portion or spark of the infinite, pure spirit therefore, unconditioned and free, and achieving his destiny only in returning to the central fire or focus of being whence he came, all the more does he lay stress upon the view (which also belongs to the psychology of the *Upaniṣads*) that, as the subject of a time-and-space experience, he is 'wholly made up of desire,' with the corollary that peace is to be attained only through its extirpation. This, indeed, is cardinal with Gautama. The 'four excellent truths' are little more than an elaboration of the position, setting forth with the usual Oriental cumbrousness of phrasing that all experience whatsoever, including as it does an element of appetite always, is of the nature of suffering; conscious life is a restless striving, an insatiable thirst or craving, the sole remedy for which lies in 'letting desire go, expelling it, separating oneself from it, giving it no room.' And in one further particular the positive yet free relation of Buddhist teaching to the past, as also the enhanced gloom attaching to it thereby, deserves to be noted. As incorporated in a system otherwise so spiritual and rarefied, the transmigration idea in Hinduism is clearly a survival from a ruder time, its retention probably representing the attempt to do some sort of justice to those indestructible convictions of personal identity and moral retribution which a self-consistent pantheism would contradict too violently. But in the Buddhist doctrine even this accommodation to ordinary human instinct is still further attenuated and reduced. The notion of the self having been surrendered, no use can any longer be made of a conception which suggests, in however illusory a manner, a continuous substrate of consciousness passing on from life to life; that of the transmission of the ethical result or outcome of ex-

perience takes its place; and the prospect that opens before the individual is that of an infinite succession of lives, each determined in character, according to the laws of an inherent necessity, by the quality of the deeds done in the preceding, until the *karma* (*q.v.*) involved is exhausted, and with the breaking of the chain of existences liberation from the burden of being is achieved.

Of the three conceptions just referred to it might be hard to say which is the most fitted to suggest a despairing estimate of life. Plainly there is a close affinity between each and the other two, and together they yield a view of existence the most essentially sad and sceptical that has ever been accepted by mankind. It is true that the Buddhist scheme contains elements of spiritual value and attractiveness, and without these its power and vogue must have been unintelligible. The desires of average human nature are so largely foolish and hurtful that no well-considered method that aims at their repression could fail to rid experience of many ills. In particular, it was nothing less than a moral discovery of the first order that led Gautama to substitute for the senseless austerities of Brāhmanism a regimen of internal purification and self-discipline as the 'path that leads to the extinction of desire.' The ethical is the universally human, and doubtless it was in virtue of the emphasis which it laid on the excellence of the ethical element in experience, especially in certain of its most gracious and winning forms, and on the accessibility of these to the lowest *Sādura* in the land, that the doctrine achieved its astonishing success at the first and has since proved capable, in versions however adulterated, of satisfying the needs of so large a portion of the race. That in the effort to reach his ideal a real measure of happiness is also open to the Buddhist disciple cannot be denied. The way to *arhat*-ship is always pleasant, in the sense that at every step pain is more completely left behind; there are lives to be passed through, especially in one or other of the seven heavens recognized by the system, as the individual fulfils his appointed course, which are full of happy experiences; and *nirvāṇa*, that 'gain which no other gain surpasses,' is hailed from afar as a joy beyond compare. Yet all this cannot conceal the essentially negative character of the conception of existence involved. In truth, it is not, as will be seen later, peculiar to Buddhism to seek to combine a relative optimism with a philosophy of being which is profoundly unbelieving and hopeless. It remains that life is desire, and desire is pain, and only where both are at an end is the craving of the soul at rest. On these terms literally no definable good is left to be the object of pursuit. Condemnation has been passed upon all. Even the morally good is not good absolutely; ultimately it also proves a hindrance, since in its most passive forms a tincture of desire is apparent and life and individuality still assert themselves. Only with their cessation is the goal attained. Of the resultant state, *nirvāṇa* (*q.v.*), all that is really predicable is that it is devoid of those elements of experience which give life content and significance. The last thread which bound the soul to the world of activity and change has been destroyed; and, if it is at peace, the meaning is that it has made good its escape into a region or condition from which consciousness itself has disappeared and where being and non-being are indistinguishable.

So subtle and profound, then, is this Oriental pessimist philosophy. It is a dogmatic pessimism, not so much basing itself upon an inductive survey of experience and a comparison of its pleasures and pains as concluding from its inherent nature that all its conditions are out of joint, and that the

outcome, so long as it shall last, can be only suffering and frustration. The modern version of the creed, being conceived in another milieu, presents necessarily somewhat different features. Nevertheless, in essentials the two do not vary greatly. In certain cardinal features the resemblance is almost startling.

2. The optimism of Leibniz.—European pessimism is preceded historically by its opposite. Optimistic theory represents a phase of 17th and 18th cent. thought, and is found in two main forms. On the Continent its classical exponent is Leibniz, and to him its definition as a doctrine is due. In England it appears in a more diffused shape, characterizing the attitude and spirit especially of the Deistic school and finding a more casual expression in various writers of the age. By Leibniz himself, however, it is not always set forth in the same manner, nor would it be fair to gather his views from the *Théodicée* alone. That treatise, originally composed for the edification of Queen Sophia Charlotte of Prussia in 1710, is essentially popular in character and cannot be rightly understood unless in conjunction with his more expressly philosophical writings. In this connexion the *Système nouveau de la nature et de la communication des substances* (1695), the *Monadologie*, and the *Principes de la nature et de la grâce fondés en raison* (both published in 1714) require to be taken into account.

Leibniz's was essentially a catholic mind, and it has been truly said that harmony is the dominant idea of his philosophy. In early life he had been fascinated by the mechanical doctrines of the current Cartesianism; later he learned from his study of Plato to regard final causes as no mere human imagination projected on things, but as objectively founded; and, in effect, his effort is to combine the ætiological and teleological aspects of existence in a unified scheme. Its formal starting-point is a criticism of Spinoza's notion of substance. Leibniz agrees with Spinoza in regarding substance as that which is independent of all else, so that its characters must be determinable from itself alone; but there agreement between the two thinkers ends. In Leibniz's view the conception of existence as essentially one is a pure abstraction and no more helpful for the understanding of the world than is the atomic hypothesis of Cartesian science itself. Reality is a manifold. It is constituted of particulars or unities of being, each of which is substantial as being independent of the rest and intelligible through its own inner nature, and from each, indeed, could it be understood rightly, the whole of existence might be construed. Further, each is active. For the real is not, as Spinoza taught, essentially passive. Substance, on the contrary, denotes capability of action, and the monads, to use Leibniz's technical term, are centres of living force in which being and work are one. They are to be construed on the analogy of that one among them of which we have the best and most intimate knowledge, namely, human personality, and must be conceived as being all more or less both perceptive and active. These ultimate constituents of things, in short, are so many points of view from which the world may be regarded or so many special forms in which it is mirrored or expressed. And, seeing that, although thus independent of one another, 'having no windows through which aught might come in or go out,' the monads nevertheless make up a coherent whole, it follows that a superior principle of combination must needs have brought this to pass. In the organic unity of experience a 'pre-established harmony' stands revealed; or, in other words, in the constitution of the world as a system of elements connected by physical laws,

together with the fact that all individuals agree in the main in the representation which they form of it, there is already implied the existence of a power of wisdom and goodness on which all depend and in which the various perfections of the creatures are present in an eminent degree. How their relation to this principle is to be understood is nowhere clearly said. If the monads are, indeed, 'simple substances' in the sense described, how can they proceed from a creative power, whose beneficent purposes they are to observe? And if, on the other hand, they are emanations from His being rather, 'the continual out-flashings (*fulgurations*) of His divinity from moment to moment' (*Monadologie*, § 4), do they not at once relapse into mere appearance, as on Spinoza's view? That Leibniz understood himself to have avoided the pantheistic conclusion is plain: he expressly repudiates the doctrine of an *anima mundi* as incompatible with the freedom and worth of the individual. But the ambiguity remains one of the outstanding difficulties of the Leibnizian system, only veiled by a profuse employment of theological language not conducive to speculative clearness.

For present purposes, however, it is more necessary to observe the tendency to self-realization which he finds characterizing existence everywhere. This pertains not only to all actual forms of being, but to those also which never emerge out of the region of mere possibility. Since possibility, in all its infinite variety, is not just nothing, it must be credited with a degree of being, or at least with a *nisus* in that direction. In the case of necessary truths, indeed, the sole test of whose objectivity is the absence of contradiction, to be possible ensures existence; but with contingent truths it is otherwise. The ground of their reality lies elsewhere. The concrete fact or event being finite does not explain itself, and can just as little furnish a true or ultimate explanation of anything else. In itself it may be reckoned arbitrary, and, abstractly considered, it and its opposite are equally possible. But they are not equally possible in conjunction, or 'compossible.' An actual world composed of a multitude of diverse elements must be the result of a selection made among all the conceivable configurations of being according to the law of sufficient reason; or, to express the matter in religious terms, among the infinite number of possible worlds eternally embraced within the divine thought the actual existing world represents that one which has been chosen by the divine will, and brought into being by the divine power, as the most fitting and best ('le plus convenable'). Hence, though the existence of the world constituted as we find it cannot be shown to be a metaphysical necessity, yet not only its non-existence but also its being constituted otherwise is morally unthinkable. God necessarily wills in accordance with His wisdom and goodness; and the universe which we know, though but one of an infinite number conceivable, is nevertheless that one among them which could not but be.

One further feature must be taken account of in order to reach a right understanding of Leibniz's unqualified faith in existence. The monads, it is obvious, differ qualitatively from each other, and especially in respect of their fundamental characteristic, the clearness or obscurity of their perceptions. Highest of all among them are those which are termed minds (*esprits*), although whether, on the general principles of his philosophy, Leibniz is entitled to consider this type of monad generically distinct from every other is more than doubtful. Nevertheless, they are consistently so regarded, no doubt in view of those ethical interests of the individual which he is everywhere so anxious to conserve. To them is ascribed the power of con-

sciously apprehending not merely the world but also the Power whence the world has sprung, so that, if souls in general are living mirrors or images of the universe of created things, human minds are also 'images of the Deity or Author of Nature Himself,' capable of knowing the system of the universe and to some extent of imitating it through spiritual creations and activities of all sorts, each mind being 'a small divinity in its own sphere.' To God, therefore, intelligible natures are related, not as the parts of a machine to its inventor (as is the case with the other constituents of creation), but as subjects to a monarch, or, rather, as children to a parent who seeks to reproduce in them his own perfection. To this under His guidance all things minister. Just as efficient and final causes are found to imply each other, so does there appear a perfect harmony between the physical and moral orders. Nature itself 'leads to grace, and grace by the use it makes of nature brings it to perfection' (*Principes*, § 15). In fine, existence in its deepest interpretation is a City of God, under whose perfect government, as at once architect of the mechanical universe and moral lawgiver and king, good and evil conduct are rewarded with unfailing if not immediate justice, and not merely the advantage of the whole but the absolute well-being of the individual also is secured infallibly. Human shortsightedness, it is true, must often mar the vision.

But 'it,' to quote the conclusion of the *Monadologie*, 'we could sufficiently understand the order of the universe, we should find that it exceeds all the desires of the wisest men, and that it is impossible to make it better than it is, not only as a whole and in general but also for ourselves in particular, if we are attached, as we ought to be, to the Author of all, not only as to the architect and efficient cause of our being, but as to our master and to the final cause which ought to be the whole aim of our will, and which can alone make our happiness' (tr. Latta, p. 271).

There is here, it will be understood, no desire to ignore or minimize the known evils of the world. On the contrary, evil is held to be inevitable. Thus, God alone finds the reason for His existence within Himself, and contains an independent fullness or perfection of being; the created world, consisting of a vast congeries of elements differing in respect of the adequacy with which they express the totality of existence and all inherently craving an ever fuller expression of it, involves imperfection—evil in this sense—in its warp and woof. And this in truth, urges Leibniz, is the whole significance of the conception. Evil is nothing positive or real, nor is there, properly speaking, a principle of evil any more than of cold or darkness. It is a defect or a negation. Such perfection as the creatures exhibit in themselves and in their conduct comes directly from God; their imperfection is merely privative. Even moral evil partakes of this character. The activities of the monads result from their perceptions, and it is because these perceptions are so often at fault that the former go astray. It is not ignorance alone, then, but (moral) error and malice also that 'formally consist in privation': the creature in causing sin is 'une cause déficiente'; while, as for the physical evils with which the world doubtless abounds, they are the necessary penal consequence of sin under a divine government which everywhere makes nature subservient to righteousness, although to our limited vision the immediate connexion of the two may not be always apparent. Evil, that is, as a thing reprehensible in itself and casting a reflexion upon either the power or the goodness of the Creator, disappears. In any case there is a vast overplus of happiness in the world; and, for the rest, the 'evil' to be found in it is justified. Certainly, the non-existence of a creaturely world is conceivable, as involving no

self-contradiction; on the other hand, it would contradict the necessity which an infinite power of wisdom and goodness is under of expressing itself in a world reflecting its own perfections. But of such a world limitation or imperfection is a necessary feature, and that evil in this sense should be eliminated therefrom is inherently impossible. All that can be legitimately asked is that it should be controlled by the good and made to serve its ends, and that the case indeed stands thus there can be no doubt at all. The law of the sufficient reason itself ensures it, and experience 'ordinarily' furnishes confirmation. Evil, in short, is a necessary ingredient in the actual goodness of the world, as the sweet becomes insipid without an admixture of the bitter and discords are necessary to richest harmonies. The existing combination of things is best. Remove any most sinister evil visible in it, and it would no longer be the world which, all things considered, is the most desirable. It might have contained no Judas, but how then should the Saviour have died? In other words, the world is a progressive achievement, in which an element of necessary limitation is always present, and from it the utmost to be expected is that the divine power will at no point suffer real defeat, but will everywhere overcome evil with good.

3. Deism.—To a dogmatic optimism of this kind speculative thought in England has no parallel to show, nor would it be easy to trace there any distinctively Leibnizian influence at work. Nevertheless, contemporary English rationalism exhibits broad affinities with the corresponding Continental tendency, and both alike find the optimistic attitude and temper congenial. In both an unhesitating confidence is placed in human reason; the Cartesian test of logical clearness is erected into a supreme standard of truth, at the expense, as a later age would say, of those deeper intuitions of the soul to which alone final reality is revealed; philosophy is treated with scholastic assurance as the handmaid of religion; and the ultimate truths, whether of the one or of the other—really they are identical—are held for a body of doctrines logically demonstrable. On these terms scant justice is likely to be done to those elements in experience which threaten the reasonableness of the universal scheme, and just this is found to be a prevailing feature in the thinking, whether theological or non-theological, of the age. Deism (*q.v.*) entertains the most complacent views of existence. Of that characteristic phenomenon of the Illumination a crude apriorism may be said to be the foundation. Subsequent writers had learned from Locke to be distrustful of innate ideas, but no more than Locke himself had they attained to a consistent experientialism. No conception is more characteristic of their thinking than that of an all-comprehending harmony in existence which (they will admit) an imperfect experience could never of itself furnish, but for which they claim that it is at least illustrated by experience everywhere. So Shaftesbury speaks throughout of a 'coherent scheme of things,' this 'mighty union' or 'consistent fabric,' whose orderliness is 'abundantly confirmed' by all that we see 'in every rank and order of beings to the remotest spheres,' apparent defects or irregularities being the necessary accompaniments of phenomena which are only parts of a greater whole and disappearing in a larger view, which in its present state, however, the human mind may not always be able to take. Bolingbroke and others follow him here, and detailed support is furnished for the affirmation of the beneficence of nature by the natural theologians, such as Derham and Ray, who handle the argument from final causes in the most naively anthropomorphic manner. So, too, as regards human

nature: the microcosm reflects the symmetry of the macrocosm. Failure to maintain internal harmony, indeed, is a serious and frequent fact; the passions break loose and play havoc with the soul's health and peace. But this represents no schism within the soul itself; it is due to ignorance, which enlightenment will remove. The disorder, then, which we witness, whether in the physical or in the moral world, is in neither case anything positive. In the one it is an illusion arising from our incomplete understanding of what is so vastly beyond us—

'All Nature is but Art, unknown to thee;
All Chance, Direction which thou canst not see'
(Pope, *Essay on Man*, ep. i. l. 289 f.).

And in the other a better understanding of our own being would enable us to avoid that disproportionate indulgence of its various impulses which inevitably entails the hurt and ruin of the whole. Essentially, then, whatever is is right.

'The gen'ral Order, since the whole began,
Is kept in Nature, and is kept in Man' (ib. 171 f.).

Ultimately, the position is scarcely distinguishable from Spinoza's own. Through its doctrine of God as revealed exclusively and sufficiently in nature deism inevitably leaned in this direction; and in Pope's shallow and pretentious piece the creed of the time once for all assumes that semi-mystical, but essentially naturalistic, form in which the ills of life are pantheistically explained away.

4. Transition to modern pessimism.—English deism, however, in the nature of the case proved to be a transient phase of thought. It was in no sense a constructive movement, but represents a traditional orthodoxy with all its more vitalizing truths eliminated; and the century which gave it birth saw also its disappearance. Various circumstances conspired to bring about this result. After all, the watchword of rationalism was a zeal for knowledge ('Sapere aude'), and, as the investigation of nature took a wider range, phenomena disclosed themselves on every side to which the current apologetics were altogether inadequate. The eudæmonism, also, which characterizes in some sort the ethic of all the contemporary schools, orthodox and free-thinking alike, provoked its inevitable reaction, and a deeper analysis of human nature, illustrated in one phase by the cynicism of Mandeville and Swift and in another by the profound seriousness of Butler and William Law, brought to light features of moral experience which could not be ignored. Nor must the historic Lisbon earthquake of 1755 be forgotten—a catastrophe which gave so rude a shock to the easy-going geniality of the age and left its mark upon the thinking of many of its foremost minds—

'Tout est bien, dites-vous, et tout est nécessaire.
Quoi ! l'univers entier, sans ce gouffre infernal,
Sans engloûtir Lisbonne, eût-il été plus mal ?'
(Voltaire, *Poème sur le Désastre de Lisbonne*).

But above all is to be reckoned here the influence of David Hume (q.v.). Against his searching inquiry into the validity of human knowledge the philosophy of the day was powerless, nor from this quarter was any justification forthcoming of the actual ills of life as his dispassionate scrutiny laid them bare. With the *Treatise of Human Nature* and the *Dialogues* a chapter in the history of European thought and feeling about existence definitely closes. The famous 'four evils' passage is fatal to all such vindication as could then be offered for a reasoned contentment with the order of the world. Another explanation, furnished perhaps from the side of 'revelation,' Hume himself professed to be ready to accept, but to the human mind 'unaided' the world-problem was insoluble. We have no line by which to measure it. In the main experience teaches that it does not

work to the production of happiness, and for the rest we must hold our judgment in suspense. It is 'a riddle, an enigma, an inexplicable mystery.'

5. The pessimism of Schopenhauer.—It is to this British scepticism that the pessimistic doctrine of later times is, at least indirectly, due. To the Kantian criticism of experience Schopenhauer owed his emancipation from the 'wickedness' of the Leibnizian representation of the world as fair and good, and, when he says this, he refers, of course, to the metaphysical presuppositions on which the representation rests. In the period of his 'dogmatic slumber' Kant had himself leaned in that direction (see the essay on *Optimism* of 1795). In its more characteristic phase also his philosophy had undertaken to preserve for man an apprehension of ultimate truth sufficient to justify faith and hope; and later the Hegelian endeavour had been so to develop the doctrine of the *Critique* that thought is constitutive of experience as to claim for existence a completely rational character and for 'evil' a necessary place in the evolution of the Idea. Nevertheless, the withdrawal of reality from the grasp of reason remains the cornerstone of the critical system, and to this feature of it Schopenhauer attaches himself resolutely. Already in his early *Fourfold Root of the Principle of Sufficient Reason* (1813) he had maintained that the intelligence, in all its various activity, is inadequate to the attainment of ultimate truth, and in his classic treatise the severance of the two is carried out rigidly. The inner substance of things is hidden from us. We never perceive reality, but only appearance. Space, time, causality itself, belong to the phenomenal region, and to apply such categories—or any others—to the thing-in-itself is to impose upon the matter of knowledge a form which is foreign to it and to distort it fatally. Thus 'life and dreams are leaves of the same book.' The veil of *māyā*—Schopenhauer is fond of the Indian terms—blinds the eyes of mortals, deceiving them with an illusory representation of existence which is no other than a mirage. And yet, it is added, if we will be content with that which is not properly knowledge but rather supra-rational intuition, a certain sense of the very truth of things is not inaccessible to us after all. We are 'let into the citadel by trickery.' In immediate feeling, namely, we realize our innermost self as will, and, could we know other things with a like directness, we should be constrained to conceive them similarly. Not that such a notion can adequately represent the absolute nature of the world. Will suggests causation, and causation is merely subjective. As predicated of the totality of existence, will must be taken for a general concept, construed through its highest species. But, in default of a better—and force, energy, and the like are far less satisfactory—we may legitimately apply it to the determination of the substance of things, and sum up the world accordingly in the formula 'Idea and Will'; i.e. *my* idea, together with the One-and-All of infinite, endless, aimless activity and desire.

Thus Schopenhauer solves the problem which Kant gave up. If it be said that this is not will as commonly understood, the objection cannot be gainsaid. Yet Schopenhauer's system hinges upon its being conceived in just this character. Reality has no part or lot in reason. Intelligibility belongs to the phenomenal alone. The ultimate is 'absolutely groundless'; apprehensible, if at all, by means of this inner volitional faculty through which it most intimately reveals itself; and interpretable, therefore, as an indeterminate craving, a blind, insatiable striving, or hunger for being, which surges up unceasingly in us and in all things, and which we and they truly are. And with this

the essentially deceptive and worthless nature of life is at once given. True, the appearance of a spiritual consciousness, able to pass such a judgment on that which gave it birth, is nowhere accounted for. Admittedly it has enkindled itself in the human brain in a manner quite inexplicable. Here, indeed, is the true 'fall' of man, which has been followed by more than all the unhappy consequences of the Biblical story. With its emergence the entire illusion of existence necessarily arises. Once for all change and multiplicity have arrived, the *principium individuationis* has begun to weave its endless spell, and in the shadowy panorama thus evoked Schopenhauer, curiously enough, recognizes the working of reason freely. For nature's immanent teleology, e.g., he has a frank and appreciative eye. The unity of the will as thing-in-itself secures that the parts of the world shall be thus inter-related, and in particular expresses itself in those successive grades of being which constitute an ordered series culminating in man. Yet this rational quality attaches merely to the shimmering illusion which we take for the world of time and space; behind it reality retains its inherent character, essentially contrary to intelligence, a-logical. The fact is apparent in man, in whom the will's self-objectification is complete and the secret of the world is declared—man whose doom it is to furnish the final illustration of the will's intrinsically nugatory character and to toil and yearn in a shadow-world of mere appearance after that which for ever eludes him.

What function, then, is to be assigned to human intelligence in the economy of things? Schopenhauer's reply is twofold. On the one hand, it serves to discover the sorrowful truth as to the essential character of experience. In the dawn of experience we are deluded by the fancy that existence is desirable and good, but from a belief so shallow the development of reason delivers us. To its wide-opened eye life presents a scene of meaningless monotonous labour, pursued to-day as yesterday and accomplishing mere disappointment and weariness. Not the most favoured can be designated happy; life swings between the poles of desire experienced and desire attained, i.e. between the pain of empty craving and the still more unendurable pain of satiety and ennui, and the bitterest complaints of a Byron or a Leopardi are justified. Nay, psychology demonstrates how well-grounded these are by showing that of the two emotional elements of which our life is made up only pain, not pleasure, is positive. Of pleasure we are aware only in the moment of its gratification; it dies in the birth, and its place is taken by want or yearning. From the nature of the case, accordingly, man is the victim of an unending ache, his pleasures are the alms thrown to the beggar, keeping him alive to-day that his misery may be prolonged till to-morrow. On the other hand, the intelligence which thus lays bare life's inward character avails likewise, in a true degree, to afford deliverance from its restless torture. Once awake to the illusory character of the world and of the satisfactions which it offers, the soul may make shift to effect its escape from the whole *māyā* world, and this it achieves, in the case of the more highly gifted natures, in æsthetic contemplation and enjoyment. The universality of the object with which art confronts the mind opens a way of salvation. In admiration of the beautiful in its ideal forms personal feeling, prejudice, and desire disappear; the individual, losing his individuality, becomes pure subject of knowledge, 'will-less, painless, timeless'—subject and object are one. And with this comes emancipation. Reason, no longer the servant of the will, devising means for the fulfilment of its impulses

and furnishing ever renewed illustration of the wretchedness attending the futile task, has become its vanquisher. The gnawing of desire is allayed. The wheel of Ixion stands still. The nature, if not in bliss, is at peace.

And yet this, happily, does not exhaust the power of reason to effect the soul's release from the misery of which it has rendered it aware. The way of æsthetic appreciation is, as Schopenhauer acknowledges, for the few; and even so it conducts them only to a momentary halting-place in the tread-mill round of experience, the satisfaction which it yields being always the more brief in proportion to its purity. But in morality, a passive and ascetic morality, a more catholic and abiding redemption is attainable. Human nature, indeed, is of itself a mass of egoistic impulses, and the ordinary virtues are only more or less refined forms of selfishness. Nevertheless, all human egos, by right of a common origin, have a latent sense of kinship, and this may be developed and expanded by reflexion. Of a *summum bonum* in the light of which to order life there can on this system be no word at all. Yet metaphysically man is a moral being; on the phenomenal side of his nature subject to necessity and a creature of mere greeds and whims, he is, more truly understood, a part of the great totality of existence, free as constituted properly of will, and fulfilling himself in sympathy, self-sacrifice, and love. The ultimate issue is self-denial in the form of denial of the will to live, and at this point religion comes in to confirm and make finally effective the moralist's teaching. Condemning the world wholly and insisting on the necessity of re-birth, it delivers man finally from his selfhood and unites him with that from which he came. In its fullness such a consummation, it must be allowed, only beckons him from afar. Nor can its very character be truly described by us. To speak of it with the saints under the denomination of ecstacy, trance, illumination, and the like, is to feed the mind with one last illusion: how name an experience from which the whole conditions of intelligent apprehension, including the distinction of subject and object itself, have been removed? The soul has reached *nirvāṇa*, a state to be described only by negatives. It is the region of 'the relative nothing.' And accordingly, as its author acknowledges, this philosophy closes in a universal nihilism.

'If we have recognised the inmost nature of the world as will and all its phenomena as only the objectivity of will . . . we have no desire to evade the consequence that with the will's denial and surrender all those phenomena vanish. That constant struggle and effort, without end and without reason, at all the grades of objectivity, in which and through which the world consists; the multifarious forms succeeding each other in gradation; the whole manifestation of the will; and, finally, the universal forms of this manifestation, time and space, together with its last fundamental form, subject and object—all are abolished. No will; no idea, no world' (*Die Welt als Wille und Vorstellung*, Eng. tr., l. 530f.).

6. Hartmann.—Fatal as are the metaphysical flaws in the view now sketched, one merit at least must be allowed to it. To Schopenhauer belongs the credit of a resolute attempt to replace the unknown thing-in-itself of the Kantian philosophy by a principle positively revealed in experience, and, had he construed the Will which sustains and informs the world on any tolerable analogy with that of whose working we are aware in ourselves, he might have ranked as one of the founders of that ethical idealism which in modern days has been found the best speculative support to faith. His refusal, however, to concede to this last ground of the world any share in reason necessitated the sceptical conclusion, and proved, indeed, too violent a contradiction to be maintained. On these terms how account, e.g., for the organic

teleology of nature, of which Schopenhauer himself makes so much? Or for those typical forms of things in the contemplation of which he finds for the soul a respite from its unrest? Or for the emergence of reason upon the scene at all? As though, observes Hartmann, the only thought in the universe had arrived there by chance! For himself, most convinced of pessimists as he is, Hartmann sees the clear traces of intelligence at work everywhere. No natural theologian has ransacked the world more thoroughly to discover fresh illustrations of it. In nature, animate and inanimate, instances, he urges, abound; in man himself also, alike on the physical and on the spiritual side of his being; and in the human world of language, custom, polity, and religion which he has slowly built up around him. Above all does the order pervading the world betray itself in history, which for Hartmann is no mere spectacle of meaningless change, but an impressive march of events, not unhindered, yet sure, to a definite goal. Yet reason in all this, it is maintained, does not work self-consciously, but rather after the manner of instinct. In its conscious form in man it proclaims itself a faulty and feeble instrument for the attaining of its ends; in the world—and in the subconscious region of human experience also—it is unaware of its own procedure, and operates the more infallibly on that account. At the heart of existence, in short, is a great Unconscious, which, as universal immanent providence, unwearyingly, without error or hesitation, fashions all phenomena and guides all issues to their predetermined end.

The Leibnizian flavour of such a view seems tolerably pronounced, and indeed Hartmann cordially adopts the position that of all worlds this is the best—could a better have lain in the omniscient Unconscious, it would have come to pass instead of the present one. Much of his ethic, too, is couched in the same paradoxical strain. The ascetic solution of the moral problem has no more contemptuous critic. From Schopenhauer's premisses certain of his disciples had drawn the conclusion that virginity and suicide alone opened a way of escape from life's ills, to which Schopenhauer's reply had been that the denial of the will to live must include the refusal not only of its sorrows but of its joys. Hartmann, however, teaches a more robust doctrine. He would reconcile men with life, and bids them lose themselves in the service of the whole. To make the ends of the Unconscious his own is the individual's all-comprehending duty, and for the toil and sacrifice required of him he is to find support and impulse in mystical communion with the supreme power whose servant he is. Hartmann is very much in earnest about these views, as his various writings on ethics and religion show, and aims professedly at nothing less than the engendering of the resolution to lead a truly divine life, in which each finite task of the earthly course shall be transfigured in the divine light (see the *Phänomenologie*, Berlin, 1879, *passim*).

Nevertheless, although the best that is possible, the world is not on that account necessarily good, and on the basis thus laid down Hartmann endeavours to rest a demonstration, more sweeping than Schopenhauer's own, that life is an essentially undesirable thing. The proof is partly experiential. Happiness is that for which all things strive. Nothing 'so affects the world-essence in its inmost core,' nor is anything else discoverable which could be regarded as a final end. But happiness remains for ever beyond us. Pleasure, it is true, is a positive element in feeling, and only a shallow psychology could have led Schopenhauer to make the contrary assertion. Yet, when the pleasures and pains of life are summed and compared,

the latter predominate vastly. The individual's life on earth is a prolonged disappointment; its fairest flowers and fruits wither as he plucks them. Equally illusory is the notion that satisfaction is attainable in the hereafter, since experience, so long as it remains conceivable at all, always retains this deceptive character. Nor does devotion to the cause of the world avail to bring true contentment, the world itself being doomed to ever-increasing suffering. True, the world advances, but with its advancement come the multiplication of its pains and an enhanced sensitiveness to them. Evolution, therefore, is no cure. We must forward, yet here is our curse. And, if in the acceptance of the end of the Unconscious lies a destiny indeed to be coveted by us, this is because the Unconscious, in His unswerving guidance of the world, is aiming at no positive consummation of its age-long labour, but rather at its redemption from all effort and desire and the infinite frustration to which these necessarily lead.

Just this, Hartmann argues, is the case, and, in support of the dismal estimate of life to which a survey of its facts has led, he adds a metaphysic of his own. Alike in Eastern and in Western pessimism, it will have been observed, the root of the world's sorrow had hitherto been found in the existence of the individual; only with his disappearance may this be healed. And probably this thought is always implied in the pessimistic doctrine. But Hartmann gives it a turn of his own. Individuation for him also is an unsolved problem; the creation of a world of finite things can only be rated a wholly inexplicable blunder. But at least the Unconscious 'foresaw' the possibility of its redemption. Within His nature are embraced both idea and will; in other words, He is all-wise as well as all-powerful, and guides the world which blind will has originated with a skill which never fails. In particular, He brings consciousness upon the scene with a view to the world's salvation. How it is accomplished is again mysterious: the self-contained peace of the Unconscious is interrupted by an idea which 'falls upon it as from the skies.' But with this the critical step has been taken. The more consciousness deepens and expands, the clearer and more commanding becomes the discovery of life's essentially evil and futile character, and with the progress of intelligence and the evolution of mankind the conviction may be expected to spread and take possession of all men, until by a common act of will the race decrees its own extinction, and along with that the disappearance of the world-system of which man is the consummation. So existence should relapse into the Unconscious again. What the unconscious idea never could have attained, to wit, the emancipation of the will, together with the entire creaturely world to which it has given rise, from its unblessed condition, consciousness, when developed to the full, either in humanity or in a race of supermen who will succeed us in this planet, shall have secured, 'hurling back' in this way the total volition of the world into nothingness, so that the world-process ends without a residuum left from which to set out once more. Thus pessimism is reconciled with optimism. This is the best world possible—such a world, namely, as attains salvation, not one whose torture is perpetuated for ever.

7. Critical remarks.—It is not possible to examine separately the various doctrines sketched above; in so far as they represent divers types of philosophical theory their detailed criticism falls beyond the scope of this article, and Leibniz's theistic apologia is dealt with elsewhere (see art. *THEONIC*). There need be no hesitation, however, in asserting that the metaphysic on which the pessimist

view is founded is an impossible one. No coherent account of things can be erected on the presupposition of their inherent irrationality. All that can be meant is that, in the world as known to us, there is much that baffles intelligence and which we never succeed in bringing into line with our desires, and so much may be admitted freely without accepting the pessimistic conclusion. Indeed, neither inference, tho optimistic as little as the pessimistic, is capable of being sustained. It is a mere extravagance of speculation to contend that this is either the best or the worst of conceivable worlds. How shall the human mind, which is but one of its innumerable constituents, rise to a point of view from which to judge the universe as a whole and relatively to anything else? The standard by which to try its worth must necessarily be furnished from within itself; nor may we go further than to say that, tested so, existence is, on the balance perhaps, desirable or the reverse. It must be acknowledged, further, that in the judgment which asserts this there is always a subjective element, with regard to which nothing more can be said. It is a value-judgment, and values can only be asserted, not proved. In the controversy as to the goodness of the world, that is, there comes a point at which discussion is closed. If that which to one disputant is good to the other is merely evil, what can further argument avail? It is always possible to deny the worth of that which the world generally has agreed to hold most worthy, and to consider it to be the aim of all praiseworthy effort to arrest the wheels of progress and to empty life of desire. And to such a contention what answer can be given? Unless, indeed, that the light is sweet and it is a pleasant thing to behold the sun, and that it is just by those interests and ideals which the pessimist despises that men live and in them is the life of the spirit.

At the same time, two general remarks may be offered with regard to this whole mode of appraising existence. It will have been noticed that the standard applied throughout has been broadly the eudemonistic one. On both sides it has been assumed that the supremely desirable thing is happiness. The universe is to be judged by the measure in which it lends itself to its production, and all that remains is to interrogate experience as to this and register the finding reached. But this in itself would seem an impossible task. It may be prosecuted so far, indeed, and the result may not improbably be to furnish the pessimist philosophy with a partial justification. It is at least well to be confronted with the facts of existence, and to the more searching examination of nature and humanity by later times it is due that the flimsy geniality of the deistic mood can never return again. Yet it must always be beyond us to cast up the sum of the pleasures and pains of the universe and weigh them against each other; and in our own human case the inherent futility of the attempt to estimate in this way the worth of life becomes more than ever apparent. Here these elements of emotional experience prove extraordinarily elusive, and even dissolve into one another in the most baffling manner. From pain itself a singular satisfaction is not seldom derived. Effort and labour, hardship and danger, self-abnegation, martyrdom, and death are what prove able most of all to summon forth men's energies and to yield them what they crave, plainly implying that pleasurable feeling is at most only one element in the object of desire. In truth, the pessimist's inventory of life's disadvantages and drawbacks is manifestly at fault. Experience candidly examined discloses compensations of which he fails to take account, and, above all this, that the possession of a 'good will' infinitely outweighs, and is altogether incom-

parable with, the indubitable ills to which he points.

That it should leave no room for the recognition of such a factor in experience, or, in other words, for the appearance of free ethical personality in the world, is a further and final defect in the pessimist view of things. Such a creed is necessarily monistic, and monism is incompatible with all those interests in the light of which alone existence can be rightly judged. It is indifferent whether, as in the case of the doctrines adverted to, the monism be of a spiritualistic order or take the shape of that scientific naturalism which is perhaps still more widely accountable for the despairing strain to be detected in modern thought and literature. In either case the essence of the world permits of no disintegration of its unity, and individuality, human or other, has no reality or rights at all. As against all such metaphysical perversity the soul must ever assert her own supremacy. Free intelligent personality is the highest form of being accessible to us. In it alone is a medium furnished through which to construe the cosmic process, and only when viewed in relation to its perfecting does that process become intelligible or even tolerable. Even so it may be impossible to say why human nature should be fashioned thus—why the whole creation should groan and travail in pain together in order to the manifestation of the sons of God. It is enough that that supreme result is being achieved. Amid the world's evanescence, unreliability, and manifold suffering the production of moral character goes steadily forward, the soul being, as Boehme says, 'bruised and pressed and set to endure much, yet is it the servant in God's vineyard which prepareth the precious wine of righteousness to be drunk in His Kingdom.' Nor is it known what righteousness is unless it be acknowledged that no age-long, heaviest cost should be too great a purchase-price to pay for its realization.

LITERATURE.—For Buddhist pessimism see ASCETICISM (Buddhist). BUDDHISM, and literature there referred to, esp. H. Oldenberg, *Buddha*, Berlin, 1881, Eng. tr., London, 1882. Leibniz's optimistic doctrine appears in his philosophical writings generally, of which there are many edd. (the latest by C. J. Gerhardt, *Die philos. Schriften von G. W. Leibniz*, Berlin, 1875-90). The *Monadologie*, with certain shorter pieces, has been translated by R. Latta (Oxford, 1899), who adds a useful exposition and notes. English optimism is most clearly defined in Lord Shaftesbury, *Characteristics*, London, 1711, and Lord Bolingbroke, *Collected Works*, do. 1763-54, and is treated in all histories of philosophical and religious thought dealing with the period (e.g., G. V. Lechler, *Gesch. der philosoph. Theologie*, Stuttgart, 1841, and Leslie, *Thought in the 18th Century*, London, 1891). Modern European pessimism are A. Schopenhauer, *Die Welt als Wille und Vorstellung*, Leipzig, 1819, 1859, Eng. tr. by R. B. Haldane and J. Kemp, London, 1893-80, and C. R. E. von Hartmann, *Philosophie des Unbewussten*, Berlin, 1869, 1882, Eng. tr. by W. C. Coupland, London, 1884. Histories of Philosophy and of the Philosophy of Religion devote more or less space to the subject, and monographs on special aspects of it are numerous. Among them may be mentioned J. Sully, *Pessimism, a History and a Criticism*, London, 1877; E. M. Caro, *Le Pessimisme au 19^{ème} siècle*, Paris, 1878; E. Dühring, *Der Werth des Lebens*, Breslau, 1865; W. Gass, *Optimismus und Pessimismus*, Berlin, 1876; J. Volkelt, *Das Unbewusste und der Pessimismus*, do. 1873; A. Dörner, *Pessimismus, Nihilismus und Naturalismus, mit besonderer Beziehung auf die Religion*, Leipzig, 1911. See also art. GOOD AND EVIL, and THEODICY.

ALEX. MARTIN.

PESSIMISM (Indian).—1. Types of pessimism.—Three types may be distinguished: environmental, temperamental, and philosophical. The first is due to the hardships of one's surroundings, the trying nature of the climate, etc.; the second to the tendency, temperamentally, to look upon the dark side of things; and the third to one's philosophy of life. Three kinds of pressure, then, may weigh down the human spirit and make its mood and outlook pessimistic. Moreover, men may be pessimistic concerning either the life which is or the life which is to come, or concerning both.

The most hopeless pessimism is when neither this world nor the next is regarded as of any value, when 'vanity of vanity' is written upon all that is. Such is the pessimism of the Chārvākas, the Indian analogue of the Cyrenaics.

2. Causes of Indian pessimism.—As to the fact of Indian pessimism there is no doubt; Indian literature is a sufficient proof. But as regards its cause or causes there is much doubt and discussion. Some scholars hold that the cause is environmental.

'India herself, through her climate, her nature, and her economic conditions, furnishes reasonable ground for pessimism' (Bloemfield, *Religion of the Veda*, p. 261).

'When we come . . . to consider the imaginative and intellectual faculties, the influence of environment is no less important. The great majority of the population inhabits the plains. . . . Nature here displays herself in her more ruthless moods—torrential rains at one season, scorching heat in another, hailstorms or earthquakes, outbreaks of disease the dangers of which are intensified by the neglect of sanitary precautions habitual to the people. Congestion of population in many parts involves a struggle for bare existence which begins with childhood and ends only with the grave. This condition of things encourages a pessimistic mode of belief, an apathetic submission to the spirits, mostly malignant, which are believed to control human life. A powerful priesthood and the bondage of caste repress originality of thought and freedom of action. Hence comes the habitual melancholy of the people of the plains which strikes every observer' (W. Crooke, *Natives of Northern India*, p. 141.).

There is some foundation, too, for holding that, as the fusion of the invading Achæans and Dorians with the Minoans of the Mediterranean may have helped to mould the artistic temperament of the Greeks, so the fusion of the invading Aryans with the aboriginal Dravidians may have helped to produce a melancholy temperament. It is certainly true that the history of the Indian Aryans from the beginning of the Vedic age down to the great *Upaniṣads* may be characterized as a movement from optimism to pessimism. And there were other changes scarcely less significant. Phallic worship is scorned in the *Rigveda* (VII. xxi. 5, x. xcix. 3), but later it becomes common. There is no clear trace of transmigration in the *Rigveda*, but by the time of the *Upaniṣads* it is a fundamental article of faith. These changes in mood and worship and doctrine require explanation. The climate and life of India may have gradually affected the temper of the invading Aryans without appreciably diminishing their powers of thought.¹ Some facts of modern India strengthen this possibility: Kipling's *Kim* is a picture (quite true to life in particular instances) of a European lad born in India who so felt the lure of Eastern ways that he became the disciple of a wandering Tibetan monk. The Anglo-Indian population are especially open to such influences and not infrequently dabble in the magic practices of India. In their case not only the influence of environment but also that of blood seems to tell. But Indian pessimism presents itself not primarily as a feeling of world-weariness due to the pressure of an untoward environment, nor as a temperamental tendency to look upon the dark side of things, but rather as an articulated system of thought, the product of Indian metaphysical speculation. Such is the opinion of Oldenberg and Barth, and in fact of most scholars. But such speculation may have had its roots in a trying environment or in a bias towards pessimism due to a melancholy temperament.

3. Psychology of Indian pessimism.—There are three antitheses which are significant for pessimism:

¹ 'Die Trennung der Inder von den Iranern war für die nach Südosten ziehenden der Verzicht oder der letzte abschliessende Schritt zum Verzicht auf die Theilnahme an dem grossen Wettkampf der Völker gewesen, in welchem die gesunde Männlichkeit der westlichen Nationen herangereift ist. In der üppigen Stille ihres neuen Heimathlandes haben jene Arier, die Brüder der vornehmsten Nationen Europas, mit der dunkeln Urbevölkerung Indiens sich vermischend, immer mehr die Charakterzüge des Hinduismus in sich entwickelt' (Oldenberg, *Die Religion des Veda*, p. 2).

mism: (a) false knowledge, or illusion, *versus* true knowledge, or reality; (b) unpleasant feeling, or suffering, *versus* pleasant feeling, or bliss; and (c) wrong volition, or evil, *versus* right volition, or good. The intellectual and the emotional antitheses alone have significance in Hindu thought. Bondage is due to nescience (*avidyā*), and nescience manifests itself in suffering. In other words, what on its intellectual side is false knowledge is on its emotional side suffering. Such is the teaching of virtually all the six systems of Indian philosophy. The same connexion between the intellectual and the emotional is indicated in the famous definition of Brahman as reality, thought, and bliss (*sachchidananda*). The third antithesis, the ethical, is the one emphasized in Hebrew and Christian thought. The doctrine of personality, which is the doctrine of the will, has received scant justice in India. Of the three directions of mental function—cognition, feeling, and willing—the Indian systems of philosophy have to do with cognition and feeling, with the first predominantly, with the second to a less extent, but with volition hardly at all. Volition, the crown of the whole mental process, is largely left out. Hence Indian mental life, being divorced to a considerable extent from healthy volition, has been marked by extravagant thinking and morbid feeling. Volition, while having its roots in knowing and feeling, should react upon them in the way of criticism. Only a strong volitional life, whether individual or national, can prevent thought from being erratic and feeling from being morbid. Now, according to Indian thought, bondage is defined as false thinking and unpleasant feeling, but not (except perhaps in the case of Buddhism) as wrong willing. That is, bondage is defined in intellectual and emotional, but not in ethical, terms. Herein lies the great difference between Indian and Hebrew thought. In harmony with the emphasis in India on knowing and feeling is the fact that Indian thought is in general rationalistic and Indian life not infrequently hedonistic. The poles of Indian experience seem to be the rationalistic calm of the ascetic philosopher, on the one hand, and the hedonistic excess of the wealthy prince, on the other. The pessimism of the ascetic philosopher is due to his feeling of the worthlessness of the phenomenal world as contrasted with the changeless bliss of the *ātman*; that of the wealthy prince, to the feeling of satiety and disgust due to unbridled excess. Bhartṛhari's *Satakas* are a good illustration of the latter. The failure of the Indian mind rightly to estimate the importance of volition may be due partly to the influence of climate. In reference, further, to the relation between knowing and feeling, it is well known that cognition usually precedes feeling, and feeling colours cognition. We see a picture and admire it. We hear a discord and loathe it. But sometimes even prior to cognition there is present a great mass of feeling, whether pleasant or unpleasant, which furnishes the atmosphere in which, so to speak, cognition does its work. Nothing can easily make a man pessimistic who looks at things through the atmosphere constituted by a pleasant feeling tone; and, on the other hand, nothing can easily make a man optimistic who looks at things through the atmosphere of an unpleasant feeling tone. What has apparently taken place in India is this. Cognition, having to do with uncomfortable environmental conditions, has been accompanied by unpleasant feeling; and, on the other hand, a melancholy temperament, possibly the fruit of the fusion of Aryan and Dravidian in India, has been the medium through which the Hindu people have looked at the facts of life. Neither thinking nor feeling has been tested and controlled by willing. The result is that in India we have a reasoned

pessimism, which apparently has its outward source in an untoward environment and its inner source in a melancholy temperament, the thought which elaborated the pessimistic view of life never having been adequately challenged and tested by the activities of the volitional life. The provisional result, then, is that Indian pessimism is at once environmental, temperamental, and speculative. Of course, this is all very tentative and hypothetical.

4. Pessimism as related to the great Brāhmanical doctrines.—Indian pessimism can be understood only as it is related to the great doctrines of Brahman, *karma*, and transmigration—in other words, only as it is set in the context of Indian thought. Thus Bloomfield (p. 212) refers to 'the twin factors of metempsychosis and pessimism' as the doctrinal differentia of any truly Hindu system.

(a) *Brahman and pessimism*.—The watchword of the *advaita* doctrine of Sankarāchārya is identity. The great confession of faith is *ekam evādvitīyam*, 'one only without a second,' and the personal assurance of the emancipated soul is *aham Brahma*, 'I am Brahman.' The theory is that, as soon as I am able to realize this identity, then the whole machinery of multiplicity, of *karma* and transmigration, falls away, and there is nothing left but Brahman, the 'one only without a second,' and 'I am Brahman.' Brahman is declared to be 'reality, thought, and bliss,' and the way of realizing one's identity with this supreme reality is the way of knowledge. This way is theoretically open to all, some time or other, in the course of the process of rebirth—the way into the highest reality, thought, and bliss. Why, then, should not the doctrine of Brahman be regarded as a splendid optimism, a message of good tidings for every soul? It seems to hold out to every one the hope of ultimate union with Brahman—certainly a magnificent goal. Why, then, is pessimism connected with such a splendid conception? One reason may be suggested. The indefinable Brahman, being impersonal and without action, cannot be conceived as a source of comfort and help for needy mortals. He (or it) may be thought of as the sum of all perfections, but the glorious Brahman, perfect in reality, thought, and bliss, is not a god of grace, but only an ultimate reality posited in such a way as to suggest overwhelmingly the worthlessness of the phenomenal world.

'The glorification of the Ātman becomes involuntarily an ever increasingly bitter criticism of this world' (Oldenberg, *Buddha: his Life, his Doctrine, his Order*, Eng. tr., London, 1882, p. 42).

How different might it have been, had the ethical and gracious Varuṇa been the 'one only without a second' in a true theistic devotion on the part of the Indian people! Then, in spite of an unhappy climate and possibly a melancholy temperament, the religious life of the Indian people might have been radiant with hope.

(b) *Pessimism as related to karma and transmigration*.—The psychological explanation of the origin of the doctrine of *karma* (q.v.) is not difficult. It is the experience of all that in the ease of moral merit or demerit there are numerous illustrations of the truth of the saying that 'whatsoever a man soweth that shall he also reap.' Such facts of experience furnish the starting-point for speculation. That which is true in general of ethical action in this life is extended in several directions, so as to cover not only moral action, but also all action without exception, and not only the deeds done in this life, but also the deeds done in past and future lives.

The twin doctrines of *karma* and transmigration first appear definitely in the *Upaniṣads*. There is no clear trace of either in the hymns of the *Rig-*

veda. It was only when the personal gods of the *Rigveda* had become merged more or less completely into the pantheistic and impersonal one and all of the *Upaniṣads* that the doctrine of an automatic principle of retribution arose. The passing of the Vedic gods left a place for *karma*. *Karma* is the theory of recompense, and transmigration states how the decrees of *karma* are carried out. Now it is highly significant that *karma* and transmigration and a pessimistic view of life arose together in India. Some hold that *karma* is the cause of Indian pessimism. Whether this is so or not, it is by virtue of *karma*, the creative effect of deeds, that, according to Hindu belief, the soul is bound for ever to the round of phenomenal existence, unless some means of release is found. This dreary round of repeated births and deaths constitutes for Hindu thought the tragedy of life. Phenomenal existence is miserable existence, and the two doctrines which govern phenomenal existence are *karma* and transmigration. They are both linked up naturally, then, with a pessimistic view of life. It is true that *karma* and transmigration are, intellectually considered, impressive doctrines. For every soul the 'one far off divine event' is emancipation from the bondage of repeated births and deaths and union with Brahman. The formula is simple: every man the arbiter of his own destiny, and salvation virtually an eternal process. Why should not this profound conception lend itself to an optimistic view of life? One reason may be this: the whole burden of the achievement of emancipation rests upon man, and man knows himself to be needy, sinful, helpless—in fact, too weak to carry such a burden. Hence the prospect of emancipation recedes into the far distant future, and the ordinary Hindu hardly dares to hope for release before he has passed through countless births. Thus he is chained to the phenomenal, and the phenomenal is illusory and sorrowful, and 'hope deferred maketh the heart sick.'

5. Effects of Indian pessimism.—The doctrine of the illusory and worthless character of the world has had its effect upon the mind and life of India. Thought and feeling are consonant with the worthlessness of the world, but volition means adjustment to a real world; and, if great deeds are to be done, the present world must be regarded as real and worthful. This is the explanation of the statement of Macdonell that early India wrote no history, because it never made any.

'The Brahmins . . . had early embraced the doctrine that all action and existence are a positive evil, and could therefore have felt but little inclination to chronicle historical events' (*Hist. of Sanskrit Literature*, p. 11).

Still another effect of the theory of the worthlessness of the world is seen in the tremendous hold which the ascetic life has always had upon the people of India. The worthlessness of the world and the evil of activity logically involve the renunciation of the world and a life of meditation. Again, as Bloomfield points out (p. 264), 'there is in all Hindu thought no expression of hope for the race, no theory of betterment all along the line.' We may find a reflexion of this mood in the retention of the ancient and widely accepted system of the four *yugas*, according to which the golden age is placed in the past rather than in the future, a thing to look back to rather than to look forward to, the direction of things being steadily downward from good to bad and finally to the worst, and the four *yugas* repeating themselves endlessly without making any advance. In this programme is embodied the hopelessness of India's social outlook.

6. Influences qualifying Indian pessimism.—The pessimism of India, however, must not be exagger-

ated. There are many things which tend to break its force. No one can be a pessimist (except in theory) when life is joyous and hopeful; and the people of India have, on the whole, their share of the natural joys of life. Then, too, all theistic and devotional movements tend to be optimistic,¹ such as the various *bhakti* movements and the theisms of modern India—e.g., Islām, Sikhism, Christianity, the Brāhma Samāj, the Arya Samāj, etc. In the case of the Arya Samāj the pessimistic influence of the doctrines of *karma* and transmigration is more or less counteracted by the acceptance of theism. It is the same in the case of Islām, where the belief in fate is robbed to a considerable extent of its sting by a belief in Allāh, the author of fate. In creating an appreciation for things belonging to this world, such as good government, freedom, equality, education, social reform, good bank deposits, etc., the British Government has exercised very great influence. The effect of Christian missions has been equally conspicuous in helping to produce an attitude of optimism.

7. Chronology of Indian pessimism.—One of the most striking contrasts in the history of thought is that between the optimism of the Vedic age and the pessimism which gradually settled down like a pall upon the spirit of India and finally obtained its creedal statement in Buddha's doctrine of suffering. The Rigvedic age was an age of appreciation of the good things of life, and of strenuous effort to secure them. The interesting thing is that the growing appreciation of the value of the present life, now observable in India, marks a kind of return to the spirit of the *Rigveda*.

Thus there are three stages in the history of Indian pessimism: (a) from optimism to pessimism, the movement extending from the *Rigveda* to the great *Upaniṣads* (c. 1400–800 B.C.); (b) pessimism attaining in the 5th cent. B.C. its climax in Buddha's four noble truths (800 B.C.–A.D. 1800); (c) from pessimism to optimism, the British Government and Christian missions (A.D. 1800 to the present time).

H. D. GRISWOLD.

PETITE EGLISE (ANTICONCORDATAIRES).—When on the point of concluding the concordat with the French Government (see art. CONCORDAT, GALLICANISM), Pope Pius VII. requested the French bishops who had fled the country to resign their sees within ten days. The concordat was signed on 10th Sept. 1801, and on 29th Nov., by the bull *Qui Christi Domini*, Pius VII. abolished 157 archbishoprics and bishoprics and established 50 new ones in place of them. Several of the bishops holding sees resigned as the pope demanded; but others refused to do so. Fourteen of the latter, residing in London, issued on 23rd Dec. 1801 a memorial in which they stated the reasons which prevented them from complying with the pope's demand. They admitted his possession of a primacy derived from St. Peter, which,

however, far from placing him above the canons, was a special reason why he should observe them and cause others to do the like. They added that the bishops are by divine right leaders in the Church; that their connexion with their own Church can be broken only by death, by a legal judgment in conformity with the discipline of the Church, or by a voluntary and canonical resignation; that, speaking for themselves, they had always during their exile cared for their dioceses; and that the new concordat was in their judgment more likely to destroy than to benefit religion. Several other bishops agreed to this memorial. Next, 38 bishops in conference in London addressed a canonical remonstrance to Pius VII. on 6th April 1803. This document is not merely a work of learning and eloquence, but an important official utterance, in which these prelates, appealing to Scripture and tradition, develop the principles set out in the memorial of 1801. These bishops, then, continued to administer their dioceses through priests who shared their convictions in regard to the concordat. It is these 'Anticoncordataires' who were henceforth called the Petite Eglise.

The members of the Petite Eglise, and especially the priests, were subjected to many persecutions and annoyances from the government, both under Napoleon I. and under Louis XVIII. and Charles X. Gradually the clergy of the Petite Eglise diminished in number. It is remarkable that the bishops ordained no priests, believing perhaps that the concordat would not last long. The last survivor of these prelates, Alexandre de Chémines, bishop of Blois, even refused to ordain some candidates who were presented to him, because they held Jansenist opinions. Some groups in the Petite Eglise were imbued with the latter ideas, while others were extremely opposed to them.

After 1830, when the clergy were reduced to the bishop of Blois (de Chémines) and some priests, the question arose whether, in view of the fact that the pre-concordat bishops were dead, the bishops of the concordat ought not to be regarded as lawful. A negative answer was arrived at, on the principle that, the apostolic succession having been broken, the effects of the rupture were enduring. The decisions of ancient councils were also appealed to. One of these, held at Benevento in 1087 by Pope Victor III., had decreed as follows:

'The sacraments of penance and communion are to be received only at the hands of a Catholic priest; if none such is to be found, it is better to remain without communion and to receive it invisibly from our Lord.'

And this soon became the state of the members of the Petite Eglise. By death and defections their numbers gradually diminished, so that towards the end of the 19th cent. there remained no more than a few groups in France, and one in the Belgian diocese of Malins.

The largest group is that of Deux-Sèvres and La Vendée. This has more than 3000 members, and is growing. Its centre is a hamlet of Plaine-lière, a commune of Courlay (Deux-Sèvres). Here there is a large church where laymen sing the offices in Latin, according to the ancient liturgy of Paris, and read instructions in French. Every Sunday 600 or 700 worshippers, and on high festivals as many as 2000, attend service.

The congregation of Lyons has also a place of worship where divine service is held in French, according to the ancient liturgy of Lyons. This group, although greatly reduced, still has some hundreds of members at Lyons and in the neighbourhood. In 1869, when the Vatican Council was sitting, these two congregations petitioned Rome for the recognition of the pre-concordat bishops, as the condition of their own return to the Roman obedience; but the attempt failed; and the

¹ The super-imposition of the Yoga on the atheistic Sāṃkhya lightened the gloom of even that ultra-pessimistic system' (G. F. Moore, *Hist. of Religions*, i. 350).

Council, by declaring the pope to be immediately the bishop of each diocese, laid down a principle the direct contrary of that by which the opponents of the concordat had been guided.

The congregations of the Charollais (Saône-et-Loire) and of Fareins (Ain) contain about 300 persons each; those of the Isère and the Hautes-Alpes contain each scarcely 30 persons; that of the neighbourhood of Fougères (Ille-et-Vilaine) is reduced to a few persons; that of Massat (Ariège) is almost extinct; and the congregation at Mont-Saint-Jean (Sarthe) has joined the Church of the concordat, with the exception of a few old people.

The members of these groups read privately in their own homes, in French, the offices of the Church, generally according to the ancient liturgy of Lyons, and, in addition, the Holy Scriptures and works of piety. Each house has a private chapel, jealously screened from vulgar eyes. It is, indeed, a tradition among the Anticoncordataires, except those of Deux-Sèvres and La Vendée, that their religious practices must be veiled in mystery. This is no doubt a consequence of the persecutions which they had to endure in the first half of the 19th century.

With all of them the only sacrament administered is baptism. This is given by a member of the community chosen for the purpose. The same member conducts funerals, reciting the ancient liturgical prayers of the Church, and also presides at marriages. Children are taught the ancient diocesan catechism by their own parents, who also prepare them for a first (spiritual) communion. They all strictly observe the old festivals abolished by the concordat, as well as the days of fasting and abstinence, according to the usage of the ancient Church. Some of them have desired the re-establishment of the ecclesiastical ministry, but the greater number appear not to feel the want of it, and seem almost to regard their present condition as the normal one.

The members of the Petite Eglise lead an industrious, simple, and peaceable life, which wins the respect of their neighbours. Their morality is generally high. They number in Franco at the present time over 4000 individuals.

GEORGES VOLET.

PEYOTE RITE.—'Peyote' is the name of a small cactus plant (the *Anhalonium* or *Lophophora* of systematists), found along the lower Rio Grande and southward in Mexico. It resembles a radish in size and shape, only the top being visible above the ground. The white blossom is later superseded by a tuft of white down, which is sliced and dried into the so-called 'button,' which alone is eaten north of the Mexican boundary, while south of it the entire plant is sliced, dried, and used in decoction. The peyote must not be confounded with the mescal or maguey cactus.

Much more widely diffused nowadays than the peyote plant is the peyote cult, which has spread northward so as to reach the Kiowa, Comanche, Arapaho, Cheyenne, Pawnee, Omaha, Winnebago, and Ogihla Dakota. Among the Winnebago it has caused a schism, the peyote-worshippers being sharply distinguished from and even hostile to the believers in the traditional Winnebago religion. The feature that is naturally shared by all the tribes mentioned is the eating of the peyote button, which produces a distinctive sensation of spiritual

exaltation. The Arapaho form of the ceremony may be described as fairly typical.

The ceremony is held in an ordinary lodge at night. One man acts as leader, moulding the rite according to a dream or a vision experienced during some previous performance. In this way individual modifications are introduced though the essential features persist. The number of participants varies; thus, on one occasion there were only three devotees, while on another there were about a dozen, including some Cheyenne visitors. The worshippers enter the lodge after dark and begin by eating four buttons each, the average number for each individual throughout the night being twelve, with a maximum of thirty or forty. The time is spent singing round a small fire, between which and the rear a simple sort of altar is made on the ground. Only one participant sings at a time, to the accompaniment of a gourd rattle shaken by himself and a drum beaten by his neighbour. After four songs the instruments are passed to the next performer, and thus each has his turn. The songs refer to the peyote, the birds regarded as its messengers, and the night, but towards morning they turn to the morning star and the end it brings to the performance. The worshippers eat, leave the tent, and spend the day reclining together in a comfortable spot, with occasional singing and rattling but no drumming. During this day new songs, suggested by the nocturnal experiences, are often composed. At noon a meal is served, at which a single spoon must be used by the entire company. At dark the meeting breaks up. The proceeding is regarded as an occasion of peace and good-will, and possibly for this reason knives and other sharp instruments are barred from the ceremonial lodge. The objects used in the cult have a peculiar decorative character—e.g., yellow is the predominant colour, the feathers used being those of the yellow-hammer and other species of woodpeckers.

The peyote rite has been of special interest to ethnologists because it has spread in so recent a period that the conditions of its diffusion have sometimes come under their direct observation. It has thus been possible to note in this instance the circumstances favouring the assimilation of a new religious practice, the influence of religious leaders, the conflict and harmonization of new and old conceptions. All this has been most suggestive as to the rise and spread of ceremonialism generally. On the whole, it appears that even the boldest ceremonial innovators cannot lift themselves by their bootstraps, but automatically conform to certain pre-existing ceremonial routines current among their people. Thus, a recent Arapaho modification of the peyote cult adapts the rite to a new purpose, that of curing the sick; but the processes adopted are those which the Arapaho ordinarily employ in the treatment of patients. Similarly, the Winnebago have not only adopted the peyote cult but incorporated with it various Christian doctrines and practices; nevertheless the organization of the ceremony conforms closely to the ancient ceremonial system of the tribe. A cult, in other words, may indeed be borrowed, but in the borrowing it is almost invariably cast into a different mould, that of the borrowers.

R. H. LOWIE.

PHALLISM.—Phallism may be defined as the worship of the reproductive powers of nature symbolized by the organs of sex. A very large share of the worship of relatively primitive and even advanced societies has been claimed for a cult which appears to us, in a high state of civilization, to be strange and repulsive. And all sorts of figures, whether engraved or plastic, have been pressed into the service of the theory as more or less disguised sexual symbols. It is obvious that the mere fact that a cult is remote from our ideas of worship, that it is repugnant to our manners, and that the objects of adoration seem to us to have no element of divinity is no reason for denying its existence or its real importance as a social bond: so many and so various, often so grotesque

and cruel, have been the modes in which human beings have conceived and approached the higher powers.

Worship may be said to be the ritual presentation of offerings supposed to be specially grateful to the divinity, or object of adoration, accompanied by obeisances and other acts designed to express humility and subservience, and usually by the utterance of sacred formulæ—praises, prayers, thanks, or narrative. It is the suitable honouring of a power from which good or evil has been received and may be expected or dreaded in the future. It is addressed not only to what we should call gods or spirits, but to any object which the worshipper may consider to be, or to represent, a power which he has reason to fear, to which he is indebted, or from which he may hope for favours.

In India 'the soldier worships his sword, the cultivator his plough, the moneylender his ledger' (H. H. Risley, *People of India*², London, 1915, p. 235; cf. J. A. Dubois, *Hindu Manners, Customs, and Ceremonies*³, Oxford, 1906, p. 568). Among the Ewe of what was German Togoland the weaver worships his loom, the smith his anvil (J. Spieth, *Die Ewe-stämme*, Berlin, 1906, pp. 309, 448). In ancient Greece 'the sceptre of Hephaestus was worshipped in Lebadea. . . . A legend tells how Aeneas set up a spear in the market-place, and bade the people worship it' (W. H. D. Rouse, *Greek Votive Offerings*, Cambridge, 1902, p. 375).

In these cases the object worshipped seems not to be regarded as a symbol, or as the outward and visible form of any indwelling divinity, but to be honoured for its own sake. The rite is more or less simple. Where it is addressed to any higher power it is analogous in framework, though it may be more splendid and elaborate.

Worship is thus an expression of religion. For religion no satisfactory definition has yet been propounded; no form of words hitherto invented will in all circumstances distinguish it from magic. But for our purpose we may regard religion, in accordance with common usage, as concerned with the relations between men in general, or a tribe or family, on the one hand, and, on the other hand, higher powers which, so far as they are personal, are endowed with free will, and are to be approached with reverence, with offerings, and with prayers which they may or may not grant. Such powers, though frequently capricious and cruel, are amenable to appeal. They are held to prescribe rules of conduct which, beginning in the lower culture as ritual, tend more and more as civilization advances to shed their ritual character and become truly ethical. Magic, on the contrary, conveys the notion of power, however acquired, wielded by the magician as his own, and not as that of a higher being. The co-operation of higher beings, when necessary, is obtained by spell. Compliance with the call is then not dependent on their goodwill; it is compulsory. The tendency of religion is social, of magic anti-social. The one is usually open, public, recognized, and approved by society, and tends to strengthen social bonds. The other is apt to be used for private ends of malice or gain, is usually secret, forbidden, disruptive. This definition, however, cannot be insisted on as a mathematical formula. In practice it is found that no religion is free from magical practices, and that magic often appropriates and adapts the ceremonies of religion. In the higher religions—Christianity and Muhammadanism—it has appeared as an anti-religion, having its own divinities and worship in pronounced hostility to the dominant cult. Indeed, in the form of 'black magic'—i.e. magic hostile to members of the same community—it is everywhere reprobated and repressed (see the present writer's *Ritual and Belief*, London, 1914, p. 66 ff.).

1. Symbols.—Men everywhere have desired and attempted to imitate in art any interesting object, and to represent in a visible and tangible form

ideas either imagined or drawn directly from external nature or from daily intercourse with their kind. It is natural that, when their power over their materials had so far advanced as to delineate even roughly the human form, any member or attribute on which it was intended to fix attention should be exaggerated. This tendency, applied for the purpose of satire, is the essence of the art of caricature. In religious matters it has given to an Indian idol its multiplicity of heads and hands—a clumsy symbol of power that has been taken over and even exaggerated by Tibetan Buddhism—and has produced the Ephesian 'many-breasted Artemis.' The same tendency has emphasized the sexual organs of various divinities in many parts of the world, such as, in ancient times, the images of Priapus, and the Hermæ set up at the boundaries of a territory or of private property. Priapic or ithyphallic figures are, in fact, common to the lower culture. They are found wherever man has attempted to sculpture the human form, whether to represent deities proper or the dead. The size of the phallus in many cases has no special intention, beyond that of expressing the sex represented, and may arise from want of skill on the part of the uncivilized artist. In some instances the intention is declared (though with more than doubtful truth) by the natives to be simply that of causing ridicule and amusement, as a caricature does (K. de Zwaan, *Die Heilkunde der Nisser*, Hague, 1913, p. 65). In general, it has beyond dispute a deeper significance; the exaggerated organs are intended to represent for cultural purposes the powers of reproduction, paternity, fertility, the powers that multiply the people and provide abundance of cattle and crops and all other things necessary for prosperity. Priapus was worshipped as a god of fertility, giving increase of flocks, watching over gardens and fruit-trees, bedewing them with friendly showers, and caring for the bees (Pausanias, ix. xxxi. 2; Vergil, *Ecl.* vii. 34, 26, *Georg.* iv. 110 ff.). He was reckoned the son of Aphrodite. His worship was a late introduction into Greece, perhaps from Lampsacus on the Hellespont, where, according to Pausanias, he was esteemed above all the gods. When it penetrated to Rome, he was identified with Mutunus, an indigenous phallic god; and his statues, in the shape of Hermæ, represented him as bearing fruit and a sickle or cornucopia. The ancient Teutonic deity Frey, or Fricco, was the giver of abundance, presiding over rain, sunshine, and the fruits of the earth. Adam of Bremen, speaking of Upsala, says that he dispensed peace and enjoyment to mortal men, that his image was represented with a very large phallus, and that at marriages sacrifices were offered to him (*Descriptio insularum Aquilonis*, 26, quoted in J. Grimm, *Teutonic Mythology*, tr. J. S. Stallybrass, London, 1880–88, pp. 212, 1354).

In the E. Indian Archipelago ithyphallic statues are frequently found. Among the Nuforese of New Guinea there is in every village a house that serves the double purpose of a temple of ancestors and the sleeping-place of the youths and unmarried men. From the description of that at Dorei we learn that the posts on which it is supported are adorned with human figures, or with those of crocodiles, snakes, and fishes. All alike are said to represent ancestors, whose respective names they bear. Both the male and female figures have exaggerated pudenda. Moreover, on the eastern and western sides of the building, and outside it, are two pairs of rude wooden statues, each pair representing a man and a woman in the conjugal act. Beside the pair on the western side is the image of a child lying on its back. Other parts of the building also are adorned with suggestive carvings

(G. A. Wilken, *Verspreide Geskriften*, Hague, 1912, iii. 213 f.). The people of Nias, an island off the coast of Sumatra, are in the habit of representing their *adu*, or supernatural beings, by means of wooden images. In many of these the male sex is emphasized in the usual way. When a man dies, such an image is carved in his honour, and is called an *adu catun*. Offerings are made to it; and the Niasese are accustomed to implore it for a numerous offspring. When a child is born, a thank-offering is presented. Before the dwellings of chiefs and persons of rank stones are erected in honour of deceased members of the family. They are called *gure salawa*, and are sometimes in human form, sometimes in that of a phallus. The Battak of Sumatra pray to the images of their long-dead ancestors for offspring. These images are ithyphallic. Among the Bare'e-Toradja in Celebes buildings described as temples for the souls of those who have fallen in war also contain ithyphallic figures, and in almost every temple of importance female breasts and genital parts of both sexes have been found represented on the supporting columns. In the village temple of Langgedoni sexual intercourse was represented by the union of the detached organs. The natives, it is true, declared that such figures had no meaning save to delight the eyes. But they were accompanied by images of crocodiles, the symbol of bravery; and bravery and fecundity are the highest of savage virtues, ensuring as they do the continuance of the stock and the prosperity of the community (de Zwaan, pp. 18, 62 ff., citing Adriani and Kruit, *De Bare'e-spreekende Toradjas*, Hague, 1912). We can have little doubt therefore that all these cases are associated with a cult of fecundity under phallic symbols. This is made very clear in the case of the festival of Upu-lero (see below, p. 822 f.) as it is celebrated in the Babar Archipelago.

An emblem of the generative and creative force of the sun, in whose honour the feast is held, is erected, in the form of a standard flying a pennant of white cotton, almost 5 ft. long. The pennant is cut in the form of a man bearing, fastened to it, a stuffed phallus and testicles—an apt suggestion of the organ enacted below (*A.E.* viii. [1935] 134).

Throughout the Slave Coast of W. Africa the worship of a divinity named Legba or Elegba is prevalent.

Among the Ewe his image 'is made of red clay, and rarely represents the human figure, generally male, rarely female, and always entirely nude. It is always represented as squatting down and looking at the organ of generation, which is enormously disproportionate. . . . When female, the figure is provided with long pointed breasts, and the other necessary adjuncts' (A. B. Ellis, *Ewe-speaking Peoples of the Slave Coast*, London, 1890, p. 41 f.). Among the neighbouring Yoruba the (masculine) image of Legba 'is found in front of almost every house, protected by a small hut roofed with palm-leaves'. 'He is supposed always to carry a short knotted club, which, originally intended to be a rude representation of the phallus, has, partly through want of skill on the part of the modelers of the images, and partly through the growing belief in Elegba's malevolence, come to be regarded as a weapon of offence.' Ellis further notes: 'In the case of Priapus we find a similar connection between the phallus and a cudgel. See *Catalina*, xx., "The Garden God".' (*Yoruba-speaking Peoples*, London, 1894, p. 65).

Certain of the Shintō gods of Japan are ithyphallic. They are represented in wood and stone, and are the object of offerings and worship (W. G. Aston, *Shintō*, London, 1903, pp. 71, 188 ff.). Whether similar deities were honoured by the ancient Gauls we do not know. It is certain that in the Middle Ages, and since, in various parts of France and Belgium, ithyphallic saints have been worshipped for the purpose of obtaining offspring or curing impotence and sexual disease. Perhaps the most famous of these was St. Foutin (whose name is variously spelt), by tradition the first bishop of Lyons. His cult was wide-spread in the south of France. When, in 1585, the Protestants took the town of Embrun, they found among the sacred relics of the principal church an object said to be

his phallus. Its extremity was reddened by the libations of wine offered to it by women in need of his help. Further north a similar divinity was honoured in the diocese of Bourges under the name of Guericlon or Greliehon, at Brest under the name of Guigoleit, and (without enumerating others) there was one said to be called Ters, whose figure appeared over the gateway to the church of St. Walburga, in the Rue des Pêcheurs at Antwerp (J. A. Dalsure, *Des Divinités gauloises*, Paris, 1903, p. 234 f., ch. xii.; E. S. Hartland, *Primitive Paternity*, 2 vols. London, 1890-10, i. 63; both citing various authorities). In Italy at Trani during the Carnival a priapian figure called *il santo membro* used to be paraded through the town (Dalsure, p. 219). On Trendle Hill, just above the village of Carne Abbas in Dorset, an ancient figure known as the Carne giant, 150 ft. long, is cut in the turf. It is represented as flourishing a club in the right hand (cf. the club of Legba). It is nude, with very distinct and exaggerated sexual organs. Like the White Horse of Berkshire and other effigies cut in the turf of the chalk hills in the south of England, it used to be cleaned and put in order every seven years. This custom exhibits the importance attached to it by the villagers, and seems to point to a religious origin.

Naturally it is less easy to represent the female figure with a corresponding exaggeration. At Ephesus Artemis as the female principle of fertility, the All-mother, was represented with many breasts. The Yoruba on the Slave Coast of W. Africa have a goddess in the form of a pregnant woman, who is invoked against barrenness and difficult labours. She is probably identical with Odunda, the earth-mother, generally depicted as a seated mother holding a child—a common emblem of such a divinity. She is the patroness of love, and many stories are told of her adventures and amours. On the doors of her temples, as well as on those of her male counterpart Otatata, the phallus and *kliri* (the female emblem) in contact are often carved (H. H. Ploss, *Das Weib*, Leipzig, 1891, i. 489, citing, without a reference, Bastian; Ellis, *Yoruba-speaking Peoples*, p. 41 f.). Female figures, however, with the organ of sex exaggerated are by no means unknown in various parts of the world.

On the Congo, e.g., 'in the forests between Mungana and Stanley Pool it is not rare to come upon a little rustic temple, made of palm-fronds and poles, within which male and female figures, nearly or quite life-size, may be seen, with disproportionate genital organs, the figures being intended to represent the male and female principle. . . . Around these carved and painted statues (previously described in similar terms by the author quoted, p. 184) are many offerings of plates, knives and cloth; and frequently also the phallic symbol may be seen dangling from the rafters. There is not the slightest suspicion of obscenity in all this; and any one qualifying this worship of the generative power as obscene does so hastily and ignorantly. It is a solemn mystery to the Congo native, a force but dimly understood; and like all mysterious natural manifestations, . . . it is a power that must be propitiated and personified to his good' (H. H. Johnston, *The River Congo*, London, 1884, p. 43; *J.A.S.* xiii. [1880-81] 473). We are, indeed, expressly told not only that this worship 'is not associated with any rites that might be called particularly obscene,' but also that 'on the coast, where manners and morals are particularly corrupt, the phallic cult is no longer met with' (Johnston, loc. cit.).

Nor are such female effigies confined to the pagan natives of tropical wilds. They were frequently carved on churches in the Middle Ages. Many have been preserved until recently in Ireland, as, e.g., on a doorway of Clorne Cathedral, Co. Cork. The Royal Irish Academy in Dublin possesses a very good specimen removed from a church. They are known to Irish antiquaries by the name of *Shells-na-gig*. Most of them, however, have now been destroyed under ecclesiastical influence. On this side St. George's Channel they are very rare. One remains as a figure in a corbel-table around the beautiful little Norman church at

Kilpeck, in Herefordshire, close to the Welsh border. 'There is said to be another in Cornwall.'

But the representation of the detached organs of both sexes, often called, from their common designation in India, the *lingam* and *yoni*, is very widely distributed. Several examples have already been incidentally mentioned.

Pausanias observes that at Cylene 'the image of Hermes, which the people of the place revere exceedingly, is nothing but the male organ of generation erect on a pedestal' (vi. xxvi. 3).

Similar objects were from remote times common in Italy. Down into the Middle Ages ceremonies appear to have been performed in connexion with them. Ecclesiastical legislation prescribes a penance of bread and water during three Lents for any one who shall perform incantations to the phallus ('*praecantaverit ad fascinum*'), or indeed any spells (*praecantationes*) save the Creed (*symbolum sanctum*) or the Lord's Prayer (anon., *Essay on the Worship of the Generative Powers*, appended to R. Payne Knight, *Le Culte de Priape*, Luxembourg, 1866 [original Eng. ed. 1786], p. 121, citing *Judicia sacerdotalia de criminibus*, vii. 35). This legislation was repeated by councils and synods to the end of the 14th century. Ex-voto stones at Roman settlements and forts in England and Scotland have been dug up, bearing phallic figures (ib. p. 117).

At Isernia, in the Abruzzi, Saints Cosmas and Damian, usually invoked for all sorts of diseases, and being in the official calendar represented more decently than the French saints just mentioned, found their medical practice concentrated almost entirely on the gratification of the feminine desire for lovers or for children.

At their feast on 17th Sept. their relics were carried in procession. The fair which was held on the occasion was attended by people from all the villages round. Maidens, married women, widows, and *donne di piacere* wore each a distinctive dress. Objects in wax representing the parts affected and for which relief was desired were sold at the fair, and were afterwards kissed and reverently presented, together with an offering, in the vestibule of the church. Inside the church the suppliant who suffered from any ill presented himself or herself to a priest at the high altar and then and there uncovered the part of the body afflicted, which the priest anointed ceremonially with consecrated 'oil of Saint Cosmas.' Although the waxen effigies offered for sale represent organs of the body, little trade was done. Women were the chief suppliants, proceeding centred in sexual matters. The ceremonies continued to be performed until the year 1780, when, the attention of the Government having been called to them, they were summarily stopped (letter from Sir William Hamilton to Sir Joseph Banks, enclosing and commenting on a letter from an Italian correspondent, prefixed to Payne Knight's book; the illustration of the votive effigies shows most realistic figures).

It would seem that votive offerings like those of Isernia were not unknown in antiquity; for Payne Knight (pl. iii.) figures a gem from the Townley Collection portraying a scene which is unmistakable. Nor is it only at Isernia that such votive offerings have been known in later times. Models in wax of either sex were offered to St. Foutin at Varailles in Provence in the 16th century. They were suspended from the ceiling of his chapel, and were so numerous that when the wind stirred them they struck against one another, to the disturbance of the devotions of the faithful (Dulaure, p. 205; anon., *Essay*, in Payne Knight, p. 132; both citing *Journal d'Henri III. Confession de Sancerre*, v. i. 22, and the notes of Le Duchat on the chapter in question).

Cakes in phallic form were among the sacred objects carried about in Greece at the Thesmophoria, and in the *Μικρον*, or basket of first-fruits, at the Orphic rite of the Liknophoria, as well as at marriages. They were included in the mystic food partaken of by the women at the Haloa. They were, there can be little doubt, part of the *sacra* presented to the *μύσταις* in the Eleusinian mysteries (J. E. Harrison, *Prolegomena to the Study of Greek Religion*², Cambridge, 1908, pp. 122,

518, 522, 530 ff., 148, 151, 154, 157; cf. Clem. Alex. *Protrept.* ii.). At Syracuse, on the day of the Thesmophoria, cakes of sesame and honey representing the female sex, and thence called *μύλλοι*, were carried about and offered to the goddesses—probably Demeter and Kore (Athenæus, xiv. 56; Farnell, *CGS* iii. 99, and the authorities there cited). The Romans made cakes or loaves in the form of either sex (Martial, iv. 69, ix. 3); and similar cakes are said to be still, or to have been within comparatively recent times, made in various parts of France, doubtless on certain festival occasions (Dulaure, p. 195; cf. F. Liebrecht, *Zur Volkskunde*, Heilbronn, 1879, p. 438). Cakes shaped like the female breast were borne by the chorus of women who followed the bride and sang her praise at a wedding in Sparta (Athenæus, xiv. 54).

On the posts of the houses raised in honour of fallen warriors by the Bare'e-Toradja in Celebes representations of women's breasts and sexual organs are found. The case of the village temple at Langgadopi, where the organs of both sexes were shown in the act of union, is probably not singular (de Zwaan, p. 63). In S. Celebes a favourite object of worship is Karaeng lowe (a name signifying 'great lord'), who is not regarded as a god in our sense of the word, but as a powerful spirit. He is figured usually under the form of *lingam* and *yoni*, though there is at least one example of his image in ithyphallic form and made of gold. It has been supposed that he is no other than the Hindu god Siva, imported by way of Java; but this is very doubtful. Incense and candles are burned before him; and he is served by special priestesses, called *pinati*. Once a year a great feast is celebrated in his honour at Gantarang keke, at the first full moon after the end of the fast of Ramadan. Karaeng lowe dispenses good and evil fortune. Life and death are said to be in his disposal. The sick seeking restoration to health, the would-be mother seeking a child, the trader seeking fortune, the gambler luck, the farmer a good harvest, all turn to Karaeng lowe with vows that he may grant their wishes. Nor will they willingly anger him by neglecting to fulfil their vows, lest he should manifest his wrath by sending disease or misfortune upon them (A. C. Kruijt, *Animisme in den indischen Archipel*, Hague, 1906, p. 500; Wilken, iii. 263). He is thus not merely the giver of increase, but a being who holds a general power of good and evil, luck and unluck. And the fact that the name of Karaeng lowe is also applied to the regalia or palladia of a kingdom is possibly significant of the genetic connexions of a mighty, though subordinate, divinity. An ithyphallic god with similarly extensive attributes was formerly worshipped by the Ulisiwa, one of the two tribes of Ambon and Uliasa. It was called Butu-Ulisiwa, 'the phallus of the Ulisiwa,' and was represented by an idol 7 ft. high. Despite the efforts of the Dutch Government at repression of idolatry, it was cherished by the people, as the cause of the fruitfulness of their women and the bestower of good fortune at sea and victory over their enemies, until in 1956 it was discovered in the inaccessible hiding-place to which their pious care had transferred it (Wilken, iii. 236).

Fetishes in phallic form are in use among the Bayanzi, on the eastern bank of the Kwilu in the Congo basin. They are made of clay moulded on wooden cores and adorned with feathers. Female emblems, but of more conventional shape, were also found by E. Torday. Both male and female emblems are propitiated by the sacrifice of a cock. Kola is chewed, and the juice expectorated over them. Torday seems to have witnessed the cere-

mony by a chief, whose prayers were usually for the fertility of his wives and slaves (*JRAI* xxxvii. [1907] 141).

Such fetishes (whose shape, however, is not delineated) were found by Grenfell among the E. Bakongo, of which we are told 'not that the representations of the generative powers, male or female, were worshipped, but that these rude images were the abiding-place of a spirit-force which, if rightly propitiated, would promote fruitful intercourse between men and women' (Johnston, *George Grenfell and the Congo*, London, 1938, ii. 638 n.). In Dahomey, among the true negroes, 'every street from Whydah to the capital is adorned with the symbol, and the old ones are not removed' (H. M. Westropp, and C. S. Wake, *Ancient Symbol Worship*², New York, 1875, p. 46, quoting Burton). East and west from Dahomey along the Slave Coast 'the phallus is seen everywhere, in front of houses, in the streets and public places, sometimes alone, but more frequently in connection with the image of Legba, to whom the organ is sacred, and whose principal attribute is the exciting of sexual desires.' Both the Ewe and the Yoruba 'attribute sexual desires to possession by the god'; and he removes barrenness. The knotted club which among the Yoruba is placed in the hand of his image has already been referred to (Ellis, *Ewe*, pp. 41, 44, *Yoruba*, p. 65; cf. the club of the giant of Cerne Abbas, above, p. 817).

In the old Shintō religion of Japan the use of the detached phallus was frequent. It was set up everywhere along the roadsides (Aston, p. 71 f.; cf. *NATURE* [Japanese], II. 7).

In identifying phallic symbols other than realistic representations, however, the greatest circumspection is required. All sorts of objects have been claimed as phallic by writers whose imagination outpaces proof. Some actual or fancied resemblance has been too often deemed adequate evidence, without showing the beliefs attached to the object, or the rites performed in relation to it. We may begin with some emblems the meaning of which is not in doubt. Around the Mediterranean Sea in antiquity the fig (perhaps from its shape, whether compared with the male organ or the womb, or, like the pomegranate or the fir-cone, from the number of its seeds) was a favorite emblem of fecundity; and artificial phalli were often formed of fig-tree wood.

'The peach is in China and Japan the acknowledged representative of the *kteis*, as the pestle and the mushroom are of the phallus' (Aston, p. 189).

Aston also notes that, though the meaning has now been forgotten, the Japanese term *uo-bashira* ('male pillar'), from its shape, is applied to the terminal post of the railing of a bridge, or of the balustrade of a staircase; and that the same term is applied to the end-tooth of a comb. In India the *lingam* is a common cultual object. It is the emblem of the great god Śiva, and is usually represented united with the *yoni* as 'a smooth round black stone, apparently rising out of another stone, formed like an elongated sancer, though in reality sculptured from one block of basalt' (E. Sellon, *Mem. Anthropol. Soc.* i. [1865] 327). Such a representation is a mere conventional symbol, no more than remotely recalling the creative and reproductive attributes of the god, and can awaken no erotic thoughts in the worshipper's mind. Miniature copies of this emblem are worn by devotees in their hair or round the arm or neck. The followers of Viṣṇu paint on their foreheads the *namam*, or emblem of the god, consisting of three lines, a perpendicular line in the centre and an oblique converging line on either side, sometimes abbreviated to a single red perpendicular line, and sometimes figured as a trident. The *namam* is the sign of the female sex (Dubois, p. 112). The Hindus themselves seem early to have felt the need of explaining the *lingam* as the emblem of Śiva. To this end a not very creditable story of the god is related in various places of the *Purāṇas* (ib. p. 629).

Throughout the northern and eastern shores of the Levant and its islands and neighbouring countries in ancient times a usual sacred symbol was a pillar or pole, called in the Bible respectively

maṣṣēbhāh and *āšhērāh*. These objects do not appear to have been peculiar to any one deity, but to have been an ordinary divine emblem. Originally in all probability a rude stone, or the unshaped trunk of a tree, they were developed in course of time with increasing mastery over materials into conical forms, into obelisks, columns, or masts, and further adorned with sculptures, painting, and draperies. From this aniconic form the Greeks and Romans evolved the statue, the intermediate form of which—a head and bust descending to a merely squared base—is familiar in the representation of many divinities, especially Hermēs and boundary-stones. It has been contended that these pillars and poles are phalli. In aid of the contention are the express words of the author of the *de Dea Syria* (xvi.), who so describes the obelisks or columns in the vestibule of the temple of the goddess at Hierapolis. He adds that they bear the inscription: 'I, Dionysus, dedicated these phalli to Hera, my stepmother.' This only proves that under Greek influence later times identified the objects as phalli, and ascribed their erection to a god in whom they recognized the son of Semele, himself a late adoption into the Greek pantheon. It cannot prove (though it satisfied the author of the treatise) by whom, or with what intention, they were erected. In fact, all the evidence obtainable goes to show that these obelisks or poles were erected indifferently in connexion with the worship of any deity, whether conceived as male or female, not excluding even Jahweh Himself (*EB*, s.v.; art. *MAṢṢĒBHĀH*, vol. viii. p. 487 f.; cf. Robertson Smith, *Rel. Sem.*², London, 1894, p. 188 f.). In the same way our own maypoles have been called phallic emblems upon the slenderest grounds. There is evidence that megalithic monuments, whether shaped by art or not, or even natural rocks and other objects of a suggestive form, have been taken for phalli, or at least thought to have procreative power. But the application to them of the phallic idea is not necessarily primitive. Ancient it may be and sometimes undoubtedly is. It is more likely to be a specific outgrowth of a vague and general sanctity and power once ascribed to them, which has developed all the more fully, since every other attribute of divinity has been lost, and worship in the strict sense of the word has been diverted in other directions. Their frequently gigantic size and the mystery, nameless awe, and surmise that hung about them after their original purpose had been forgotten would be potent aids to such a development.

One emblem of wide currency appears fairly certain. A mode of producing fire early adopted, and widely prevalent even yet among savage races, is that of the drill. Fire is made by rapidly rotating a stick of hard wood upright upon a piece of softer wood lying on the ground and held firmly in its position by the foot. The action is so suggestive, and the result is so analogous to life and so mysterious, that it need not be wondered at that the two sticks have been usually called the male and female sticks respectively, and that their use has almost universally received a sexual interpretation. As the author of the anonymous *Essay* already quoted points out, the use of the fire-drill long survived in W. Europe, where it was applied for the purpose of obtaining need-fire (*g.v.*), as a protection for cattle on the occasion of an epidemic, or for lighting the midsummer and other fires. Need-fire was prohibited by that name in the Capitularies of Karloman, king of the Franks, along with other pagan rites (anon., *Essay*, in Payne Knight, p. 153). It is still used by many peoples when sacred fire is necessary for ritual purposes.

In Egypt the monuments yield many priapic

figures. Osiris as the principle of life is often thus represented. The well-known story told by Plutarch (*de Is. et Osir.*) of the search by Isis for her husband's missing member, when after his murder and the cutting up of his body by Typhon she had collected all the rest, is the mythological form in which the reverence for his phallus is accounted for. Not being able to find it, she caused a wooden surrogate to be made. But, beyond the realistic representations of the phallus, it has been suggested that the Egyptian *tau* cross (like the similarly shaped hammer of Thor) and the symbol known as the *crux ansata* are emblems of the same object. Of this there is no direct or cogent proof. The cross in various forms is a widely distributed symbol in both Eastern and Western hemispheres. It has been claimed to be everywhere phallic; but real evidence in support of the claim is, generally speaking, still to seek. On the other hand, it is the simplest symbol that can be found, and may be (and doubtless has been) made to do duty for many purposes. Likewise the crescent moon, the horse-shoe, and other such figures have been insistently presented as emblems of the corresponding female organ, usually with as little justice. It is true that many things in nature and in art do lend themselves by form or use to such an interpretation, and probably have been sporadically and occasionally accepted. He who is preoccupied with the subject will see phallic emblems everywhere. But a wise scepticism will insist on proof, not merely of sporadic and obscene, but of serious and cultural, or at least magical, employment.

2. Ceremonies.—Phallic ceremonies are very numerous. Some of them have already been incidentally referred to.

The population of Mārwar in Rājputāna fear a *bhūt*, or malignant spirit, called Nathurām. 'This Nathurām is said to have been a scamp from some part of the North-Western Provinces [now called the United Provinces] who settled in Mārwar and seduced many Marwari ladies, until he was detected and put to death. Then he became a malignant ghost, and began to torment wives and children; and now his spirit can be appeased only by the most obscene songs and gestures performed by the Marwari women. . . . No household can be without an image of Nathurām, which is vaguely described as nude and 'of a monstrous and disgusting appearance.' 'On the night the bride first visits her husband an image of Nathurām is placed beside her couch. Barren women and those whose children do not live look to Nathurām for deliverance from their troubles' (*NINQ* iii. [1893] 92). He is, in short, as Orooke observes, 'a phallic fetish.' Nor is he by any means the only one in India. Among others, in Dhārwar women of the Ambig caste carry about an image called Jokamār, 'whose private parts are three times as large as the rest of his body,' and sing his praises in front of each house, getting in return small presents (*BG* xxii. [1884] 183 f.). In Upper Burma at the New Year feast 'an indecent figure' is paraded, and obscene antics are indulged in all along the route (*Gazetteer Upper Burma*, i. pt. ii. [1901], p. 440; the present writer is indebted to Mr. Crooke for these two references). At Roman marriages the bride was required to sit upon the image of Priapus (Augustine, *de Civ. Dei*, vii. 24; Lactantius, *Div. Inst.* i. 20). If we may trust an allusion by Arnobius (*adv. Gentes*, iv. 7), women already married sometimes performed the same rite. In India about Pondicherry, in Canara, and the neighbourhood of Goa, brides are reported actually to sacrifice their virginity to a similar idol of Siva (Dulaure, p. 86, citing Duquesne, *Voyage dans l'Inde*, ii.; Liebrecht, *Folksskunde*, pp. 397, 511, citing Linschoten and Barbosa). On the island of Java, at Batavia, an old and useless cannon, lying in a field, was regarded by the natives as a divinity in phallic form, and daily worshipped with offerings of rice and fruit, miniature sunshades, and coppers. It was held to cure sterility in women, for which purpose it was necessary to sit astride on it for some time. Women might be seen—sometimes two at once—dressed in their best and adorned with flowers, doing this at any period of the day. For years the priests encouraged the practice, to their own pecuniary benefit, until at length the cannon was removed by the Dutch Government (*JAI* vi. [1876-77] 359).

It is clear that practices like these are intended to secure offspring. They are a magical proceeding to obtain fecundity. And it is not unnatural that they should develop into a more effectual proceeding, in which the god is represented by his priest. There is no record of such an evolution in Rome; may be quite sure that the Christian

Fathers would have seized upon it with pious alacrity as a weapon against the heathen if they could have done so. But in India the practice is not unknown. The most famous example is that of the temple of Jagannāth in Orissa (Dubois, p. 602; cf. F. Bernier, *Travels in the Mogul Empire*, London, 1891, p. 305). Elsewhere in India it is enough to subject a barren wife to the embraces of any chance stranger (often more than one), in pursuance of a vow to that effect. The occasion is usually that of some religious festival (Dubois, p. 596; *JES*, new ser., vii. [1869] 264).

In the *Jātaka* we are told how the righteous king Okkāka, in despair because his favourite wife Sīlavatī was childless, sent her, magnificently arrayed, out into the streets on a certain day, as a religious act. There she was met by the great god Sakka, disguised as a Brāhman. With a touch of his thumb he rendered her pregnant of the future Bodhisattva (*Jātaka*, ed. E. B. Cowell, 6 vols., Cambridge, 1895-1907, v. 141).

This story probably gives us the clue to the meaning of a practice described by Herodotus and Strabo as taking place at the temple of Mylitta, in Babylon. Every Babylonian woman was required once in her life to prostitute herself there to the first stranger who threw a silver coin into her lap (Herod. i. 199; Strabo, xvi. l. 20). A stranger was a person of unknown powers; he might even be, as in the tale from the *Jātaka*, a god in disguise. From this quasi-supernatural character generally attributed to him in the lower culture it would follow that intercourse with him might be productive of blessings. The greatest of blessings to women is fecundity. If, as is probable, the rite was a sacrifice of virginity at puberty, the woman was thus consecrated for married life, with its special duty of bearing and rearing offspring. A similar rite, it would seem, was practised in many other places, as far west as the Troad. It has been confounded with two other customs of the voluptuous East. One is that of dedicating girls at the temple of a divinity of fertility as prostitutes, whose gains went to the support of the worship and the priests. This seems, e.g., to have been a feature of the cult of the Armenian goddess Anāitis (Strabo, xi. 14. 16). There are indications that it was not unknown even in worship of Jahweh. It is still largely practised in India, and is preceded by a solemn ceremony in which the new recruit to the service of the deity is 'married' to him (authorities numerous; see Dubois, pp. 310, 584; A. M. T. Jackson and R. E. Enthoven, *FL Notes*, ii. [Konkan], *Mazgaon*, Bombay, 1915, p. 74; *Ethnog. Survey of Mysore*, Bangalore, 1906, ii. 8 [Holey caste]). The other custom was that by which a girl earned her dowry by prostitution. This is said to have been followed in Lydia, on the island of Cyprus, and elsewhere. It was not a religious practice, but was perhaps a survival of the social arrangements of ruder races. Girls among many of such races are before marriage accorded complete liberty, of which they take full advantage, ultimately wedding one or other of their lovers (the subject has been recently fully discussed; see artt. PROSTITUTION; *GB*³, pt. iv., *Adonis*, *Attis*, *Osiris*, London, 1914, i. 37 n., 57 ff., 70 ff.; W. M. Ramsay, *Cities and Bishoprics of Phrygia*, Oxford, 1895, pp. 94, 115, 135; L. R. Farnell, *Greece and Babylon*, Edinburgh, 1911, p. 268 ff.; F. Cumont, *Les Religions orientales dans le paganisme romain*, Paris, 1907, pp. 143, 286; *MI* ii. 444; E. S. Hartland, *Ritual and Belief*, p. 266 ff.).

The priapic deity of the Slave Coast, Legba, has, like some of the Eastern gods just referred to, women called his 'wives,' who are dedicated to his service, and give themselves illicitly to his worshippers at the time of the celebration of his mysteries. The excesses committed on these occasions are, we are told, 'of a nature which does not admit of any description.' 'At the commencement of the ceremony the priests cause the worshippers to drink a mystic draught, containing powerful aphrodisiacs. The mysteries invariably take place at night, and mostly in the "harem," at some little distance from the sacred building' (*IBIS*, *Extr.*, p. 44; cf. A. J. N. Trewearne, *The*

Tailed Head-hunters of Nigeria, London, 1912, p. 205). Indeed, the god is held to cause erotic dreams by consorting in his own person, either in male or in female form, with women or men during their sleep. His sacrifices are 'cocks, dogs and he-goats, chosen on account of their amorous propensities; but on very important occasions a human victim is offered' (Ellis, *Yoruba*, pp. 67, 60). When implored to remove barrenness, 'a sacrifice is offered, and the worshipper anoints the organ of the figure with palm-oil, in order that the required fertility may be attained.' On festival occasions the phallus is borne aloft in procession with great pomp, 'fastened to the end of a long pole. The worshippers dance and sing round it, and the image is waved to and fro, and pointed towards the young girls, amidst the laughter and acclamations of the spectators. Sometimes the phallus is concealed by a short skirt, or petticoat, which a man causes to fly up by pulling a string' (Ellis, *Ivra*, p. 44; cf. *Yoruba*, p. 65).

An officer of the French marine reports having witnessed, in 1787, a festival in the kingdom of Congo, when masked men executed a pantomime, carrying an enormous priapic figure worked by means of a spring (Dulaure, p. 41, citing L. de Grandpré, *Voyage à la côte occidentale d'Afrique*, i. 118). Higher up on the river Congo, between Isangila and Manyanga, there is a species of worship reminding us of the cult of Cybele in Greece. Its ministers are eunuchs, and it is intimately connected with a reverence for the moon. 'When the new moon appears, dances are performed by the eunuchs, who sacrifice a white fowl—which must always be male—in its honour. The bird is thrown up into the air and torn to pieces as it falls to earth. I was told that in former days a human victim was offered up on these occasions, but that in later times a white fowl had been substituted' (Johnston, *River Congo*, p. 409). Further details on this cult, which is said to be 'a vague phallic worship,' are much to be desired, in order to arrive at an accurate estimate of its extent and meaning. It would seem, however, to be an orgiastic cult, similar in some respects to that of Attis.

Further north, among the Ekoi of Nigeria, there is a *juju* named Eja, whose festival, celebrated at the time of new yams, is the chief festival of the year. Amaury Talbot, who inquired into it a few years ago, compares it to 'the old Adonis-Attis-Osiris worship.' He says: 'The ecstatic frenzy of the dancers, the trances into which some of them fall, and the jealousy with which all strangers are excluded, show that this ceremony holds a very special significance.' The cult is supposed to produce plentiful harvests, and 'also to protect human beings, farms and cattle from damage by lightning and thunderbolt.' It is said to have been brought from the interior of the continent, and to have been held every two years. To ensure the continued efficacy of the *juju*, however, sacrifices must be offered every two years. For this celebration 'medicine' is necessary—presumably to doctor the worshippers, a very common practice in Africa. Of the medicine the most essential ingredient is the sexual organ of a human being slain for the purpose, or by the act of removing the organ. The Ekoi prefer a female victim. But the rite is known elsewhere; and in the neighbouring Cameroons men are also sacrificed. Eja being a *juju* of fertility, it should be added that one of the chief ceremonies at the festival is the offering of firstfruits; and until it comes round neither *fufu* (yams and other things beaten up into a paste) nor fresh yams may be eaten (P. Amaury Talbot, *In the Shadow of the Bush*, London, 1912, pp. 74-78). The character of the cult leads to the suspicion that it culminates in sexual intercourse; but Talbot reports no evidence of this.

There seem to have been more than one god of fertility in ancient Egypt. This is not to be wondered at. The religion, like the State, was an amalgam. The gods of the petty States absorbed into the kingdom were similarly absorbed into the pantheon. Either they were recognized as identical with those of the State-religion, or, maintaining an independent existence, they became the special divinities of certain nomes. The chief god, in later times at all events, was Osiris, who, whatever else he may have been, was a god of vegetation, a god of creative energy who renewed the life of all living things. To this his myth, his pictorial representations, and his ritual unmistakably point. In all these his phallus was emphasized. Herodotus relates (ii. 48) that on his festival priapian images were carried about the villages by the women. They were each about a cubit in height, with a phallus almost as large as the rest of the figure, and worked by strings. We may assume that the antics performed with them by the bearers were substantially the same as those on the Slave Coast and in the Congo. Osiris was identified by the Greeks with their own divinity Dionysus, a god of similar character, to whom similar rites were performed. These were probably Osirian mysteries; there certainly were mysteries connected with the worship of Dionysus. In the latter, as well as in

his worship outside them, the phallus was carried about and prominently exhibited (Clem. Alex. *Protrept.* ii.; Arnobius, *adv. Gentes*, v. 28, 39). Dionysus was not indigenous to Greek soil. He was an intrusive deity, probably from Thrace, whose cult was accepted in Greece only after considerable opposition. His worship was celebrated at the festivals by men and women with orgiastic rites, in the course of which victims offered in sacrifice were torn in pieces and devoured raw, and the devotees indulged in sexual intercourse. The excitement, heightened by cries, wild dancing, and draughts of wine, was credited to possession by the god himself. Under cover of darkness (for night was the season when the performances culminated) all sorts of excesses were committed. Whatever was done in this mad rout, the votaries acting under the inspiration of the god were held not to have sacrificed their modesty (Euripides, *Bacchæ*, *passim*). Such a cult, it is obvious, was of barbaric origin. In this connexion it must be remembered that the Greeks had themselves emerged from a low state of civilization, and still retained many and startling survivals of that condition. The savage orgies introduced from Thrace and elsewhere found willing and powerful allies in the barbarous elements yet struggling in the midst of a growing culture. Thus reinforced, their victory was inevitable, whatever the better minds thought of them. They held the immense advantage that they provided an outlet for religious excitement, largely wanting in the more staid and regulated worship of Greece. The memory of the conflict passed away into the region of myth, whence it continued to exercise an influence, by no means negligible, in favour of the cult on the superstitious of all classes. It is probable, however, that contact with Greek thought and institutions refined and softened the ritual, purging it of its grosser elements.

A performance much modified, but containing some genuine hints of the barbarous archaic ritual, still takes place in the neighbourhood of Viza, the old Bizye, the capital of the Thracian kings.

Christians of the Greek Church are the actors. It is performed on the Monday of the last week of Carnival. Two *kalogéroi* play the chief parts, disguised with head-dresses made each of an entire goat-skin without the horns, but stuffed with hay and falling down over the face, thus forming a mask, with holes cut for the eyes and mouth. One of them carries a mock-bow, the other (the principal personage) wields a wooden phallus. Two boys dressed as girls are called *κορίτσια*, or in some of the villages *νύφες* ('brides'). There are also *καταβέλοι*, or gypsies, among the performers. Another man personates an old woman, called the Babo (cf. Baubo), carrying a doll (*λίκνιτς*) in a basket on her arm. This part in some places is taken by one of the *καταβέλοι*, who is dressed as a woman. Another of these gypsies, with the assistance of his wife, forges a ploughshare. The play includes the pursuit and marriage by the chief *καλογέρος* of a *κορίτσα*. He is subsequently shot by his male companion, and mourned by his bride and other actors. The preliminaries of burial are gone through; but he suddenly jumps up and comes to life again. The rites of the Greek Church are parodied both in the marriage and in the funeral. A house-to-house collection by the *καλογέροι*, dancing with the *κορίτσια*, begins the masquerade, while on the straw-beaps in front of the houses the *καταβέλοι* and his wife carry out from time to time an obscene pantomime. After the ploughshare is supposed to be finished, ploughing is represented. The plough is drawn contrary to the course of the sun round the village square. When the play was witnessed by R. M. Dawkins in 1906 at Haghios Georgios, two of the *κορίτσια* were harnessed to the plough. They were led by one of the *καλογέροι*; the other *καλογέρος* was at the plough-tail. In front marched the *καταβέλοι* and his wife with long rods; but after the second circuit of the square they were themselves harnessed to the plough. A man scattering seed followed, amid cries of 'May wheat be ten piastres the bushel! Rye five piastres the bushel! Barley three piastres the bushel! Amen, O God, that the poor may eat! Yea, O God, that poor folk be filled!' The evening was spent in feasting on the presents collected during the day (*JHS* xxvi. [1906] 191 ff.).

It can hardly be denied that in this carnival custom we have the survival of an archaic agricultural ritual. Its object evidently is to obtain a plenteous harvest and probably increase of men

and cattle. Of the orgies of which we read in the Dionysiac cult the remains are here decayed, but unmistakable. Dawkins points out that the *καλογέροι* wear padded backs and that the *κατσίβελαι* bear wands suggesting that the victim was originally beaten. The slayer even yet pretends to flay the slain *καλογέρος*. And Dawkins conjectures with probability that the latter represents the Thracian Dionysus, and that the part was once taken by a human victim put to death in downright earnest.

Compared with the Dionysiac rites, those of the Thesmophoria were from our point of view innocent. The Thesmophoria were celebrated by women alone, in honour of Demeter and Kore, in the autumnal month of Pyanepsion. Swine were offered in sacrifice. Phalli and snakes made of dough were carried about and dedicated to the goddesses, together with fir-cones as emblems of fertility and the remains of the sacrificed swine, by being thrown into the *μέγαρα*, or underground vaults appropriate to them as earth-goddesses. Men being excluded, there was no sexual indulgence; but there was flying—coarse and indecent chaff—between the participants. This ribaldry was part of the ceremonies; it was prophylactic, or intended 'to stimulate the fertilizing powers of the earth and the human frame.' Such was indeed the object of the entire ritual. Primarily agricultural, it was connected with the autumnal sowing. And its limitation to women probably relates back to that earliest stage of agriculture when the labour was done entirely by women. But, as elsewhere, the idea of vegetable fecundity was inseparably mixed up with that of human beings. The fasting and abstinence from sexual relations required on the part of the celebrants doubtless were directed to this double end (*CGS* iii. ch. ii.; J. E. Harrison, p. 120 ff.).

Less important than the Thesmophoria were the *Haloa*—like the former, an Attic festival. Their centre was at Eleusis. The festival, we are told, was held on the threshing-floor; and it seems to have been an autumnal celebration which had been displaced to mid-winter. Originally in all probability dedicated to the goddesses Demeter and Kore, as symbolizing the fruits of the earth, it has been conjectured that its displacement was due to the intrusion of Dionysus, who received divine honours together with the goddesses on the occasion. However this may be, men played very little part in it. The offerings were bloodless, therefore consisting of vegetable products, and were presented by the priestess. The sacred symbols of both sexes were handled, the priestesses secretly whispered into the ears of the women present (the men were absent) words that might not be uttered aloud; and the women themselves indulged in jests and flying similar, it would seem, to those of the Thesmophoria. The feast culminated in a banquet set out by the archons, but partaken of by the female celebrants alone. The banquet included cakes shaped like the symbols of sex (Harrison, p. 145 ff.; *CGS* iii. 45 ff.). At Greek marriages the rite of carrying the phallus in the *ἄλκων*, with other emblems of reproduction and plenty, was doubtless a charm to produce these results.

The Eleusinian mysteries were deeply penetrated by Dionysiac influence; and disgraceful things are said to have been done at them, as the Christian Fathers do not fail to remind their opponents. The most recent researches of scholars, however, have failed to discover, among the fragmentary hints supplied by ancient writers, any certain evidence of practices grosser than those of the Thesmophoria and the *Haloa*. In the worship of the Great Mother, introduced from Phrygia, and certain other foreign cults the sexual idea was

prominent, though in the case of Cybele the orgies seem to have taken an ascetic and unnatural development. Aphrodite was one of such alien goddesses; and her cult, in some places at all events, was of a most voluptuous description. But we need not here follow the matter into detail.

In Rome Tutunus or Mutunus, otherwise Fascinus, later identified with the foreign god Priapus, was a very ancient divinity. He was represented under the form of a phallus. His office, it was said, was to avert evil and evil spirits; to this we shall return below. Another god, Liber, was held to preside over fertility, including the cultivation of the vine and the increase of all fruits of the field, as well as of animals. He was worshipped in connexion with Ceres and Libera, feminine deities having a similar office, and, like Tutunus, was represented as a phallus. An indigenous Italian divinity, in course of time he was identified with Bacchus. St. Augustine hints at licentious rites, and quotes Varro as an authority for the celebration of his cult at cross-roads. At his festival his image was mounted on a car and carried round the cross-roads in the country, and thence into the city. At Lavinium the feast lasted for a month, during which a kind of Saturnalia prevailed. The image was then brought through the forum into the temple of the god, and the most honourable matron placed a wreath upon it before the assembled people (*Aug. de Civ. Dei*, vii. 21). Libera was identified with Venus, and represented in the temple by the image of the female organ. The excesses of the Bacchanalia at length compelled the senate to suppress them in Rome (*ib.* vi. 9).

Sexual excesses on such occasions were, no doubt, like those of the archaic Dionysiac worship in Greece, of a ritual character. Rites of this kind betray their origin in savagery. It is probable that they were unknown to few of the European peoples of antiquity; but we have little or no evidence of the fact outside the Balkan Peninsula and Italy. Throughout mediaeval Europe the various spring festivals seem to have been similar. Of some we have definite evidence to this effect. Of others it is only a matter of inference from the remains in modern times. History affords no account of their origin; they dated back to 'a time whereof the memory of man runneth not to the contrary'; and such a time was one of barbarism. They were joyous, mirthful occasions, on which young men and women took a prominent part, mingled and paired off. Though these feasts and merry makings may not have been always directly connected with agriculture, they were celebrated with the effervescence and abandon of renewed life and enjoyment, when all nature was reviving from its wintry death; and they commemorated, if they did not promote, that revival. There can be little doubt that they culminated in orgies generally recognized and tacitly permitted (*W. Mannhardt, Baumkultus*, Berlin, 1875, ch. v.). This was, indeed, one of the charges brought by the English Puritans against the May-day festivals (*anon., Essay*, in Payne Knight, p. 153, quoting P. Stubbes, *Anatomic of Abuses*, London, 1583).

Analogous customs are still or were lately in existence in the south-western islands of the E. Indian Archipelago.

The inhabitants of the islands of Leti, Moa, and Lakor pay divine honours to Upulero, Grandfather Sun, and Upunusa, Grandmother Earth. They are two spirits residing in the sun and earth respectively. Every year at the easterly monsoon the *numu*-tree (a species of *Ficus*) changes its leaves. It is then that Grandfather Sun comes down to fertilize Grandmother Earth. For this purpose he descends into the sacred *numu* of the village-community; and under this tree a great feast is held. The organization of the feast is a weighty matter of State; for it lasts a whole month. Pigs are contributed by the members of the community according to their ability, to be

slain in honour of Upulero, and afterwards eaten by the partakers of the feast. Thrice in varying terms during the feast the village priest calls upon Upulero to come and eat and drink; the pork and the chickens, the cooked rice and the drink, are ready. In return he is asked to give all good things to his expectant children, and to increase the number of the nobles and of the people. He is besought for ivory and gold, he is prayed to fill the fishing-boats, the paddy-baskets, the sago-vessels, to multiply the goats and pigs, to give food and drink, and to cause children to be safely brought into the world. Dances of various kinds (among which one is danced by women alone, and another—the *pisang*-dance, emblem of the *liŋgam*—by men alone) are performed to the accompaniment of drums that hardly cease day or night. The people await with expectation the coming of Upulero to fertilize Upunusa, and share in his enjoyment. Formerly at least, while the feast lasted the men and women had unrestricted access to one another (J. G. F. Riedel, *De sluit- en kroesharige Rassen tusschen Selebes en Papua*, Hague, 1886, p. 372).

Every year when the *sāl*-tree is in blossom the Orāons of Bengal celebrate the marriage of the earth-goddess with Dharme, the sun-god (see ORAONS, § 6).

But not every licentious rite can be accurately described as phallic worship. Many are purely magical.

Among the Nāga tribes of Manipur a month after the paddy is sown, and again before the firstfruits are cut by the village priest, a *genna*, or general tabu, accompanied by a festival, is held, when a 'tug of war' takes place, the women and girls pulling against the men and boys. The object of this is said to be to take the omens for the future of the crop. More probably it is intended to assure its future. The rite is attended by considerable licence (T. O. Hodson, *Nāga Tribes of Manipur*, London, 1911, p. 163).

The licence attending puberty ceremonies in various parts of the world is often great. It is sometimes ceremonial, as among the newly-made adults on emerging from the rites in many Bantu tribes. Even in such cases it cannot be called religious without an abuse of terms. It is rather a first assertion of adult life, a testing of new conditions, physical and social, at the most a magical proceeding to ensure fertility. Some sexual rites are prophylactic in intention, and will be considered later.

The ancient Nicaraguans, in whose ordinary life sexual relations were fairly strict, were reported to hold a yearly festival at which women were permitted to give themselves up to any men they chose (J. G. Müller, *Amer. Urreligionen*, Basel, 1867, p. 663). A hint is given by Dumont in the 18th cent. of a similar practice at the harvest festival of the Natchez, in Louisiana. This, however, seems to have been confined to the youth of both sexes, and may have been no more than an example of the ordinary courting customs (quoted by J. R. Swanton, *43 Bull. B.E.*, 1911, p. 121). In both cases details which would have enabled us to judge of the meaning of the festival are lacking.

The tribes of the N. American Plains, at any rate, had ceremonies, known as the Sun-dance, which were definitely religious. They were lengthy and elaborate, extending over eight days. We possess an excellent account of them by G. A. Dorsey. He witnessed them on more than one occasion.

The Sun-dance is performed by the Arapaho in accordance with a vow made by a member of the tribe at some crisis of his life. The entire community joins in the performance. A great lodge is built, every portion of which with its accessories is symbolic. One of the chief functionaries is the Lodge-maker, and another is his official 'grandfather,' called the Transferrer. At a certain point of the performance the Lodge-maker's wife and the Transferrer leave together the Rabbit-tipi, a lodge where the secret preparations are made for the dance. Deliberately, solemnly, and in ritual order they prepare for this duty. Each is clad in a single robe, all other clothing being removed. While a sacred song is sung and intense emotion prevails in the lodge, they pass out by a sunwise circuit over the fumes of rising incense and proceed to a spot a short distance away. It is midnight. After a few moments' prayer, in which they both emphasize the fact that they are about to do that which had been commanded at the time of the origin of the ceremony, and that what they are about to do is in keeping with the wish of their Father, the woman throws her covering on the ground and lies down on her back. The Transferrer, standing by her side, prays and offers her body

to Man-above, the Grandfather, the Four-Old-Men, and various minor gods. It is difficult to suppose, after this preface, that actual intercourse did not follow in former times; and it is to be gathered from the statement of one of the priests that in fact it took place. But it is averred that it is now prohibited—that abstinence is necessary, else 'the connexion does not benefit the people'; although it is admitted that 'the temptation is great.' During the act of intercourse, whether real or only symbolical, the Transferrer places in the woman's mouth a piece of root, which he has brought from the tipi, and which represents the seed or food given by the All-Powerful (Man-above). On her return to the tipi she transfers it to her husband's mouth directly from her own. Re-entering the tipi, she says, addressing him, 'I have returned, having performed the holy act which was commanded'; whereupon he and the other dancers thank her and pray for her success. The rite is repeated on the second night following with similar formalities. It is a dramatic representation in intimate relation with the myths of the tribe. The Transferrer represents Man-above, while the woman represents the mother of the tribe. 'The issue of their connexion is believed to be the birth of the people hereafter, or an increase in population. It is also a plea to all protective powers for their aid and care.' Thus it has a potent influence on the well-being of the people (*Field Columbian Mus. Pub., Anthropol.* iv. [1903] 173, 101). We are told by another authority that 'at the sun-dance an old man, crying out to the entire camp-circle, told the young people to amuse themselves; he told the women to consent if they were approached by a young man, for this was their opportunity'; and he deprecated jealousy on the part of husbands. The old women, moreover, at such dances encouraged the girls to licence (A. L. Kroeber, *Bull. Amer. Mus. Nat. Hist.* xviii. [1902] 15). The Cheyenne had an analogous rite at the Sun-dance (G. A. Dorsey, *Field Columbian Mus. Pub., Anthropol.* ix. [1905] 130). It was also comprised in some other of the sacred ceremonies of the Arapaho and other tribes—perhaps taken over from the Sun-dance (Kroeber, pp. 193, 200, 226; *Anthropol. Papers, Am. Mus. Nat. Hist.* i. [1903] 244).

On the other hand, the Buffalo-dance of the Mandans can only be designated as magical. Its object was to obtain a plentiful supply of buffaloes, the mainstay of Indian economy. It was part of a great annual religious celebration, including solemn prayers and offerings to the 'Great Spirit,' and other supernatural powers, and the young men's puberty ordeal of abstinence and tortures.

The entire series lasted for four days, during which the Buffalo-dance by eight men, disguised in buffalo-skins and horns, and imitating in their movements a herd of the animals, was repeatedly performed. On the last day, while they are thus dancing, there enters to them a grotesque and horrible personage, naked and covered with black paint of charcoal and grease, who, careering about, scatters terror and dismay among the spectators. He is provided with a wooden phallus of colossal dimensions, and a buffalo's tail. At first he pursues the women, but is ritually foiled by the intervention of the master of the ceremonies, armed with the sacred medicine-pipe. After repeated onsets of this kind he turns his attention to the eight buffalo-dancers and enacts with four of them as cows the part of a rutting bull. This appears to exhaust him. The women and children, then no longer afraid of him, crowd around and hustle him, the women dancing up to him and challenging him with lascivious attitudes. He is thus driven away, the phallus being intimately wrested by one of the women from his body (to which it was affixed by a thong) and carried in triumph into the village. There from the roof of the medicine-lodge 'she harangued the multitude for some time, claiming that she held the power of creation and of life and death over them, that she was the father of all the buffaloes, and that she could make them come or stay away as she pleased.' This gives the clue to the real meaning of the weird figure, whom Catlin, in describing the scene, takes to be 'the Evil Spirit.' Having possessed herself of his distinguishing implement, she temporarily assumed his character, she claimed his power, she became 'the Father of all the Buffaloes.' In that capacity she stopped the dance and ordered the tortures to be commenced in the medicine-lodge. In exchange for her trophy she received from the master of the ceremonies the handsomest dress in the tribe, and was appointed to 'the envied position of conductress of the Feast of the Buffaloes, to be given that night' (G. Catlin, *N. Amer. Indians*, new ed., London, 1876, l. letter xxii. and *folium reservatum*).

In this extraordinary scene we clearly have a pantomimic representation of a magical nature; for to its strict observance the Mandans attribute the coming of buffaloes to supply them with food during the season. The performance was, in short, believed to ensure the multiplication of the animals so necessary to the life of the tribe. Catlin, preoccupied with the dance and with the horrors of the medicine-lodge, says nothing of a scene during the same festival witnessed by Lewis and Clark some thirty years earlier. Various young married men offered the use of their respective wives to certain elders in place of a doll which

the latter were about to embrace, and regarded their acceptance as a great honour (M. Lewis and W. Clark, *Exped. to the Source of the Missouri*, reprint, London, 1905, i. 210). The account does not fully elucidate the intention of this rite. It is treated as if it were the only rite of importance at the feast. But the writer was not himself an eye-witness; he writes from the report of companions. We may conjecture that its object was similar to that of the Babylonian and Indian customs already mentioned. Such an object in the mind of a savage would not be inappropriate to the Buffalo-dance. Indeed, the proceedings of the women at the corresponding feast among the Hidatsa recall to another writer the women at the temple of Mylitta (Dorsey, *11 RBEW* [1889-90], p. 505, citing Maximilian, Prince of Wied). More obscure is the meaning of the medicine-dance, celebrated by a Mandan desirous of doing honour to his 'medicine' or fetish. A dance by the young unmarried women was part of the ceremonies, in the course of which they challenged and received in public the embraces of the youths (Lewis and Clark, i. 211).

It is thus apparent that what we call licentious rites are by no means always to be described as worship. They are ritual performances, but probably in the vast majority of cases they are intended to serve what may more properly be called magical purposes. Mimicry, either of the procedure or of the result to be attained, is one of the most widely adopted of the processes of magic. It has been fully expounded and abundantly illustrated by Frazer in *The Golden Bough*. Worship, however, has been so widely mixed with magic, especially in the lower culture, that it is not at all times easy to distinguish them. And, where magic relies to any extent, as it often does, on the assistance of supernatural beings, mimicry may be interpreted as an acted prayer, intended to make clear to the being whose aid is sought exactly what services are required. It is especially noteworthy that licentious rites are frequent (if a stronger word may not be used) at agricultural festivals. Nor is it overstating the facts to say that such rites are most fully developed and practised by a settled agricultural community. At agricultural festivals the gladness for the opening spring or the gathered harvest finds overflowing expression, the hopes, the aspirations for future increase of men, cattle, and fruits of the earth are uttered in a crescendo of acts as well as words; dancing and alcohol powerfully contribute to an excitement of growing intensity; and worship becomes an orgy.

Indeed, a recent investigation of the aboriginal tribes of Mexico goes farther, and attributes literally and physically the continuance of the Tarahumare to their agricultural festivals.

The national drink of the tribe is *tesvino*, an intoxicating liquor made from Indian corn. It is 'an integral part of the Tarahumare religion. It is used at all its celebrations, dances, and ceremonies. At the festivals food and drink are offered to the gods, speeches are made, and dances performed. 'While the dancing and singing, sacrificing and speechmaking are going on, the people behave with decorous solemnity and formality. The ceremonies are never interrupted by unseemly conduct; everybody deports himself with grave sobriety, and refrains from loud talking and laughing, and from making any disrespectful noise. But after the gods have been given their share, the people go in, no less energetically, for enjoying themselves.' It is, in fact, the avowed aim and intention of everybody to get drunk; and the drinking ends in a sexual debauch. 'Under the influence of the liquor, men and women rapidly lose that bashfulness and modesty which in ordinary life are such characteristic traits of their deportment. . . . Aside from social and religious considerations, the drinking of *tesvino* is a vital factor in the national life of the tribe. Incredible as it may sound, yet, after prolonged and careful research into this interesting psychological problem, I do not hesitate to state that in the ordinary course of his existence the uncivilised Tarahumare is too bashful and modest to enforce his matrimonial rights and privileges; and that by means of *tesvino*

chiefly the race is kept alive and increasing. It is especially at the feasts connected with the agricultural work that sexual promiscuity takes place' (C. Lunnholtz, *Unknown Mexico*, 2 vols., London, 1903, i. 253, 350 ff.).

But sexual indulgence in a ritual form occurs on other occasions.

Thus at the time of the blossoming of the rice, and for the purpose of increasing the yield, in some districts of Java, the owner of the rice-field and his wife run round it naked, and then and there unite in conjugal embraces (Wilken, iii. 41). Among the Pipiles of Central America, after four days' abstinence, the husband and wife on the night before planting This was 'enjoined default of which it was not lawful to sow the seed.' 'Certain persons are even said to have been appointed to perform the sexual act at the very moment when the first seeds were deposited in the ground' (*GE*, pt. i., *The Magic Art*, ii. 98). On the other hand, on the islands of Ambon and Uliase, in order to promote the fertility of the cloves, if a poor crop be threatened, the man goes to the plantation by night, alone and naked, and there simulates coition with one of the trees, crying out 'More cloves!' (Wilken, iii. 45).

These performances are unaided by festival stimulus. They are an obvious application of mimetic magic to agricultural purposes, or are intended, as Wilken suggests, to excite the sexual passions attributed to the growing crops regarded as living things, and so to promote their fecundity (iii. 175). In Java, at the ingathering of the rice, bundles of ears are tied up to represent a bridal pair; and the harvest is carried out with the ceremonies of a marriage (*ib.* 41; cf. 175).

The Egyptian procession of women in honour of Osiris, to which reference has already been made, seems to have been at least tinged with worship. As described by Herodotus, it was led by a flute-player; and the women followed, singing the praises of the god. They carried priapian figures, worked by means of strings. We may suspect from this description that in origin it was a magical rite, which had grown up independent of strictly cultural associations. The influence of such associations may have purified it of its grosser features; for the historian gives us no hint of sexual licence on the occasion. In India, where Siva is worshipped under the form of the *lingam*, the idol has a purely conventional shape, and is not of itself suggestive of sexual ideas. Siva seems to have been a non-Aryan deity, adopted subsequently to Vedic times into the Hindu pantheon. There he has obtained a highly exalted position. His worship has spread more or less throughout India. The Saivas do not connect his symbol with eroticism; indeed, an erotic tendency is markedly absent from his ascetic cult (art. *HINDUISM*, vol. vi. p. 701; cf. Sellon, *Mem. Anthropol. Soc.* i. 327), though it is said that certain sectaries among the worshippers of Viṣṇu, by whom the female emblem is honoured as the manifestation of the power or energy of the god in female form, and the Vama-charis, who worship the female counterpart of Siva, at times indulge in an orgiastic *puya*, comparable to the worst things recorded or imagined of Eskimo feasts or the nocturnal revels of mediæval witches (Dubois, p. 286; *Census of India, 1911*, Report, xvi. 76). These rites may be survivals of an aboriginal practice; they may, on the other hand, be an abuse of comparatively modern date. In this connexion it is not unimportant to mention the fact to which Crooke calls attention, namely, that, if phallic practices—and indeed phallic worship in general—be a non-Aryan cult, it was by no means universal among the aboriginal races of India.

Whatever be the case of the Vaisnavite and Vama-chari practices, phallic rites, as we have seen, were an ancient institution in Rome; but the worst excesses seem to have arisen after the importation of foreign deities, and perhaps as part of the depravation of manners among certain classes of the population at a time of increasing luxury

and leisure. The Roman god *Fascinus* was served by the Vestal Virgins as priestesses (*HN* xxviii. 7), whose rule of chastity was proverbially strict. The rites of the Bona Dea probably had relation to the promotion of fecundity of the earth and of women, as part of the general prosperity. They were celebrated by women alone; and, though we gather that they were more or less orgiastic, it was only after the admission of men in the early days of the empire that disorders resulted (*L. Preller, Röm. Mythologie*³, 2 vols., Berlin, 1881-83, i. 403). We must, however, be on our guard against supposing that all the Roman rites in honour of fertility were originally what we call innocent. We have little or no direct evidence on the subject. But we cannot be far wrong in thinking that, not only in Rome but throughout Italy, the festivals of *Liber* and the *Saturnalia* (held at the completion of the sowing) conformed to similar festivals elsewhere in including sexual relations, which were, in origin at all events, magical in their object. Attention has been already called to the probably similar character of the May-day and other celebrations of mediæval Europe.

Reference has also been made to megalithic monuments. Evidence of their use as phallic representations is particularly abundant in France and the neighbouring countries. On many of these stones, as well as on certain natural rocks, women desirous of children or of being married rub themselves. Sometimes the husbands take part in the ceremony. Nor is it confined to stones and rocks: trees of suggestive appearance or statues of saints and other objects are equally resorted to for this and similar practices, and are doubtless equally effective. Menhirs, indeed, are frequently the centre of rites, such as dancing, singing, and kissing, which can be nothing else but survivals of religious observances. Some of them have been surmounted by a cross, and thus (possibly, too, with other rites) consecrated to Christianity. The legends that have gathered round consecrated and unconsecrated alike bear witness to their pagan origin, and to the enduring devotion of the peasantry, which has here and there conquered the aversion of their spiritual guides and compelled a compromise with the old heathenism. The population was converted only by slow degrees to a higher religion. The ancient sanctity of these objects, the potency once ascribed to them, would linger on, though with decreasing influence. Their shape would alone remain to fix the speculations of generations that had forgotten the religious beliefs and the plenitude of the rites of their forefathers. Round that shape the vague remains of those primitive beliefs would crystallize and be expressed in tale and superstition, sometimes thinly overlaid by Christianity, but more often sturdily independent of it. Elsewhere in Europe and the surrounding islands, and in many other parts of the world, analogous rites for the cure of sterility are, or have been, performed. They frequently exhibit a mixture of magic and religion profoundly interesting to the student of anthropology (*Hartland, Primitive Paternity*, i. 124 ff., and the authorities there referred to). The illustration of the subject belongs to the consideration of sympathetic magic rather than to the present inquiry. It is enough to observe in this place that it is but one application of a wide-spread notion that contact with something to which sacredness or power is for any reason attributed will result in conferring an appropriate benefit. Where in the progress of civilization the practice of endeavouring to secure fertility in this manner has been abandoned, survivals in jest or proverb are often found. Thus at *Cerne Abbas*, if an unmarried girl becomes pregnant, the current ex-

pression is, 'She has been sitting on the giant.' In the same way, in Provence, a girl was said to have offered her virgin robe to St. Foutin (anon., *Essay*, in Payne Knight, p. 134).

Another magical proceeding is the employment of phallic figures as amulets. It was well known in classical antiquity, and many such amulets for personal wear, especially from Italy, are still extant. The priapic form of boundary-stones is probably due to a belief in its prophylactic value. This form, or perhaps the god whom it represented and embodied, was held to have power to avert evils of various kinds, as well as to ensure fertility. Negatively considered, indeed, to ensure fertility is to avert evil. An emblem of fertilizing power, the phallus was the foe of sterility, of death, and of all the ills that flesh is heir to. It protected fields and vineyards alike against birds and human thieves and the subtler influences that withheld the fruit or spoiled the crops. It was sculptured on the walls of buildings, as at *Alatri*, near Rome, where it is still to be seen, but where, by a revulsion of custom, it has long been a semi-religious practice for the inhabitants to go out *en masse* to mutilate the figures on Easter Monday (*A. J. C. Hare and St. C. Baddeley, Days near Rome*, London, 1906, p. 140). Yet the same inhabitants doubtless commonly carry it as a talisman on their own persons. The emblem has also been found scratched on Roman buildings in Britain. The continued belief in its apotropaic power seems to account for its appearance on the doorways of the cathedral at *Toulouse* and other churches in France (anon., *Essay*, in Payne Knight, p. 124) and a corresponding belief for the *Sheilana-gig* in these islands. The same reason possibly accounts for the 'pillars of shamelessness' which *Clement of Alexandria (Protrept. iv.)* twits the heathen with setting up in their houses and guarding with scrupulous care. The passage as it stands appears to extend to other images and mythological pictures; but we must perhaps make allowance for the author's puritanical bias and controversial purpose and for his rhetoric. So the phalli reported to have been brought away by those who were initiated into the mysteries of *Aphrodite* at *Cyprus* were probably amulets securing the protection of the deity (*ib. ii.*; *Arnobius, adv. Gentes*, v. 19). Small medals in lead bearing phallic representations have been found in the *Seine*; they seem to be identifiable as amulets (anon., *Essay*, in Payne Knight, p. 137).

The furniture of ancient tombs frequently includes phalli—perhaps to ward off evil from the dead (a striking example from *Egypt* is mentioned in *Dulaure*, p. 43). Large stones of phallic shape have repeatedly been found in graves of the Viking age, in *Norway*, both on the numerous fiords and inland. Some of them are preserved in the museum at *Christiana*. Their exact purpose is unknown; but it has been conjectured that they were in fact phalli, and were intended to serve a similar purpose to that of the smaller objects in the Mediterranean area (the writer is indebted for this information to the late Dr. *Henry Colley March*, who had examined the stones and discussed their intention with the curator of the museum). On the other hand, it may be that they are to be classed with the 'pillars of white stone' frequently set up on barrows in *Scandinavia*, which were probably connected with ancestor-worship, and may have been, as their shape suggests, phalli (*Goblet d'Alviella, The Migration of Symbols*, Eng. tr., London, 1894, p. 107).

The phallus broke through witchcrafts. Against the evil eye it was potent. Therefore victorious generals had the image of *Fascinus* before their cars in their triumphal processions in *Rome*. From

the use of the symbol at Rome the god *Fascinus* probably acquired that name, and the word *fascinum* ('enchantment,' 'witchcraft') became an ordinary word for the phallus. Even to-day, in Italy and other Mediterranean countries, the figure of a phallus is among the commonest amulets worn by men, women, and children, though often disguised as a closed fist, with the thumb protruding between the first and second fingers. In this form it is called the *fico*, or 'fig'; and the action of forming the *fico* is a customary prophylactic improvised against a suddenly suspected witchcraft, such as an assault of the evil eye (*q.v.*). In Minuhassa (Celibes) the same gesture is made. It is not only a defence from, but also a defiance of, the evil eye. By an extension of the idea it becomes a defiance of a human opponent in a quarrel; on the island of Ambon, when men are quarrelling, one of them will uncover his sexual organ as a challenge to the other (Wilken, iii. 318)—probably, with its innuendo of magic, all the more deadly. In India a tiny plate of gold, called the *tali*, shaped like the leaf of the Indian fig-tree, and representing the phallus, is tied about a woman's neck at her marriage. When, in the 18th cent., Roman Catholic missionaries endeavoured to substitute the cross, they met with such resistance among their converts that they were forced to a compromise: the *tali* was still permitted to be worn, but a cross was engraved upon it (Dulaure, p. 81, citing Sonnerat). On the island of Nias the centre of the panels composing the walls of a house is filled with a sort of rosette; but very often the rosette is replaced by a phallus, more or less disguised, but still recognizable. When an epidemic has broken out in a *kampung* (whence our word 'compound'), or enclosed family settlement, grotesque and horrible figures are set up at the entrances to neighbouring *kampungs* to frighten away the evil spirit causing the sickness. Often these figures are adorned with extraordinarily large organs of sex. In the northern district of the island the sexual organs forming part of the image of the *adu* (which, as we have seen, is ithyphallic) are avowedly emphasized to frighten away the hostile spirits, rather than as a symbol of fecundity or an amulet against the evil eye (de Zwaan, pp. 66, 64).

These purposes, however, are not incompatible with one another.

Just as the phallus came in the ancient world to have a much extended significance, in Japan, from representing the generative or procreative power, 'it has become the symbol of the more abstract conception of lusty animal life, the foe to death and disease. Hence its use as a magical prophylactic appliance. In *Shinto* this latter principle is much the more prominent. It is embodied in the name *Sahe no kami*, which means "preventive deities." The application of this epithet is clear from the circumstance that in a *norito* [liturgical prayer] they are invoked for protection against the "unfriendly and savage beings of the Root Country," that is to say *Yomi* or *Hades*. These by no means imaginary personages . . . represent, or rather are identical with, diseases and other evils associated with death and the grave. Epidemic and contagious diseases are specially intended. Hence the *Sahe no kami* are also called *Yakushin*, or "Pestilence Deities," meaning the Gods who ward off pestilence, a phrase wrongly taken in later times to signify the Gods who produce pestilence" (Aston, p. 187).

We have seen that the peach is in Japan the representative of the *kteis*. In conformity with this symbolism peach-wood staves were used in the demon-expelling ceremony on the last day of the year. At the festival in honour of the *Sahe no kami*, or phallic deities, held at the first full moon of the year, boys used to go about striking the younger women with potsticks employed in the making of gruel on the occasion. This was held to ensure fertility. The sticks were of willow, whittled near the top into a mass of adherent shavings; and it is suggested with probability that they had a phallic significance (Aston, p. 189 f.). The *Ainu*, the *Arunta* of Central Aus-

tralia, and other peoples, it is true, use similar wands in their sacred ceremonies apparently without any phallic meaning. The practice at the Japanese festival, however, coincides with that of the *Luperci*, who pursued and struck women with thongs of goat-skin for a fertilizing purpose. It resembles also that of striking women and girls with willow- or birch-twigs at various modern European festivals. About Roding in the Upper Palatinate the bride is thus struck as she walks up from the church-door to her seat at the marriage service (Hartland, *Prim. Paternity*, i. 103, citing authorities). It is reasonably clear that in all these cases the intention is to promote fertility. This intention is quite certain if we compare with these rites one reported from the Konkan, Bombay Presidency, India.

We are told that the Konkan villagers on the day of an eclipse 'strike barren trees with a pestle, in order that they may bear fruit and flowers. A barren woman is also beaten with the same motive.' Presumably it is meant that the woman is beaten with the same instrument as the trees. The pestle is obviously regarded as a phallus (Jackson-Enthoven, *FL Notes*, ii. 9, recording a report by the schoolmaster, at Kalse, Ratnāgiri).

Phalli were used with ritual significance by the heathen Norsemen. An ancient poem in dialogue still exists in which is delineated a ceremony apparently performed in the family of a *karl*, or peasant-farmer.

The Goodman himself, his wife, son, and daughter, and the thrall and bondmaid take the phallus in turn, each repeating an appropriate stave or spell, and handing it on to the next. Three guests, however, are present; and one of them, unknown to the Goodman, is the king, St. Olaf. When it comes to his turn, he seizes the object and casts it to the dog, to the no small consternation of the goodwife. With the family's recognition of him the poem breaks off abruptly (G. Vigfusson and F. Y. Powell, *Corpus Poet. Boreale*, 2 vols., Oxford, 1888, ii. 350).

Such objects seem to be included in those denounced in the Scandinavian Church law under the name of *bloeti*, 'hallowed thing' or 'talisman' (*ib.* i. 408). Their precise use is, however, uncertain.

The origin of the wide-spread custom of circumcision and of the related mutilations of the sexual organs, both male and female, has often been discussed (see art. CIRCUMCISION), and needs no more than a passing notice here. These rites are unquestionable evidence of the preoccupation of the savage mind with sexual matters. Whatever other motives may have contributed to their institution, there can be no doubt that they are above all a preparation for adult life—that is to say, for the sexual life—and are intended to facilitate the procreation of children. This was, of course, in normal cases quite needless; but the practice had regard not merely to individual convenience and comfort, but also to the wider interests of society. As a social act, it is found connected with religion in very rudimentary grades of civilization. In the lower culture generally it is performed on a number of patients at the same time, at or near adolescence, and avowedly as an initiation into adult life. Instruction in their future duties, and in fact the whole moral code of the tribe, but especially in relation to sexual matters, and in the religious traditions and sanctions which form the tribal belief, is commonly an important part of the proceedings. The religious element, to be sure, in this definite form is not invariably found; but, where the practice survives into a more advanced stage, a distinctly religious motive is usually imputed.

Among the *Ewe* and *Yoruba* of the Slave Coast it seems to be an act of sacrifice to *Elegba* (Ellis, *Ewe*, p. 43, *Yoruba*, p. 66). A similar rite was enacted by the *Totonacs* of E. Mexico on presentation of the infant boy in the temple on the twenty-eighth or twenty-ninth day after birth; and *Acosta* states generally of Mexico (perhaps meaning the city and dominant tribe of the country) that the mother brought the child to the priest in the temple, and that he made a small cut in the ear and in the prepuce (H. H. Ploss, *Das Kind*², Leipzig, 1884, i.

856 f.). But the accounts do not clearly show the extent of the operation. Among the Hebrews it certainly was a religious ceremony; moreover, the importance attached to the male organ was such that oaths were taken upon it, and that admittance to the national religious privileges was debarred to those who were not circumcised, and to those whose organs, on the other hand, were not perfect in every other respect. Among the Muhammadans (as probably among the ancient Arabs) circumcision is likewise a religious rite. In Arabia at the present day it is performed at a festival, formerly, there can be little doubt, of a licentious character, and probably a survival of the spring festival in which the ancient Semitic mother-goddess was honoured (G. A. Barton, *A Sketch of Semitic Origins*, New York, 1902, pp. 99, 110). Circumcision takes place among Muhammadans at an early age, and it is not now, whatever it may have been in 'the times of ignorance,' in strictness a puberty rite. But it may be noted that puberty rites are very commonly the occasion of licentious outbursts and miscellaneous sexual commerce.

3. General considerations.—The various practices, then, commonly and collectively known as phallic worship are a congeries of rites partly cultual and partly magical. While many of them are easily distinguishable into these two classes, many, on the other hand, are on the border-line between cult and magic. Religion and magic alike originate in the emotional nature of mankind, rather than in the reasoning faculties; and only in the highest civilizations, if completely even there, are they separated.

In savage and barbaric stages of culture sexual matters are discussed with more openness than with us. They are taken more as a matter of course. The literature of every country discloses how long this habit may persist into the higher civilization. Greater or less laxity of sexual morality, despite individual jealousies, is likely to be an accompaniment of this freedom of speech. It is notorious, in fact, among a large number of peoples. Races, to be sure, differ in this respect. Some are comparatively cold; among others erotic passion is a prominent characteristic, impelling them to continual gratification and change of object. That it should frequently be encouraged and consecrated by religion is only what we might anticipate. Thus it comes about that religious festivals—prepared for by days or weeks of anxious observances, fasting, and asceticism, during which the emotions are gradually excited and wrought to a high tension—culminate in a recoil of wild indulgence of the pent-up passions. The community comes together in general assembly on such occasions. The social instincts are gratified, and the imagination and the feelings are stimulated, by the dances and other ceremonies performed and witnessed in common. All the physical needs, all the desires previously repressed, are satisfied; and, since sexual impulses are as crude and almost as powerful in primitive humanity as the craving for food, their unrestrained indulgence is parallel with the unlimited eating and drinking on these occasions. This consecration of outbursts of debauchery by religion, when once it has taken place, preserves them for long periods as a physical and social pleasure and, more, as a religious duty, amid the changes of culture and growing refinement of manners.

While a dispassionate view of religion refuses to identify it with sexual and amatory passion (see art. FEMALE PRINCIPLE), these are, notwithstanding, intimately related. Emotion, once excited in any direction, is often either diverted into another or carries with it in its vehemence objects not at first contemplated—nay, even fills and overflows all the channels of life. The very strength of sexual passion, upon which the continuance of the race depends, renders it peculiarly liable to attract and unite with religious emotion. That it has done this in all historical ages is shown not merely by phallic practices and the use of phallic emblems such as we have considered, but equally by the sensual or the ascetic excesses into which

religions fanaticism almost everywhere falls. The crazy votaries of the Mother of the Gods, who in her honour deprived themselves of their manhood, were the subjects of sexual obsession no less than the worshippers of Anaitis or Eleggba. Vowed celibacy, whether solitary or in communities, of all religions is preoccupied with the sexual idea. It leads to nauseous developments, like those of St. Teresa or St. Catharine of Siena; or human nature gives way under the strain to unregulated physical satisfaction of the very passions which it has endeavoured to suppress. Through intense erotic passion in its higher manifestations, as through intense religious passion, there runs a rich vein of mysticism. The religious devotee and the lover are alike impelled to union with the object of devotion—union which is envisaged as more than corporeal, loftier, more intimate, merging the being in that which is so eagerly adored. All others are renounced, contemned. In religion, where the object is by the nature of the case incapable of possession, of appropriation, the worshipper has no means of complete satisfaction of his passion. Especially where the object is conceived as of the opposite sex, his passion in extreme cases becomes monomania. Even where it falls short of that, it often drives him to extravagances and fantastic surrogates for the satisfaction which is denied him. The lives of ancient hermits, the annals of the cloister, as well as the history of many a Christian sect, bear abundant witness to the evil; and Christianity has had no monopoly of it.

Save in a few instances, however, such as the worship of Cybele, the eroto-religious fervour in paganism exhausts itself in occasional orgies. In the intervals the worshippers are sane; the intoxication past, they resume their normal selves. Usually intermittent outbreaks are sufficient to satisfy the human craving for excitement. When sexual passion is crude and easily expended on other objects, and when the religious ideal is child-like and undeveloped, so that the divinity is imagined as quite apart from humanity and without any intimate sympathies with the individual worshipper, but rather as the ruler of a tribe or community, sexual passion does not morbidly and continuously project itself into the religious sphere. The periodical religious orgies afford ample scope for the gratification of the sexual instinct beyond the normal indulgence. In that stage sexual and religious mysticism asks no more than the belief that the orgies are an imitation, a dramatic representation, of the divine procedure, or an assistance to it—in either case a religious duty—and a social enjoyment crowned with the privilege of sharing it in some sense with the god.

For illustrations of the stage in question we may refer to the festivals in honour of Grandfather Sun and Grandmother Earth in various E. Indian islands and to the Sun-dance of the tribes of the N. American Plains. The worship of the old Semitic mother-goddess and of the cognate divinities of S.W. Asia seems to have been not dissimilar. To this type we may probably also refer the ancient Thracian worship of Dionysus. When by a missionary movement he entered Greece, his cult became more individual; it was raised to a higher plane and refined; Orphic influences and speculations, originating perhaps in Crete, gave it a new tone and content.

The divinity associated with these periodical orgies, as soon as he has assumed definite characteristics, is found to be one among whose attributes fertility is prominent. To him the mild and genial sunshine, the rains and revival of nature, all the conditions of the fruitfulness of earth, the increase of food, and the multiplication of the people are

ascribed. His worship is directed to obtain these blessings, without which life is impossible. The rites are not confined to prayer and sacrifice, as to a strictly personal being. What we call magic mingles with these and rivals them in potency. It is, in fact, an essential part of the performance. The social gatherings and the rites are no doubt far older than the divinity, far older than any practical aim beyond that of pleasure and gratification. They were in their rude beginnings an expression of the emotions of the community before the divine personality was dimly imagined. His worship and symbols have grown out of them. The process was probably unconscious. Many generations may have elapsed before a motive less vague than social enjoyment was evolved for the periodical reunions. But, when man's curiosity about himself and his surroundings led him to discover the connexion of sexual passion with the mystery of birth, then the dance, the rhythmical cries, and the sexual indulgence practised in the assemblies of the group would be fitted with a deeper meaning. They would be held to arouse the emotions and kindle the appetites of the animals and the crops, more or less personalized and interpreted in human terms, or to act as spells directly on them; or they would become appeals to, and perchance a species of co-operation with, the higher powers conceived as ruling the course of nature. Social amusement would thus be transfigured into obligation, and the welfare of the community would be held to be dependent on its punctual observance.

A cult like this is apt to become specially developed in a population dependent for the supply of food and other necessities and comforts of life on some form of agriculture, though not, as we have seen, exclusively confined to these. Its rites relate to the immediate needs of the community. Their symbols are drawn from those needs. The festivals are held at periods when the chief labours of the year are about to be undertaken or are just completed—before sowing, in the interval between sowing and harvest, and after the crops have been gathered in. These are the times when the collective emotions are liveliest and the pause in the collective labours gives opportunity for feeling the awakening influences of the spring, the anxiety for the success of the operations of the year, or the satisfaction, gladness, and sense of security of the results. It is no wonder that they overflow in words and actions repressed (it may be sternly) at other times, and regarded with disgust by a civilization that has risen above such coarse and brutal exhibitions. For what an experienced observer says, describing the harvest festival in Borneo, is of wide application:

'The whole festival is a celebration or cult of the principle of fertility and vitality—that of the women no less than that of the padi' (C. Hose and W. McDougall, *Pagan Tribes of Borneo*, 2 vols., London, 1912, i. 112).

Some of these festivals took the form of a sacred marriage—a marriage, i.e., of the god and goddess of fertility, such as the marriage of the sun-god and earth-goddess celebrated by the Orōns and in the E. Indian Archipelago.

'At Calah,' once the capital of Assyria, 'the marriage of the god Nabu appears to have been annually celebrated on the third of the month Iyyar or Airu, which corresponded to May' (*GB*, pt. i., *The Magic Art*, ii. 130). The marriage of Zeus and Hera was performed annually in various parts of Greece. In India, in the Salem district of the Madras Presidency, the Malayālis, a Tamil tribe, celebrate the marriage of their tribal god, Sarvarāyam, with the goddess of the Cauvery river. This union is supposed to fertilize the cultivated lands of the tribe (*FL* xxii. [1911] 229). Among the Bambara of the Niger basin in W. Africa the male and female idols are believed to couple at the time of the annual sacrifices offered before the rainy season (J. Henry, *L'Âme d'un peuple africain*: 1910, p. 151). Frazer suggests that the May at European spring festivals are relic
In this connexion it is interesting to

festival, a peasant celebration of a similar character, in Gujārat, a mock-marriage dressed as bride
'Gujarat,' *Maz*: conjecture be correct or not—and it is not unfeasible—we frequently find in such ceremonies the part of the goddess played by a mortal woman. In Athens Dionysus was married every year to the queen, the wife of the king archon. Probably the annual spring festival in Scandinavia, when the image of Frey was drawn round the country in a waggon, accompanied by his young priestess, who was called the god's wife, was a similar rite (*Grimm, Teut. Myth.* i. 213; *GB*, pt. i., *The Magic Art*, ii. 143). The Blackfeet of N. America are said to have married the sun every year to the moon, represented by a maiden or a woman who had had only one husband. The Algonquins married their nets to two young girls of six or seven years of age (thus securing that they were virgins); and the Hurons adopted the custom from them (*GB*, pt. i., *The Magic Art*, ii. 146f.). These are evidently rites to secure fertility and plenty. As might be expected, the consummation of the divine union often comes to be enacted. It was so in the case of Dionysus in Athens; 'but whether the part of the god was played by a man or an image we do not know' (*ib.* p. 136). Among the Orōns the priest and his wife represent the divine personages. Jagannāth's bride is put into the god's bed, and a Brāhman is said to join her there, to play the god's part.

A further stage is reached when the god is provided with a permanent wife or wives.

The ancient Egyptian queen was held to be wedded to the god Ammon, who approached her in the likeness of her earthly consort, the Pharaoh, as Uther Pendragon approached Igraine and the hero Astrabakus the wife of Ariston, king of Sparta. Similarly, in Babylon a woman was kept in the lofty temple of Bel as his wife. 'The Indians of a village in Peru have been known to marry a beautiful girl, about fourteen years of age, to a stone shaped like a human being, which they regarded as a god (*huaca*). All the villagers took part in the marriage ceremony, which lasted three days, and was attended with much revelry. The girl thereafter remained a virgin and sacrificed to the idol for the people. They showed her the uttermost reverence and deemed her divine' (*ib.* p. 146).

In such cases the provision of a wife was probably looked upon as an ordinary duty to the god, who was thought of in anthropomorphic terms. Such wife frequently became his priestess. And the relation between the god and his wife may not always have been the direct cause of fertility or other blessings to the worshippers, though doubtless the neglect to provide a wife would have aroused the divine resentment.

In India, where prostitutes are attached to a temple, they are first married to the god. The Kaikōlans, a caste of Tamil weavers, deem it right that at least one girl in every family should be dedicated to the temple service. At Coimbatore the marriage ceremony is performed before the idol, presumably Siva. A Brāhman ties the *tālī* upon her; and at night the god is represented by a sword, which is laid by her side before any one else is allowed to approach her. So realistically is the relation between the god and the girl conceived that at her death the idol, as her husband, has to observe the customary death-pollution; consequently no *pūja* is performed in the temple until her body has been disposed of (*E. Thurston, Castes and Tribes of S. India, Madras, 1909*, iii. 37ff.). A ceremony widely practised in India is that of marrying Viṣṇu to a *tulsi*-plant, or of marrying an *asvattha*-plant to a *margosa*-plant, and so forth. This is performed by husbands and wives to obtain offspring (*Census of India, 1911, Report*, vii. 63, xvi. 176, xxi. 89).

Generally, when from various causes a pantheon develops, the individual divinities become more or less specialized, and the patronage of sexual love and human fecundity is often severed from that of the multiplication of flocks and herds and the seeds of the field. This has been the case with the Negro divinity Legba. In Greece the imported goddess Aphrodite tended in the same way to become the goddess of beauty and human love, obscuring the wider functions that she originally exercised and in many places continued to share with other divinities. In such cases the licentious rites are often emphasized and turned to uses involving more than a disregard—a conscious defiance—of all moral regulations. Societies deeply penetrated with this cancer are on the way to dissolution.

But a much more legitimate motive dictates recourse to these divinities. The desire for offspring, so vital to the species, is deeply imprinted in every normal individual. It is, indeed, limited by the necessity for finding room and subsistence. Where

this condition presses on the community, as among very low races and peoples hemmed in by geographical or political obstacles, it is counteracted by infanticide; but elsewhere it impels to reproduction. Women as well as men, and even more than men, wish for children. Nowhere is the wish more in evidence than among patrilineal peoples, where women are held in esteem according as they are, or are not, blessed with children, and it is a reproach to a married woman to be childless. So strong is the desire for offspring that a man often cares not who has begotten the children reckoned to him. He will marry a woman who has proved her capacity for childbearing, in order to obtain not only the children she may hereafter bear, but those she has already borne. He will subject his wife to other men's embraces with perfect indifference, so long as the children resulting become his, or even for the purpose of thus acquiring children. In such a community, it need hardly be said, the issue of adultery—i.e. the wife's connexion with a man unlicensed by the husband—is usually claimed by the latter, though he may dissolve the marriage or punish the wife even with death. Here, then, resort to divinities of fecundity to procure offspring is natural and, granted their ability to bestow it, reasonable. Wherever the desire for children is strong, such resort is witnessed in custom and told in story. Ancestor-worship lends itself to the practice. An ancestor who founded or continued the family is interested in its permanence. If he be possessed of power, which his worship presumes, he will, when properly approached, exercise that power to grant increase to his seed. It is, therefore, not without significance that his image should be, as in some cases we have seen it to be, represented in ithyphallic form.

The rites employed to attain the object are, as we have learned, very various. Vows, prayers, and offerings to the god are things of course. When he is in phallic form, he is embraced; and for this purpose many objects are deemed phallic that were not so intended. A human representative may play the part of the god. Mere contact with a sacred object is often sufficient. Phallic amulets are everywhere in request. They may be placed in or about the dwelling, or, more likely, are worn on the person, so as to secure continuous contact. Special kinds of food, or food prepared with special rites, may be prescribed, or the drinking of, or bathing in, various liquids (Hartland, *Prim. Paternity*, i. ch. ii. f.). These and other methods are mainly magical, and often have little or nothing directly to do with worship in the strict acceptance of the term. In either case recourse is had to the mysterious—a region in which worship, magic, and medicine are as yet hardly distinguished.

Examples have already been given of the sexual act in relation to agricultural rites. At festivals the object of sexual licence, in the promotion of general fertility, the revival of nature, and the germination of the fruits of the earth, is sometimes obscured by the social character of the occasion. This is not the case where conjugal relations are ordained for the express purpose of assisting the growth of crops. But the magical influence of the sexual act is deemed powerful over a much wider sphere. Many ceremonies must be performed only by virgins, or by persons who have abstained for a period from intercourse with the opposite sex, and who are consequently held to be in a state of ritual purity.

Contrary to this, the Akamba require the head of the village and his wife to cohabit on the second and fourth nights of their preliminary occupation of the new site, when the village is removed (C. W. Hobley, *Ethnology of A-Kamba and other E. African Tribes*, Cambridge, 1910, p. 65)—probably a rite intended to lead to all sorts of good luck. Among the same

people the father and mother must cohabit two days after their child's circumcision; otherwise the father cannot go and drink beer at the feast, and the child's wound will not readily heal (ib. p. 69). In the month of January the Bechuana hold a general assembly of all adult males, on a day fixed by the chief, at the great kraal of the tribe. Certain ceremonies, apparently of a purificatory nature, are performed; and they are repented by each man upon his own family at home. That night every man ritually sleeps with his chief wife. If he is away from home and unable to return, the year will probably be a year of calamity for him, and his chances of surviving it are slight. When he returns, he cannot cohabit with his wife until after the next year's ceremony. The danger rests not only upon him, but also upon her, if the ceremonial cohabitation be omitted. She may, however, call in the assistance of another man, in case of her husband's absence; and she is perfectly free from blame in so doing; but the husband is under a grave interdict until an elaborate ceremony has been performed over him by the medicine-man (*JAI* xxxv. [1905] 311). Nor is a sexual rite of this kind confined to the Bantu race. It is difficult to say whether the Todas of the Nigiri Hills are, like the Bantu and their congeners the true Negroes, specially libidinous. It is certain that their sexual morality is very low, and that there is no word for adultery in their language; the evidence, indeed, points to a total absence of the concept of adultery, despite the fact that there are recognized husbands and wives. The Todas are composed of two non-exogamous divisions—the Tartharol and the Teivaliol. The *ti* is the most sacred institution known to them. It comprises a herd of buffaloes with a number of dairies and grazing districts tended by dairy-man priests. These dairies belong exclusively to one or other Tarthar clan, but the *palol*, or priest, must be a Teivaliol. He must be celibate. If he holds office continuously for eighteen years, he performs ceremonial intercourse completely naked on an appointed day with a Tarthar woman, chosen by himself and brought for the purpose into a neighbouring wood. Intercourse during the day-time is ordinarily accounted immoral, but it does not seem to disqualify him for his priestly duties. That the act has some ritual value seems clear, from the very fact that it is directly contrary to the moral and religious usages, but it is not known exactly what its value is (W. H. R. Rivers, *The Todas*, London, 1906, pp. 520, 53, 103).

When a sexual act which infringes the accepted morality has no ritual value, it is often held to produce evil results on the weather or the harvest, blighting the crops and causing sterility of women and of cattle, and other misfortunes (Frazer, *Psyche's Task*², London, 1913, p. 44 ff.; *GB*³, pt. i., *The Magic Art*, ii. 107 ff.). So much importance is attached in the lower culture to the act of sexual union.

Whatever may be the exact import of the Toda rite, the apotropeic intention of the rites just previously cited is manifest. The same is to be said of a certain Australian rite.

When the Kurnai of Gippsland saw the *aurora Australis*, 'they thought it to be *Mungan's* fire, which might burn them up. The old men then told them to exchange wives for the day, and the *Bret* (the dried hand of one of their dead kinsfolk) was swung backwards and forwards with cries of "Send it away!" (A. W. Howitt, *Native Tribes of S.-E. Australia*, London, 1904, p. 277). These are obviously magical proceedings to avert the danger.

In the course of this article we have referred to several dances and other ceremonies in which the actors who were charged with the priapic performances were masked. Possibly our own Jack-in-the Green is a survival of such a figure. In these cases the personages represented appear to be spirits of fertility, and their actions to be intended to bring about by sympathetic magic the impregnation of nature, the reproduction of men and beasts and fruits of the earth.

The *καλογέροι* in the modern Thracian performance are disguised with goat-skins. In the Mandan dance the performers are buffaloes. Among the Karays of Brazil, who live largely by fishing, a man is reported on such an occasion to have been masked as a dolphin with a gigantic phallus (*Anthropos*, vii. [1912] 203, citing P. Ehrenreich, *Beiträge zur Völkerkunde Brasiliens*, Berlin, 1891, p. 35).

In each case the supernatural being represented takes the shape of the creature whose multiplication is of the greatest importance to the community. In this way he embodies the reproductive power and process in general.

Such presentations are not confined to seasonal festivals and rites at the opening or close of agricultural or hunting labours. Perhaps the last connexion in which we should look for them is that of death rites. In various parts of the world,

ascribed. His worship is directed to obtain these blessings, without which life is impossible. The rites are not confined to prayer and sacrifice, as to a strictly personal being. What we call magic mingles with these and rivals them in potency. It is, in fact, an essential part of the performance. The social gatherings and the rites are no doubt far older than the divinity, far older than any practical aim beyond that of pleasure and gratification. They were in their rude beginnings an expression of the emotions of the community before the divine personality was dimly imagined. His worship and symbols have grown out of them. The process was probably unconscious. Many generations may have elapsed before a motive less vague than social enjoyment was evolved for the periodical reunions. But, when man's curiosity about himself and his surroundings led him to discover the connexion of sexual passion with the mystery of birth, then the dance, the rhythmical cries, and the sexual indulgence practised in the assemblies of the group would be fitted with a deeper meaning. They would be held to arouse the emotions and kindle the appetites of the animals and the crops, more or less personalized and interpreted in human terms, or to act as spells directly on them; or they would become appeals to, and perchance a species of co-operation with, the higher powers conceived as ruling the course of nature. Social amusement would thus be transfigured into obligation, and the welfare of the community would be held to be dependent on its punctual observance.

A cult like this is apt to become specially developed in a population dependent for the supply of food and other necessities and comforts of life on some form of agriculture, though not, as we have seen, exclusively confined to these. Its rites relate to the immediate needs of the community. Their symbols are drawn from those needs. The festivals are held at periods when the chief labours of the year are about to be undertaken or are just completed—before sowing, in the interval between sowing and harvest, and after the crops have been gathered in. These are the times when the collective emotions are liveliest and the pause in the collective labours gives opportunity for feeling the awakening influences of the spring, the anxiety for the success of the operations of the year, or the satisfaction, gladness, and sense of security of the results. It is no wonder that they overflow in words and actions repressed (it may be sternly) at other times, and regarded with disgust by a civilization that has risen above such coarse and brutal exhibitions. For what an experienced observer says, describing the harvest festival in Borneo, is of wide application:

'The whole festival is a celebration or cult of the principle of fertility and vitality—that of the women no less than that of the padi' (C. Hose and W. McDougall, *Pagan Tribes of Borneo*, 2 vols., London, 1912, i. 112).

Some of these festivals took the form of a sacred marriage—a marriage, *i.e.*, of the god and goddess of fertility, such as the marriage of the sun-god and earth-goddess celebrated by the Orôns and in the E. Indian Archipelago.

'At Calah,' once the capital of Assyria, 'the marriage of the god Nabu appears to have been annually celebrated on the third of the month Iyyar or Airu, which corresponded to May' (*GB*, pt. i., *The Magic Art*, ii. 130). The marriage of Zeus and Hera was performed annually in various parts of Greece. In India, in the Salem district of the Madras Presidency, the Malayâlis, a Tamil tribe, celebrate the marriage of their tribal god, Sarvarâyam, with the goddess of the Cauvery river. This union is supposed to fertilize the cultivated lands of the tribe (*FL* xii. [1911] 229). Among the Bambara of the Niger basin in W. Africa the male and female idols are believed to couple at the time of the annual sacrifices offered before the rainy season (J. Henry, *L'Âme d'un peuple africain: Les Bambara*, Münster, 1910, p. 161). Frazer suggests that the King and Queen of the May at European spring festivals are relics of a similar ceremony. In this connexion it is interesting to note that at the Hol-

festival, a peasant celebration of a similar character, in Gujârât, a mock-marriage is performed between 'two poor stupid persons' dressed as bride and bridegroom (Jackson-Enthoven, *FL Notes*, 'Gujarat', *Maggaon*, Bombay, 1914, p. 158). Whether Frazer's conjecture be correct or not—and it is not unfeasible—we frequently find in such ceremonies the part of the goddess played by a mortal woman. In Athens Dionysus was married every year to the queen, the wife of the king archon. Probably the annual spring festival in Scandinavia, when the image of Frey was drawn round the country in a waggon, accompanied by his young priestess, who was called the god's wife, was a similar rite (Grimm, *Teut. Myth.* i. 213; *GB*, pt. i., *The Magic Art*, ii. 143). The Blackfeet of N. America are said to have married the sun every year to the moon, represented by a maiden or a woman who had had only one husband. The Algonquins married their nets to two young girls of six or seven years of age (thus securing that they were virgins); and the Hurons adopted the custom from them (*GB*, pt. i., *The Magic Art*, ii. 146 f.). These are evidently rites to secure fertility and plenty. As might be expected, the consummation of the divine union often comes to be enacted. It was so in the case of Dionysus in Athens; 'but whether the part of the god was played by a man or an image we do not know' (*ib.* p. 136). Among the Orôns the priest and his wife represent the divine personages. Jagannâth's bride is put into the god's bed, and a Brâhman is said to join her there, to play the god's part.

A further stage is reached when the god is provided with a permanent wife or wives.

The ancient Egyptian queen was held to be wedded to the god Ammon, who approached her in the likeness of her earthly consort, the Pharaoh, as Uther Pendragon approached Igraine and the hero Astrabakus the wife of Ariston, king of Sparta. Similarly, in Babylon a woman was kept in the lofty temple of Bel as his wife. 'The Indians of a village in Peru have been known to marry a beautiful girl, about fourteen years of age, to a stone shaped like a human being, which they regarded as a god (*huaca*). All the villagers took part in the marriage ceremony, which lasted three days, and was attended with much revelry. The girl thereafter remained a virgin and sacrificed to the idol for the people. They shewed her the uttermost reverence and deemed her divine' (*ib.* p. 146).

In such cases the provision of a wife was probably looked upon as an ordinary duty to the god, who was thought of in anthropomorphic terms. Such wife frequently became his priestess. And the relation between the god and his wife may not always have been the direct cause of fertility or other blessings to the worshippers, though doubtless the neglect to provide a wife would have aroused the divine resentment.

In India, where prostitutes are attached to a temple, they are first married to the god. The Kaikôlans, a caste of Tamil weavers, deem it right that at least one girl in every family should be dedicated to the temple service. At Coimbatore the marriage ceremony is performed before the idol, presumably Siva. A Brâhman ties the *tali* upon her; and at night the god is represented by a sword, which is laid by her side before any one else is allowed to approach her. So realistically is the relation between the god and the girl conceived that at her death the idol, as her husband, has to observe the customary death-pollution; consequently no *pûja* is performed in the temple until her body has been disposed of (E. Thurston, *Castes and Tribes of S. India*, Madras, 1909, iii. 37 ff.). A ceremony widely practised in India is that of marrying Vîṣṇu to a *tûlî*-plant, or of marrying an *asvattha*-plant to a *margosa*-plant, and so forth. This is performed by husbands and wives to obtain offspring (*Census of India*, 1911, Report, vii. 63, xvi. 176, xxi. 89).

Generally, when from various causes a pantheon develops, the individual divinities become more or less specialized, and the patronage of sexual love and human fecundity is often severed from that of the multiplication of flocks and herds and the seeds of the field. This has been the case with the Negro divinity Legba. In Greece the imported goddess Aphrodite tended in the same way to become the goddess of beauty and human love, obscuring the wider functions that she originally exercised and in many places continued to share with other divinities. In such cases the licentious rites are often emphasized and turned to uses involving more than a disregard—a conscious defiance—of all moral regulations. Societies deeply penetrated with this cancer are on the way to dissolution.

But a much more legitimate motive dictates recourse to these divinities. The desire for offspring, so vital to the species, is deeply imprinted in every normal individual. It is, indeed, limited by the necessity for finding room and subsistence. Where

this condition presses on the community, as among very low races and peoples hemmed in by geographical or political obstacles, it is counteracted by infanticide; but elsewhere it impels to reproduction. Women as well as men, and even more than men, wish for children. Nowhere is the wish more in evidence than among patrilineal peoples, where women are held in esteem according as they are, or are not, blessed with children, and it is a reproach to a married woman to be childless. So strong is the desire for offspring that a man often cares not who has begotten the children reckoned to him. He will marry a woman who has proved her capacity for childbearing, in order to obtain not only the children she may hereafter bear, but those she has already borne. He will subject his wife to other men's embraces with perfect indifference, so long as the children resulting become his, or even for the purpose of thus acquiring children. In such a community, it need hardly be said, the issue of adultery—i.e. the wife's connexion with a man unlicensed by the husband—is usually claimed by the latter, though he may dissolve the marriage or punish the wife even with death. Here, then, resort to divinities of fecundity to procure offspring is natural and, granted their ability to bestow it, reasonable. Wherever the desire for children is strong, such resort is witnessed in custom and told in story. Ancestor-worship lends itself to the practice. An ancestor who founded or continued the family is interested in its permanence. If he be possessed of power, which his worship presumes, he will, when properly approached, exercise that power to grant increase to his seed. It is, therefore, not without significance that his image should be, as in some cases we have seen it to be, represented in ithyphallic form.

The rites employed to attain the object are, as we have learned, very various. Vows, prayers, and offerings to the god are things of course. When he is in phallic form, he is embraced; and for this purpose many objects are deemed phallic that were not so intended. A human representative may play the part of the god. Mere contact with a sacred object is often sufficient. Phallic amulets are everywhere in request. They may be placed in or about the dwelling, or, more likely, are worn on the person, so as to secure continuous contact. Special kinds of food, or food prepared with special rites, may be prescribed, or the drinking of, or bathing in, various liquids (Hartland, *Prim. Paternity*, i. ch. ii. f.). These and other methods are mainly magical, and often have little or nothing directly to do with worship in the strict acceptance of the term. In either case recourse is had to the mysterious—a region in which worship, magic, and medicine are as yet hardly distinguished.

Examples have already been given of the sexual act in relation to agricultural rites. At festivals the object of sexual licence, in the promotion of general fertility, the revival of nature, and the germination of the fruits of the earth, is sometimes obscured by the social character of the occasion. This is not the case where conjugal relations are ordained for the express purpose of assisting the growth of crops. But the magical influence of the sexual act is deemed powerful over a much wider sphere. Many ceremonies must be performed only by virgins, or by persons who have abstained for a period from intercourse with the opposite sex, and who are consequently held to be in a state of ritual purity.

Contrary to this, the Akanba require the head of the village and his wife to cohabit on the second and fourth nights of their preliminary occupation of the new site, when the village is removed (C. W. Hobley, *Ethnology of A-Kamba and other E. African Tribes*, Cambridge, 1910, p. 58)—probably a rite intended to lead to all sorts of good luck. Among the same

people the father and mother must cohabit two days after their child's circumcision; otherwise the father cannot go and drink beer at the feast, and the child's wound will not readily heal (ib. p. 69). In the month of January the Bechuana hold a general assembly of all adult males, on a day fixed by the chief, at the great kraal of the tribe. Certain ceremonies, apparently of a purificatory nature, are performed; and they are repeated by each man upon his own family at home. That night every man ritually sleeps with his chief wife. If he is away from home and unable to return, the year will probably be a year of calamity for him, and his chances of surviving it are slight. When he returns, he cannot cohabit with his wife until after the next year's ceremony. The danger rests not only upon him, but also upon her, if the ceremonial cohabitation be omitted. She may, however, call in the assistance of another man, in case of her husband's absence; and she is perfectly free from blame in so doing; but the husband is under a grave interdict until an elaborate ceremony has been performed over him by the medicine-man (*JAI* xxxv. [1905] 311). Nor is a sexual rite of this kind confined to the Bantu race. It is difficult to say whether the Todas of the Nilgiri Hills are, like the Bantu and their congeners the true Negroes, specially libidinous. It is certain that their sexual morality is very low, and that there is no word for adultery in their language; the evidence, indeed, points to a total absence of the concept of adultery, despite the fact that there are recognized husbands and wives. The Todas are composed of two non-exogamous divisions—the Tartharol and the Teivaliol. The *ti* is the most sacred institution known to them. It comprises a herd of buffaloes with a number of dairies and grazing districts tended by dairy-man priests. These dairies belong exclusively to one or other Tartharol clan, but the *paiol*, or priest, must be a Teivaliol. He must be celibate. If he holds office continuously for eighteen years, he performs ceremonial intercourse completely naked on an appointed day with a Tartharol woman, chosen by himself and brought for the purpose into a neighbouring wood. Intercourse during the day-time is ordinarily accounted immoral, but it does not seem to disqualify him for his priestly duties. That the act has some ritual value seems clear, from the very fact that it is directly contrary to the moral and religious usages, but it is not known exactly what its value is (W. H. R. Rivers, *The Todas*, London, 1906, pp. 529, 83, 103).

When a sexual act which infringes the accepted morality has no ritual value, it is often held to produce evil results on the weather or the harvest, blighting the crops and causing sterility of women and of cattle, and other misfortunes (Frazer, *Psyche's Task*, London, 1913, p. 44 ff.; *GB*³, pt. i., *The Magic Art*, ii. 107 ff.). So much importance is attached in the lower culture to the act of sexual union.

Whatever may be the exact import of the Toda rite, the apotropeic intention of the rites just previously cited is manifest. The same is to be said of a certain Australian rite.

When the Kurnai of Gippsland saw the *aurora Australis*, 'they thought it to be *Munana's* fire, which might burn them up. The old men then told them to exchange wives for the day, and the *Bret* (the dried hand of one of their dead kinsfolk) was swung backward and forwards with cries of "Send it away!" (A. W. Howitt, *Native Tribes of S.E. Australia*, London, 1904, p. 277). These are obviously magical proceedings to avert the danger.

In the course of this article we have referred to several dances and other ceremonies in which the actors who were charged with the priapic performances were masked. Possibly our own Jack-in-the Green is a survival of such a figure. In these cases the personages represented appear to be spirits of fertility, and their actions to be intended to bring about by sympathetic magic the impregnation of nature, the reproduction of men and beasts and fruits of the earth.

The *καλογέροι* in the modern Thracian performance are disguised with goat-skins. In the Maudan dance the performers are buffaloes. Among the Karayaz of Brazil, who live largely by fishing, a man is reported on such an occasion to have been masked as a dolphin with a gigantic phallus (*Anthropos*, vii. [1912] 208, citing P. Ehrenreich, *Beiträge zur Völkerkunde Brasiliens*, Berlin, 1891, p. 83).

In each case the supernatural being represented takes the shape of the creature whose multiplication is of the greatest importance to the community. In this way he embodies the reproductive power and process in general.

Such presentations are not confined to seasonal festivals and rites at the opening or close of agricultural or hunting labours. Perhaps the last connexion in which we should look for them is that of death rites. In various parts of the world,

however, the sexual act is associated with the customs observed on the occasion of a death. It is very commonly tabued for a certain period either to the relatives or to the entire neighbourhood. But sometimes ceremonial cohabitation is enjoined.

When a man dies among the Akamba, his father and mother, if living, must on the third day have conjugal relations, prior to their ritual purification and to the resumption of normal relations by the other men and women of the family (H. A. Junod, *op. cit.* p. 67). A missionary, describing a mourning ceremony which he had witnessed among the Barotsi about Delagoa Bay, tells us that at a certain stage an elderly woman came forward singing the plaudits of the deceased.

Of at least seventy years of age followed her, and running with a mincing gait through the place, was uttering words of the same kind. Junod's comment is interesting: 'the period of mourning, he says, is a marginal period, according to van Gennep's significant terminology, between two normal periods of social existence; and these phases of life are marked for the Bantu by this period of sexual intercourse and a shame-words and gesticulations.' The main rites purificatory of the death-pollution include ritual coition between the respective husbands and wives, after which ordinary life is renewed (H. A. Junod, *The Life of a S. African Tribe*, 2 vols., Neuchâtel, 1912-13, i. 160, 152-156). On the Aaru Islands it is customary to exhume the corpse after a certain period, sometimes as long as three years, and to clean and prepare the bones for their permanent deposit in a cave. Until this is done the widow wears mourning garb and may not leave the house. The decayed corpse is brought down to the beach. The inhabitants of the village are there assembled. All the mourning clothes of men and women, together with the corpse, are burned. The men carry a wooden phallus, the women a *kteis*. Singing all sorts of obscene songs, they leap round the flames like demons, thrusting the phallus into the *kteis* and imitating the movements of copulation. The object of this is said to be to incite the widow to cohabitation, or to intimate to her in a forcible manner that she is now at liberty to marry again (Riedel, p. 268). Beyond this, however, it is probable that the ceremony is a formal resumption of the normal life of the village and a spell to stimulate reproduction. On the Upper Alary, in Brazil, a German explorer witnessed a few years ago a mourning dance by masked figures representing spirits, who attacked and stormed the dwelling of the deceased to the no small terror of the women and children. Ultimately the wild scene ended in laughter; and there followed dances by masqueraders disguised as various animals. In one of these all the performers took part. They were provided with disproportionately large phalli, with which they mimicked the act of copulation—a proceeding regarded by both the actors and the spectators in a thoroughly serious fashion. The explorer concludes that it was intended to produce fertility in human beings, animals, and plants alike, in the whole settlement—'an idea,' he says, 'full of deep moral import and quite free from indecency in our sense' (L. Koch-Grünberg, *Zwei Jahre unter den Indianern*, 2 vols., Berlin, 1909-10, i. 133 ff.).

Thus the sexual organs as the great instruments of reproduction are the enemies of sterility and death; and as such they are exhibited and employed, actually or by symbol—that is to say, magically—to counteract the depredations of mortality. For the same reason they are regarded as having prophylactic virtue against all sorts of evil influences. The destructive attacks of evil spirits and the more insidious blasting power of the evil eye are alike subdued by them. This general prophylactic virtue accounts for the common use of priapic figures and ithyphallic statues, whether of gods or of ancestors. Much more than the specific gift of offspring or of abundant harvests was expected of the personages thus represented, whether gods or ancestors. They were often tutelary divinities, warding off all kinds of evils. Here we have, there can be little doubt, an explanation of many rites in various parts of the world to be performed naked.

Pliny tells us that in his time it was believed that storms could be diverted and driven away by a woman simply uncovering herself (*HN* xxviii. 23). In order to secure his seed against the depredations of birds, in some of the Saxon settlements in Transylvania the farmer is recommended to go to the field before sunrise and, stripping naked, walk round the crop, ending by repenting a Paternoster. Then, dressing again, he must take an ear of corn in his mouth, and, without speaking to anybody, elsewhere it is the farmer's wife who performs the ceremony, holding a candle in her hand. Against smut or damage by hail she also walks naked round the field by night at the first full moon after sowing (H. von Wilslock, *Volkglaube der Siebenb. Sachsen*, Berlin, 1893, pp. 127, 129). Among the Tsul tribe in Morocco, when rain is wanted, women go to a retired place where they cannot be seen by men, and play,

completely naked, a certain game of ball with wooden lads. The game itself has a magical effect here and elsewhere; but its virtue is emphasized by the nakedness of the players (E. Westermarck, *Ceremonies and Beliefs in Morocco*, Helsingfors, 1913, p. 121). In the Trichinopoly district of S. India, 'when the tanks and rivers threaten to breach their banks, men stand naked on the bund and beat their drums; and if too much rain falls naked men point firebrands at the sky. Their nudity is supposed to shock the powers that bring the rain, and arrest their farther progress' (ib. p. 130 n., quoting Thurston, *Omens and Superstitions of Southern India*, London, 1912, p. 309). The Orâons and Mûndâs of the Chotâ Nâgpur plateau perform the yearly ceremony of driving away from the village the evil spirits that cause cattle disease. It takes place at night. All the young unmarried men (who, because unmarried, are presumed to be virgin and therefore possessed of 'greater soul-power than married men') are the performers. They are naked, and with sticks in their hands, breaking to pieces the earthen pots which hang in front of the houses, they chase the demon, represented for the nonce by the village cattle-herds, across the boundary to the next village (*JRAI* xlv. [1914] 344). In Russia the peasant girls, clad only in their shifts, with loose hair and barefooted, ward off the cholera from their village, by dragging a plough round it at midnight (an example is recorded in *Daily Chronicle*, 3rd July 1905). Here the one remaining garment left to the girls appears to be a modern concession to decency. In the same way it seems probable that originally the Luperci in Rome ran round the base of the Palatine stark naked, to perform the *lustratio* of the city. Throughout the E. Indies a woman who dies in childbirth is the object of great dread. She becomes a powerful and malicious spirit. She misleads wayfarers, she attacks pregnant women and those in childbed, she seduces and emasculates men. Special precautions are taken against her. In the Philippines a Tagala husband whose wife is in travail mounts on the roof of his hut with his sword, shield, and spear, completely naked or with only a loin-cloth, while sundry friends surround the hut below similarly accoutred. They rage, they lunge, they hew the air, holding that by this fury and their nakedness they will frighten the *patianak*, as this malignant ghost is there called, and drive her away. Wayfarers who have lost the right path, believing that their misfortune is due to the *patianak*, 'strip themselves and uncover their genital organs, whereby the *patianak* is terrified and no longer in a condition to lead them astray' (Wilken, iii. 318). It has been suggested that the *patianak* has a more than ordinary fear of the phallus, because that was the cause of her pregnancy and therefore in the long run of her death. The inference does not seem necessary. The relation to the catastrophe, which the *patianak*, like all ghosts of persons dying violent deaths, so bitterly resents, may have laid stress in popular belief on the terrifying power of the phallus, though there is no direct evidence of this. It is enough that she is a hostile spirit, a spirit of sterility and destruction; against such the phallus is a defence and a countervailing power.

There are, of course, many rites performed in a state of nudity, for which other reasons may be assigned. It is not intended here to suggest that all cases of ritual nudity are to be accounted for by the apotropaic power of the sexual organs, which is manifested in the foregoing illustrations.

To define the geographical limits of phallic symbols and ceremonies is not possible in the present state of our knowledge. Their range is wide. They owe their inception to emotions which are the necessary outcome of the animal part of our nature. The probability is, therefore, that they are well-nigh universal in the lower planes of culture, even where they have not hitherto been recorded. And they are long preserved in spite of the growing refinement of the general advance of civilization. In some cases this is due to the fact that they have become interwoven with a definite religion. In other cases they are an atavistic reversion generated by intense religious emotion. More often they persist in the shape of spells and amulets. Magic, like religion, deals with the fears, the hopes, and the desires of mankind. Religion, becoming more and more sublime, leaves the baser elements of which it has been purged to magic, which, on the other hand, becomes more and more degraded. The worship of the sexual organs, or of deities or nature-powers under their form, is, so far as our information goes, an uncommon phenomenon. Prominence of sexual attributes in an object of worship from whom fertility and plenty are expected by the worshipper is more frequent, whether that object be conceived as god or as ancestor. In such a case phallic rites may or may not be part of the cult, but perhaps are hardly ever unmixed with

magic. Magic, indeed, is the predominant element in phallic rites; in the vast majority of such rites all trace of worship strictly so called is wanting. When magic becomes an outlaw from society, as it does in the higher cultures, one of the chief means by which it maintains its existence is the ministry to sexual impulses. Love-spells and philtres are a large portion of its stock-in-trade; rites and amulets to obtain children are hardly less in request in many communities. These spells, rites, and amulets are generally phallic, and often obscene and repulsive. Their consideration belongs rather to magic and witchcraft than to phallic worship, and it has been possible to give only very few illustrations here.

Wide-spread, however, as are the practices with which this article is concerned, and intimately as they are related to some of the deepest emotions, it is worth while to remind ourselves that they form a portion only of the history of religion. The caution is the more necessary since the subject exercises such fascination upon some minds as to have given occasion to the taunt that no one who studies it remains sane. Concentration of attention is apt to cause any subject to assume an importance which it may not in itself deserve. The sexual element is indigenous in human nature. But it is only one element, and its direct influence on religion may be exaggerated. There are many departments of life, and a variety of human interests, desires, and aspirations, represented by cults in which the sexual element has normally little or no share; and they increase with the progress of civilization and the intellectual expansion of mankind. Religious conservatism may preserve the sexual element for a time in a cult inherited from savagery. In the higher religions it lingers chiefly in the negative form of asceticism, rising at times into delusion and monomania, or in other equally abnormal manifestations of fanaticism.

LITERATURE.—The literature of the subject is voluminous. Some of the most important works have been indicated throughout the article. In addition to them the following may be consulted: Clifford Howard, *Sex Worship*⁴, Chicago, 1902; J. G. R. Forlong, *Rivers of Life*, 2 vols., with separate chart, London, 1883.

Among various German works there is an art. by F. Maurer, in *Globus*, xcii. (1907) 256, entitled 'Der Phallusdienst bei den Israeliten und Babyloniern.' It contains a good summary of what is known or alleged relating to phallic worship among the ancient Babylonians and Israelites.

E. S. HARTLAND.

PHARISEES.—Some difficult problems arise in connexion with the earlier history of Pharisaism which cannot be said yet to have been definitely solved. An attempt will be made in this article to give some indication of these and of the important discussions that have been devoted to their elucidation within recent years. See also art. SADDUCEES.

1. **Origin and name.**—As an active movement Pharisaism emerged from the Maccabæan conflict with surrounding heathenism, and became quiescent only after the annihilation of the Jewish national life in the reign of Hadrian; that is to say, its activity extended over a period of nearly three centuries, from the reign of John Hyrcanus (135–105 B.C.) to A.D. 135. The Pharisees already appear in the reign of Hyrcanus as a powerfully organized party (Josephus, *Ant.* XIII. x. 5–7), and no doubt were in existence even earlier (*ib.* v. 9). Their general aim was to continue and make effective the work which the earlier teachers of the Law had begun, viz. the application of the Tōrah to the practical affairs of everyday life. But Pharisaism, though dominantly legalistic in character, was more than mere legalism. As Elbogen¹ has pointed out,

'The Pharisees are usually described as the party of narrow legalistic tendencies, and it is forgotten how strenuously they laboured against the Hellenizing movement for the maintenance of *monotheism*; it is forgotten that they built up *religious individualism* and purely *spiritual worship*; that it was through them more especially that *belief in a future life* was deepened; and that they carried on a powerful *mission* (propaganda). They are represented as merely the guardians of the Pentateuch, and the fact is overlooked that they no less esteemed the Prophets and Hagiographa, and were not less careful to make it their duty, in the weekly expositions of the Scriptures (in the Synagogues), to preach to the people the *truths and hopes of religion* out of these books.'

In the famous passage of Josephus referred to above the rupture between the Pharisees, already a powerful party, and the governing authority, represented by the ruler, is placed by Josephus in the reign of John Hyrcanus. According to the story, the breach grew out of an incident at a banquet given by the ruler, when a Pharisee was indiscreet enough to suggest that the ruler should divest himself of the high-priestly functions and content himself with the civil government. When pressed to give a reason, the Pharisee is said to have mentioned a rumour (which was in reality baseless) that the mother of Hyrcanus had been a captive.¹ The result was an open rupture, and Hyrcanus is alleged to have withdrawn from the Pharisaic party, of which he had been hitherto a zealous member. In the Talmud, however (*T. B. Qiddushin*, 66a), the story is referred to Alexander Jannai (Jannæus), who reigned 104–78 B.C., and this is probably its correct setting. The reign of Hyrcanus, as Josephus himself says, was peaceful and happy, while that of Alexander Jannai was characterized by war and bloodshed, and also by violent conflicts with the Pharisees. As Israel Friedländer says,²

'The whole story points clearly to the unfortunate conditions as they existed in the time of Jannai and, when looked at in this light, the Talmudic account, though curtailed in some parts, receives its proper historical setting such as we would seek in vain in the version of Josephus.'

We may conclude, then, that the Pharisees first appear as an influential party under that name in the reign of John Hyrcanus; that the latter ruler favoured them throughout his long and prosperous reign, and was under their influence; and that the breach between the party and the ruler took place in the reign of 'King' Alexander Jannæus. We need not follow the later fortunes of the party in detail, their persecution under Jannæus and triumph under his widow, Queen Salome Alexandra (reigned 78–69 B.C.). For a long time they continued to exercise great political power, not always, perhaps, wisely. The separation of the high-priesthood from the kingship may be traced to their influence. In the so-called *Psalms of Solomon* the impression produced by the terrible events that followed the break up of the Hasmonæan dynasty and the intervention of the Romans under Pompey, who massacred thousands of the Jews in Jerusalem, is reflected in a Pharisaic writer. The psalmist evidently regards the bloody chastisement which the Jews had to endure at this time as proceeding from the hand of God. It was the punishment inflicted on the people for having acquiesced in the usurpation by the Hasmonæans of the royal dignity which had been reserved for the Messianic prince of the House of David. The Jewish scholar Moritz Friedländer, in his stimulating and suggestive work, *Die religiösen Bewegungen innerhalb des Judentums im Zeitalter Jesu* (Berlin, 1905), takes a very unfavourable view of the Pharisees of this period and later down to the time of the destruction of Jerusalem (A.D. 70), regarding them as

¹ This would be a legal disqualification for the high-priesthood.

² 'The Rupture between Alexander Jannai and the Pharisees,' in *JQR*, new ser., iv. [1913–14] 444. The whole article is important.

a narrow legalistic party, who were corrupted by being mixed up with politics. This is hardly just to the party as a whole. Doubtless there was an extreme element, represented later by the Zealots, who took an active, and sometimes sinister, part in political movements. But there also existed a large section who were truer to the ideals of their spiritual ancestors the *Hasidim*, or 'pious,' who were primarily interested in the maintenance and furtherance of religion as they understood it, and, so long as those interests were not menaced by the political régime, were content to leave politics alone.

The explanation of the name 'Pharisees' is a difficult and unsolved problem. The Hebrew form of the name, *pērāshīm*, apparently means 'separatists,' and, if originally given, as seems probable, by opponents, may have been intended to brand the party as disloyal, those who separated themselves from loyal obedience to the king. Or it may have originally meant 'the expelled' or 'dismissed,' viz. from the Sanhedrin. It seems probable that a division did take place in the Sanhedrin by which it became finally separated into two groups or parties, the Sadducees (=the priestly group) and the Pharisees (=the lay members of that body representing the popular party). Later the Pharisees, accepting the name, seem to have given it a different meaning, viz. those who separated themselves from the wicked Sadducees.¹ Kohler² explains the name as meaning "one who separates himself," or keeps away from persons or things impure, in order to attain the degree of holiness and righteousness required in those who would commune with God. He cites in support of this explanation the term *pērishuth*, which means 'abstinence' or pious self-restraint. But, on the face of it, this meaning has all the appearance of being secondary, and it is to be noted that the Rabbinical literature itself uses the term *pērāshīm* in the sense of 'seceders.'³ Another and most ingenious explanation is that proposed by Leszynsky in his work on the Sadducees.⁴ Leszynsky argues that the Pharisees were in no sense a 'separatist' party, as is commonly assumed, but arose from the ranks of the people as the champions of popular religious custom. So far from separating themselves from ordinary life and affairs, they flung themselves with fierce energy into these. Against them were arrayed the Sadducees, opposing to their oral tradition the written *Tōrah*. The opposition, of course, affected only certain specific points, but on these the Pharisees did not hesitate to exalt their own tradition, even when this was in apparent conflict with the written word of the Law. Leszynsky explains the name 'Pharisee' as connoting originally 'expounder' or 'interpreter' rather than 'separatist.'⁵ It is supposed that the party came to be called 'expounders' or 'interpreters' (*pērāshīm*) as the result of a long dispute. For a long time controversy raged within the Pharisaic party on the issue whether the oral tradition should be adjusted to, and find its justification in, the written Law. At first the section of the Pharisees opposed to this policy triumphed; but after the time of Simeon ben Shetaḥ (flourished before and after 78 B.C.) the policy of linking up the oral tradition

with Scripture prevailed. Leszynsky finds support for this view in an obscure passage of the Mishnāh (*Ḥag. ii. 2*) which he explains in an ingenious manner of his own. The name 'Pharisee,' according to this view, means 'interpreter' (of Scripture) in the interests of the oral traditional Law. It did not originally denote the whole party who championed the oral Law, but only a section of it. Their original name was 'Hasidim,'¹ but in time, when the new policy prevailed, the name 'Pharisees' naturally attached itself to the whole party. A not inconsiderable difficulty attaching to Leszynsky's theory is that the form of the word *pērāshīm*, which is passive, does not lend itself easily to the meaning 'interpreters.' On the whole, the explanation proposed by Lauterbach, that the name = 'seceders' or 'expelled' (viz. from the priestly Sanhedrin), is most probable. It suits admirably the historical circumstances of the time when the Pharisees first emerge into prominence as an active and influential party. According to Lauterbach, the original name of the Pharisees for themselves was 'the wise of Israel' (חכמי ישראל).² Another name, used by the Pharisees among themselves, was *hābēr*, 'colleague' or 'fellow-member.' This connoted membership of a close association, or *hābūrāh*, to which only those were admitted who 'in the presence of three members, pledged themselves to the strict observance of Levitical purity, to the avoidance of closer association with the 'Am ha-Areẓ [i.e. those living outside the standards of the Law], to the scrupulous payment of tithes and other imposts due to the priest, the Levite, and the poor, and to a conscientious regard for vows and for other people's property.'³ But it is doubtful how far, if at all, such an organization existed in Palestine before A.D. 70.

2. Antecedents and development.—It has already been pointed out that the Pharisees carried on, and made effective, the work which the earlier teachers of the Law had begun, the application of the *Tōrah* to the practical affairs of everyday life. This earlier class of teachers of the Law went by the name of 'the *Sōfērim*,' being so called because they taught the people out of 'the book of the Law' (*Sēfer ha-tōrah*). Their teaching was based directly on the simple and plain text of the Law, no doubt with a certain amount of interpretation and explanation, but all of the simplest character. The period of the *Sōfērim* came to an end with Simon the Just (the first of that name), about 300-270 B.C.⁴ It therefore ceased just about the time when Greek influence had begun powerfully to affect Jewish communal life in Palestine, and new conditions had begun to grow up in the life of the people.

The period during which the *Sōfērim* controlled the religious teaching and exercised supreme authority in regulating the religious affairs of the community thus covered the Persian period and the transition period that followed. During this time the circumstances of the Jewish community in Palestine underwent no great changes.

The Book of the Law accepted from Ezra by these early founders and organizers, with the few simple interpretations given to it by the *Sōfērim*, was therefore sufficient for almost all the needs of the community throughout the entire Persian period.⁵

³ Cf. *T. B. Pes. 70b*, where 'the argument of *seceders*' is referred to, i.e. those who have left the college and established a school of their own.

⁴ *Pharisäer und Sadduzäer*.

⁵ The term פִּרְשֵׁי is constantly used in the Rabbinical literature in the sense of 'explain' or 'make explicit' (cf. פִּרְשֵׁי, 'explanation'). Just as פִּרְשֵׁי = פִּרְשֵׁי and פִּרְשֵׁי = פִּרְשֵׁי, so פִּרְשֵׁי = פִּרְשֵׁי (i.e. 'interpreters'), according to Leszynsky.

¹ The *Hasidim* ('Assideans') appear as an organized party in the early Maccabean period. They are mentioned in 1 Mac. as strict observers of the law (2:12), and abstainers from things unclean (1:62). Possibly these *Hasidim* are referred to in some late Psalms (e.g. 149).

² Cf. also the constantly recurring expression in the early Rabbinical literature תַּלְמִידֵי חֲכָמִים, 'the disciples of the wise.'

³ Kohler, in *JE* ix. 661 (Citing *Dem. ii. 3*).

⁴ In *Pirge Abhōth*, i. 2, he is designated as being 'of the last survivors of the men of the Great Synagogue,' i.e. he belonged to the last of the *Sōfērim*.

⁵ Lauterbach, in *JQR*, new ser., vi. 34.

No doubt slight changes did develop in the inner life of the community, and these were reflected in new religious customs. But, as Lauterbach rightly points out,¹

'All these necessary modifications and even the few new laws [required] the Soferim could easily read into the written Law by means of interpretation, or even embody the same in the Book by means of some slight indications in the text itself. Thus they found in the Book of the Law all the teachings they required.'

The Soferim were able to do this because they were also the actual scribes whose business it was to prepare copies of the Book of the Law. If they desired to teach a certain law, custom, or practice, because they considered it as part of the religious teachings, although it could not be found in, or interpreted into, the Book of the Law, they would cause it to be indicated by some slight change in the text. . . . They did not hesitate to do so, because they did not in any way change the law as they understood it. The changes and corrections which they allowed themselves to make in the text were of such a nature that they did not affect the meaning of the passage, but merely gave to it an additional meaning, thus suggesting the law or custom which they desired to teach. In this manner they succeeded in grafting upon the written Law all these newly developed laws and customs which they considered genuinely Jewish.'

Simon the Just, the last of the Soferim († not later than 270 B.C.), was himself high-priest, and no doubt the body of teachers of which he was the head was mainly priestly in character and personnel. But after his death the activity of these teachers as an authoritative body seems to have largely ceased.

'Even the authority of the High-priest was undermined. . . . Laymen arose who had as much influence among the people and with the government as the High-priest, and they became leaders.'²

The old control over popular religious custom by the high-priest and the body of teachers under him—which had been possible while the community was stable and (to a large extent) self-contained—was no longer possible. New customs and practices gradually arose for which there were no precedents in the old tradition, or in the text of the Law itself, and gradually established themselves among the people. Still the need was felt for maintaining the authority of the Law and tradition, and so there arose a body of lay teachers, who privately devoted themselves to the study of the Law, which now became 'a matter of private piety, and as such . . . was not limited to the priests.'³ No doubt there were faithful priests who assisted this movement. Thus for some 70 or 80 years—from about 270 to 190 B.C.—there seems to have been a break in authoritative teaching. The text of the Law and the study of it were preserved during this interval by the piety of individual teachers, both priests and laymen. About 190 B.C., or a few years earlier or later, it is probable that this state of things was brought to an end by the organization of the Sanhedrin, an authoritative body consisting of priests and lay teachers, which was able to regulate officially the religious affairs of the people. It was their task to harmonize the laws of the fathers with the life of their own times; and this task had become exceptionally difficult because the new religious customs that had grown up among the people had now (owing to lapse of time) come to be regarded by them as traditional, and meanwhile, also, the text of the Law had become rigidly fixed—it was no longer possible to introduce slight verbal modifications, as the earlier Soferim had done. How was the problem to be solved? It was apparently in connexion with the issues raised by this difficulty that that division took place in the Sanhedrin which later led to the secession (or dismissal) from that body of those who came to be called 'Pharisees,' i.e., as explained above, 'seceders.' But, before this critical state of affairs was reached, a long period of discussion and controversy seems to

have ensued. The priestly, at that time the most powerful, element in the Sanhedrin wished to maintain the sacred and obligatory character of the written Tōrah, as apart from the new religious customs. According to Lauterbach, they wished to give authoritative recognition to the latter by special decrees, issued and modified from time to time, to suit varying circumstances, by priestly authority in accordance with Dt 17⁸⁻¹². These decrees were not to be put on a level with the sacred text of the written Law, but were to be regarded as authoritative so long as they remained in force. On the other hand, the Hasidim, or members of the 'pious' party, largely represented by the lay teachers, in the Sanhedrin would not accept this solution. They were unwilling to recognize any such extension of purely priestly authority, and contended that their own authority as teachers was equal to that of the priests, and that all authorized religious custom must be based directly upon the Law or its equivalent.

'Acknowledging the Law of the fathers to be the sole authority, these lay teachers now had to find all the decisions and rules necessary for the practical life of their time contained or implied in the Law. They also had to devise methods for connecting with the Law all those new decisions and customs which were now universally observed by the people, thus making them appear as part of the laws of the fathers.'¹

Two methods, according to Lauterbach, were adopted to secure this result. One was to extend, by means of new exegetical methods, the system of Midrāsh, i.e. to deduce from the letter of the Law itself justification for particular rules and customs. This method was, as a matter of fact, adopted on a large scale and developed by the Pharisaic teachers, and has given birth to a vast hermeneutical literature. The methods used were, as is well known, highly artificial and complex.

'The other method was to enlarge the definition of the term "Law of the Fathers," so as to mean more than merely the written Book of the Law with all its possible interpretations. In other words, it meant a declaration of the belief that not all the laws of the fathers were handed down in the written words of the Book, but that some religious laws of the fathers were transmitted orally, independently of any connexion with the Book.'²

This 'oral Law' (הוראה שבעל פה), which later, in an expanded form, was embodied in the official Mishnāh, was regarded as coeval and of equal authority with the written Tōrah. Thus, according to Lauterbach, the oral Law is a figment invented by the Pharisees to lend authority to popular religious customs which had become established. However this may be, Lauterbach's reconstruction, sketched above, gives the best explanation that has yet been proposed to account for the somewhat complicated facts.³ It accounts for the separation of the Pharisees from the Sadducees (in the earlier Sanhedrin), and for their emergence as distinct and bitterly opposed parties at the time when their party names first emerge into the light of history; it also makes plain how this divergence had been prepared for by previous events and by the religious situation that had in consequence arisen.

3. Aims and religious position.—The age-long conflict between the Sadducees and the Pharisees was the most important factor in the development of Judaism. The Pharisees, as we have seen, were the champions of the oral Law which at first was quite independent of the written Tōrah, and was deeply entrenched in old popular custom and usage. On the other hand, the Sadducees mainly represented the old conservative positions of the priesthood, and inherited the tradition of the older scribism. The 'scribe,' as he is depicted in Sirach (c. 190 B.C.), is a judge and man of affairs, a cultivated student of 'wisdom,' well acquainted, of course, with the contents of the written Law, and

¹ Lauterbach, in *JQR*, new ser., vi. 34, 36.

² *Ib.* p. 37.

³ *Ib.* p. 43.

a frequenter of the courts of kings. He belongs to the leisured, aristocratic class, and is poles asunder from the typical Pharisee and teacher of the Law, who was drawn from the ranks of the people. It was in the reaction against Hellenism that Tōrah-study, among the people and in the sense explained above, was born. The public reading and exposition of it in the synagogues probably dates only from the Maccabean period. Both parties were compelled now to devote themselves to Tōrah-study in the new and exacting way demanded by the times, the Sadducees because, on their view, the Law was the only valid standard for fixing juristic and religious practice, and the Pharisees because it was necessary for them to adjust their oral tradition, as far as possible, to the written word. The first result of Pharisaic activity in this direction was the development of a remarkably rich and subtle exegesis. A further result was the evolution of new laws by exegetical methods.¹

The Pharisees were thus essentially a democratic party in the sense that they were themselves mainly drawn from the people and safeguarded the religious rights and privileges of the laity as against the aristocratic and exclusive priesthood. The reaction against the Hellenizing movement was largely strengthened by their work in succession to that of the earlier Hasidim; they democratized religion by making the Scriptures the possession of the people, and expounding these in the weekly assemblages of the Synagogue. In marked contrast with those of the Sadducees, their judgments in questions of law were, as is well known, of a mild and compassionate character. When it is realized how they spent their energies without stint in the work of instructing the people in the Tōrah, and in bringing religion to bear upon popular life, their enormous influence with the people generally, to which Josephus testifies, is explained.

Josephus says that the Pharisees led the people, compelling even the priestly aristocracy to yield to them. 'Practically nothing was done by them [the Sadducees]; for whenever they attain office they follow—albeit unwillingly and of compulsion—what the Pharisees say, because otherwise they would not be endured by the people' (*Ant.* xviii. i. 4).

In manifold ways the influence of the Pharisees made itself felt upon the religious life and institutions of the people. The observance of the Sabbath and holy days was invested with special sanctity in the home. As at the sacrifices in the Temple, wine was used in honour of the day. 'Remember the Sabbath Day to keep it holy' was interpreted: 'Remember it over the wine,' and was embodied in the ceremony of *qiddush*, 'sanctification.'² They made the observance of these days popular, and succeeded in imparting to them a character of domestic joy. Whereas by the conservative priesthood such occasions were regarded mainly as Temple festivals, the Pharisees strove to bring them into the common life of the people. Their influence on the Temple services was also of a democratic character. They introduced the recitation of daily prayers beside the sacrifices (*Tamid*, v. 1), and founded the institution of the *Ma'amadot*, i.e. the deputation of lay Israelites which was present in the Temple at the daily sacrifice.³ They also proclaimed the doctrine that the priests were

but the deputies of the people (cf. *Mishnāh*, *Yōmā*, i.).

'While the Sadducean priesthood,' says Kohler, 'regarded the Temple as its domain and took it to be the privilege of the high priest to offer the daily burnt offering from his own treasury, the Pharisees demanded that it be furnished from the Temple treasury, which contained the contributions of the people.'¹

Further, they secured Temple sanction for certain popular customs which were not enjoined in the Law. Such was the great festival of the water-drawing at the Feast of Tabernacles, when a libation of water was brought in procession from the Pool of Siloam to the Temple and solemnly poured on the altar. It was, perhaps, originally regarded as symbolical of rain. During the feast, which lasted seven days, the libation of water was made each day at the time of the morning sacrifice, and it is to this custom that Christ implicitly refers in Jn 7³⁷ 'If any man thirst, let him come unto me, and drink.' This was one of the most popular of Temple ceremonies, and the *Mishnāh* referring to it and its accompaniments says:

'He who has not seen the joy of the water-drawing has never seen joy in his life.'

The Pharisaic institution of the *tēfillin*, or phylacteries, on the head and arm seems to have been devised as a counterpart of the high-priest's diadem and breast-plate, and to have been regarded as a consecration of head and arm; and in the same way the *mēzūzāh*, or door-post symbol, was regarded as symbolizing the consecration of the home. Both observances were, of course, derived from the text of Scripture (Dt 6⁸ 11¹⁶), and doubtless originally had talismanic associations; but these were, to a large extent, forgotten. The Pharisees strove to make their symbolism really religious. They also infused new and more specifically religious ideas into the observance of the old traditional festivals and solemnities. One of the most significant of these was their doctrine regarding the Day of Atonement. They boldly transferred the atoning power from the high-priest to the day itself, so that atonement might be effected apart from sacrifice and priest. The one indispensable condition was true repentance, on the necessity of which the Rabbinic literature lays the utmost stress. Similarly the New Year Festival (*Rōsh ha-shānāh*) became the annual Day of Judgment; and the Feast of Weeks, or Pentecost (originally a purely agricultural festival), became the Festival of Revelation, or the Giving of the Law. They also improved the status of women, relaxing the rigour of the old laws of purification, and, by the institution of the marriage-document (or settlement), protected the woman against arbitrary divorce. Their general aim, apparently, was to invest the woman in the home with as much dignity as possible. In consequence they enjoyed, as Josephus tells us, great popularity with the Jewish women (*Ant.* xvii. ii. 4). Among their other great achievements they fixed the canon of Scripture, built up the Synagogue service and liturgy, and established a system of religious instruction by means of elementary schools, supplemented by the Synagogue.

The enormous influence of the Pharisaic party on the religious life of the Jewish people in Palestine is thus clear; and it undoubtedly operated in the time of Jesus and the apostles. In the Synagogue and outside the Temple it was supreme. Even within the Temple it made itself seriously felt. Apparently, however, the Pharisees did not secure full control of the Temple ritual till the two decades that preceded the destruction in A.D. 70 (c. A.D. 50-70). Thus in the time of Jesus the Temple services were still mainly conducted in accordance with the old priestly traditions (though

¹ *JE* ix. 662^a.

¹ The thirteen exegetical principles of R. Ishmael (developed from an earlier nucleus attributed to Hillel) are set forth in S. Singer's *Hebrew-English Authorised Daily Prayer Book*, London, 1914, p. 13. They are explained and illustrated in M. Mielziner, *Introd. to the Talmud*, Cincinnati, 1894.

² For a description of this ceremony see W. O. E. Oesterley and G. H. Box, *The Religion and Worship of the Synagogue*, London, 1911, p. 376 ff.

³ Only a deputation was present in the Temple. The other members of the 'course' on duty who had been left behind in the towns and country districts assembled in the local synagogues (at the time when the sacrifice was being offered in the Temple) and engaged in prayer and the reading of Scripture (see *Ta'anith*, iv. 2, and cf. Schürer, *HJP* iii. 275 f.).

not, as we have seen, entirely). Both the Sanhedrin and the Temple were still dominated by the priestly aristocracy. This comes out very clearly in the details of the trial of Jesus, as narrated in the Gospels. The procedure adopted violated the canons of the criminal law accepted by the Pharisees, and embodied in the Mishnāh.¹ It is clear enough from the Gospels, indeed, that the chief actors in the tragedy were the members of the high-priestly party.

The Pharisaic ideal was the exact opposite of what is understood by 'progress' in the modern world. While in modern life the tendency is to secularize ever more and more all departments of human activity, the Pharisees consistently strove to bring life more and more under the dominion of religious observance. But observance—ceremonial—was valued mainly because of its educational worth. By carefully formed habits, by the ceremonial of religious observance, religious ideas could be impressed upon the people's mind and heart. But the outward was, at any rate ideally, subordinated to the inward. Thus in the prescriptions that occur in the Mishnāh and Tōseftā regarding prayer the necessity of conscious direction of the thoughts to the objects of the prayer (*kawwānāh*) is insisted upon. Nor is it clear that the Pharisees put all the requirements of religious observance on exactly the same level, and made no distinctions. The essential marks of their piety are well summed up in a Talmudic passage as follows:

'Three distinguishing characteristics mark the people of Israel—compassion, humility, and the practice of benevolence (acts of kindness).'²

The three purely religious duties which were most emphasized have been combined in a phrase which has become a commonplace in Pharisaic (Rabbinical) literature: 'penitence, prayer, and charity' (חסידה, תפילה, צדקה); these 'avert the evil doom.' 'Charity' (צדקה) is one of the 'good works'—a *miṣvah* in fact—which are a prominent feature in Pharisaic piety.

4. The Pharisees in the NT.—It must not be supposed that Pharisaism, during its active period, was all of one type. It was, as a matter of fact, sharply divided into opposing sections or 'schools.' Probably these divisions are not exhausted by the opposing schools of Hillel and Shammai. There were doubtless apocalyptic Pharisees, as well as others who strove to relegate apocalyptic to the background. Before A.D. 70 Pharisaism of various shades was struggling for supremacy. The later Rabbinism has absorbed its spirit, but breathes a serene atmosphere. It is less polemic in character, and doubtless had itself been to some extent influenced by the elements which opposed the earlier Pharisaism. Among these, as we have seen, one of the most important was the party (or parties) of the Sadducees. But it is necessary also to remember the presence of warring schools among the Pharisees themselves, if we are to estimate the NT evidence rightly. There was certainly an extreme and fanatical section, to be found, it would appear, among the school of Shammai (though not embracing all Shammaites), which was open to the charge of formalism and hypocrisy. Pharisees of this type were severe and exacting in their requirements, and bitterly narrow and exclusive. It seems probable that it was against this section that the polemic in the Gospels was primarily directed. Jesus denounced this hypocritical section of the Pharisees. The Talmud³ also denounces them. But on the other side were the mild and peace-loving disciples of Hillel.

A brief examination of one of the Gospel accounts

¹ See esp. the tractate *Sanhedrin*.

² *T. B. Yebāmōth*, 70a.

³ In the well-known passage in *T. J. Brāk*, ix. 14b, which classifies Pharisees into seven classes, five of which suggest 'suits' (including grave hypocrisy).

will serve to illustrate what has been said. That Jesus came into conflict with the scribes and Pharisees is attested very clearly in the oldest tradition of the Synoptic Gospels. Two specific instances of points of conflict of great importance are given, viz. the question of vows (a son by pronouncing the word *qorban* being permitted to relieve himself of the duty of helping a parent [Mk 7⁶⁻¹³]), and a question of ritual purification, the obligation, viz., to wash the hands before meals (Mk 7¹⁻⁵). To the historicity of both these accounts strong objection has been raised on the Jewish side, it being alleged that the Pharisees could never have tolerated such a breach of the moral law as neglect of duty to parents on the ground of tradition; and, further, that the laws of purification did not apply to the ordinary layman in daily life at all, but only on the rare occasions when he visited the Temple.¹ Otherwise they were obligatory only on the priests.

It is not possible to discuss these points fully here. But something may be said on the question of the ritual hand-washing. It is noticeable that the rebuke by Jesus of the Pharisees as described in Mk 7 is directed against a hypocritical section (v. 6, 'you hypocrites'). These are represented by 'certain of the scribes which had come from Jerusalem,' i.e. probably a deputation of the Shammaite party. The Shammaites were aggressive and exacting, and their influence up to the time of the catastrophe of A.D. 70 seems to have been in the ascendant. Later the milder party of Hillel triumphed, and the oral Law, embodied in the Mishnāh, was revised in accordance with Hillelite views. It is probable that in the time of Jesus the question of ritual hand-washing was a party one, and that Jesus Himself strongly opposed the Shammaite view. In fact, the impression is almost irresistible that the denunciations of the Pharisees occurring in the Gospels are directed primarily against a Shammaite section, and that the incident described in Mk 7 is an episode in the controversy between Jesus and the Shammaites. In confirmation of what has been said of the party-character of the point at the time presupposed in the Gospel account, it is interesting to note that, according to the Talmud (*T. B. Shabbāth*, 14b), the duty of ritual hand-washing formed one of the 'eighteen articles' which the Shammaites forced with such violence on the Sanhedrin in the stormy years that immediately preceded the conflict with Rome in A.D. 66-70.²

The great danger inherent in a legalistic religion is undoubtedly that of formalism, externalism, unreality; and this defect unquestionably manifested itself in certain phases of Pharisaism. But the Pharisaic religion never failed to produce genuine examples of profound piety, while its positive achievements in the domain of religious institutions were astonishing.

Pharisaism was essentially legalistic in character. To the Pharisee the Law and its prescriptions were the supreme embodiment of the divine Will and divine revelation. No doubt Pharisaism by its exegetical methods succeeded in adapting the Law to the requirements of living conditions. But the adaptation and modification were legalistic in character. They multiplied precepts and rules. Jesus, on the other hand, while maintaining the divine character of the Law, and even asserting its

² For a full discussion of both questions see the writer's art. 'Recent Literature on the Pharisees and Sadducees,' in *RThPh* iv. (1903) 139 ff. That the neglect by Jesus' disciples of the practice of ritual hand-washing was not a departure from general lay usage may be inferred from the Gospel account itself. No protest was raised against it, apparently, till a deputation of scribes from Jerusalem arrived on the scene; and what they objected to was that a teacher—a Rabbi—should permit his disciples to neglect the rite.

text against the developments of Pharisaic tradition, adopted a prophetic rather than a legalistic attitude to the Law itself. The Pharisaic attitude, while not deficient in inward strength and religious conviction, was bound to be somewhat unsympathetic to those who remained outside the Law's pale. A Jewish scholar has said:

'Only in regard to intercourse with the unclean and "unwashed" multitude, with the 'am ha-arez' ['people of the land'], the publican, and the sinner, did Jesus differ widely from the Pharisees.'¹

This difference, however, is really fundamental. Such a transcending of the letter of the Law involved ultimately its supersession. In Palestine the hostility of the Pharisaic party, as a whole, seems first to have been aroused only when a section of the Christian sect became avowedly and explicitly antinomian in the person of Stephen; and even then the hostility was not extended to those Christians who wished to remain loyal to the Law.

5. The significance of Pharisaism in the history of Judaism.—As we have seen, Pharisaism was the dominant factor in the development of orthodox Judaism, which assumed a more or less permanent form in the Rabbinical system. Its relations with other parties during the two centuries before A.D. 70 were also of vital importance. What exactly the relation of Pharisaism was to the earlier apocalyptic it is difficult to say. The two types of thought and circles, though distinct and emphasizing the one the Law, and the other eschatological hopes, were not necessarily opposed, and were doubtless often combined in greater or less degree. It is significant that the Pharisees took over from the apocalyptists and made a firm position of orthodox Judaism the doctrine of the future life; they also admitted the apocalyptic book of Daniel into the canon. (On the other hand, there was a certain anti-apocalyptic bias in Pharisaism, which showed itself later (c. A.D. 100) in the rejection of the apocalyptic literature of the earlier Judaism. In fact, Pharisaism was far from other-worldly in its outlook. Its main interest was to bring the sanctions of religion into *this* life. This tendency also appears in its Messianic doctrine, which it has impressed on all parts of the Synagogue liturgy. Its Messiah is not the transcendental and heavenly figure of some of the apocalyptists, but a purely human son of David. Pharisaism was the most vital factor in the development of the Judaism of the Talmud. But Rabbinic Judaism, in the form which it assumed from the 2nd cent. A.D., is not a mere deposit of Pharisaism. It is really a synthesis of the earlier Pharisaism and some of the elements that were in conflict with it. The final product was something richer and more serene than the struggling and confused elements, as they appeared before the process of fusion was complete.

It may be claimed, with some justice, that by Pharisaism 'the element of evolution and progress was injected into the Law. . . . It was due to this progressive tendency of the Pharisees that their interpretation of Judaism continued to develop and remained an ever living force in Jewry.'² Certainly the Pharisees erected a structure which has proved its strength by withstanding the shocks of time, and by its survival, so far as it has survived, in the Jewries of to-day.

G. H. BOYD.

PHILADELPHIANS.—The Philadelphia Society was a little group of mystics, in London, Holland, and Germany, who flourished from 1693 to 1819. Dr. John Pordage (1607-81), one of the Cambridge Platonists, and the author of *Theologia Mystica*, followed a temporary fashion and drew together several readers of Jacob Boehme. Commissioners of Berkshire therefore ejected him from the rectory of Bradfield before the end of 1654, on charges of blasphemy, necromancy, scandal in his life; at the Restoration, however, he re-entered. In this circle of followers of Boehme was Jane Lead (1623-1704), a widow of good family who in 1670 began to experience divine openings and revelations, so that she, a living medium, taught by God's eternal virgin wisdom, superseded the dead Boehme. Soon 'The Philadelphia Society for the Advancement of Piety and Divine Philosophy' was organized, apparently on a microscopic scale. Nothing was written till 1681, when Mrs. Lead issued a little tract, *The Heavens Opened now Breaking*, followed in two years by a larger work, *The Revelation of Revelations*. This was published through Sowle, the Quaker bookseller—an obvious sign of a spiritual kinship. Francis Lee of Oxford (1661-1719) heard of the movement at Leyden, where he was studying medicine; he sought out Mrs. Lead on his return, became her adopted son, and, in accordance with revelation, married her daughter. Soon he headed the movement, introducing Mrs. Lead to kindred spirits abroad, so that a sister society arose in Holland. He urged Mrs. Lead to write, and himself edited the *Theosophical Transactions* of the society, which began to appear in 1697.

Mrs. Lead broke new ground in 1694 with another pamphlet, *The Enochian Walks with God*, in which she announced a fresh stage of revelation superseding her former deliverances, and declared that it was possible after spiritual death, a resurrection by the aid of the cherubim, to have direct communion with departed saints as well as with Christ. Next year appeared *The Wonders of God's Creation manifested in the Variety of Eight Worlds*, of which she was only the 'subordinate author,' and in which, on divine authority, it was revealed that there are eight worlds, the visible universe being lowest, and four being sinless—Paradise, Zion, New Jerusalem, and Eternity, the source of all. In 1695 appeared *The Laws of Paradise*, or the Ten Commandments spiritualized. The fourth was interpreted to mean that there was to be no reasoning but implicit belief in the revelation, and no working for a living but acceptance of whatever was provided, while the seventh forbade all conference with any one but Jane Lead. In 1696, when the society was at its zenith, she began *Fountain of Gardens*, which contains her recollections in old age of her spiritual experiences till 1685. This work extended to four volumes, the subsequent instalments appearing in 1696, 1700, and 1701. Two little tracts, *The Tree of Faith* and *The Ark of Faith* (London, 1696), described the flying ark navigated by the apostle John, who gathered the saints fit for transmutation. Mrs. Lead's first *Message to the Philadelphian Society*, also published in 1696, explained the seven churches and the seven sons of Jesse, and showed that Christ rejected Episcopalians, Presbyterian

¹ Kohler, *JE* ix. 665b.

² Lauterbach, in *Studies in Jewish Literature in Honour of Kohler*, p. 198.

Independents, Baptists, Fifth-Monarchists, and Rome, choosing only the Philadelphian Society as free from all forms. The *Message* also enjoined organization, and repeated that to work for a living was wrong; the kings of the earth would send tribute. This bid for publicity won adherents, but attracted hostile comment and brought forth rivals, so that it was necessary to advertise what were the authentic works of Mrs. Lead. Monthly *Memoirs* were published, beginning in 1697.

A formal meeting was held at Westmorland House, when the society agreed not to separate from outward ecclesiastical connexions, but to superadd their own meetings. This was the custom of the religious societies then so familiar, out of which grew the Wesleyans later on; it was Spenser's *ecclesiola in ecclesia*. In this way the growth of a German branch was facilitated; but it was contrary to the revelation to Mrs. Lead, and marks the repudiation of her sole claims. Another constitution, describing the order of worship, enjoined the reading of Scripture, silent meditation, and prophecy; it forbade argument or the stating of doubts in meeting; it was explicit that all members were equal, and that women must be modest if they took part. A pamphlet controversy led to explanations that the discipline of the society was borrowed from the Church of England and the Friends; that Scripture was accepted as the touchstone of alleged revelations, which cannot supersede or add to Scripture, but can only interpret it; that in case of conflict of alleged revelations the common sense of the society judged the genuineness and validity.

The revolt against Mrs. Lead and her son-in-law Lee was disastrous; the *Memoirs* ceased to appear, and the third *Message* shifted ground, declaring that the seven churches were now Jews, Romans, Greeks, Ethiopians, Lutherans, French Reformed, and Vaudois. Two more works by the foundress of the society were published, *The Wars of David* (London, 1700) and *A Living Funeral Testimony* (do. 1702), but the movement was doomed. A confession is said to have been issued in 1703, but the government suppressed the meetings of the society, and no protest was published. The Dutch section formally severed connexion, and the English section collapsed with the death of Jane Lead in 1704. She had been quite consistent in her refusal to work, and her needs had been met by an annuity from Baron Kniphausen. The German connexion had introduced the society to the practical work of Francke at Halle, an account of which appeared in the *Memoirs*. It has been claimed that Lee persuaded Hoare and Nelson to acclimatize that work as the charity schools, but the claim is too high, for these were begun by Presbyterians in Southwark as early as 1687.

LITERATURE.—Sources are named in the article. See also S. Lead, *Biographie der Lead*; *Biographie der Lead*, in *hist. Theologie*, 1865, 1873, p. 181 ff.; M. D. Conway, in *The Open Court*, vii. (1900), 376 ff.; A. Ruegg, in *PRE* xl. 326 ff.; R. M. Jones, *Spiritual Reformers in the 16th and 17th Centuries*, London, 1914. An ed. of the *Wars of David*, published in 1810, has many notes, extracts, and criticisms. W. T. WHITLEY.

PHILANTHROPY.—I. Introduction.—Philanthropy is defined in *OED* as 'the disposition or active effort to promote the happiness and well-being of one's fellow-men.' It is closely akin to charity (*q.v.*), and may be regarded as charity grown up; i.e., the impulse to help the needy, which may be but a casual and superficial emotion, develops in some minds into a settled disposition and a steady life effort. The typical philanthropist

is a prosperous person who gives up a large share of his life to the work of improving the lot of his fellow-creatures. While charity concerns itself in the main with the present needs of individuals, philanthropy looks further, to the future as well as to the present, and seeks to elevate human life on a larger scale. It is specially characteristic of those societies that are called 'individualistic,' i.e., in which ideals of personal liberty make a strong appeal to the average person. Where the rights of the community over the individual are powerfully felt, as in the ancient Greek cities or in modern Germany, there is less call for philanthropy; it is to the community, organized in the State, rather than to wealthy individuals that men naturally look for the redressing of human wrongs. Further, philanthropy is usually the product of religious faith, and it is therefore affected by the kind of religion that prevails in a community. It is much more characteristic of Christian than of pagan societies, and of Protestant than of Roman Catholic or Orthodox. The reason doubtless is that Protestant societies are usually the more individualistic: where the Church idea is strong, and the sense of personal liberty weak, it is to the Church rather than to individuals that people turn for succour and support.

Philanthropy, then, is the outcome of the charitable impulse, when disciplined by reflective thought, in a strongly individualized society; but philanthropy, in its turn, under the criticism of reason, tends to merge itself in something larger still. The efforts to cope with social evils put forth by individuals, either alone or in voluntary association, are often found to fail; and it is seen that to be effective they must be undertaken by the community. The object is now sought to be attained through changes in the law and improved administration of the forces of society. The philanthropist becomes the reformer.

2. History.—A full outline of the history of the world's philanthropy cannot be attempted here; but we may illustrate a few of its features. It is in the Christian communities of the West, and particularly in the English-speaking countries, that philanthropy has been most highly developed; but it has long existed in the East also, quite apart from Christianity.

(a) *Chinese.*—In China, through the teachings especially of Confucius and Mencius, the virtue of benevolence has been recognized from very early times. They taught that the State exists for the promotion of human happiness; but neither central nor local authorities appear to have done much actively in this direction. There has, however, been much private benevolence, especially during the last two centuries; but this is scarcely noticed in the Chinese histories, which have been written in the main as chronicles of the doings of kings and emperors. Orphans and abandoned children have been cared for, and endeavours made from time to time to put a stop to the practice of desertion. Hospitals and alms-houses have been established. There is a Chinese poor law, which is stated to be on paper admirable but in practice almost a dead-letter, since no funds are provided by the State, apart from the land-tax, the proceeds of which, even under an honest magistracy, are usually required to meet the costs of local administration. In most of the Chinese cities there is a large amount of philanthropic work initiated and controlled by the people apart from, but not in antagonism to, the government; and these local charities are co-ordinated by institutions like the 'Hall of United Benevolence' at Shanghai, which dates from 1805. Some of these are using modern and enlightened methods; how far this is due to a growing acquaintance with Western life, through

the work of missionaries and others, it is not easy to judge.

A native writer says:

'Chinese philanthropy has reached the stage of systematization and institutionalism, and of adequate relief; but not that of the scientific prevention of destitution. . . . But the scientific stage is bound to be reached' (Yu-Yue Tsu, *The Spirit of Chinese Philanthropy*).

This may be true of some parts; in many others it certainly cannot be said that 'relief is adequate.' Beggars, lepers, blind and insane persons, often fail to obtain needed succour, either through the clans or the merchant gilds, which are supposed to care for their members.

That there is a fine philanthropic spirit at work among the Chinese people is clear from their success in putting down the use of opium, and also from the rapid progress of the movement for freeing women from the pernicious practice of foot-binding.

(b) *Indian*.—In regard to India, it is perhaps unnecessary to add to what has already been said under the head of CHARITY, ALMSGIVING (Buddhist) and (Hindu).

(c) *Greek*.—Among the Greeks philanthropy occupied but a minor place, whether in practice or in ethical theory. It was always assumed that the bulk of the hard manual work of the community would be done by slaves, whose fundamental needs were of course provided for; and, if distress came upon the citizens, the Greek mind naturally turned to the city-State, rather than to wealthy individuals, as the organ through which the trouble should be met. In the place of philanthropists we find legislators and statesmen like Solon and Cleisthenes, whose reforms were designed to lift up the poorer citizens and release them from their burdens. We hear, indeed, of rich citizens in Athens fitting out at their own charge vessels for the navy, and helping their poorer neighbours by portioning their daughters and sisters; yet Aristotle in his *Politics* (vi. 5, 1320^a b) commends foreign examples of benevolence, implying that this was not a conspicuous virtue among his fellow-Athenians. What he desired was no ill-considered or spasmodic charity:

'The chief service rendered by Aristotle was to show that unless the purpose of civil and social life was carefully considered and clearly understood by those who desired to improve the conditions, no change for the better could result from individual or associated action' (C. S. Loch, *Charity and Social Life*, p. 34).

Thus the benevolence which he desiderates is the philanthropic rather than the merely charitable spirit.

(d) *Roman*.—What has been said about the Greeks applies in large measure also to the Romans. Philanthropy was not a characteristic Roman virtue, yet it burned with a very pure flame in the breast of Tiberius Gracchus, when he saw great estates in Tuscany cultivated by slaves and barbarians, while Roman citizens were idle and starving; and it drove him to reform of the land laws. His reforms and those of his brother Caius, for which they gave their lives, were in a measure successful; but the *lex frumentaria* of Caius, which gave to Roman citizens the right to purchase corn from the public stores at about half-price, began the demoralization of the Roman *plebs*. This illustrates one of the dangers of philanthropy, even when it takes the form of social legislation. Apparent success at the time may be achieved at the cost of grievous trouble in the future. The process of demoralization went on until the greater part of the Roman populace were enabled to live in idleness, depending on the *annona*, or free distribution of corn at the public charge; and no philanthropist could untie the fatal knot—for the Roman citizen was a voter, and thereby master of the situation. He would

support any one who would offer him plenty of *panem et circenses*.

Under the empire the Stoic faith, which fitted so well the ideal Roman character, drew some of the leading minds towards a wider recognition of the worth of manhood: 'homo sacra res homini,' wrote Seneca (*Ep.* xv. 3). This broadening of the sense of human brotherhood had its outcome in a distinct development of the philanthropic spirit. Hospitals of some kind, probably private infirmaries, appeared in the 1st cent. A.D.; and, with the desire to encourage the growth of population, several of the emperors formed endowments (known as *alimenta*) for the support of selected children of poor parents, entrusting their administration to local municipalities, and encouraging others to do likewise (see, further, CHARITY, ALMSGIVING [Roman]).

(e) *Jewish*.—Among the Jews the duty of kindness to the poor, the widows, and the fatherless was constantly enforced as a thing pleasing to God. But the nearest approach to anything that can be called philanthropy is perhaps to be found in the earlier prophets, who (from the time of Elijah's fearless denunciation of Ahab for his injustice to Naboth) pleaded the cause of the poor against their oppressors. The special contribution of the Jewish spirit (mainly through the prophets) was its insistence on the practice of justice and love as a vital element in religion: what Jahweh required of men was 'to do justly, and to love mercy, and to walk humbly with thy God' (Mic 6⁸).

After the Exile the rise of the Synagogue was accompanied by the gradual development of a system of organized charity, for which the Jews are still remarkable. It is not surprising, after the treatment which they have received at the hands of Christians, that except to their own people most Jews are not much inclined to liberality.

(f) *Early Christian*.—It was through the ethical teachings of the prophets that a section of the human race was prepared for the coming of Christ, that the spiritual senses of a few were so trained and developed as to be able to appreciate and welcome the manifestation of divine and human love which Christ brought. It is this that makes philanthropy peculiarly a Christian product. Christianity broadened and deepened the spirit of love to man, as nothing else in human history has ever done.

The early Church felt that its Master had revealed both God and man: God as perfect love, stooping to unimaginable depths of humiliation for man's sake, and man, always and everywhere, gifted with the capacity to appreciate and respond to that love. Every man became a brother 'for whom Christ died.' Jesus, by His example even more than by His words, had broadened the bonds of brotherhood to encircle all mankind; He ate with publicans and sinners, disclosed His deepest teaching to sinful women, and taught that our 'neighbour' is the alien and the heretic if they need our help, that a kind act done to one of the least of His brethren is done to Him, that men are called to be 'perfect' by sharing the universal love of the Father of all. Love to man as man, the sense of universal brotherhood, the intuition of the oneness of humanity, became for the first time a guiding principle for ordinary men and women.

What Christ made of His followers is seen most clearly in the career of His great apostle, St. Paul, whose noble hymn in praise of love in 1 Co 13 rings true because he lived it out himself. His whole life after his conversion was one of philanthropy in its best and truest sense—self-dedication to the highest good of men. The early Church was a community of 'inspired' men and

women—inspired, above all, with a new experience and power of love. 'We know that we have passed out of death into life, because we love' (1 Jn 3¹⁴). The new order of relations lifted all human life to a higher level; it gradually made slavery impossible, raised the position of women nearer to equality with men, and led many of the most spiritually-minded Christians, during at least the first two centuries, to refuse to fight in the Roman armies, because they felt that all men were their brothers. Its most conspicuous triumph was won in the amphitheatre, where it put a stop to the gladiatorial games, thus countering the fiercest passion of the ancient world.

But the picture has its flaws. After the first glow had passed away, influences unfavourable to philanthropy began to make themselves felt. One of these was the absorption of the Church in the tasks of defining its creed and settling its organization. Another was the ascetic spirit, which is essentially self-regarding, and which tended to displace the spirit of love. A third was the notion, taken over from Jewish teachers, that almsgiving is a discipline good for the soul, which was so emphasized as to empty charitable deeds of all love, by making them a penance, whose main value was to the giver in the next world rather than to the recipient in this. And so the 'dark ages' do not shine when we search them for philanthropy. The idea that poverty was a divine ordinance—a fixed condition, to be relieved but not removed—robbed the almsgiving of the monasteries to a large extent of a really philanthropic purpose. Yet the spread of public 'hospitals' from the 4th cent. onwards—institutions founded for the help of the sick, the poor, the aged, and the orphans, sometimes with ecclesiastical money and sometimes by private benefactions, but always controlled by the Church—shows the presence of real solicitude for suffering humanity. The ransoming of captives, pagan as well as Christian, was largely practised, some of the bishops even, when their own wealth did not suffice, using the costly plate of their churches for the purpose. Great ecclesiastics frequently, at no little personal risk, interceded with barbarian invaders on behalf of humanity; St. Ambrose compelled Theodosius the emperor to do penance for his massacre of the Thessalonians. And all through the Middle Ages the Church strove, fitfully perhaps and with only partial success, to regulate commerce and industry in the interests of justice and human welfare. The philanthropic spirit is shown in the Christian society, even when we cannot single out the individual philanthropist.

(g) *Modern.*—Modern philanthropy, strictly so called, begins with the Reformation, and is exemplified most in the countries of N. Europe and America, where the Reformation took deepest root. In England the dissolution of the monasteries destroyed the whole organization of society so far as the relief of the destitute was concerned, just at a time when their numbers were increasing fast; and the Elizabethan poor laws mark the failure of private philanthropy to rise to the need. The outbreak of strange sects during the Commonwealth period included schemes of social regeneration, like that of the 'Diggers,' led by Everard and Winstanley, but more important was the rise of the Quakers, just in the middle of the 17th century. Their belief in the 'Light of God in every man' gave them a fresh intuition of human brotherhood, and sent them forth as sober apostles of love and justice among men. William Penn's colony of Pennsylvania was a great philanthropic achievement, specially remarkable, first as an experiment in entire freedom of conscience, and secondly for its security from attack by the Indians, who, as

long as the Colonial Government followed Penn's example of treating them justly, remained its warm friends and supporters. For seventy years the colony was free from attack by the Indians, though unguarded by fort or soldier. Then the 'Holy Experiment' came to an end, at the opening of the Seven Years' War in 1756. Positive orders were received from the British Government to arm the colony in defence against the French, and this drove the Quakers from power.

Remarkable among Quaker philanthropists was John Bellers (1654–1725), who is described by Karl Marx as 'a veritable phenomenon in the history of Political Economy' (*Das Kapital*, Hamburg, 1872–94, i.² 515). He worked out with much shrewdness a scheme for Colleges of Industry, which afterwards influenced Robert Owen. The later Quakers became pioneers in various crusades, notably those against slavery, for the reform of prisons, for the humane treatment of lunatics, and for popular education; and all through its history the society has striven against war.

There is no great work of humanity and mercy in which the Quakers have not had their share, and which finally is not rooted in that which Fox recognised as the power of the "Seed of God" (P. Wernle, *Introd. to Germ. ed. of George Fox's Journal*, Tübingen, 1903).

The close of the 17th cent. and the early years of the 18th marked a new departure in philanthropy: the beginning of 'societies' for carrying on religious and philanthropic work with money jointly provided. Among these were the 'Society for the Promotion of Christian Knowledge' (1698), the 'Society for the Propagation of the Gospel' (1701), and other missionary bodies. Several of the larger London and provincial hospitals date from this time, though St. Bartholomew's and St. Thomas's are much older. Guy's was founded in 1724, Westminster in 1734, and Winchester, the earliest provincial hospital, in 1736. In this particular matter England was behind several of the continental countries, particularly Holland.

From the 18th cent. onwards the formation of philanthropic societies has continually gone forward with all sorts of objects, among which we may mention as typical the printing and distribution of the Scriptures, popular education, the aftercare of prisoners, the prevention of crime by reformatories and industrial schools, the advocacy of temperance, the prevention of cruelty to children and animals, and the spreading of the principles of international peace.

3. *Philanthropy and the State.*—In most of the fields of philanthropic activity it is not possible to separate by any rigid demarcation the spheres of private and of State responsibility; there has been a constant tendency for work that is attempted by private persons or associations to be eventually undertaken by the State. The most conspicuous example of this is public education, which every one now recognizes to be a legitimate concern of the whole community. This tendency arises mainly from the discovery that private effort rarely accomplishes what is needed—whether through deficient or capricious financial support or because in some cases a power of compulsion is required which only the State can supply. Strong arguments can be adduced, on grounds of efficiency, for the State management, at the national charge, of hospitals, asylums, and the like—just as the government, in Germany and England, has undertaken the task of insuring its poorer members against sickness and old age. The task of philanthropists, in the present day, often is to get the community to shoulder its responsibilities for the weaker members of society; hence, as was said above, philanthropy becomes merged in social reform.

The special case of the reform of prisons, and of

penal administration generally; illustrates well the relation between philanthropy and the State. In the 17th cent. the State took no responsibility for the management of prisons or for the support of prisoners; its task was done when, having convicted them of crime or debt, it handed them over to the jailer for a certain term of safe keeping, leaving him to get out of them or their friends what he could. The investigations of John Howard, which began in 1773, led him at once to advocate changes in the law—payment of salaries to jailers, abolition of fees, cleansing of prisons, classification of prisoners, separation of the sexes, and so forth. Some temporary improvement resulted; yet in 1813, when Elizabeth Fry began her visits to Newgate, the condition of many prisons was as bad as ever. Since that time it has been increasingly recognized, at least in Europe and America, that society itself has a duty to the law-breaker, and that, if it neglects that duty and simply contents itself with punishing him, in most cases he comes out of prison a greater danger to society than before he went in. Hence the demand that prisons shall be made, so far as possible, not merely deterrent but reformatory; that the criminal, after leaving prison, shall be given the chance of a fresh start in life, and shall be upheld and guided by those who have his good at heart; and that similar methods shall be employed with unhardened offenders, instead of sending them to prison at all. Experiments in the use of probation and conditional liberation on parole, under the care of special officers, have been made more freely and successfully in America than in Europe, but both are being cautiously introduced in England. Private philanthropy is not displaced, but is absorbed and directed. The State makes large use of the philanthropic earnestness of individuals, as probation officers and the like; but, unless the philanthropic spirit also animates the administrators of the law, the result is largely failure. The supreme need is the change of the bad will into the good will, and the development of character; and these are things that may be achieved by personal influence, but hardly ever by machinery, however perfect.

This opens up a large question—too large for more than mention here. If the State is compelled, even in its own interests, to care for the lives of those who break the law—to seek to find them suitable employment, and so forth—how can it rightly leave, to sink or swim in the surging sea of competition, the great majority who keep the law? Must not the process end logically in a guarantee that the State will find employment for all? The difficulties that attend such a guarantee have often been pointed out by economists, and we cannot here pursue the matter further. But this we may certainly say: that the State must seek not only to repress crime but to remove those elements in the life of the community that cause and encourage crime; and that in doing this it will continually need the help and guidance of philanthropists.

In various fields of social work there are advantages in experiments being made by private philanthropists before the State steps in. Even if their work is not fully efficient, premature State action may often turn out to have been misguided, and may do more harm than good. If, e.g., all the reformatories for boys had been managed by the State in the days when manacles and armed guards were thought essential for order and discipline, it is very doubtful whether, in spite of more adequate equipment, a military machine of that kind would have achieved even the moderate success which, with all their drawbacks, has been attained by the privately managed reformatories. It is, as has been said above, only through the free play of

personal influence that personality can be rightly developed.

4. **Extra-national philanthropy.**—A word may be added regarding philanthropic action by individuals or societies for the benefit of humanity outside their own country. The great missionary enterprise must be considered here; apart from it nearly all such benefit is necessarily sought through the agency of the State. The anti-slavery agitation is the greatest of these philanthropic movements. In this case the work of philanthropists has been mainly directed to securing the necessary changes in law, and to bringing continual pressure to bear on the government to secure, as far as possible, justice and right treatment for weaker peoples. The exploitation of the resources of the tropical regions of the earth by European and American capital opens up continual dangers of forced labour and other abuses akin to slavery, of which the Congo and Putumayo atrocities have been the most widely known; and there will long be a place for such philanthropy as that of the 'Anti-Slavery and Aborigines Protection Society.' Other movements that may be mentioned in this connexion are those for restricting the sale of intoxicating liquor among native races, and for the abolition of the Indian opium trade with China, which is now, happily, almost a thing of the past. In these cases the work of philanthropists has been to enlighten the public and to quicken the demand for legislation and effective government administration.

5. **War.**—The most pressing of all social problems at the present time is that of war, and for long years to come an urgent task for philanthropists and reformers will be to replace the spirit of national egoism by the desire to deal justly with all, and, as the outcome of this desire, to discover means by which mutual trust among nations may be established, and disputes may be prevented from giving rise to war. In this great task statesmen and philanthropists will need one another's help.

At the present day the alternative 'philanthropy or the State' has been transcended, and the problem is to find how the two lines of activity may best support each other.

PHILIPPINES.—See **INDONESIANS**, **MALAY ARCHIPELAGO**, **MALAY PENINSULA**, **NEGRILLOS** AND **NEGRITOS**.

PHILISTINES.—The Philistines (Heb. פְּלִשְׁתִּים; Gr. Φυλιστινῆς, Ἀλλόφρονες [LXX], Παλαιστῖνοι [Josephus]) were a warlike people, established on the coast of Palestine, and at the zenith of their power during the early years of the Hebrew settlement.

1. **Origin, name, and history.**—We have but little material for a history of the Philistines outside the literature of the Hebrews, who, being their bitterest and most resentful enemies, paint them in the blackest colours. Criticism has therefore to be applied to the statements there contained.

Of the origin of this people the Hebrews had a vague tradition that they came from a place called Caphtor. The 'Caphtorim' (whence went forth the Philistines) and Caphtorim are enumerated among the children of Mizraim, son of Ham, in a passage of the Table of Nations (Gn 10^{6, 13, 14}) attributed to the Jahwistic writer. The words in parentheses are probably a misplaced gloss, which ought to

follow 'Caphtorim.' Am 9⁷ speaks of the Philistines having been brought from Caphtor; Jer 47⁴ refers to them as the remnant of Caphtor, calling the place by a word (כַּפְתֹּר) which implies that it was on the sea-coast, if not an actual island. Dt 2²³ speaks of the Caphtorim, which came out of Caphtor, having destroyed the villagers of the neighbourhood of Gaza, and established themselves in their land—a geographical indication which equates the Caphtorim with the Philistines.

Besides the name Caphtorim, we find others in Hebrew literature that have every appearance of referring to the same people or, at least, to clans or other tribal subdivisions of them. Chief of these is כֶּרֶתִּית, 'Cherēthites' (1 S 30¹⁴, Ezk 25¹⁶, Zeph 2⁹). In the Ezekiel passage the Philistines and the Cherēthites are spoken of together. Elsewhere the Cherēthites are alluded to as part of the bodyguard of the early Hebrew kings, coupled with the name פֶּלֶתִּית, 'Pelēthites,' of which the only reasonable explanation that has been suggested is that it is a modification of the name of the Philistines used for the sake of the assonance. This royal bodyguard is thrice alluded to as the Carians (כָּרִי), namely, in 2 S 20²³ [RVm], 2 K 11^{4, 19}—a fact probably something more than a mere accident.

The question of the origin of the Philistines is thus bound up with that of the identification of Caphtor. There is a place referred to on Egyptian monuments by the name *Keftiu*, *Keftiu*, first mentioned in inscriptions of the XVIIIth dynasty, which it is natural to compare with the Hebrew name. In the *Hymn to Amon*, under the guise of which Thutmose III. vaunts his mighty deeds, he speaks of smiting the west-land and causing terror to the lands of Keftiu and Asi. In the annalistic inscription on the walls of the temple of Karnak we read of ships of Keftiu, showing that it is a place on the sea-coast, like the Caphtor of Jeremiah. More important than these, we find in the tombs of the officials, notably in that of Rekhmara, vizier of Thutmose III., wall-paintings representing messengers from Keftiu and other places bearing tribute to the Pharaoh. This tribute, which *inter alia* takes the form of artistic vases of precious materials, we are now in a position to identify as belonging to the contemporary Minoan civilization, which had its centre in Crete. On this ground it has become generally recognized that Keftiu is to be identified either with Crete itself or with one of the neighbouring countries which enjoyed the benefits of the Minoan civilization. The obvious similarity of the Hebrew Cherēthites with 'Cretans' has long been recognized, even from before the days of scientific archaeological investigation, and has prepared the way for the general acceptance of this identification.

It may be said that the identification is so far certain that other identifications that have been suggested are rendered obsolete—such, *e.g.*, as the attempts made by various writers to find Caphtor in the Delta, or to prove for the Philistines a Semitic origin. On the other hand, there are still some difficulties not yet solved, chief of which is the origin of the *r* in the Hebrew name Caphtor, which does not appear in its apparent Egyptian equivalent Keftiu. Another difficulty is that Keftiu early disappears from Egyptian record, to be revived by would-be archaeologists under the Ptolemys, whereas the name is preserved by the Hebrews after the Egyptians appear to have forgotten it. To explain these points we must await further discovery.

Towards the end of the troubled 14th-12th centuries B.C., a period of great unrest in the E. Mediterranean, we begin to find mention of an indefinite number of small tribes who make their appearance in Egyptian records. These tribes bear

names easily identified with places and peoples in Asia Minor and the neighbouring islands. Thus the Tell el-Amarna letters tell us of the Lukku (Lycians), Shardanu (Sardians), and Danunu (Danaoi?). Ramessu II., in the great battle of Kadesh (1333 B.C.) against the Hittites, had to meet the first two of the above-mentioned peoples, who were leagued with his enemies, as well as the Dardanu (from Dardanus in the Troad), Masa (Mysians), Mawuna (Mæonians, but the reading is uncertain), Pidasa (people of Pedasus in Caria), and Kelekesh (Cilicians). Merneptah (1300 B.C.) was opposed by the Lukku and Shardanu in league with the Libyans, as well as the Ekwesh (Achæans), Turisha (people of Troas), and Shekesh (Sagalassians). And, lastly, in the inscriptions in the temple of Medinet Habn, built by Ramessu III. to commemorate his great victory over the allied tribes who came to invade Egypt, we hear once more of the Shardanu, Danunu, and Shekesh, as well as of the Pulasati (Philistines), Zakkala, and Washasha (the last-named have not been satisfactorily identified). This is the first certain appearance of the Philistines, as such, in history, and is of great importance, as it gives us an explanation of their sudden appearance on the coast of Palestine.

The inscriptions in the temple record that in the eighth year of Ramessu III., the last great warrior-king of Egypt (c. 1192 B.C.), the north was disturbed, and bands of marauders, driven from their homes by troubles, began to raid the east and south, seeking a new dwelling. They flowed over the land of the Hittites, Syria, and Palestine, while at the same time a parallel expedition was advancing by sea, over Cyprus. Egypt was their goal; but Ramessu was ready for them, and in the inscriptions and engraved cartoons on the wall of his temple he describes his successful operations against them—notably the great sea-fight, the first event of the kind of which any pictorial record remains. Driven back from Egypt, the invaders established themselves on the Palestinian coast-line about the same time as (probably shortly after) the arrival of the Hebrews in the Hinterland by the desert route.

It is true, the book of Genesis (chs. 20, 21, 26) records certain events in which Abraham and Isaac are brought into contact with one Abimelech, king of the Philistines. In criticizing this cycle of tales we must bear in mind that the main incident is repeated in ch. 12, where, however, the king of Egypt takes the place of the Philistine king. The use of the word 'Philistine' in these stories is an anachronism, and none of the attempts that have been made to evade this fact is successful. Abimelech is a Semitic chieftain, and he is called a Philistine because his territory was in the region which was actually 'the land of the Philistines' at the time when the stories were first written down in their present form. The popular storyteller, who is responsible for them as we have them, was not troubled by the question of how far back in time the Philistine occupation may or may not have extended. Similar criticisms are applicable to the casual references to the Philistines in Ex 13¹⁷ 23³¹.

Passing over the very obscure story of Shamgar (Jg 3³¹ 5⁶) and the reference to Philistine oppression (Jg 10⁷), we find the first record of the inevitable collision between the Philistines and Hebrews in the epic of Samson. This remarkable series of stories weaves round the person of a single ideal hero the incidents of a guerilla border-warfare. They show the complete domination of the Philistines over the Hebrews, and the internal disunion of the Hebrew clans; for Samson's chief danger is not so much the prowess of his Philistine

enemies as the treachery of his own kinsfolk; the men of Judah would betray him, and he at last is delivered over by his Hebrew wife Delilah—for there is no evidence in support of the popular view that she was a Philistine.

Under the pressure of the Philistine domination the Hebrew tribes gradually became welded into one, and slowly and with many reverses succeeded in ultimately ridding themselves of the domination of the uncircumcised. The first campaign was disastrous for the Hebrews; the Ark was lost at Aphek (1 S 4); but an outbreak of bubonic plague caused the Philistines, in superstitious fear of the Hebrew deity who had plagued the Egyptians, to return it. A more successful engagement, in which the Philistines were discomfited by a great thunderstorm, is recorded in ch. 7. An index of the growing sense of tribal unity—the result of this Philistine pressure—is the Hebrew demand for a king which now began to be expressed. As soon as Saul was elected, his son Jonathan slew the Philistine governor of Gēba; the Philistines came up against the Israelites to quell the revolt and met their rebellious serfs at Michmash, where, but for Jonathan, they would have crushed them. In a later battle, at Ephesdammim (1 S 17, 2 S 23⁹, 1 Ch 11¹³), David first distinguished himself, though the Goliath story is probably here out of place. Notwithstanding these Israelite victories, and the occasional raids carried out by David, the end of Saul's reign saw the Philistines as strong as ever. After Saul's death David reigned as king over the southern tribes at Hebron, doubtless under Philistine vassalage, while Ish-Baal, Saul's son, ruled in the north, presumably in the same subject condition. The assassination of Ish-Baal opened the way for David to add his rival's kingdom to his own, capturing the citadel of Jerusalem that had hitherto stood as a non-Hebrew wedge dividing the two groups of Hebrew tribes. Fearing that David would become too strong, the Philistines came up against him; but vainly. Three battles are recorded as having taken place in David's reign—one at Baal-Perazim (2 S 5¹⁷⁻²¹), one at Gēba (2 S 5²²⁻²³), and one at some unknown place, possibly Gath (2 S 8¹), in which the power of the Philistine people was broken beyond recovery, as is shown by the remarkable fact that they made no effort to recover their lost power during the troubles that darkened the end of David's reign. Nor did they take any conspicuous advantage of the internecine dissensions between Judah and Israel. In fact, they practically drop out of history after the reign of David, and are principally referred to as composing the bodyguard of the king (Cherēthites and Pelēthites, or Carians, as in the passages already cited) or the guards of the Temple (Ezk 44⁷, Zeph 1^{8t}). Almost the only sign of rallying is a temporary revival under Ahaz (2 Ch 28¹⁸), suppressed by Hezekiah (2 K 18⁸).

The annals of the Assyrian kings from Hadad-Nirari III. (812-783) down to Assurbanipal (began to reign 668) give us a few further details of conquest, and of feeble attempts at revolt promptly and ferociously suppressed. It is noteworthy that nearly all the persons mentioned in these documents in connexion with the Philistine cities have Semitic names, the only exception being a king of Ekron of the time of Esarhaddon (681-668), by name Ikausu, evidently the old Philistine name Achish. According to Neh 13²³⁻²⁴, the 'speech of Ashdod' still lingered at the time of the return from the captivities.

2. Land.—Jos 13² limits the Philistine territory to the strip of coast-line from Ekron down to the Shihōr (the modern Wadi el-Arish, on the Egyptian frontier), lying between the sea and the foot-hills

of the Judæan mountains. At the greatest extension of their power, however, they must have held a much wider territory. The Golenischeff Papyrus shows us the Zakkala, probably near kinsmen of the Philistines, established at Dor, just south of Mount Carmel; and yet farther north the Phœnicians display peculiarities which distinguish them from all other Semites (absence of circumcision and a cultivation of maritime enterprise) and which are probably due to the influence of this people. The Philistines at the beginning of Saul's reign have governors at Gibeah and at Gēba, near Jerusalem, and at the end of it are able to set up their trophy at Beth-Shan—which, if it is really the modern Beisan, implies a command of the whole plain of Esdraelon.¹ The command of the sea-coast gave them enormous commercial advantages, especially when we remember that the chief trade-route—from Egypt to Mesopotamia—passed through their territory, and that one of their chief cities (Gaza) was the natural market-place for the Arabian trade. The maritime plain possesses, moreover, natural fertility far beyond the greater part of the Hinterland; the Shunammite sojourned during the seven years' famine in the land of the Philistines (2 K 8²).

3. Organization.—In their political organization the Philistines show peculiarities that distinguish them from all the Semitic tribes to which the OT introduces us. These are governed by kings or chiefs, absolute despots within the limits of the tribes over which they are set. The Philistines, on the other hand, have no king over the whole nation (the Abimelech of Genesis is the *exceptio probans regulam*), but are governed by a council or oligarchy of lords called by the technical term *šeren*, plur. *šerānīm*, each of them dominant in one of the five metropolitan cities Gaza (Ghuzzeh), Ashdod (Esdud), Ashkelon (Askalun), Gath (probably Tell es-Sāfi), and Ekron (commonly identified with 'Akir), but acting in concert for the common good of the nation. The king of Gath seems to have been, at least in the time of David's exile there, in the position of *primus inter pares*, but his colleagues can, and do, overrule his decisions when they consider them undesirable. The people, too, enjoy much more freedom than the slave-subjects of the ordinary Eastern despot. They dare to 'annoy' their lords, when the presence of the Ark leads (as they suppose) to the outbreak of plague, to decide what should be done; and even in the time of the Assyrians we read how the Ekronites deposed and imprisoned their lord, Padi, because he persisted in the unpopular course of submission to Assyria. All this indicates an essentially un-Semitic instinct for liberty which we might well look for in the descendants of those who in the Bronze Age developed the great Cretan civilization.

The nearest parallel to this system of government is to be found in Etruria, where the *lucumones* seem (so far as the materials at our disposal permit us to judge) to have been remarkably similar in their office and functions to the Philistine *šerānīm*. It is one of several links which connect the Philistines and the Etruscans together, and which suggest that they are divergent branches of the same stock or of closely related stocks.

That their military forces were well organized is shown clearly by the Medinet Habu sculptures and by the frequent Biblical references to their war-equipment, especially their chariots (Jg 1¹⁹, 1 S 13²). In 1 S 29² we read of 'hundreds and thousands'—possibly an indication of some kind of regimental or legionary division of their armies.

¹ A place otherwise unknown, called 'Shen,' appears in 1 S 7¹². This is nearer the Philistine territory as usually defined, and might possibly be the Beth-Shan in question.

Of their domestic life nothing is known; but Samson could see and fall in love with his Timnathite wife; and (on the occasion of the death of the hero) the temple at Gaza contained men and women mingling freely together. These facts, so far as they go, indicate that women were not so jealously secluded as in a Semitic community.

4. Language.—Their language is almost totally unknown. The word *seren*, above quoted, is the only common noun that we certainly possess; its apparent relation with the Gr. *τύραννος*, a word of unknown etymology, has often been pointed out. Otherwise we have nothing but (1) an unintelligible magical formula, said to be Keffian, in an Egyptian papyrus—which, supplying the missing vowels, would be something like *senutiukapuwaimantirek*¹—and (2) a number of proper names. An Egyptian school-exercise tablet, now in the British Museum, gives us the following as 'Keffian' names: Aša-hurau, Nasuy, Akašou (=Achish), Adinai, Pina-ruta, Rusa, and Benešasira. The OT names a number of Philistines, but of these only Phicol, Achish, and Maoch seem to bear non-Semitic names. Sisera, king of Harosheth, may perhaps have been of the Zakkala tribe; the name has some similarity, on the one side to Benešasira just quoted, and on the other to Badyra, king of Dor, in the Goleniseheff Papyrus. Of the kings mentioned on the Assyrian tablets only one (Ikausu = Achish) bears a non-Semitic name.

5. Religion.—We read of several deities associated with the Philistines. According to Is 2⁶, they were celebrated (like the Etruscans) for a skill in soothsaying. An ancient oracle of a god Baalzebub (*q.v.*) at Ekron was worked by them, and consulted on occasion even by Israelites (2 K 1²). The Semitic name of the god shows, however, that this was not a Philistine foundation, but that, when they became masters of Ekron, they took over what was probably its most lucrative industry. Another deity is called by the Semitic name Ashoreth (*q.v.*); but, though in name the Philistine goddess is equated to the great Semitic goddess, the assimilation was probably not complete. An inscription exists at Delos, on an altar dedicated by an Ashkelonite, naming as the tutelary deities Zeus, Astarte of Palestine, and Aphrodite Urania, who is mentioned by Herodotus (i. 105) as a deity specially worshipped in Ashkelon. Lucian (*de Dea Syria*, 14) also shows us the two goddesses as kept apart—one of them in human form, the other with the tail of a fish, like a mermaid. The latter was also called Derketo, or Atargatis; and Diodorus Siculus (ii. 4) tells us a legend of her which links her with the Cretan Britomartis, in whom we may see the prototype of the Philistine goddess.

The head of the Philistine pantheon was Dagon (*q.v.*), a god who had temples at Gaza and at Ashdod. In the latter temple was an image of the god (1 S 5¹⁻⁵). There is really no evidence that, like Atargatis, he had a fish-tail, though this is currently believed; it probably rests on a false etymology of the name (Heb. דג, 'fish'). But Dagon (or Dagan) is not an exclusively Semitic god. He existed in Palestine before the coming of the Philistines, as is shown by the name Dagan-takala in the Tell el-Amarna letters, and by the occurrence of the place-name Beth-Dagan in an inscription of Ramessu III.; it also occurs not infrequently in Babylonian monuments. The name of the Etruscan culture-hero Tages suggests the possibility that, as in the case of Atargatis-Aphrodite, the Philistines brought with them a god having a name similar to Dagon, and confused

the two together. This explains why a comparatively obscure Semitic deity should have attained such an importance among the Ἀλλόφυλοι. Dagon continued to be worshipped under his own name down to the time of the Maecabees (1 Mac 10³⁴), and even in the 4th cent. A.D. he was not forgotten, for there can be little doubt that Marna (= 'Our Lord'), the great god of Gaza at that time, was Dagon. The destruction of the temple of Marna is the central incident of that most remarkable little work, the Life of Bishop Porphyrius of Gaza by the deacon Mareus. From this narrative we learn that human sacrifices had been offered to the god (PG lxx. 1240).

6. Culture.—The chief interest of the Philistines and the cognate tribes lies in this, that their history bridges the gap between the ancient civilization of the Bronze Age and the later civilization of the Iron Age. The two hundred years of overlap between the Bronze and the Iron Ages was a period of turmoil and confusion respecting the history of which very little is known. The Philistines and the Zakkala in the east, and the Turisha in the west, carried the Bronze Age traditions across this troubled time, to form the basis of new civilizations. How far they actually developed the iron trade is a question which we have insufficient materials to discuss; they have even been claimed as the inventors of the art of the smith (ZE xxxix. [1907] 334). And it is not impossible that they had a share in the evolution of the alphabet, the cornerstone of modern civilization.

LITERATURE.—F. Hitzig, *Urgeschichte und Mythologie der Philistiner*, Leipzig, 1845; K. B. Stark, *Gaza und die philistische Küste*, Jena, 1852; A. Noordtjij, *De Filistijnen, hun afkomst en geschiedenis*, Kampen, 1905; M. A. Meyer, *Hist. of the City of Gaza*, New York, 1907. In the present writer's *Schweich Lectures on The Philistines: their Hist. and Civilization*, London, 1913, an endeavour has been made to collect an exhaustive account of the facts known concerning this people, and a large number of references to books, papers, etc., will there be found, which need not be repeated here.

R. A. S. MACALISTER.

PHILO BYBLIUS.—Philo Byblus (Herennius) received his surname, Byblus, from the fact that he was born at Byblus (Gebal of the OT, modern Jebail), a city on the Phœnician coast north of Beirut. According to Suidas (*s.v.* Φίλων Βύβλιος), he was born in the reign of Nero (A.D. 54-68). Suidas states also that at the age of 78 in the 220th olympiad he assumed the name of his patron, Herennius Severus. By earlier historians this Herennius Severus was identified with L. Catilins Severus, who was consul in Rome in A.D. 119, and Philo's birth was dated A.D. 42, but the researches of B. Niese (*De Stephani Byzantii auctoribus*, Kiel, 1873, p. 26 ff.) have made it probable that Herennius Severus was consul in A.D. 141 and that Philo was born in A.D. 64. The figures for the olympiad are then incorrect. Although born in Phœnicia, he wrote in Greek, and attained eminence as a philologist, grammarian, and historian. Suidas calls him γραμματικός. In the reign of Hadrian (117-138) he was sent to Rome as an ambassador from the Phœnician cities, and succeeded in obtaining for Tyre the rank of 'metropolis' (Suidas, *s.v.* Παῖδος Τύριος). He remained in Rome and won the friendship of the consul Herennius Severus, from whom he received his surname of Herennius (Suidas, *s.v.* Φίλων Βύβλιος; Origen, *c. Celsum*, i. 15). Hermippus of Beirut was a pupil of Philo, and was introduced by him to Herennius (Suidas, *s.v.* Ἑρμιππος).

The names of the *Philistines* concerning the Reign of: work is lost, and in *Marvellous History*, passage preserved by Eusebius, *Præp. Evang.* i. 12. *Concerning Cities and the Illustrious Men which* has produced, 80 books (Suidas, *loc. cit.*). Extracts have been preserved by Stephen of Byzantium in his geographical dictionary *Ethnika*. It was epitomized by *Strabo*.

¹ Of course we have no guarantee that this is really 'Keffian'; the Egyptian scribe may possibly use the word to denote something to him meaningless, just as we sometimes use the jocular expression 'double Dutch.'

s.v. *Σεπῆνος*), and extracts from this epitome have been preserved by the *Etymologicum Magnum*. (4) *Concerning the Acquisition and Selection of Books*, 12 books (*Suidas*, s.v. *Φίλων Βύβλιος*). The ninth book apparently was entitled 'Concerning Physicians.' It is cited by Stephen of Byzantium, s.v. *Κύριος* and *Δυσπάχιον*. The treatise *Concerning Things worth Knowing* (*Etym. Mag.* s.v. *γράψας*) was perhaps part of the same work. (5) *Concerning the Language of the Romans* (*Etym. Mag.* s.v. *ἀλτήρ*). (6) *The Choice of Words* (*Etym. Mag.* s.v. *ἀβολήτωρ*, *αἴστος*, *ἀμνηστος*). (7) *Epigrams*, 4 books (*Eudocia*, s.v. *Φίλων Βύβλιος*). (8) By far the most important of Philo's works was his *Phœnician History*, 8 books (*Porphyrus*, *de Abstin.* ii. 56), or 9 books (*Eus. Præp. Evang.* i. ix. 31d). This purported to be a translation of the *Phœnician History* of Sanchuniathon. Extensive extracts from it are given by Eusebius (*Præp. Evang.* i. ix f.). It

is cited also by Origen, c. *Celsum*, i. 16, p. 334 (Ben.), by Johannes Lydus, *de Mens.*, ed. C. B. Hase, Paris, 1823, p. 274, and by Stephen of Byzantium, s.v. *Νίσις* (see *SANCHUNIATHON*). All the fragments of Philo have been collected by G. Müller, *PHG* iii. 560-576.

LITERATURE.—Art. 'Philon von Byblos,' in J. S. Ersch and J. G. Gruber, *Allgemeine Encyclopædie*, Leipzig, 1847, pp. 427-435; art. 'Philo Herennius,' in *EB* xxi. 413; C. Wachsmuth, *Einleitung in das Studium der alten Geschichte*, Leipzig, 1895, p. 406; E. Schürer, *GFV* i. 71 f., iii. 463; and especially the copious literature on *SANCHUNIATHON*.

PHILOSOPHY (Primitive).—Philosophy has many definitions, not a few of which would render such a phrase as 'primitive philosophy' contrary to sense; for they consider philosophy as a product of sophistication, consciously critical in character, the last and ripest fruit of studied experience. Certainly this is a just description of the thought of the great historical schools of Europe; but there is, none the less, a sense in which the word 'philosophy' can be justly applied not only to the stream of sophisticated reflexion which was born with Thales, but also to the more naïve, but not less genuine, reflexion with which even the least traditioned of men consider the world about them. As inclusive of this unsophisticated thought, philosophy may be defined as the process and expression of rational reflexion upon experience—a definition which will be found applicable to the speculations of the sophisticated and the primitive man alike.

To be sure, 'system,' the very mark of sophistication, is not to be found in primitive thinking, except here and there by implication; but 'system' is by no means synonymous with 'rationality.' Further, that subdivision into fields or sciences which is the prime token of systemic philosophies is also wanting, though there is a sense in which we may speak of the ethics, psychology, and ontology, and even of the logic and epistemology, of the pre-critical period—viz. from the point of view of an observer who has made and learned the use of these distinctions, and now sees them in embryo in the speculations of men not yet conscious of them.

In the present article (which can no more than indicate a point of view) the various 'leads' of primitive speculation in the directions of the several sciences will be briefly sketched.

1. **Method.**—Consciously developed method is, of course, not found in unconsciously developed thinking, yet the main elements of all rational method—reasoning on the principles of identity and causality, the use of number, and the evaluation of sense-perception—are presented with a kind of elemental perspicuity that makes the study of primitive thinking at once fascinating and instructive.

A main and interesting characteristic of this thinking is its suspicion of sensation. Few things are to the primitive man merely what they appear to the senses; the realities of things are their powers, and these powers are rarely measured in physical terms. There is, indeed, a profound

analogy between a savage's conception of natural bodies and that of physical science: in each case the reality of the object is defined by the sum of its forces, never by its ostensible form; sense-perception is a guide to experience, but not a test of true being.

From this first fact follows the search of the savage after causes, which he is ever seeking to divine. His two great formulæ, 'post hoc ergo propter hoc' and 'similia similibus,' are in substance the same as the laws of causality and of identity; all that is needed to give them logical validity is quantification—the syllogism and the method of trial and error.

Of the weaknesses of primitive thinking the most important is the feeble use of number and mathematical relations generally. Nearly all peoples have some conception of number, both ordinal and cardinal, but their applications of this knowledge are most limited. The oldest of the sciences, that of the calendar, is certainly everywhere somewhat developed, and among barbaric peoples leads to important metaphysical theories; but, apart from this, the application of number-concepts to any body of facts is rare, and without such applications the perspective of science is impossible.

A second weakness is paucity of analogies. Human instincts and desires seem to form the primary group of analogies for savage reasoning, in line with the savage's fundamentally activist interpretation of the 'life of nature,' as we still call it. Along with this comes the immense group of analogies based upon the body and its functions: 'This corn is my heart, and it shall be to my people as milk from my breasts,' says the earth-goddess in a *Sia* myth (M. C. Stevenson, 'The *Sia*,' *IRBEW* [1894], p. 39); and in primitive myth and rites generally it will be found that the head, the heart, the tongue, and the nutritive and sexual functions are the great fountains of similitude by which the world about man is brought within the scope of his understanding. This is no deep derogation, for the modern attraction and repulsion hark back to the primitive love and hate, while energy itself gets its common intelligibility from the human will; only the purifications of mathematics sublimate the human metaphor which is at the core of all science.

There are, of course, differences in the philosophical gift among primitive races and tribes, and between individuals of savage groups, as among civilized people. The Polynesian and the American Indian are clearly more speculative than are the black tribes of Africa. In N. America it is comparatively easy

to single out certain peoples with a marked gift for speculation—the Pawnee, the Navaho, the Bellacoola—and a tendency towards the systematization of thought. James Mooney (*14 REEW* [1896], pt. ii. p. 775 f.), gives an interesting contrast of the philosophical and the practical types, from two associated tribes. "The Cheyenne and Arapaho, although for generations associated in the most intimate manner, are of very different characters. In religious matters it may be said briefly that the Arapaho are devotees and prophets, continually seeing signs and wonders, while the Cheyenne are more skeptical. In talking with Tall Bull, one of the Cheyenne delegates and then captain of the Indian police, he said that before leaving they had asked Wovoka [the ghost-dance prophet] to give them some proof of his supernatural powers. Accordingly he had ranged them in front of him, seated on the ground, he sitting facing them, with his sombrero between and his eagle feathers in his hand. Then with a quick movement he had put his hand into the empty hat and drawn out from it "something black." Tall Bull would not admit that anything more had happened, and did not seem to be very profoundly impressed by the occurrence, saying that he thought there were medicine-men of equal capacity among the Cheyenne. In talking soon afterward with Black Coyote, one of the Arapaho delegates and also a police officer, the same incident came up, but with a very different sequel. Black Coyote told how they had seated themselves on the ground in front of Wovoka, as described by Tall Bull, and went on to tell how the messiah had waved his feathers over his hat, and then, when he withdrew his hand, Black Coyote looked into the hat and there "saw the whole world." It is worthy of remark in passing that maps or charts which show 'the whole world' are not infrequent among the N. Americans, their purpose being, as a rule, to show the 'way' by which the spirit may descend to the powers of the nether, or ascend to the powers of the upper, realm. Such maps are surely in the method of scientific cosmology.

2. Theory of man.—The primitive thinker measures the world about him in terms of his own mind and body: its conduct is actuated by desires and motives such as his, and its physical unities are set by his own bodily dimensions—finger, palm, hand, foot, and pace are all measures still in use, and the decimal system itself is but the mathematical apotheosis of our ten-digit hands. But this *homo mensura* standardization of experience becomes retroactive: when man measures the world in terms of himself, even unconsciously he is already analyzing his own being; he makes the panorama of nature his mirror and reflexion, and so comes eventually to self-revelation. Further, he expands his own nature in assimilating environment to it, and thus finds his inner self not only reflected in the outer world, but coloured by it.

Psychology is a science whose roots run very deep. In reading his motives into nature man has begun already the classification of his powers, and gradually this classification, unconsciously impressed on his mind, becomes assumed as his natural image. Doubtless the first distinction made is that of the 'life' from the body: the life represents feeling and conduct, the body mere form; and, as to savage man forms are always suspect, it is the life that is conceived to be the prime reality. But the life is not incorporeal; it is always associated with some bodily manifestation, of which the most common and elementary is the blood, the blood of life: "But flesh with the life thereof, which is the blood thereof, shall ye not eat" (Gn 9th). Many American aborigines believe that potent or sacred stones, if broken, will bleed, as a broken body bleeds. After the blood, the breath is the most universal symbol of vital reality: "And the Lord God formed man of the dust of the ground, and breathed into his nostrils the breath of life; and man became a living soul" (Gn 2nd). The belief in a 'breath-body' or 'wind' life is nearly universal, attested, of course, by the outstanding fact that so many words for soul—*nephesh*, *psyche*, *pneuma*, *spiritus*, *anima*—rest their meaning on this metaphor. After blood and breath, the body's heat and its shadow—*flamma*, *umbra*, *simulacrum*—are the commonest images of its separable life.

Psychology is begun with this distinction of the active from the passive in man's being, of soul from body. The fact of death is certainly potent

in enforcing the distinction; and the antiquity of burial attests the depth of this impression. But deeper even than death is that consciousness of the active and impulsive power which man feels in himself and hence imagines in the raging winds and rushing waters of an unquiet world of nature.

With this first distinction made, others become easy. It is no uncommon thing, therefore, to find among primitives theories of man's constitution rivaling the Egyptian in complexity; mummy, genius, bird-soul, heart, form, shadow, soul, strength, and name represent an Egyptian dissection of the personality of the deceased, but the American prophet Keokuk taught his followers to pray for the heart, heart and flesh, life, name, and family souls; the Haida have two names for the embodied and one for the incarnate soul, while mind and ghost are still other entities; and the Iroquois distinguish mind, soul, ghost, life, brain, and strength—a classification which surely constitutes respectable psychology. The further discrimination, not of parts but of faculties, is well begun when bodily organs, especially the heart and the liver, are made seats or symbols of passion and appetite, memory and thought—a symbolism which the speech of civilization still retains (see artt. LIFE AND DEATH, SOUL, SPIRITISM).

3. Theory of the world.—Even Xenophon still speaks contemptuously of 'the thing the Sophists call "the world"' (*Memorabilia*, I. i. 11), and it is hardly to be wondered at that few primitive men attain Sophistic familiarity with the concept. The idea of a cosmos or a universe is a late achievement of reflexion; nevertheless, a conception of what might properly be called a 'world-house,' or perhaps the 'stage of life,' comes into definition far anterior to sophistication. Cosmology and cosmogony are both very primitive in origin; and in truth it may be fairly affirmed that the most advanced philosophies are as subordinate to cosmology as is the most primitive mythology; cosmology is the parent of ontology, and it is altogether probable that the 'scientific' cosmologies of to-day will appear to some future age as visionary as do the mythic world-views of the past to us.

Cosmology is essentially an effort to define the world of space. Its natural and nearly universal first form is of a world-tent or domed house, a circular plane surmounted by a hemispherical roof. But, since the imagination does not stop with the visible, a heaven above the firmament and a hollow beneath the earth are conceived, and may be multiplied into a series of heavens and hells, thus framing a storeyed universe. The plane dimension of the middle earth is itself divided. Man is a four-square animal; and, corresponding with his structure, the place of the rising sun becomes 'the before,' the south is 'the right,' the north 'the left,' the west 'the behind'; and so the four cardinals are established.

'The earliest orientation in space among Indo-Germanic peoples arose from the fact that man turned his face to the rising sun and thereupon designated the East as "the before," the West as "the behind," the South as "the right," the North as "the left"' (O. Schrader, *Indogermanische Altertumskunde*, Strassburg, 1901, p. 371). Evidence from Semitic tongues indicates the early prevalence of a like system, while in America there is an almost universal cult of the quarters implying the same conception; with the Zuñi, who have this cult highly developed, the east is always 'the before' (M. O. Stevenson, 'The Zuñi Indians,' *23 REEW* [1904], p. 63). Determination of the four quarters necessarily involves the fixation of a middle place, or *point*; hence the number of sacred cities which form 'the navel of the world'—Delphi, Delhi, Peking, Cuzco, Zuñi, and doubtless many others.

But the conceptual completion of the frame of the world is only a step to its endowment with moral values. The sky, as the source of light and warmth, becomes the giver of life, strength, goodness, and righteousness; personified, it is the Heavenly Father of all things. The earth, as the

bringer forth of life and nourishment, becomes the Great Mother, spouse of the lord of heaven; while within her dark body are concealed the pre-natal and post-mortem powers of the unborn and the buried—the beginnings and the ends of fate. The dark under world, too, is the source of all that is noxious and deadly, and hence the permanent abode of things evil. This is the primitive symbolism, but it still colours our thought and forms the very substance of our expression in the whole realm of moral philosophy.

Two types of human experience stand as the foundations of cosmogony. One is the sexual procreation of life. When the heaven is conceived as a father and the earth as a mother, the procreation of life from this primordial pair is the most natural of myths, its philosophic residuum being represented by the theory of cosmic evolution, and indeed by every vitalistic interpretation of nature. Again—the second type—the origins of the world are sought on the analogy of manufacture. A primal being is conceived who finds or gives off a substance from which creation is modelled or constructed. This—the rarer form in primitive speculation—is the prototype of mechanistic philosophies of nature; it represents, too, the type of theistic and transcendentalist philosophies, just as the image of the procreative pair stands for the philosophic doctrines of pantheism and immanence. Wide-spread, too, is the occurrence of a bi-sexed creator, signifying, perhaps, the earliest compromise between the eternally conflicting conceptions of the one of being and the many of becoming.

Of the first type of cosmogony Hesiod's *Theogony* is the outstanding example; and it is not unfair to assume that the prevalence of this conception accounts in no small measure for the characteristic evolutionism of Greek philosophy. The Hebrew Genesis illustrates the second form; and the third is perhaps best known in the Chinese doctrine of heaven and earth as proceeding from the T'ien, the father-mother of the world. An American example, analogous to the Chinese, is presented by the Zuñi: 'Awonawilona [He-She] conceived within himself and thought outward in space, whereby mists of increase, steams potent of growth, were evolved and uplifted. Thus, by means of his innate knowledge, the All-container made himself in person and form of the Sun whom we hold to be our father and who thus came to exist and appear' (F. H. Cushing, 'Outlines of Zuñi Creation Myths,' *IS RBEW* [1896], p. 379). A second version (M. C. Stevenson, 'The Zuñi Indians,' *23 RBEW*, p. 23) reads: 'With the breath from his heart Awonawilona created clouds and the great waters of the world.' A Pima myth shows extraordinary powers of conceptualization for a primitive people: 'In the beginning there was nothing where now are earth, sun, moon, stars, and all that we see. Ages long the darkness was gathering, until it formed a great mass in which developed the spirit of Earth Doctor, who, like the fluffy wisp of cotton that floats upon the wind, drifted to and fro without support or place to fix himself. Conscious of his power, he determined to try to build an abiding place, so he took from his breast a little dust and flattened it into a cake. Then he thought within himself, "Come forth, some kind of plant," and there appeared the creosote bush' (Frank Russell, 'The Pima Indians,' *26 RBEW* [1908], p. 206). The story goes on with an account of the creation of the heavenly bodies and earth's inhabitants, and contains the interesting suggestion of antipodes in the account of the departure of a part of earth's inhabitants, through a hole in its centre, to dwell on its nether side. Here we are almost in the realm of Milesian cosmology.

Cosmogony gives us the drama of creation; there is but one further step to complete the conception of the world in time. When to theogonic sons legendary and historic periods are annexed, the conception of ages of the world is attained; and, as most men find their present case sorry and dark, a future and golden regeneration is anticipated. Thus the acts of the cosmic drama are complete, though its measures remain to be set. They become set through the science of the stars. The stars are men's first vision of order, cosmos; and with the discovery of their orderly movements and periodical synchronizations they become, and the whole heaven becomes, the great wheel of destiny which measures out the slow repetitions of the world's recurrent drama. Nearly every people with any astronomy reaches this conception of a self-

repeating universe, passing through cyclic creations and destructions, whose terms are star-measured. That fate is interbound with this cosmic movement is but the inevitable inference of a being such as man, who cannot (and perhaps ought not to) see the world that contains him except as reflecting his moral nature. But, with such a conception reached, we are far on the way to the nebular hypothesis or the not less histrionic cycles of the Hegelian absolute idea (see artt. AGES OF THE WORLD, COSMOGONY AND COSMOLOGY).

4. Theory of conduct.—Our ideas of conduct are inferred from our conception both of man's nature and of the world's nature. The more primitive folk are, the more instinctive and habitual is their action; but there are probably no men who are utterly without some sense of the wherefore of action, and hence unacquainted with speculative morality. Religion might almost be said to represent man's sense of a world-sanction for his own ideals of conduct; certainly this is in some degree the explanation of the intimate union of religion and ethics, and again of the religions and ethical cast which every philosophy assumes. Customary morality explains the great mass of action in every grade of culture; but moral speculation—which to some extent is found everywhere—is the true source of our interest in morals.

Moral philosophy, as has been indicated, is outwardly imaged in cosmology and cosmogony; the light of heaven represents knowledge, justice, and goodness; the changeless stars represent remorseless destiny. But this outward image, just because it is beyond the control of man, becomes an object of reverence, a system of religious sanctions, rather than a problem for the will. That problem is set primarily by men's needs, especially by the great need of conforming human desire to its possible satisfactions. The recognition of this, far more than the blindness of custom and tradition, is the real source of that conservatism for which primitive people are noted; their conservative clinging to the ways of the fathers is a product, not of habit, but of intention, whose warrant is the justification which nature gives in giving life itself.

'We observe our old customs,' said an aged Greenlandic to Knud Rasmussen (*The People of the Polar North*, London, 1903, p. 124), 'in order to hold the world up, for the powers must not be offended. We observe our customs, in order to hold each other up; we are afraid of the great Evil. . . . Men are so helpless in face of illness. The people here do penance, because the dead are strong in their vital sap, and boundless in their might.'

The same sentiment was expressed by a Hopi priest to J. W. Fawkes:

'We cling to the rites of our ancestors because they have been pronounced good by those who know. We erect our altars, sing our traditional songs, and celebrate our sacred dances for rain that our corn may germinate and yield abundant harvest' (*Annual Report of the Smithsonian Institution*, 1895, p. 698f.).

Garcilasso says of his fellow Peruvians:

'It was an inviolable law among them never to alter the mode or custom of their province, no matter what example should come from elsewhere. . . . Hence the Indians, rigid in the following of their ancient customs, were astonished to see the Spaniards change almost every year their manner of living, and they attributed this inconstancy to an excess of pride and presumption' (*Hist. des Incas*, Paris, 1830, v. ix.).

Here surely we are already in sight of Heraclitus and the beginnings of Greek ethics:

'Those who speak with understanding hold fast to what is common to all, as a city holds to its law—aye, and more strongly, for all human laws are fed by one law divine, which prevails where it will, and suffices for all, and surpasses all' (frag. 114, in H. Diels, *Fragmente der Vorsokratiker*, I, 2, Berlin, 1906, p. 78).

See artt. ETHICS AND MORALITY.

LITERATURE.—See the literature under artt. referred to throughout the article. H. B. ALEXANDER.

PHILOSOPHY (Buddhist).—I. Introduction: position of philosophy in Buddhism.—Philosophical inquiry was not a purely scientific matter in India. The knowledge of the nature of things was aimed

at, not for its own sake, but for a practical purpose. It was regarded as a factor in the great work of deliverance from transmigration. In Vedantism it is the factor of deliverance, for the very fact of knowing the true nature of the individual self—identical with the universal self—is deliverance. The position of philosophy in Buddhism is different.

At the beginning, at least, metaphysical knowledge was not an essential part of the Buddhist discipline. The True Law was a practical training and nothing more. In short, deliverance from suffering belongs to the saints; sanctity is deliverance from desire; deliverance from desire is to be reached by the life of a monk (*brahmacharya*), by a moderate asceticism coupled with meditations that foster distaste for pleasure; these meditations—on universal impermanence and decay, on death, on loathsomeness (*aśubha*)—are only the realization of the *vanitas vanitatum* of Solomon, a pessimistic view of life and of the world, but not a philosophical system. Sometimes, when questioned on the doctrine of *karma*, Śākyamuni answers: 'My doctrine is: "Do good actions, avoid evil ones"'—an uncompromisingly ethical standpoint, or, so to speak, a 'pure moralism.' Śākyamuni is not agnostic. The so-called 'agnostic texts' (see artt. AGNOSTICISM and NIRVĀṆA) emphasize this characteristic of Buddhism, or rather—as there are many Buddhisms—reveal a Buddhism which is freed from any metaphysical surmise, which even strongly forbids any curiosity concerning the nature of soul and the state of a saint after death. According to these texts, such metaphysical questions, important as they seem to us and undoubtedly seemed to many Buddhists—to the compilers of the Scripture themselves—have no more to do with sanctity than purely cosmological problems and mundane science (*lokāyata*) in general.

A slightly different attitude is illustrated by some texts which we might style 'pragmatist,' texts according to which Śākyamuni purposely answered the philosophical questions in conflicting terms: he spoke sometimes as a believer in permanence (*śāśvata*), sometimes in favour of annihilation (*uchchheda*). The standpoint of the Master is that the training that leads to sanctity does not require truth, but useful statements, statements suited to the various dispositions of the hearers and to the general and conflicting instincts of humanity. In order to crush desire, a man must believe in succession that there is a soul and that there is no soul.

Evidence is not lacking that the teaching of Śākyamuni himself was agnosticism coupled with pragmatism; but it would be rash to make any assertion on this point. So far scholars are concerned, not with Śākyamuni's own teaching, but with the leading ideas embodied in the Scriptures.

And it is fairly evident that, from the earliest time, most probably from the beginning, Buddhism adopted¹ or worked out a philosophy which may be summarized as negation of the existence of a soul (technically, in Sanskrit Buddhism, *pudgalanairātmya*) together with the hypothesis of a composite self (*skandhavadā*). This philosophy is a translation, in terms of metaphysics, of the ideas of impermanence and insubstantiality which, from the point of view of agnosticism, were to remain the topics of moral and emotional meditation. We may state here again that the *māna* to which many *suttas* object is self-love, estimation of the self as good, better, best, bad, worse, worst, not the actual notion of self; that the notions of impermanence and insubstantiality which are essential to the religious training are the conviction of the evanescence of beauty, strength, and life, not the

theory of the composite and momentary character of things. But, notwithstanding the 'moralism' of certain monks and possibly of the Master, the historical circumstances being given, metaphysics could not be avoided. Some metaphysics is an essential feature of Buddhism; for it is admitted by all Buddhists that desire cannot be crushed, that desirable things cannot lose their attractiveness, so long as we admit that there is an 'ego' and a 'mine.'

Buddhists denied the Ego and, in consequence, had to exercise themselves to give an explanation of life and transmigration in terms of impermanence and selflessness. Buddhist philosophy was born, and developed a coherent system of 'phenomenalism' (the doctrine of the *Abhidharmas*). Phenomenalism, by a natural evolution, gave rise to various forms of nihilism or voidness (*śūnyatā*, so-called nihilism, or Madhyamaka; idealism, or Vijnānavāda).

These new doctrines are logically constructed and claim to be justified from the scientific point of view; but their maintainers believe that they are no less useful than true. Their usefulness is perhaps the best proof of their truth. The best reason that a Buddhist has for professing nihilism is that there cannot be real religious life (*bhikṣutā*), sanctity, or deliverance from desire as long as one admits the reality of phenomena (*Bodhicaryāvatāra*, ix. 40). The schools had not forgotten the Master's lesson of pragmatism.

2. *Hīnayāna* or *Abhidharma* philosophy (*pudgalanairātmya* or *phenomenalism*).—The first philosophy of Buddhism, the philosophy of the *Hīnayāna* ('Little Vehicle'), may be shortly described as *phenomenalism*: non-existence of a substance or an individual (*pudgalanairātmya*), absolute existence of the *dharma*s—small and brief realities which, grouped as causes and effects, create the pseudo-individuals.

This philosophy was at first far from perfect. It is the result of a long inquiry.

From the doctrinal point of view, it would perhaps be convenient to contrast (1) the unsystematic views that are expressed in the *sūtras* (*Suttantas*) and which may be described as 'a theory of the *skandhas*' (*skandhavadā*, a fictitious name), with (2) the developed system which is embodied in the *Abhidharmas* of the Sarvāstivādins (Sanskrit books, school of the Vaibhāṅikas, *Abhidharmakośa*) and which is discernible in extra-canonical Pāli works (*Mūlinda*, *Buddhaghosa*, *Abhidhammasaṃgaha*); this system is properly called *Abhidharma*.

From the historical point of view, there are strong objections to such a division. The fully grown phenomenalism is the legitimate offspring of the principles forcibly expressed in the oldest canonical books. No new idea has been discovered, but philosophers see more clearly what they mean; that is nearly all. Here we shall merely call attention to the chief topics of interest.

(a) At first no effort was made to work out a comprehensive and systematic exposition of the ontological or psychological principles; these principles were mere surmises and postulates rather than doctrines; they had not been studied enough to be fully understood; they lacked precision and remained, therefore, to some extent contradictory.

There is no self (*ātman*), person (*pudgala*), living being (*sattva*), or principle of life (*jīva*)—a flat negative not only of an unchangeable self as recognized by the Brāhmanic philosophies, but also of the substantial principle that the popular philosophy considers as a transmigrating entity, a soul different from the body. Man is a complex, composed of five *skandhas*—the material element, *rūpa*, or body, and four intellectual elements, *saṃjñā*, *vedanā*, *samskāras*, *viññāna*. The ego, or 'man,' is described in terms of its constitutive elements, and is compared to a chariot which lacks personality because it is composed. That is a 'static' point of view. In this compound the position of the intellectual elements is a subordinate one; they are given as a resultant of the material

¹ We cannot deal here with the indebtedness of Buddhism to Sāṅkhya and Yoga philosophies. See SĀṆKHYA, YOGA.

elements, viz. the organs: 'The colour blue being given and the organ of the eye being also given, there arises a visual cognition (a blue image). That is 'sensationalism.' The intellectual cognitions (abstract ideas, judgments) are worked out by mind, which is a material organ too.

(b) The obvious and necessary conclusion of this psychology would be the negation of survival. But, as a matter of fact, Buddhists flatly deny the heretical theory of annihilation, destruction at death (*ucchheda*). Individual or personal permanence and responsibility through successive existences in the long journey of transmigration are strongly insisted on (see art. DEATH [Buddhist], KARMA).

(c) A conciliation between the negation of a soul or self, capable of survival, and the negation of annihilation is to be found in a 'dynamic' conception of self. Such a conception was brought about by the study of impermanence (*anityatva*) and causality (*pratityasamutpāda*).

(1) 'Impermanence' is, in some texts, almost a synonym of 'suffering' and 'selflessness.' Existence is suffering because joy does not last; body and mind are impermanent, and therefore are not a self, do not depend upon a self. But from the idea of impermanence issues the idea of momentariness, which leads to far-reaching conclusions. Impermanence, when predicated of things in general, does not mean momentariness. There is origination (*utpāda*), duration (*sthiti*), change or old age (*anyathābhāva*, *jarā*), and destruction (*nirodha*) of impermanent things in general. But the momentary character of a flame—the flame of a lamp is only a succession of flames, each of which lasts only an instant—and of thought (*chitta*) was recognized very soon:

'That, O monks, which is called mind, thought, cognition, keeps up an incessant round by day and by night, of perishing as one thing and springing up as another' (*Majjhima*, i. 256); whereas the body may last for a hundred years and more.¹ When once the notion of momentariness was reached, it inevitably made its way and took the place of the notion of impermanence. Now momentariness is quite naturally associated with causality. Momentariness and causality converge in continuity.

(2) *Causality*.—Buddhists first examined the cause of suffering (rebirth and death again) and expressed their views in the second truth: 'Suffering originates from desire.' They later expressed the principle of causality in the formula known as *pratityasamutpāda*, 'dependent origination,' a formula which seems to have been originally only a commentary on the second Truth (cf. *Sutta-nipāta*), and which, according to the scholastic interpretation, presents a summary of three successive existences of a man (cf. art. PATICCA-SAMUPPĀDA). It is given in the Scripture as an ontological and psychological theory. It is said to open a middle way between the two wrong ideas (or heresies) of permanence of the living being through consecutive existences and annihilation at death: the man who is reborn is not the dead man, but he is not different from this man; because he originates from this man. Coupled with the dogma of momentariness, the dogma of causality leads to the conclusion that the ego is not a static compound like a chariot, but a series (*samtāna*)—a living series of causes and effects. Everything, even material lifeless objects, will be understood as the series of its successive moments of existence. The series does not exist in itself; it is made up of small momentary entities, called *dhammas*. There is no thinker, but only thoughts; no feeler, but only feelings; *dhyāna* partly consists in dis-

cerning the successive ideas that present themselves without any reference to the ego as thinking.¹

'That only exists which is momentary' (*yat sat tat kṣaṇikam*). What is permanent—e.g., space, *nirvāṇa*—does not exist, is a mere name, a mere negation (*abhāva*).

(d) An obvious conclusion to be drawn, and one which was early drawn, from the theory of dependent origination is that the origination of cognition has not been scientifically explained in the *sūtras* (see above, p. 848*). A distinction is to be made between the cause (*hetu*) and the conditions (*pratyaya*). The flame of a lamp is apparently burning during three watches; but it is only a succession of flames. Each of these momentary flames (to put it otherwise, each moment in the existence of this flame that is burning during three watches) has for conditions the oil, the wick, and so on; but its cause is the preceding flame (or the preceding moment in the existence of the flame). To apply this theory to the causation of a cognition, a visual cognition is conditioned by the eye and the exterior object (the colour blue); but it is caused by the preceding cognition. The series of thoughts (*chittasamtāna*) goes on uninterruptedly through the successive existences; the death-consciousness is continued in a conception-consciousness (see art. DEATH [Buddhist]).

Pudgala-vāda.—A small place must be given to the 'heretical' theory of a self—a theory which is much abused in the *sūtras* as well as in the treatises, both Sanskrit and Pāli, but which, nevertheless, was supported by the powerful sects of the *Sammitiyas*. There is a *sūtra*, the '*sūtra* of the bearer of the burden,' which states that the *pudgala* exists independently of the *skandhas*; that it 'shoulders' the *skandhas*, new *skandhas* at every birth, till it lays down the *skandhas*, i.e. obtains liberation. The explanation of the *Sammitiya* school is that the *pudgala* is neither identical with nor different from the *skandhas*; that it is 'not to be expressed' (*anabhilāpya*), that nevertheless it exists and transmigrates. There are in the Scriptures passages where the relations of the feeling with the feeler, and so on, are expressed in the same terms; and the position of the *Sammitiyas* is not an impossible one. But in the light of other passages which state that there is no feeler, no eater, but only feelings, foods, we must admit that this Scripture, on the whole, favours the opinion of the schools who deny altogether the existence of a *pudgala*. We know the partisans of the *pudgala* only from the criticism of the 'orthodox' scholars, both Sanskrit and Pāli.

3. *Mahāyāna* philosophy. — (a) *Sūnyatāvāda* (*Mādhyamaka* system). — (1) The real nature of things (*dharmatā*, *bhūtataṭhatā*, or, shortly, *tathatā*) is their being produced by causes and their being productive of effects (*pratityasamutpannatā*). The *Abhidharmikas* have stated this fact well. But they fail to see that what is produced by causes does not exist in itself, is without 'own nature' (*niḥsvabhāvatā*), is insubstantial or void (*sūnya*). Voidness (*sūnyatā*) is neither a principle immanent in things nor is it nothingness. On the contrary, it is the character of what exists, of the *dhammas*. Things are void because they are originated; voidness = origination, void = originated. Existence (*saṃsāra*) is an intricate succession of momentary things, or *dhammas*, which have not in themselves any *raison d'être*, and which cannot exist substantially by the power of their causes; for these causes are *dhammas* of the same nature, which do not exist in themselves. As it is said, 'From *dhammas* like a magical show (*māyopama*) arise *dhammas* like a magical show.' We should say, 'From contingent phenomena arise contingent phenomena.'

(2) Such is the common view of the *Mādhyamikas*. But there are many texts which would lead us much further: (a) the simile of the monk suffering from ophthalmia, who sees in his almsbowl hairs which do not exist, while a healthy monk sees these hairs as they are, i.e. does not see them; in the same way a saint who is free from illusion ornescience (*avidyā*) does not see the *dhammas*:
1 C. A. F. Rhys Davids, *Buddhist Psychology*, London, 1914, p. 93.

¹ Cf. *Vibuddhimagga*, viii., ap. H. O. Warren, *Buddhism in Translations*, Cambridge, Mass., 1900, p. 252, and *Mahāniddesa*, p. 117. See art. IDENTITY (Buddhist)

the correct knowledge—the knowledge of a Buddha—is a non-knowledge; (β) the criticism to which the notions of cause, of knowledge, of motion, etc., are submitted; by the four-branched syllogism it is shown clearly that a thing is not born either from itself or from another, or from both, or without cause. The consequence is that production is logically impossible; production does not support inquiry (*vichārāsaha*); therefore there is no production. Again, thought cannot know itself and cannot know another; and so on. Truth is silence.

(3) *The two truths*.—Phenomenalism is a psychological interpretation of life and consciousness in terms of 'negation of the individual' (*pudgalanairātmya*): life is a series of momentary phenomena originating in dependence one upon another. The Mādhyamika does not reject this doctrine, but claims to explain what phenomenalism really means—to point out its metaphysical aspect. He says that phenomena are only appearances, or, from the subjective point of view, experiences. Phenomenalism is the 'experimental' or 'erroneous' truth (*vyavahāra, samvṛtisatya*); nihilism or voidness, negation of the reality of the *dharma*s (*dharma-nairātmya*), is the metaphysical or absolute truth (*paramārtha*).

But everything happens as if things were composed of real and substantial *dharma*s; the illusion that we have of the happening of the phenomena is due to the very causes that, according to the phenomenalist, give birth to the phenomena. The Path of old remains safe (see art. NIHILISM [Buddhist] and below).

(b) *Vijñānavāda*.—It is difficult to give an account of the system of the idealists, Vijñānavāda, more exactly Vijñānamātravāda, Vijñaptimātravāda, Chittamātravāda, 'theory that there is nothing except cognition or thought,' also Svasaṃvedanavāda or Svasaṃvittivāda, 'theory of self-consciousness.' The philosophers of this system have worked out quite subtle notions, and, moreover, we know from Tibetan authorities that they were divided into many branches and disagreed on important points. These Tibetan authorities are far from clear, while the original treatises, the larger number of which exist only in Tibetan and Chinese translations, have not yet been studied. Sanskrit, Brāhman, and Jain summaries do not touch the points in question. Therefore we must be satisfied with a general outline of the system—an outline which cannot be taken as definite.¹

(1) Some hypotheses may be offered on the origin of the idealist system.

(a) The phrase *manomaya* in the first stanza of the *Dhammapada*, 'All that happens (*dharma*) is the result of thought (*manas*), is made up of thought (*manomaya*),' does not mean 'consisting of thought,' but 'caused by thought, by mental action' (just as the *manomaya* body of the *bodhi-sattva* is not a spiritual body, but a body created by thought [see art. *BODHISATVA*]). That is not technically idealism, but leads to idealism. It was admitted that the new physico-psychical organism which continues after the death of a man is 'created' in the matrix by the 'rebirth consciousness,' itself a product or a sub-product of a mental action; moreover, pleasant and unpleasant sensations during life are chiefly the reward of action (*vipākaphala*, 'fruit of ripening of action'), while the exterior causes of these sensations depend on action as 'fruit of mastery' (*adhipatiphala*); we should style them 'the delegates of the power of action,' just like the tormentors and the trees with swords for leaves in hell. It follows that the existence of exterior objects may be looked upon as a eumbrous hypothesis (see Vasubandhu's *Viṃśakakārikā*).

(β) On the other hand, the Sautrāntikas (a branch of the later Hīnayāna) had studied the character and origin of knowledge. In opposition to the Vaibhāṣikas (= Abhidharmikas) and to the Mādhyamikas, they maintained that a thought can think itself, that thought has self-consciousness (*svasaṃvitti*), for, though the end of a finger cannot touch itself, a lamp illuminates itself and another (*Bodhicharyāvatāra*, ix. 15); further, that the form of representations is given by the mind. This idealist theory of knowledge is compatible with realism; the Vijñānavādins, heirs of the Sautrāntikas, built upon it an idealist metaphysical system.

(γ) This system owes much to the Śūnyatāvāda (nihilism); in fact, it is a branch of nihilism; it differs from the numerous systems of idealism recorded in the history of philosophy both Indian and non-Indian. It is not satisfied with the negation of the exterior object; it denies the self, an individual generator of thoughts, as all Buddhists do; it applies a thorough criticism to the individual thoughts themselves. It maintains that the only *dharma*s (= things) are thoughts (idealism), and that these *dharma*s are not substantial (*dharma-nairātmya*); that they are void. The voidness of the idealists differs from the voidness of the Mādhyamikas, the properly so-called nihilists. For the latter, voidness is the characteristic in things of being produced, while, from the critical point of view, no production is possible.

According to the idealists, 'for voidness to be a justifiable position, we must have, first, existence of that which is void, and, second, non-existence of that in virtue of the absence of which it is void,' i.e. existence of a receptacle, non-existence of a content, 'but, if neither exists, how can there be voidness? We wrongly superimpose the notion of a serpent on a rope: the rope exists, the serpent does not exist, the rope is void of serpent. In the same way, such "notes" or characters as form, etc., are commonly attributed to the things: the denotable properties do not exist, but the substrate of the designations exists' (*Bodhisattvabhūmi*, fol. 29^b f.).

The 'notes' wrongly attributed to the things are both what is called *jñeya*, 'knowable,' and *jñāna*, 'cognition'; the thing is an 'undenotable something.'

(2) To realize what the idealists understood by 'knowable,' 'cognition,' and 'undenotable something,' we have to study the three natures (below, β) to which the simile of a dream (below, α) is an easy introduction.

(a) The visions of a dream are independent of any thing 'to be seen.' The elephants which a dreaming monk sees entering his cell do not exist,

or, rather, do not exist as elephants. As far as it is a 'thing to be known' (*jñeya*), a 'thing to be grasped' (*grāhya*) or 'to be named' (*abhidheya*), the thing seen during sleep does not exist; it is only a product of the mind, a mental phenomenon wrongly made objective, the very 'form of elephant' (*ākṛti*) taken by a thought under the influence of the 'impression' (*vāsanā*) left by a visual knowledge.

Now what about the idea that the dreamer has of an elephant—the idea which he considers as a visual knowledge (*jñāna*), which 'grasps' (*grāhaka*) an elephant? This knowledge is in fact the same mental phenomenon, the same form of elephant taken by a thought. During sleep the visual knowledge that grasps an elephant, the mental knowledge that ascertains the qualities of this elephant and names it, cannot have more reality than the elephant itself. There is no knowledge (*jñāna*), since there is no knowable (*jñeya*).

The simile of a dream will help us to realize the nature of things. First, there is no matter (*rūpa*); there is nothing outside (*bahis*, *bāhya*) the thought (*chitta*) and the corollaries of thought (*chaitta*, pleasure, etc.); rather, outside thoughts, for there is not a thinking unity but only series (*saṃtati*, *saṃtāna*) of thoughts; so many series of thoughts, so many living beings (*sattva*).

(β) Secondly, every thought, except the thoughts of a Buddha, is to be looked upon from three points of view; technically it possesses a threefold nature or character (*svabhāva*, *lakṣaṇa*)—imagined nature (*parikalpita*), dependent or caused nature (*paratantra*), and absolute or metaphysical nature (*pariniṣpanna*).

i. *Parikalpita*.—A thought—i.e. an 'actual' or 'conscious' (*pravṛtti*) thought (see below)—presents itself as exterior to itself, as does, in a dream, the notion of elephant; it presents itself as an object of cognition, a knowable (*jñeya*). The wrongly objectified objects of cognition are said to be threefold: body and the organs (*dēha*, *āyatana*), the things (*artha*, *viśaya*) to be known by these organs (*rūpāyatana* . . . *manā-āyatana*), and place (*pratiṣṭhā*, *pada*), the material universe (as a whole, *bhājanaloka*).¹ Inversely, thought appears as cognition (*jñāna*): (1) as visual cognition of a blue object; (2) as auditive cognition . . . ; (6) as mental cognition of the qualities of an object (the first *manovijñāna* of the Vijñānavādin list); (7) as an ego which knows (the second *manovijñāna*—*ahamārṣṭi*—*kṛtsam manas*).

In short, thought presents itself to itself as object (*grāhya*) and, at the same time, becomes cognition (*grāhaka*) of this object. The notions of being, non-being, essence, difference, number, etc.—in a word, what the Western philosophers style categories—originate from this opposition or duality (*dvaya*). Now this duality, which is the characteristic of every state of consciousness (*pravṛttivijñāna*), is real; our thoughts are really taking the double aspect of object and subject; this twofold nature of our thoughts is not an imaginary nature. As a matter of fact, we think dually. But this duality results from the fact that we consider as exterior and existing in themselves the so-called objects which are only forms of the thought, in the same way as a dreamer believes in the reality of the dream-elephants and thinks that he has a visual knowledge of elephants. This duality has no metaphysical *raison d'être*; it is worked out or elaborated by imagination (*parikalpa*, *vikalpa*), which imposes on thought the categories of object and subject, together with the categories of being, essence, etc.

Therefore thoughts (*chitta*), i.e. things, in so far as they are in opposition as object and subject, are said to be imagined (*parikalpita*).

ii. *Paratantrasvabhāva*.—We are now concerned with the question whence thoughts derive their origin, according to what law they appear in succession and in duality. Thoughts are not produced by exterior objects, as the old realist school believed: 'The colour blue being given and the organ of eye being also given . . . there arises an image of blue.' Nor are they produced by a self, as the idealist Vedānta would suggest. Nor are they autonomous (*svatantra*). They are dependent one upon another (*paratantra*); they are produced one from another.

Paratantra is almost synonymous with *pratiṣyusamutpanna*, 'originated in dependence'; but there are conspicuous differences between the classical *pratiṣyusamutpāda*, 'dependent origination,' and the causation which we are studying (sometimes styled 'subtle origination'), and these differences justify the use of a new phrase. The problem is somewhat obscure; but the present writer hopes that the following is a fair solution.

All the Buddhist philosophers—maintainers of the doctrine of *karman*—had to admit that thoughts, although momentary, do not perish altogether, but originate new thoughts, sometimes after a long interval of time (see art. KARMA, *niṣyandaphala* and *avijñapti*). As long as they believed in the existence of matter (*rūpa*) and considered man as a physico-psychical complex, it was not difficult for them to explain the interdependence of thoughts. The six classes of cognitions (sense cognitions, eye, etc., and mental cognitions) had a material support and exterior excitants, and it was possible to explain all the psychological facts, including memory, with these six cognitions. But the idealists had to work out a system of psychology without the hypothesis of any material element. They say that the cognitions acknowledged by the realist schools, visual . . . mental cognitions, create 'seeds' (*bīja*) which will ripen in due time, without any interference except for the power of the *bodhisattvas*, into new visual . . . mental cognitions. Now these seeds are not a part of the visual . . . mental cognitions which arise in succession between the sowing and the ripening of the seeds; e.g., the cognition of blue which will emerge to-morrow in a certain 'series of cognitions' named 'I' depends on yesterday's cognition of blue, but its seed is not to be found in any of the cognitions of which I am conscious to-day. Therefore we must add to the sixfold cognition of the primitive psychology—to the sixfold cognition to be named 'actual cognition,' 'active cognition,' or 'state of consciousness' (*pravṛttivijñāna*)—another group of cognitions which the modern philosopher would style 'unconscious' or 'subliminal images'; these are the seed of actual cognitions; they are created by actual cognitions; beside and below the actual cognitions, they flow as a series of momentary subliminal images which proceed owing to an uninterrupted self-reproduction; this series bears the old supply of seeds, is enlarged by the sowing of new seeds, and will stop when the seeds have borne their fruit and no new seed is sown. It is known as *ālayavijñāna* or *ādānavijñāna*, 'store cognition,' 'receptacle cognition.'

iii. *Pariniṣpannasvabhāva*.—Thoughts are to be considered from a third point of view. The knowable (*jñeya*) does not exist as such, since it is only a subjective idea, an image, a thought that constitutes itself as an object. On the other hand, the fact that thought cognizes, i.e. recognizes itself as visual cognition, as mental cognition, as subject

¹ *Laṅkāvatāra*, p. 78; *Mādhyamakāvatāra*, vi. 93; *Sūtrālamkāra*, xi. 40.

¹ See the writer's 'Note sur les cent Dharmas,' *Muston*, vi. 101.

of cognition, depends on the fact that it constitutes itself as an object. There is cognition because there is a knowable; there is designation because there is an image, i.e. an objectified designation. The two groups of terms, *jñeya-grāhya-abhidheya* and *jñāna-grāhaka-abhidhāna*, stand together, and, as the first is mistaken, the second too is mistaken. The duality object-subject is accidental to the thought, for it is produced by misconception or imagination (*parikalpa* or *vikalpa*).

In order to know what thought is metaphysically—what thought is in itself—we have to ignore, to put aside, duality. Freed from duality, thought is beyond the range of words; it eludes denotation, it is undeniable (*anabhilāpya*); no character (*viśeṣa*) can be predicated of it; it can only be said to exist (*bhavadaty eva*). It is therefore defined as *vastumātra*, 'simply thing,' 'pure thing,' or a 'something' ('chose sans plus,' 'chose tout court'), or as *chittamātra*, 'simply thought,' 'pure thought,' since 'thing' and 'thought' are interchangeable notions.

In a Buddha imagination has come to an end. The thought of a Buddha—a non-cognition—is practically what all thoughts are metaphysically. To use a metaphorical phrase, our thoughts are soiled by cognitions which produce passions (*jñeyāvaraṇa*, *klesāvaraṇa*); we have to purify them (*vyavādāna*).¹

To sum up, a thought—e.g. an image of blue—is imagined in so far as it is both the object blue which we believe we see and a cognition of blue. It is dependent because it is produced by a preceding image of blue. It is a *something* of which nothing may be predicated from the metaphysical point of view, a substance which is accidentally, owing to an eternal illusion, constituting itself as object and subject.

4. Later philosophies: theism, pantheism (doctrines of immanence).—The phrase 'Buddhist pantheism,' like the phrase 'Christian atheism,' associates notions that are conflicting. But, if we are to consider Buddhism not as a doctrine but as a historical fact, there must be a place for the non-Buddhist philosophical views that developed in Buddhism—the more so because such views not only are dressed in Buddhist garb, but are to some extent the natural evolution of truly Buddhist theories.

There was in Mahāyāna an essential antinomy between the experimental and the absolute truth.² While the learned schools carried to their ultimate consequences the philosophical principles of the old creed and worked out systems of dialectical or idealist nihilism, a Buddhist religion has grown: Buddhas and *bodhisattvas* were universally looked upon as gods, almost eternal beings, providences. The learned schools admitted the quasi-divinity of the Buddhas, and the necessity of devotion and charity, as constituting the practical or experimental truth (*samvrtisatyā*); but they maintained that the true religious life had to combine the practice of this truth with the meditation of voidness: voidness is the absolute truth (*paramārthasatyā*). There cannot be true religious life (*brahmacharya*, *bhikṣutā*, *bodhicarya*), there cannot be deliverance, as long as the faithful do not know that Buddhas are mere names; the enlightened devotee adores celestial persons whom he knows to be pure phantasms; the enlightened giver pities beings while knowing that they do not exist (*Vajracchedikā*). Such a position can be saved only by sleight of hand, by sophistical and highly conventional contrivances (see art. NIHILISM [Buddhist]). As a matter of fact, a time comes when it is neces-

sary to make a choice between the two truths: to keep the absolute truth, and practise accordingly silence and apathy, or to admit the experimental truth as 'true' and have recourse to an ontology in accordance with it.

The chief factor in the development of theistic and pantheistic ideas in Buddhism has probably been the Brāhman and Hindu milieu, the influence of the learned monism (Vedānta), and the yet more powerful influence of the popular and Tāntric Saivism. While theism (the worship of Amitābha) is very old, it is in the so-called Buddhist Tāntric literature (*mantranaya*, *vajrayāna*) that we find, together with a mass of theurgic practices, unmistakable affirmations of a system of immanence. Buddhist saints and deities, by an insensible progress or owing to a rapid naturalization, had come to be conceived under the familiar shape of the Hindu gods. But we are here concerned with the doctrinal aspects of the historical evolution and adulteration of Buddhism. Our problem is to elucidate by what doctrinal and verbal development the orthodox nihilism and idealism were apt to be reversed and turned into pantheism.

On the whole, we clearly see how Buddhist monism arose. The post-Vedic inquiry for being, permanent being, real being, had a legitimate conclusion in the absolute monism (*advaita*) of Saṅkara. Brahman is, but its true description is *neti neti*, 'it is not so, it is not so.' There is no relation possible between it and limited beings; i.e. no limited being exists. 'Ontologism' in its last phase is nihilism, for the *ens realissimum* is void. Inversely, the Buddhist theory of a becoming without being is apt to be reversed into monism. As regards details many conjectures may be made, some likely to be more or less justified.

(a) *The Mādhyamika tenets*.—From an absolute point of view (*paramārthasatyā*), there is no difference (*nānābhāva*) among things and among the characters of things. Things are void (*śūnya*), like the daughter of a barren woman; characters are void, like the beauty of this unreal daughter. Things are void because there is no real origination of things—if no origination, no destruction, an eternal inexistence. There is no difference between existence (*saṃsāra*) and *nirvāṇa*: 'Not being produced (*anutpanna*), not being destroyed, things are from the beginning quiescent (*ādīśānta*); they are really, naturally (*prakṛtyā*) in *nirvāṇa* (*parinirvṛta*). The Vedāntists (Saṅkara's school) sometimes use the same phrases to explain the nature of particular things; they borrowed these phrases from the Buddhists; possibly they borrowed also the doctrine of the non-existence of particular things; while the Buddhists—some Buddhists—went so far as to recognize in the *bhūta-tathatā* or *tathatā*, 'real nature of things,' or *dharmadhātu* or *bhūtakoti*, so many synonyms of voidness,² a sort of 'void Brahman.'

(b) *Vijñānavāda; ontology*.—Genuine Vijñānavāda (works of Aśvaghoṣa, Asaṅga, Vasubandhu) is truly Buddhist, since it maintains the momentariness (*kṣanikata*) and the dependent origination (*paratantratva*) of every thought. Nevertheless it is dangerously akin to Vedānta; the Tāntrik school has interpreted it as a monism, and many modern scholars do so too.

The *dayavijñāna* is somewhat like a soul, and we know from Tibetan authorities that the maintainers of the Hīnayāna strongly objected to this 'new' *vijñāna*. It is a series of 'subliminal images'—a store of seeds that give birth to actual cognitions (*pravṛtti vijñāna*);³ it may be looked

¹ On the Vijñānavādin theory of purification see L. de la Vallée Poussin, *Théorie des douze causes*, Ghent and London, 1913, p. 65.

² Many of the Buddhist tenets were lacking in consistency. The idea of *nirvāṇa*, e.g., an 'unqualified deliverance,' was apt to be understood as immortal happiness or as annihilation.

¹ See sources in *JRAS*, new ser., xlii, [1910] 317 ff.

² See *Muston*, xli, [1911] 252.

³ Cf. Buddhaghosa's *bhavaṅga* (S. Z. Aung and C. A. F. Rhys Davids, *Compendium of Philosophy*, London, 1910, p. 265).

upon as a thinking entity which manifests itself in a succession of thoughts.

On the other hand, to say that the true or meta-physical nature of things is thought, an uncharacterized thought 'which only is,' or, in the Vedāntic phrase, 'which is not so, which is not so' (*neti neti*); that this pure thought is defiled by nescience (*avidyā*) and all the passions that follow nescience; that, owing to defilement, it takes the aspects of knowable and knowledge and generates the whole of the particular cognitions; that it is apt to purify itself (*vyavadāna*) by an inverse process¹—that is pure Vedānta of Śaṅkara's school.

Yamunāchārya, in his *Siddhitrāya*, compares the doctrine of Dharmakīrti, the avowed Buddhist (*prakaṣa buddha*): 'Although the pure intelligence is free from differences, it is characterized (or imagined), owing to erroneous views, as multiple: as knowable, knower and knowledge'—with Śaṅkara's view: 'The pure reality is not the cause of the development [of names and forms], because it ceases not to be [what it is, i.e. it remains pure]: therefore it is illusion which is the mother of this distinction, knower and knowable.' Yamunāchārya concludes that Śaṅkara is a Buddhist in disguise. Vijñānabhikṣu holds the same opinion for the same reason.²

The thought of a Tathāgata is undefiled, purified thought; the thought of a *prthagjana*—a man who has not 'seen' the Truths—and of any living being except the Tathāgata is defiled, unpurified thought; but for the defilement, the thought of a *prthagjana* is the thought of a Tathāgata.

This doctrine is embodied in the theory of the embryo of a Tathāgata (*tathāgatagarbha*), which is explained as follows in the *Laṅkāvatārasūtra*:

'There is an embryo of a Tathāgata, genuinely radiant and pure, endowed with the thirty-two marks, present in every living being, but, like a gem covered by dirt, covered by the corporeal forms, sensation, etc. (*skandha*, *āyatana*, *dhātu*), defiled by the wrong notions produced by lust, hatred and delusion; nevertheless permanent, firm, blessed, everlasting.'³

The compilers of the *Laṅkāvatāra* are careful to state that the dogma of the *tathāgatagarbha* is not to be understood in a heretical sense, that it is not like the theory of a universal and permanent soul (*ātman*), that it has been preached in order to introduce the heretics who believe in a soul into the Buddhist doctrine of soullessness (*nairātmya*); that the *tathāgatagarbha* really means voidness, *bhūtakoti*, *nirvāṇa*. But is it not a strange method of converting the Vedāntists, to teach them Vedāntism in Buddhist garb? Granted that the true meaning of the *tathāgatagarbha* is that every creature is an embryo of Tathāgata, i.e. a future Buddha, there may be doubt as to its obvious meaning.

(c) *The three bodies of a Tathāgata*.—Like Vijñānavādin ontology (the three natures and the 'pure thought'), with which it has strong analogies, the Vijñānavādin Buddhology has also been understood in a pantheist sense. This Buddhology, the origins of which can be traced in the Hinayāna *Abhidharma* and mythology, is explained in the dogma of the three bodies of a Tathāgata (*trikāya*). We shall deal (1) with the orthodox, or Vijñānavādin, conception of the bodies, and (2) with the pantheist, or Tāntric, evolution of this conception.

(1) Notwithstanding its mythological and de-
volutional features, the Mahāyānist Buddhology is

¹ We know from Tibetan authorities that the Vijñānavādins disagreed as to the defilement: some held it to be real; some taught that it is illusory (cf. *advaita* and *viśiṣṭādvaita*, *māyā* and *avartavāda*).

R. Garbe, Cambridge, Mass., 1895, index, s.v. 'Vijñānavāda,' 'Prachannabuddha'; T. Aufrecht, *Cat. Oxoniensis*, Oxford, 1859, p. 14; Vasudev Anant Suklitanter, *The Teaching of Vedānta according to Rāmānuja*, Vienna, 1908.

³ *Laṅkāvatāra*, ed. Buddhist Text Soc. of India, Calcutta, 1902, p. 80; a correct quotation of the passage in *Museon*, xii. 251; see *JRAS*, new ser., xxxviii. [1906] 954.

not in conflict with the phenomenalist and nihilist principles of Buddhism. Like the *Abhidharma* Buddhology, it is not a theism, but only a hagiology, and a phenomenalist or nihilistic hagiology.

A Tathāgata, like any other living being, is an insubstantial compound and series of *dharma*s. (α) Among these *dharma*s there is a large number of thoughts or intellectual *dharma*s which are only to be found in Tathāgatas: supramundane (*lokottara*) knowledges, i.e. knowledges that are turned towards *nirvāṇa* (*kṣayajñāna*, *anutpāda-jñāna*, *asaikṣi samyagdr̥ṣṭi*); the Tathāgata would disappear into *nirvāṇa*, but he chooses to keep his mundane *dharma*s—omniscience of every mundane thing, all-embracing and all-powerful compassion. (β) Moreover, a Tathāgata has a 'body'; i.e. some material (*rūpin*) *dharma*s are a constituent part of the compound which we call a Tathāgata. (γ) Lastly, he is able to create, in order to save beings, magical appearances—'doubles' of his body.

The phrase *dharma-kāya*, which originally designated (i.) the whole of the Scriptures, and (ii.) Buddha as law or Scripture incarnate, came (in *Abhidharma*) to be used to designate the collection of the spiritual *dharma*s owing to the presence of which a pseudo-individual is named Buddha. Every Buddha possesses the same supramundane *dharma*s; while Buddhas differ in merit, in duration of life, etc., they are endowed with the same *dharma-kāya*. In the same way monks (*bhikṣu*s), while differing one from another in many respects, possess (i.e. have as a constituent part of their pseudo-individuality) the same set of *dharma*s, called *bhikṣutā*, 'that which makes a *bhikṣu* a *bhikṣu*' (morality, the *samvara*, or vows of a *bhikṣu*, etc.).

The material elements in a Buddha were, from of old, styled *rūpakāya*, 'material body.' Mythological Mahāyānism styles them *sambhogakāya*, 'glorious or blessed body,' or *vipākakāya*, 'body of ripening.' The body of a Buddha is glorious, endowed with the thirty-two marks, enthroned in paradises where it is adored by celestial *bodhi-sattvas*. The so-called 'material body' of the man named Śākyamuni was not what we should call, in our phraseology, a 'body,' but only a magical double of the glorious body of a certain Buddha. Side by side with Śākyamuni there is an infinite number of such doubles, some Buddha-like (as Śākyamuni), some endowed with every sort of appearance. These magical creations are styled *nirmāṇakāyas*, 'contrived,' 'created,' or 'magical bodies.'

To sum up: a Buddha is a saint in whom we can, with the scalpel of dialectic, distinguish what Europeans call a 'soul'—a set of sublime *dharma*s, some of which are beneficial to himself (*svārtha*—e.g., wisdom, meditations turned to *nirvāṇa*), some of which are beneficial to others (*parārtha*—e.g., compassion and power corresponding to this compassion)—and a 'body,' the fruit of his merits and former vows (*prāṇidhāna*), which sanctifies and ripens the blessed, while a number of magical appearances convert and save ordinary beings.

(2) An interpretation of the three bodies in terms of monism and immanence was very easy.

(α) The *dharma-kāya*—i.e. this set of *dharma*s that are the special *dharma*s of a Tathāgata—is realized in all the Tathāgatas. A Platonist would say that the Tathāgatas are so many copies of the *dharma-kāya*, that the *dharma-kāya* is an eternal essence which manifests itself in the Tathāgatas.

(β) The *sambhogakāya* depends on the *dharma-kāya*, as it is the fruit of the merit accumulated (*puṇyasambhāra*) by the future Buddha, this merit being in close relations with the accumulation of knowledge (*jñānasambhāra*) which results in the *dharma-kāya*. As a matter of fact, the *sambhoga-*

kāya is described in the Tāntras¹ as 'effluent from the *dharmadhātu*' (*niṣyanda*), i.e. an 'emanation of the *dharmakāya*.'

(γ) The set of *dharma*s which characterize *bodhisattvas* as *bodhisattvas* and their visible bodies are, in the same way, imperfect copies of the bodies of a Buddha. The same process may be applied, *mutatis mutandis*, to every being. The *sambhogakāya* is described as the universal matrix, 'the place of origin of all beings' (*utpattisthāna*).²

Several scholars, among them D. T. Suzuki (pp. 61, 73, 231, 245, 255, 261), maintain that such an interpretation was the interpretation of the chiefs of the Vijnānavādin school, Aśvaghōṣa, Asaṅga, Vasubandhu, and they quote *sūtras* (*Avataniśaka*) which are supposed to embody it. The present writer believes that the only texts which are clear to this effect are Tāntric texts. But it would be a mistake to underestimate their value, as there are evidences of the antiquity of the pantheistic or theistic views (see art. DOCTRINES (Buddhist)).

As observed above, the *tathāgatagarbha* and the 'pure thought' are very like an immanent undefined *dharmakāya*. Asaṅga states that there is not an *Adibuddha* (see art. *ADIBUDDHA*), a primordial and eternal Buddha; every Buddha has been for a time a 'future Buddha' (*bodhisattva*) and, before becoming a future Buddha, was from the beginning an ordinary being. If Buddha is styled *svayambhū*, 'who exists by himself,' the meaning is that he has acquired, by himself, Buddhahood. But the refutation of the theory of a Buddha *per se* proves that such a theist theory had partisans. As a matter of fact, in the *Mahāvihāri* (Wassilieff, p. 112) the Buddha is possessed of a pure self, of a permanent bliss, not of *nirvāṇa*.

For the theists, Buddha would be a Brāhmanic god. His *dharmakāya* (*Amitābha*) is a counterpart of Brahman; his *sambhogakāya* (*Amitāyus*) corresponds to Viṣṇu or to the celestial Kṛṣṇa; his magical apparitions (*Śākyamuni*, etc.) correspond to the *avatārs*.

Tāntrism (*mantrāyāna*, *vajrayāna*) is thoroughly immanentist and Śaivist. It is fond of Mādhyamika formulas, and states, at every opportunity, that things are void. But voidness is the *ens realissimum*, is *ātman*, or *brahman*, and this *ātman* is styled *Vajrasattva*, a Bhagavat united to a Bhagavatī (= *śakti*). *Mantras* (formulas) and *vidhis* (rites) of different classes, especially erotic *vidhis*, quickly transform the devotee into *Vajrasattva*, or rather 'exteriorize' the *Vajrasattva*-nature that is immanent in every being, just as, in *Mahāyāna*, the practice of the 'perfect virtues' (*pāramitās*) develops the 'germ of a Buddha.'

Side by side with the doctrine of immanence, which is chiefly Tāntric, there are several forms of theism (monotheism and polytheism) coupled with doctrines of emanation. They may be styled Brāhmanic or Paurāṇic (*Svayambhū*-*purāṇa*, *Kārandavyūha*, *Mani bka bum*, etc.). Buddha is identified with Brahman; the 'magical bodies' with which he was credited in orthodox *Mahāyāna* are now living beings, born from the rays emitted from his body.

L. DE LA VALLÉE POUSSIN.

PHILOSOPHY (Chinese).—Although in philosophy the Chinese cannot vie with the great nations of thinkers—the Greeks, the Hindus, or the Germans—they may well be placed on a level with the Romans, and they surpass the Semitic peoples—the Arabs, Hebrews, and Persians. The Japanese are their disciples. We must bear in mind that they produced their philosophy almost entirely independently of alien influence. The Chinese always took more interest in practical

¹ *Nāmasaṃgīti*, v. 79.

² *Id.* v. 60.

questions concerning the life and welfare of individuals and society than in purely theoretical ones, and in consequence developed fairly complete systems of ethics, whereas they did not advance far in metaphysics. Tradition, authority, and veneration of antiquity were so many chains and fetters impeding the flight of their speculative genius. They trusted too much in the wisdom of sages and worthies and too little in their own mental powers. Satisfied with the knowledge of their predecessors, which they did not dare to challenge, they imagined themselves to be in possession of the whole truth, and never thought of the many problems evolved in the West.

In the history of Chinese philosophy we can distinguish two distinct periods—ancient and modern—separated by an interval of stagnation. The former extends from remote antiquity to the 1st cent. of our era, comprising the Chow and the greater part of the Han dynasty; the latter begins in the 11th cent. and is known as the Sung philosophy, for it originated under the Sung dynasty and was carried on to the Ming epoch, when it stopped in the beginning of the 16th century. No further progress was made after the Sung philosophy had been more or less recognized as the official philosophy. Westerners are better informed on ancient Chinese philosophy than on the modern development of Chinese thought.

We find the first traces of philosophical speculations in the *Shu King*, especially in the chapter entitled 'Hung-fan.' The legendary emperor Yü is believed to have received it from heaven, and in 1122 B.C. the prince of Chi presented it to the founder of the Chow dynasty, Wu-wang. The language of this old document is very archaic, and it may well date from such an early time. During the 12th cent. B.C. the Chinese had already reached a certain height of civilization, and it is not surprising that the highest questions of human life should have presented themselves to their minds. The 'Hung-fan' deals with the five elements, the primary agencies of the universe, natural phenomena supposed to be connected with human fate, chronology based on the observation of the stars, the virtues and duties of the ruler, the various functions of government, and the different kinds of happiness and misfortune. In the short aphorisms of this treatise we have the germs of the later philosophy of nature, ethics, and political philosophy.

Another source of primitive Chinese philosophy is the *Yi King*, the chief text-book of divination, consisting of a series of hexagrams which have been explained in a fanciful way so as to yield a great variety of oracles. But it must be remembered that the passage usually quoted as containing the first reference to the cosmic dual forces, *yin* and *yang*, occurs in a late commentary ascribed to Tse-sse, the grandson of Confucius, not in the text. Nevertheless, it is probable that the dualistic theory of the *yin* and the *yang* was known before Confucius, at least its fundamental outlines. The dual forces precede the five elements, which are evolved from them. The *yang* is regarded as the bright, male, active, generative essence, the *yin* as the dark, female, passive, and receptive one. *Yang* is embodied in heaven and the celestial bodies, *yin* in earth with all her products. There is an interaction of both in thunder and lightning, in wind and rain, heat and cold, in the courses of the sun and the moon.

In ancient Chinese philosophy we have two distinct and opposed schools of thought, the one practical, realistic, and agnostic, the other idealistic and transcendental—Confucianism and Taoism. There are besides quite a number of independent philosophers, who hold views agreeing

with neither the one nor the other of these schools, and whom we may denote as 'heterodox.' The preponderance of Confucianism is, however, so marked that, from a Chinese point of view, only Confucianism would be considered as orthodox philosophy, and Taoism would be heterodox. Foreigners do not accord this pre-eminence to Confucianism, and hold that both schools of thought have contributed equally to the formation of the Chinese mind.

I. Confucianism.—Confucianism may be called a philosophy or a religion, although it just lacks that part of religion which in our opinion is essential—metaphysics. Its founder, Confucius (551–479 B.C.), is neither a great philosopher nor a theorist in ethics, but a practical moralist who has impressed his countrymen by his personal character no less than by his common sense. He did not wish to propound new and original ideas, but to propagate those of the ancients, for whom he felt the greatest reverence, holding that his contemporaries had degenerated from the ideal state of civilization in primitive times. For this purpose he edited the old books supposed to contain the noble thoughts of former sages, which thus became the classical works of Chinese literature. As a teacher he inculcated practical wisdom, philosophizing with his disciples on all questions concerning the moral conduct of the individual and the good government of the State. His disciples took note of his characteristic utterances, which subsequently were published as the *Lun-yü*, or the *Confucian Analects*, and are our chief source of his teachings. He limits himself to ethics, refraining from all metaphysical speculations, in which he does not take the slightest interest. We do not know his reasons for this; he may have thought such speculations useless or transcending the human intellect. As regards popular beliefs and customs, he shows a benevolent neutrality. He advises his adherents to follow the old usages, sacrificing to the spirits and the souls of the departed as though they were present, and he believes in a superior being, whom he calls Heaven, and a just fate, but he positively declines to speak on supernatural things. It is not correct, therefore, to make Confucius responsible for the worship of nature—the old popular religion of China—and to call all these superstitious practices Confucianism. Confucius is merely concerned with ethical problems, as also is his follower, Mencius, and is utterly indifferent to all higher speculations, philosophical as well as religious.

The Confucian ethics are eudæmonistic, for Confucius holds that by good actions one acquires happiness, whereas bad actions rouse the ire of heaven and bring down punishment on the guilty. In this respect he is a convinced optimist, in spite of all the unfortunate experiences which he underwent during his life. Man is in possession of a moral sense sometimes obscured by his passions, but he may overcome these by intelligence. Virtue is the *summum bonum* and the source of all happiness. It may be learned by study and self-culture. Every one should strive to become a *chün-tse*, a superior man who possesses the five cardinal virtues and all the accomplishments of a perfect gentleman. These five virtues are: benevolence, justice, decency, wisdom, and truthfulness. The cornerstone of Confucian ethics is filial piety (*q.v.*)—the love which children owe to their parents even beyond the grave, and on which is based ancestor-worship (*q.v.*). In close relation to this virtue is respect of seniors. Courage and loyalty to one's sovereign are likewise reputed virtues. For the sovereign, the parents, and the teacher one may eventually be obliged to sacrifice one's life. The five relations regulate the duties

between the different classes, which are: ruler and subject, father and son, older and younger brother, husband and wife, friend and friend. As a general principle applicable to all relations, Confucius established the Golden Rule: 'What you do not want done to yourself do not do to others' (*Anal.* xv. 23). That Confucius was not a narrow-minded nationalist may be gathered from his saying that 'All men between the four seas are brethren.' In politics Confucius advocates an enlightened despotism. Recent efforts of young Chinese to represent him as sponsor for republicanism have failed. The possibility of such an institution as democracy was not even thought of in his time. Confucius would have seen in it a subversion of all true relations. The prince has to work for the welfare of his people and to lead them to virtue by his good example. His subjects have to serve him and obey his commands. Government is not their business, but must be left to their ruler, who is appointed by heaven, and to his ministers. In strong contrast to Taoism, Confucius lays great emphasis on culture and study; even virtue can be learned.

In the *Great Learning*, a short ethico-political treatise ascribed to Tse-sse, the grandson of the sage, the self-culture of the individual has to start from an insight into the nature of things, followed by a study of ancient customs and literature. The individual thus having become cultivated, his whole family imitates him, and, when all clans and families are well ordered, the State is well governed. The ultimate aim is universal peace among all the nations.

The third classical text of Confucianism is the *Doctrine of the Mean*. The author, Tse-sse, first takes a somewhat higher flight, which in its wording at least savours a little of Taoism, describing the equilibrium of mind in its original state before its passions have been stirred. The rest of the book is in the less pretentious style of the *Analects*. See also artt. CONFUCIAN RELIGION, CONFUCIUS.

As Socrates found a Plato and Christ a Paul who explained and further developed the teachings of their masters, so Confucius found in Mencius (372–289 B.C.), the second sage, as he was called afterwards, his ablest exponent. In longer dialogues he defends Confucianism against the objections raised against it, with great dialectical skill and in a brilliant style, strongly contrasting by its vividness with the self-control and dispassionateness of his master. Mencius is a greater philosopher, a more profound thinker, and a better theorist than Confucius. He tries to deduct from general principles the conceptions which Confucius takes as given or self-evident. So he derives the four cardinal virtues—benevolence, justice, decency, and wisdom—from the feelings of compassion, shame, reverence, right and wrong. These virtues are innate in man, but he must preserve them by constant practice. Human nature is the gift of heaven, and therefore originally good, but it can be corrupted. Mencius himself originated a theory of passion-nature, dealing with human passions. His political views were much more democratic than those of Confucius. He ranked the sovereign below the people, and even admitted that a bad ruler might be assassinated by a 'minister of heaven.' See, further, artt. MENCIUS.

With Mencius Confucianism was practically completed. Later Confucianists of the Han period, like Tung Chung-shu, Lu Chia I, Chia I, Pan Ku, and Yang Hsiung, did not carry it much farther. For many centuries the question of the goodness or badness of human nature was hotly debated.

Hsün K'uang of the 3rd cent. B.C. held that the nature of man at his birth is evil, and that virtue is artificial, not natural. Otherwise he laid the

chief stress on the ceremonial side of Confucianism. He was of a practical and unimaginative turn of mind. Before Mencius was, so to speak, discovered by Chu Hsi, and raised to the rank of a sage, Hsin K'uang was on a level with Mencius in public estimation.

The philosopher Kao-tse, a contemporary of Mencius who quotes him, held that there is no difference between good and bad. Tung Chung-shu (2nd cent. B.C.) and Yang Hsiung (53 B.C.-A.D. 18) both assert that human nature is partly good and partly bad, and that the development in either direction depends upon environment.

2. Taoism.—Between Taoism and Confucianism there is the greatest possible contrast; they are, as it were, two different worlds. Whereas Confucianism teaches a practical morality, insisting on the different virtues, assigning to man his position in the family and the State, regulating his life in his diverse spheres by strict rules, and eschewing all speculations on the essence of things, Taoism turns away from this busy world, evincing a distinct ascetic tendency and endeavouring to grasp the primary cause of existence by intuition and mysticism. Hence it is not proper to maintain that both systems logically run together. A Confucianist may believe in the old philosophy of nature already in existence before the two schools were established, but this agreement does not remove the fundamental differences between the two rival philosophies, just as an idealist does not become a materialist by accepting the natural sciences based on materialistic principles. The Taoist writers themselves show their antagonism to the Confucian doctrine by their violent attacks on Confucius.

The Taoists claim the legendary emperor Huang-ti as the first advocate of their dogmas, and they often couple his name with that of Lao-tse. No sayings of Huang-ti are recorded, but it is not impossible that Taoist thought existed before Lao-tse, the founder of Taoism. Lao-tse is supposed to have been born in 604 B.C., so he would have preceded Confucius by half a century. The genuineness of his work, the *Tao-teh-king*, has been called in question by some sinologists, but on insufficient grounds. Many scholars regard Lao-tse's book as the most wonderful production of the Chinese mind; others hold that its value has been greatly exaggerated. Judgments will vary according as the critics themselves lean to pantheism and mysticism or are sober-minded and matter-of-fact. At all events the book seems to have a fascinating influence, which is shown by the fact that we have about fifteen or more translations, and they have not yet stopped. The best translations are those of Julien, Chalmers, von Strauss, and Legge.

Lao-tse's system is pure pantheism and mysticism, and is fully treated under the title MYSTICISM (Chinese).

The fundamental thoughts of Lao-tse were developed by later Taoist writers. The oldest of them is Lieh-tse, who lived in the 5th century. His existence has been denied by some sinologists, but it is well established by utterances of many ancient authors and by his work, which is much too original to be a later forgery. Lieh-tse is concerned with the philosophy of nature, and his doctrine has been characterized as naturalism. He regards nature as an eternal circle of growing and decaying caused by an occult force. Life and death alternate, but there is no absolute annihilation, no beginning and no end. Lieh-tse was aware of the so-called antinomies of time and space, and in contradistinction to Kant he holds that infinity alone is possible. All living beings, being created from the same primordial substance,

are nearly related, and there is no fundamental difference between man and animals. In a somewhat fantastical theory on the descent of man Lieh-tse gives a list of all our animal ancestors. He assumes an intuitive knowledge, independent of the senses, but the highest knowledge of *Tao* cannot be expressed by words. Through a concentration of will-power and a mystical community with *Tao* one may obtain magical forces, transcend the natural laws, and become an immortal.

Whereas Lieh-tse is chiefly interested in the philosophy of nature, Chuang-tse (3rd cent.) deals with the philosophy of mind. His writings are a mixture of mysticism and doubt, of seriousness and humour. He is as much a poet as a philosopher, a most ingenious thinker, more idealistic and abstruse than Lieh-tse, and consequently much harder to understand. According to Chuang-tse, our common judgments are wrong. A wise man discards all the contrasts based on sense-perception, even the difference between the perceiving subject and the perceived object. 'The ego and the world are one and the same. All contrasts are blended in *Tao*. This is what Chuang-tse calls the 'identity of contraries'—a theory scientifically developed in Schelling's philosophy of identity. If by mystical intuition the sage becomes one with *Tao*, he sees that a difference between subject and object does not exist. He severs himself from his own self and becomes a passive vessel of *Tao*, the mirror of the eternal. Knowing that *Tao* alone has real existence, he looks upon life as an empty semblance, as the phantasmagoria of a wild dream.

Han-fei-tse (3rd cent.) tried to utilize Taoist principles for the theory of government and the management of State affairs. His ideal is an irresponsible despotism. The ruler is not to act himself; he may enjoy the *vue-voir*, but he must have responsible organs to mete out rewards and punishments.

The work which goes under the name of Huai-nan-tse (2nd cent. B.C.), but perhaps was composed by Taoist adepts in his service, deals with the activities of the primary force and natural phenomena, and is our oldest source on Taoist cosmogony, astrology, and alchemy. In later Taoism these sciences are cultivated chiefly, and purely philosophic disquisitions are not much appreciated.

3. Heterodox philosophers.—During the latter part of the Chow dynasty there existed in China a very active literary spirit and many more schools of thought than Confucianism and Taoism, which alone survived and supplanted all the others. Of most of these heterodox philosophers only scanty remains are preserved, and it is difficult to know what their teachings really were.

Yang Chu (4th cent. B.C.) founded a school of pessimism and egoism. His bitterness is the result of the miseries of life, which in his opinion by far outweigh its charms. This world, where the virtuous are unhappy and the wicked thrive, cannot be governed by any higher ethical principle. Man should not strive for unattainable ethical ideals, thus losing the little enjoyment left him, but should live in accordance with his nature, making the best of his poor existence. He may help his fellow-creatures, but not to the excess of self-sacrifice, since his own sufferings are already hard enough. Yang Chu teaches the Horatian 'Carpe diem,' but, like Epicurus, deprecates all excesses and advises moderation and equanimity.

Mé Ti (4th and 5th cent. B.C.) was the counterpart of Yang Chu, an extreme altruist and optimist. He admitted the evils of the world, but held that their root was the want of love and sympathy for one's neighbours. Universal love

and self-sacrifice would cause all the calamities to disappear and re-organize society. Mè Ti attacks aggressive wars with the same arguments as are used by the pacifists of our time. The argumentation throughout his work, which has come down to us, is logical and well to the point. Owing to this doctrine of universal love, Mè Ti has been designated 'the Christ of China.' Like Yang Chu, he was vigorously condemned by Mencius, who feared that this doctrine would loosen the family ties, Confucianism according more love and sympathy to blood-relations than to strangers. Mè Ti favours equality of all citizens, and shows socialistic tendencies. He objects to luxury and extravagance, especially as often shown in funerals, and recommends economy. Rejecting the theory of a predetermined fate, he has a strong faith in the just rule of gods and spirits rewarding good actions and punishing bad. The school of Mè Ti split into three branches, but we do not know anything more about them.

Another school of thought that flourished between the 6th and 4th centuries B.C. was that of the dialecticians, or logicians, if we may use this term. The Chinese never have developed a complete science of logic, but we find some germs from which it might have been evolved. Yin Wên-tse (4th cent. B.C.) made some investigations on the parts of speech and their logical functions. With the dialecticians (*ming-chia*) the Chinese class the sophists (*pien-shih*). They are famous for their love of argument and for their strange sayings or paradoxes, which, however, hide deep truths. The earliest seems to be Têng Hsi (6th cent. B.C.), whose paradoxes do not differ much from those of the Taoists. He professes a peculiar theory of knowledge: instead of using one's own senses, one ought to see with the world-eye, to hear with the world-ear, and to think with the world-intellect—i.e., a mystical knowledge should be acquired by a complete identification of one's self with *Tao*, or the absolute.

The sophist Hui Shih (4th cent.) is known to us from Chuang-tse, who frequently disputed with him and speaks of him with great respect. Hui Shih must have been a prolific writer; his works are said to have filled several carts; it is the more to be regretted that a number of paradoxes recorded by Chuang-tse are all that we know of his work. From these aphorisms it appears that Hui Shih denies the reality of time and space, and attempts to dissolve all contraries. His starting-point, however, is not *Tao*, but the infinitely small and the infinitely great, from which Zeno and many other idealistic philosophers have tried to disprove the reality of our world.

We can form a fairly good idea of how Chinese sophists would argue from the few chapters of Kung-sun Lung (3rd cent. B.C.) which are still extant. In question and answer, thesis and antithesis, he proves that a white horse is no horse. His treatise on the 'hard and white' touches an important question of the theory of knowledge. He holds that the qualities of things, such as hard and white, have only an intermittent existence. When not perceived by us, they are in abeyance, they separate, or hide.

The last great thinker of the early epoch of Chinese philosophy is Wang Ch'ung (A.D. 27-97), who far surpasses Confucius and Mencius as a metaphysician. He regards himself as a Confucianist, but the Chinese usually take him for an eclectic, and we shall not be far wrong in calling him the greatest Chinese sceptical philosopher. He shows his scepticism and brilliant critical genius in exposing the errors and superstitions of his countrymen. His own philosophy is a kind of materialistic monism akin to that of Epicurus and

Lucretius. In his system the *yin* and *yang* are material substances, as water and fire. Their movements are spontaneous, subject to certain laws, but there is no intelligence, no superior being holding the universe in his sway. The *yin* forms the human body, the *yang* the soul. At death they are scattered again. The human soul is no more immortal than that of animals. Many reasons are given against the belief in immortality. Nevertheless, Wang Ch'ung believes in ghosts and demons as an effluence of the fiery *yang* fluid, and in other portents and omens produced in a natural way. He still clings to fate and predestination, but he has materialized fate, regarding it as a quantity of the original heavenly fluid with which man is imbued at his birth. Wang Ch'ung is much more critical and scientific than other Chinese philosophers, and, as far as possible, bases his arguments on experience.

From the time of Wang Ch'ung Chinese philosophy was in a state of torpor for nearly a millennium. Some philosophical books were written, but the writers contented themselves chiefly with expanding and commenting upon older works. It was the age of commentators, devoid of new and original ideas. Independent thought was smothered by the authority of Confucianism, which passed for the acme of wisdom, and which nobody dared to oppose. At last a new impetus was given to mental philosophy in the 11th cent. A.D. by the Sung philosophers.

4. Sung philosophy.—Chou Lien-ch'i (1017-73) was the first to revive the study of the philosophy of nature. Taking the commentaries of the *Yi King* as a basis, he wrote a very short monograph on the primary cause or the first principle, *t'ai-chi*, from which *yin* and *yang* were evolved, which produced the universe. Chou Lien-ch'i's ethics are quite Confucian, whence this school has been denoted as Neo-Confucianism. Chang Ming-tao and the two brothers, Ch'êng Hao and Ch'êng I, followed in the same line of thought, but were eclipsed by a pupil of Ch'êng Hao, Chu Hsi (1130-1200), the most illustrious of the Sung philosophers.

Chu Hsi began his work as a commentator. His commentaries on the four classics are excellent, and enjoy almost as much fame as the old texts themselves. His annotations on the writings of his four predecessors became the nucleus of his own metaphysical productions. He did not make a systematic digest of his system, but his disciples were in the habit of noting down the conversations that they had with their master, and Chu Hsi himself wrote innumerable letters to his friends and pupils, in which he discusses philosophical questions, replying to their inquiries, setting doubts at rest, or refuting objections. From these notes and letters we gather the impression that there was an active philosophical life in China during the Sung dynasty similar to that of the Greek philosophical schools. It was only after the death of Chu Hsi that all these notes and letters were collected and published. In 1713 all the philosophical writings of Chu Hsi were revised and systematically arranged by order of the Manchu emperor K'ang Hsi.

Chu Hsi's philosophy is dualistic and has been compared with Cartesianism. He supposes two fundamental principles, matter (*ch'i*) and reason (*li*), of which the latter takes precedence. They were already united in the primary cause or the absolute, from which the *yin* and *yang* and the whole universe were evolved. Wang Ch'ung knows but one materialistic principle; Chu Hsi acknowledges a spiritualistic one too. It produces life and the human mind, at least its superior part, intelligence. Death causes a dissolution of

the body and the mind, the one returning to earth, the other to heaven, whence they came. Immortality is out of the question.

This philosophy is known by the name *hsing-li*, 'human nature and reason.' It found so many adherents that in 1415 the third emperor of the Ming dynasty could make a collection of the principal writings of this character—a systematic digest embracing the works of 120 scholars. It is a complete philosophical encyclopædia with the following sections: cosmogony, spiritual powers, metaphysics, first principles, sages, literati, education, philosophers, successive generations, principles of rule, principles of government, poetry, and literature. This somewhat unwieldy compilation was revised in the 18th cent. by an imperial commission and abridged. The new publication may be regarded as a handbook of the official philosophy of China. It is Confucianism as interpreted by Chu Hsi and supplemented with metaphysics, in which the original system was deficient.

5. Opposition to the Sung philosophy.—The authority of Chu Hsi did not remain unchallenged. His opponents averred that he had misunderstood and misinterpreted the Confucian classics. Lu Chiu-yüan (1140-92) opposed him on the ground that Chu Hsi had exaggerated the importance of education from without and mere learning, and that the rectification of the heart was the chief thing. Self-cultivation and subjective education were alone essential. It must be admitted that Chu Hsi's highly-developed metaphysical system is alien to primitive Confucianism, which is only ethical.

The dispute went on, some scholars taking the side of Chu Hsi, others opposing him, others again endeavouring to reconcile the two conflicting views. Among all the antagonists of Chu Hsi, Wang Yang-ming (A.D. 1472-1528) is the most successful. He holds that the great learning of Chu Hsi is of no use, that he merely explains the words of the classical texts, but misses the meaning. His own purely idealistic philosophy is founded on the original nature of man as described in the *Doctrine of the Mean*. He vindicates for man a sort of intuitive faculty which may be obscured temporarily by passions, but is always there. It is the source of all knowledge, for it creates the external things and thus resembles the absolute of modern philosophy.

Both Chu Hsi and Wang Yang-ming were acquainted with Buddhist thought and to some extent were influenced by it. Their writings are much studied in Japan, where they became the heads of two rival schools of philosophy.

With Wang Yang-ming the productivity of Chinese philosophy again ceases, and it is passing once more through an ebb-tide at present. Signs of another renaissance, however, are not wanting. In recent years the Chinese have become interested in European philosophy, and it is to be expected that the many new ideas derived from this source will prove to them a stimulus to original research.

PHILOSOPHY (Egyptian).—1. The tradition.

—The Greek writers, from Homer and Herodotus downwards, are almost unanimous in their praise of the wisdom of the Egyptians, thereby perpetuating a firmly-rooted opinion of which far earlier testimony may be found in the Hebrew literature. At first, it is true, this wisdom is of a very ill-defined quality; in the book of Kings (1 K 4³⁰) it means proverbial lore, while to Homer (*Od.* iv. 229-232) it signifies skill in medicine. In later times, however, it becomes increasingly clear that what is meant is not merely mental attainments of a superficial and practical kind, but the possession of profound philosophical views. We have the authority of such writers as Diodorus, Plutarch, and Strabo for the fact that eminent Hellenic philosophers and statesmen like Solon, Thales, Pythagoras, Democritus of Abdera, and Plato sat at the feet of Egyptian priestly teachers, some of whose names have been handed down (conveniently collected in G. Parthey's ed. of Plutarch, *de Iside et Osiride*, Berlin, 1850, pp. 182-186); and in the works of Plutarch and Iamblichus we find many philosophical explanations that are attributed to the priests of Heliopolis, Thebes, and Sais.

2. The native evidence.—The study of the hieroglyphic literature cannot fail to dissipate completely this cherished illusion concerning the profundity of the Egyptian philosophy, though it must not be denied that the surviving evidence is exceedingly scanty and one-sided. To take an instance from a quite different sphere, it is known for certain that the Egyptians codified their laws: and yet not one scrap of a law-book has come down to us. Why, then, it may be asked, is it not justifiable to suppose that the Egyptians did possess profound philosophical systems, of which the written record, if ever there was any, is now lost? This supposition, it may not unreasonably be argued, is required to explain the Greek tradition.

No hypothesis of this kind is likely to win much support from hieroglyphic students, for, judged by Greek standards, the texts which we possess cannot conceivably be placed on any very high level. Most scholars would agree with the verdict that the Egyptians show no real love of truth, no desire to probe into the inner nature of things. Their minds were otherwise oriented: a highly gifted people, exhibiting talent in almost every direction, their bent was towards material prosperity and artistic enjoyment; contemplation and thought for their own sake—necessities to the peoples of Greece and India—were alien to the temperament of the Egyptians. Plato once liberates himself from the prevailing tradition to say, with much truth, that love of knowledge was the characteristic of the Hellenes, while the characteristic of the Phœnicians and Egyptians was the love of wealth (*Rep.* iv. 436).

This generalization, of course, is merely comparative; the Egyptians possessed a didactic

literature, which no doubt satisfied the same kind of need in Egypt as the works of the Greek philosophers and scientific men did in Greece; but it never rises above the immediate requirements of everyday life. There is nothing earlier than the Middle Kingdom; but from that period onward we possess books of maxims and counsels addressed by aged Pharaohs to their successors (*The Instruction of Amenemmes*, *The Instruction of Akhthoi*), advice to magistrates about to take office (*The Installation of the Vizier Rekhmerē*), more general books of precepts (*The Instruction of Ptahhotpe*, *The Maxims of Any*), praise of the scribe's vocation, based on disparaging descriptions of other professions, books on medicine and mathematics, and lists of words classified according to sense. There are poems of sceptical tendency, dwelling on the brevity of life, and exhorting men to eat and drink, for they must soon die; and poems of opposite tendency, exalting death and the west, where deliverance from suffering may be found. One class of composition bears a superficial resemblance to the Platonic dialogues: a short narrative introduces a certain situation, the problem of which is then treated in rhetorical speeches. Among these are the conversation between a nisanthrope and his soul on the value of life, the reflexions of a robbed peasant on human injustice, and the admonishments addressed by a sage to a lax king reigning over a ruined Egypt. None of these writings inspires us with a very great respect for Egyptian profundity of thought, though they display a certain practical perspicacity and worldly wisdom. Above all, they have often considerable poetical merit. In a word, they are to be compared with the Wisdom literature of the Hebrews, though they cannot be said to rise to the same heights of grandeur and spirituality.

The religious literature of Egypt shows a stronger leaning to speculation than the secular works, due to a confusion of contradictory myths and attributions which must have been intolerable to the more learned priests. Cosmogony has the same purpose as philosophy—an explanation of the universe; and in Egypt it might, under more favourable circumstances, have resulted in true philosophy. We have one exceptional inscription from Memphis, the late copy of a very early document, in which Ptah appears as All-creator: out of him arose Horus as 'heart' or 'understanding' and Thōth as 'tongue' or 'speech'; and from the interaction of these two, explained in some detail and with some subtlety, all things came into existence. This account has been recently shown to be only the variant of the old Heliopolitan dogma that received Atūm, the sun-god, as the Creator, aided by Hu, 'commanding utterance,' and Sia, 'understanding'—deities who were emanations of himself (see art. PERSONIFICATION [Egyptian], §(b) 3f.). Again, sporadic passages in the texts identify Osiris with water or vegetation, Seth with evil, Rē with light, and so forth; these rationalizations might, in more systematic hands, have become stepping-stones towards a philosophy like that of earlier Ionia.

About the year 1375 B.C. a religious revolution took place which completely contradicts all that has been said above concerning the Egyptian temperament, and which, unless the baseless theory that it was due to foreign influence prove true, can only be ascribed to the individual genius of a very exceptional man. Akhnaton, as he called himself later, was the son of Amenophis III., one of the most powerful of the Pharaohs, and of Queen Tiyl, the daughter of a priest; his portraits represent him with an abnormally-shaped head on a deformed, emaciated body, whence some have imagined that he may have been an epileptic.

Already in the time of Amenophis III. we can detect a growing reverence for the sun as a celestial body, distinct from the traditional sun-god Rē-Atūm of Heliopolis; nor is it impossible, as J. H. Breasted has suggested, that the extension of the Egyptian rule both in Syria and in Nubia may have made felt the need of such a universal, omnipotent deity. Be this as it may, the propagation of the new cult was due to the fervour of the young king Akhnaton; not long after the beginning of his reign he broke completely away from the faith of his forefathers, forbade the worship of any other god than Aton, the solar disk, changed his name from Amenophis to Akhnaton ('pleasing to the Aton'), and moved his capital from Thebes, the town of the hated but powerful deity Amūn, to a new site near the modern village of Amarna in Middle Egypt. The suppression of all other gods thus created an exclusive monotheism, but the new religion was far more than the mere exaltation of the old sun-god in the place of a complex pantheon. Though temple-worship and certain externals of the old rituals persisted, the anthropomorphic form of the god was replaced by a mere symbol representing the ball of the sun spreading its rays, which are furnished with hands, in all directions; in the magnificent hymns addressed to the Aton all mythological traits are given up, and deep emphasis is laid on the life-giving attributes of light and warmth, to which all creation and all existence are ascribed. The intellectual character of the new faith is indicated by the name Sbōye, 'the doctrine'; never, perhaps, in the world's history, except in the French Revolution, has so radical an attempt been made to enthrone a philosophy in the place of religion. But the time was far from ripe, and 'the doctrine' barely survived its author; a generation later Theban Amūn is again all-powerful, and Egyptian religion has reverted to its traditional groove.

The Ramessid dynasties show no new rationalistic developments; the Theban priesthood grows steadily in power, and theology appears to submerge all secular interests. About 1100 B.C. the high priests of Amūn wrest the temporal power from the feeble hands of the Pharaohs, and under their weak rule is prepared a series of foreign invasions. At last Egypt becomes united again under a dynasty from Sais (XXVIth dynasty, 663-525 B.C.); this is a period of revival, when the art, the religion, and the political organization of the Old Kingdom are consciously copied, with little or no sign of innovation. Then comes the period of the Persian rule, followed by a momentary flickering up of the old native culture; after which Egypt passes under the sway of Alexander and his successors, when new intellectual influences are brought to bear on her.

Thus there was little scope, in the last centuries of Pharaonic rule, for the development of more truly philosophical standpoints. On the other hand, there are ample traces of a growing mystical tendency, due no doubt to the desperate difficulty felt by the exponents of so irrational a religion in keeping a hold on the popular faith. Enigmatic writing, increased symbolism, and the recrudescence of early animal cults are symptoms of the times; all these must have tended to enhance the awe with which the priests were regarded.

3. Explanation of the tradition.—The Greek tradition as to the wisdom of the Egyptians has its roots in the very real cultural achievements of that people in early times, coupled with the glamour of a high antiquity. Though our authorities for the facts may not be very trustworthy, it is quite possible that a number of Greek men of note went to Egypt and studied there. They could hardly fail to learn much, but what they

learned was less philosophy than the materials out of which philosophies could be constructed. The Egyptian religion, in particular, commanded the admiration of the Greeks, who mistook its crudities for disguised truths and its contradictions for paradoxes expressive of a deeper harmony. The wisdom of the Egyptians was mainly the wisdom of the Greeks read into the Egyptian myths. It has been truly remarked that, when the eclectic Plutarch discusses the character of the Egyptian gods, this agrees miraculously with the philosophy of Plutarch, and, when it is the Neo-Platonic writer Iamblichus, his account accords strangely with the philosophic outlook of Iamblichus. It is highly probable that the best-educated Egyptian priests of the Ptolemaic and Roman periods were imbued with Greek ideas, and imported these into the interpretation of their inherited religion. Thus Manetho (*q.v.*), who wrote a book in Greek about Egyptian religion (the *Ἱερά Βιβλία*), was, according to Plutarch (*de Is. et Osir.* 28), actually consulted by the first Ptolemy about matters connected with the introduction of the new god Sarapis. The introduction of this god was clearly an astute political move, an attempt to weld together Greek and Egyptian in a common worship; the outward appearance of Sarapis was entrusted to the skill of the celebrated Athenian sculptor Bryaxis, and similarly, it would appear, the determination of his spiritual characteristics was settled in co-operation by Manetho and Timotheos, a Eumolpid of Eleusis. About 300 years later the sacred scribe Chaeremon, an Egyptian, became the tutor of Nero; he wrote much on Egyptian topics, and is known to have been a Stoic.

The evidence that philosophy ever became, even in the Graeco-Roman period, a characteristic attainment of the Egyptian priests is very slight. Clement of Alexandria, quoting from an apparently trustworthy source, quotes 42 books of Hermes, which, he says, were absolutely necessary to the training of the priests, and comprise 'all the philosophy of the Egyptians' (*Strom.* bk. vi. ch. iv.); among these are hymns and rituals, astrological, medical, and scientific books, and also works relating to the laws and the gods; there is nothing to indicate that they differed in their intellectual level from the books that have come down to us from this time in hieratic and demotic. In the temple of Edfu an inventory of the library is written upon the walls (see H. Brugsch, *Aegyptologie*, Leipzig, 1897, pp. 156-158), and proves even more disillusioning; most of the books named are magical treatises, together with a few rituals, catalogues, and astronomical books. The temple walls at this period are covered with masses of inscriptions, hymns, mythological matter, lists of places, lists of festivals, lists of temple property—nothing indicating a departure from earlier custom; indeed, the language of many of the texts suggests that they are transcriptions or adaptations of books dating from the New Kingdom.

4. Conclusion.—The depreciatory view of Egyptian intellectual achievement taken in this article has been imposed by the exaggerations of Greek tradition and the unfounded claims which modern occultism has based upon it. But for these, the luxury of a more sympathetic appreciation might have been permitted us. The proper standards of comparison are Babylonia and early Syria; here Egypt can hold her own. It is true that Babylon displays more method, more accuracy, more purely intellectual preoccupation; but she lacks the poetry and the artistic genius of ancient Egypt, and, in the sphere of religion, she has no such momentous event to record as the reform of Akhnaton.

LITERATURE.—For the tradition and criticism of it see W. Otto, *Priester und Tempel im hellenistischen Ägypten*, Leipzig, 1903, ff. 209-238; F. Cumont, *Les Religions orientales dans le paganisme romain*², Paris, 1909, ch. iv. For the native literature, besides more general works, see esp. J. H. Breasted, *Development of Religion and Thought in Ancient Egypt*, New York, 1912.

ALAN H. GARDINER.

PHILOSOPHY (Greek).—The drift of the pre-Socratic philosophies of nature was towards rationalism, positivism, and the mechanical explanation of the universe. They sought to replace anthropomorphic gods by material causes. They asked, as Grote would put it, not 'Who rains?' but, 'What is the cause of the precipitation of moisture?' The principle, 'Naught can come from or return to naught,' rigidly applied, excluded direct divine intervention. And the physician Hippocrates speaks in the spirit of this early 'positivism' when he objects to the term 'sacred malady' on the ground that all diseases are equally 'divine.' The open avowal of agnosticism or atheism, however, was reserved for the more forward disciples of the age of the 'sophistic enlightenment.' The chief pre-Socratics seem to have left room for the gods in their mechanical constructions, or at least to have 'accommodated' their language to popular religion. The saying, 'All things are full of gods,' is attributed to Thales (Aristotle, *de Anima*, 411^a 8; cf. Plato, *Laws*, 899 B), and Cicero (*de Nat. Deor.* i. 25), doubtless wrongly, ascribes to him the doctrine that God is the mind which fashions the world out of water. Cicero and the doxographers, indeed, make gods of the first principles of all the pre-Socratics. For them the successive worlds that issue from Anaximander's infinite are gods, and likewise the *acr* of Anaximenes, the fiery *corona* of Parmenides, and the reason (*νοῦς*) of Anaxagoras.

The name of Pythagoras (*q.v.*) is for us a mere symbol, standing in its higher interpretation for the ideas of immortality, metempsychosis, and the systematic, ascetic cultivation within the soul of an order, harmony, and purity, corresponding to the like qualities in nature and God, while to the populace it signifies mysticism, thaumaturgy, and the survival of primitive prescriptions and tabus in respect of food, dress, and the conduct of life. We know little or nothing of pre-Platonic Pythagoreanism beyond the allusions in Heraclitus and Xenophanes, and the undeniable influence of Pythagorean ideas upon Plato. But the subject has been hopelessly confused by the forged literature and tradition that attribute to Pythagoras himself all Platonic developments of possible Pythagorean suggestions.

The philosophic poet and satirist Xenophanes of Colophon is the first to assail popular anthropomorphism directly (J. Freudenthal, *Ueber die Theologie des Xenophanes*, Breslau, 1886). He will hear nothing of the mythological 'fictions of former men,' which are no fit theme of rational discourse:

'If horses and oxen had hands to carve and paint, they would represent their gods in equine or bovine shapes' (*Diels, Die Fragmente der Vorsokratiker*³, i. 60). 'Homer and Hesiod have attributed to the gods all acts that are a disgrace and reproach among men—to steal, to commit adultery, and deceive one another' (*ib.* p. 59 f.).

With securing verbal inconsistency he proclaims 'one god supreme among gods and men,' whom he describes in language that wavers between monotheism and pantheism. This deity may be variously conceived as the world, the unity of 'being,' or a monotheistic idealization of Zeus. Strictly speaking, it is impossible to reconcile, either in Xenophanes or in his successor Parmenides, the Eleatic pantheism and abstract monism with the retention of mythological language or the recognition of gods. But Parmenides' poem, like

Shelley's *Queen Mab*, begins with an imaginative flight through space under the guidance of a goddess. He speaks of love as first-born of the gods (cf. Hesiod), places at the centre a daemon who governs or guides all things, and, according to Cicero, gives the name of 'God' to the *corona* of fire that girds the heavens (*de Nat. Deor.* i. 11). See, further, IONIC PHILOSOPHY, vol. vii. p. 417 f.

The pregnant rhetoric of Heraclitus (*q.v.*) stimulates the modern imagination to the most varied interpretations. The third book of his work on nature is said by Diogenes Laertius to have dealt with 'theology.' He celebrates the eternal process, law or reason (*Λόγος*). He describes God in pantheistic Emersonian antitheses as the identity of contraries (Diels³, i. 90 ff., frag. 67). He contrasts the relativity and weakness of man with the divine to which all things are always fair and good (*ib.* frag. 102). He personifies eternity (*αἰών*) as a child playing at draughts with the world (*ib.* 52). He declares that the eternal wisdom is willing and unwilling to be called by the name of Zeus (*ib.* 32). Sprung from a priestly family and depositing his book in the temple of Artemis, he speaks with respect of the Delphic Apollo (*ib.* 93) and the Sibyl, whose enigmatic style resembles his own (*ib.* 92). But, without attacking anthropomorphism in the uncompromising spirit of Xenophanes, he fiercely denounces the ceremonial purification of sin by the blood of victims (*ib.* 5), and the orgiastic rites of the new Asiatic Dionysiac cults (*ib.* 15). And he expresses infinite scorn for the false teachers Hesiod, Pythagoras, Xenophanes, and Hecataeus (*ib.* 40, 57).

Empedocles (*q.v.*), as a philosophic poet, deified the four elements, the cosmic forces love and strife, and many other personified abstractions. His chief divinity seems to be the Sphaeros, or globular unity of the elements, from which all things are evolved, and which the Neo-Platonists accepted as a symbol of the absolute One. Some fine lines on the spiritual nature of the godhead, however, are referred by our sources to Apollo (Diels³, i. 274, frag. 134). In his character of medicine-man, hierophant, and Pythagorean mystic, he taught doctrines of thaumaturgy, metempsychosis, and ceremonial purification, the compatibility of which with his philosophic system cannot be made out from the fragments.

The atomic philosophy of Democritus (*q.v.*) leaves no place for the concrete supernatural, and his explanation of the origin of religion in misunderstood allegory or in primitive man's fear of the thunder and the storm (Diels³, ii. 30, frag. 75 f.) presupposes the unreality of the popular gods. Conventional references in the ethical fragments to God and the divine and to the love of the gods for just men are of no significance (*ib.* frags. 175, 217). More difficult to understand is the doctrine attributed to him of daemons or real aerial beings, beneficent and maleficent, long-lived but not immortal, from whom emanate images that penetrate the minds of men (*ib.* frag. 166). 'Telepathy' could as easily be explained by the atoms then as it can by the analogy of wireless telegraphy to-day. And it may be that Democritus, unable to reject the evidence for supernatural visions and prophetic dreams, invented this way of reconciling them with the atomic physics and psychology. Lucian (*Philopseudes*, 32), however, praises Democritus as the thinker whose adamantine faith in natural law rejects *a priori* the possibility of supernatural apparitions. And it is extremely probable that our authorities have given a superstitious colouring to some purely psychological theory of casual combinations of atoms finding their way into the mind. The interpretation of the prayer 'to meet with propitious visions' is

doubtful. In any case Democritus' daemons must not be confounded with the Epicurean gods who inhabit the interspaces of the worlds.

In contrast to these 'random speakers,' Aristotle (*Met.* 984^b 15) praises as the first sober utterance the proclamation of Anaxagoras (*q.v.*) that *νοῦς*, or reason, originally set in motion and reduced to order the indefinite homogeneity of chaos. But he concurs with Plato (*Phædo*, 98 f.) in the criticism that Anaxagoras failed to deduce the teleological applications of this principle and continued to explain all things by mere mechanism. In spite of this, attempts have been made to refer directly or indirectly to Anaxagoras the arguments from design attributed to Socrates in Xenophon's *Memorabilia* (F. Dümmler, *Akademika*, Giessen, 1889, sect. vi.). However this may be, the Athenian jurors who voted for the exile or death of Pericles' philosophic friend saw in him the representative of atheistic science which dethroned Helios and Selene and pronounced the sun merely a red-hot stone. And Plato, both in the *Apology* (26 D) and in the *Laws* (967 C), makes regrettable concessions to this prejudice.

In the loss of the writings of the sophists, we cannot reconstruct in detail the history of the 5th cent. enlightenment. But from Euripides, Aristophanes, Thucydides, and Plato it is amply apparent that all the ideas and tendencies of what we call an 'age of transition' were present.

The national and local festivals, cults, shrines, and oracles, the religion of the dead, and the worship of heroes still retained their hold upon the people. The immense place occupied by these things in the history of Herodotus may be held to indicate that the crisis of the Persian wars temporarily stimulated the popular faith in the supernatural. But the mythology of Homer and Hesiod was no longer credible to educated men. It offended the developed ethical sense of the pious. It had never really met the needs of personal and emotional religion. In response to this need the 6th cent. had witnessed, side by side with the development of philosophic rationalism in Ionia, a revival or new birth of mysticism and enthusiasm associated with the names of Orpheus, Musæus, and Pythagoras, and the union in the Eleusinian mysteries of the worship of Demeter and Dionysus (cf. J. E. Harrison, *Prolegomena to Greek Religion*, p. 646 ff.). Modern critics style this movement a recrudescence of superstition or a spiritual awakening according as they are swayed by distaste for its irrational accompaniments or by sympathy for the underlying conceptions of salvation from sin, reconciliation with God through dramatized and emotional forms of worship, and faith in the revelation of a judgment after death.

The criticism of its fragmentary and doubtfully authentic literary remains must be left to the philological specialist (see Diels³, ii. 163 ff.; E. Abel, *Orphica*, Leipzig, 1885; E. W. Maas, *Orpheus*, Munich, 1895; Rohde, *Psyche*; Harrison, *Prolegomena*², p. 455 ff.).

The great extant poets of the first half of the 5th cent. are neither philosophical rationalists nor corybantic revivalists; they are conservative reformers. Their endeavour is to preserve and purify the essential spirit of reverence and religion rather than either to encourage or satirize superstition, or to display their ingenuity in the attack or the defence of the mythological letter. This is the temper of Pindar, Æschylus, Sophocles, and Simonides, whom Gomperz (*Greek Thinkers*, Eng. tr., ii. 13) therefore calls 'trimmers' and Matthew Arnold 'prophets of the imaginative reason.' In the next generation, more consciously and philosophically, this is the temper of Plato.

Meanwhile the 'enlightenment' proceeds, de-

veloping every shade of critical and sceptical opinion. The chorus of Æschylus' *Agamemnon* (370) barely alludes to one who denied that the 'gods deigned to regard those by whom the sanctities of holy things were trodden under foot,' and the confident free-thinking of Sophocles' Jocasta seems to heighten, if not to motivate, the dramatic irony of the *dénouement*. But the disputatious personages of Euripides have all received the new education and, with little regard to dramatic verisimilitude or unity of æsthetic and religious impression, they bandy like shuttlecocks all the ideas which the philosophers, the mystics, or the sophists had put in circulation (P. Décharme, *Euripide et l'esprit de son théâtre*, Paris, 1893; A. W. Verrall, *Euripides the Rationalist*, Cambridge, 1895).

It is superfluous to demonstrate, after Grote, that the sophists (*q.v.*) were not a school of professed atheists, or that they often used conventional and edifying language about the gods. It is enough to observe that the general effect of their teaching was to unsettle the old bases of moral and religious conviction, while putting nothing in their place (Plato, *Rep.* 538 f.).

This was the practical outcome both of their philosophy of relativity and of a higher education devoted wholly to rhetoric and the plausible exploitation of opinion (H. von Arnim, *Dio*, Berlin, 1893-96, *Introd.*). In recognizing this fact and the reaction which it provoked in Plato, we need not apologize for their persecution by Athenian orthodoxy, or deny that their writings, if we possessed them, might reveal the elements of a constructive treatment of ethics and law on a purely scientific and positive basis. In fact, we have only fragments, titles, and conjectures. A treatise of Protagoras began with the words: 'Of the gods I cannot know that they are or that they are not' (Diels³, ii. 229). Tradition adds that the book was burned and the author exiled; and a fragment of Euripides' *Palamedes*, sometimes uncritically referred to Socrates, has been plausibly interpreted as an allusion to Protagoras (Gomperz, i. 440). In the Platonic dialogue which bears his name, however, Protagoras represents justice as the gift of Zeus to mankind, and says that man by reason of his divine kinship is the only animal who knows and worships gods. From this Gomperz (i. 449) infers that he doubted not the existence of the gods, but the alleged proofs of it. Similarly Prodicus, who speaks with edification of the gods in the apologue of the *Choice of Hercules*, attributed to him by Xenophon, is credited with a purely rationalistic theory of the origin of religion. Men personified and defied all that helped and hindered them (Diels³, ii. 274). From this it is but a step to the doctrine of Critias expounded in a fragment of the *Sisyphus* (Diels³, ii. 320). Religion is the invention of a prudent statesman who, perceiving that law restrains men only from open wrongdoing, devised the idea of gods who know our inmost thoughts and purposes. And in a similar vein a chorus of Euripides, while expressing scant faith in miracles, adds:

'But dreadful myths are conducive to the worship of the gods' (*Electra*, 743 f.).

'The younger wits teach,' says Plato, in effect (*Laws*, 889), 'that religion, ethics and law are late products of convention and do not belong to the nature of things.'

Law so analyzed ceases to coerce. The history of Thucydides exhibits naked human nature demoralized by war and pestilence and incoercible by any restraints human or divine. The intellectualism of the author views with cold contempt all appeals from the calculus of political forces to invisible and ideal realities. Or at any rate he represents this hard positivism as the prevailing temper of the age, and so prepares us to understand

the intensity of the reaction in Plato (see P. Shorey, 'Implicit Ethics and Psychology of Thucydides,' *Trans. of the American Philological Association*, 1893).

Of the religion of Socrates (*q.v.*) we know nothing except that he was condemned to die for corrupting the youth and introducing new gods, that he acknowledged the guidance of a familiar divine voice or inward monitor, and that by the testimony of Xenophon and Plato he worshipped the gods according to the law of the city and approved the consultation of the oracles in matters beyond the scope of human foresight. Xenophon's account is coloured by his apologetic purpose, and attributes to Socrates his own favourite beliefs and somewhat old-fashioned religiosity. The *δαίμωνιον* is a positive private oracle available for the practical concerns of friends, and not, as in Plato, the negative check of an inner spiritual tact. Socrates not only repudiates, as he does in the Platonic *Apology*, special doctrines of Anaxagoras, but holds that prying into the secrets of nature is offensive to the gods. And he elaborates the evidences of design in the cosmos and in the body of man, in discourses the details of which Xenophon may have transcribed from some follower of Anaxagoras or Diogenes of Apollonia (*Mem.* i. 4, iv. 3).

To the cheerful, conventional, and somewhat vague piety and the mainly ethical religion of Socrates, exhibited in his earlier dialogues, Plato (*q.v.*) adds as the years go on an ever-deepening aversion to the irreverent and irreligious spirit of the age. The feeling culminates in the formal refutation of materialistic atheism set forth in the tenth book of the *Laws*:

Religion is an essential bulwark of law and morality; no one who possesses a sound and vital faith in the gods can voluntarily sin. The conscious sinner must either deny their existence or their providence or believe that the divine justice can be corrupted by sacrifice or prayer. Atheism, however, is not always the offspring of licentiousness. It is in Athens the product of old books (886 Cff.) that teach false conceptions of the gods, or of new philosophies of nature that affirm that matter is the primal reality and that morality, law, and religion are not nature but art—secondary conventions of man. The argument from design is not in itself sufficient to refute this form of scepticism (880 A). It must be met by a demonstration that the first causes of motion, soul and the functions of soul, are necessarily prior in the order of nature to matter and its qualities. This principle established, we may remind the sceptic that atheism, a malady incident to pert youth, has never retained its hold on any man through life. Doubts as to the moral government of the world are to be cured by reflexion on our own insignificance and the small part of the total order which we behold. And the minute providence and unswerving justice of God may be deduced from the very idea of the divinity.

These pages contain the germs of all future theodicies, Stoic and Christian, from Cleanthes to Malebranche, Leibniz, Shaftesbury, and Pope. The honest sceptic who remains unconvinced by these arguments is confined five years in the House of Reformation and required to submit to instruction for the 'salvation of his soul.' If then still recalcitrant, he is put to death. This boutade is hardly to be taken seriously, though it has greatly agitated modern liberal Platonists such as Grote, Mill, and Gomperz. More significant is Plato's deliberate affirmation that the doctrine that the gods may be bribed by worship is worse than atheism. In the *Republic*, where the existence of the gods is assumed, the mythological religion of Homer is purified by theological canons to which all poets and teachers must conform: God is good and the author of good only (379 C; cf. Cleanthes' *Hymn*). God is unchanging and never deceives (380 f.). Plato will accept any 'accommodation' to popular religion that does not compromise essential ethical truth. In both the *Republic* (427) and the *Laws* (738 B-C) it is assumed that his city will have a polytheistic cult with temples, precincts, ritual, festivals, and hero-worship of good men

approved by Delphi. He himself speaks of the Hesiodic gods with thinly veiled irony in the *Timæus* (40f.), and in the *Phædrus* (246 C) pronounces the very notion of an immortal animal a figment of the imagination. It is not true, as matter-of-fact interpreters affirm, that he believed in the literal divinity of the sun and the moon. He insists only that this universal frame, of which their ordered motions are so conspicuous a part, is not without an author:

'Either the soul which moves the sun . . . resides within the circular and visible body . . . or the soul provides herself with an external body . . . or thirdly she guides the sun by some wonderful power. . . . And this soul of the sun . . . whether taking the sun about in a chariot . . . or acting from without, or in whatever way, ought by every man to be deemed a god' (*Laws*, 898 E-899).

From this the Neo-Platonists easily deduced three solar divinities. But the plain meaning is that Plato would rather leave the people their naive faith in Helios and his chariot than have them imbibe virtual atheism from Anaxagoras' teaching that the sun is merely a red-hot stone. His temper is that of Matthew Arnold telling us that, 'compared with Professor Clifford, Messrs. Moody and Sankey are masters of the philosophy of history' (*God and the Bible*, London, 1894, p. x). His religion, if not the 'religion of all sensible men,' is that of all cultured latitudinarians from Plutarch to Schleiermacher and Matthew Arnold himself. He is not a dogmatic monotheist only because his 'accommodations' are to Greek polytheism and not to historical Christianity. He employs theistic language in the fluid rhetorical manner of Seneca and Emerson. His God is in ethics the transcendental sanction of morality, and in cosmogony the limited deity of Mill's posthumous essays—a demiurgic principle of order and harmony contending with recalcitrant 'necessity.' It is customary, however, to connect Plato's theology more closely with his metaphysics than is here done. God is identified with the idea of good or with the One (see Shorey, 'The Idea of Good in Plato's Republic,' *University of Chicago Studies in Classical Philology*, i. 183, n. 2; T. Whittaker, *The Neo-Platonists*, Cambridge, 1901, p. 37). The goodness of God is the first canon of theology, and the Demiurgus transforms chaos to cosmos out of his ungrudging goodness (*Tim.* 29 E; Boethius, *Cons. Phil.* i. 8: 'insita summi forma boni'). It is entirely possible, then, that in mystical or emotional passages the 'good' in Plato may be intended to suggest God. But the idea of good has a definite logical meaning for ethics and politics (see SUMMUM BONUM), and it is confounding two different lines of thought to identify it with God. So of the One. The absolute metaphysical unity of the *Parmenides* resembles both the supreme god and the pure being of the ideas in that it is ineffable and admits no predicates unless it be 'existence.' But the identification of this One with Plato's God in Neo-Platonic speculation is wholly uncritical. To metaphysics also belongs the 'problem' of evil. God being the author of good only, evil must be derived from metaphysical (*Theæt.* 176 A) or from physical necessity (*Tim.* 48). The *Politicus* describes mythical cycles in which the world is guided alternately by God and, in reverse motion, by innate desire (272 E). A passage of the *Laws* (896 E) admits the Manichean conception of an evil world-soul side by side with the good, and this is accepted by Plutarch as the authentic teaching of Plato. The freedom of the will is treated by Plato ethically, not metaphysically or theologically. 'Virtue is free' (*Rep.* 617 E), but vice is involuntary (see *AJP* x. [1889] 77). For the purposes of legislation he is a determinist (*Laws*, 861-864 C). Immortality is a rational hope (see Shorey, *The Unity of Plato's Thought*, Chicago, 1903, p. 41). The eschatological

myths of the *Gorgias*, *Phædo*, and *Republic* serve to confirm the hope and as supplementary sanctions of ethics (J. A. Stewart, *The Myths of Plato*, London, 1905). Immortality is 'proved' in the *Phædo* and *Republic* by supersubtle dialectic and in the *Phædrus* by the same argument that establishes the existence of the gods in the *Laws*—the priority of soul as the first cause of motion. The doctrine of daemons—first appearing in Hesiod, and elaborated by Xenocrates, Plutarch, the Christian Fathers, and the Neo-Platonists—is for Plato a mythological fancy (*Symp.* 202 E). Lastly, the ever-recurrent gloss that the ideas are thoughts of God is merely a plausible evasion of the difficulty of recognizing more than one form of absolute being, and a convenient syncretistic device for reconciling Plato with Aristotle.

That Aristotle (q.v.), like Shakespeare, recognized religion as a great fact, and that he paid formal respect to the established cult, hardly need be said (Dèclarme, p. 233; Zeller, *Aristotle*, Eng. tr., London, 1897, ii. 334 n.). His lost dialogues, composed under Plato's influence, dealt with the immortality of the soul (*Eudemus*) and the truths of natural religion. The origin of the belief in gods was traced to the phenomena of dreams and enthusiasm, and the argument from design was illustrated in a brilliant passage quoted by Cicero (*de Nat. Deor.* ii. 37). In the extant writings, however, there is little of Plato's unction, and nothing of Plato's fervent preoccupation with the reform of religion and its defence against the scepticism of the age. Personal immortality is nowhere affirmed (Zeller, ii. 133 f.), and, while the universal belief of mankind from of old is accepted as confirmation of abstract theism (*de Caelo*, i. iii. 6, ii. 12, *Met.* 1074^b), the 'rest,' he says almost in the tone of Critias, 'is mythical addition for the persuasion of the multitude and as a useful aid to the laws.' Aristotle's own 'scientific theism' (Zeller, i. 399) is an inference from his theory of the soul, his metaphysics, and his theory of the heavens. The key to his philosophy is the recognition of the irreconcilable conflict in his thought between empirical postulates and Platonic principles. The psychology of the logical works and of the *Parva Naturalia* is inductive and sensation-alistic. Both the conceptual major premisses and the highest regulative 'principles' of syllogizing are derived by (a perhaps unconscious) induction from the impressions and memory-images of sense. The highest reason (*νοῦς*) is in fact practically identical with this faculty of generalizing induction peculiar to man. The *de Anima* rests the possibility of a separable soul (not the mere entelechy of an organic body) on the existence of a thought that is not thus dependent on sense, or on images derived from sense. As the analysis proceeds, this problematical thought is hunted from chamber to chamber of the subdivided soul, and finally takes refuge with the active intellect, which in the very act of thinking converts the passive intellect or potentiality of ideas into the direct contemplation of them. We may still ask whether the active intellect is anything more than a paraphrase for 'man thinking' and whether images of sense are not still the indispensable matter of the passive and, by consequence, of the active intellect. But, whatever our interpretation of the third book of the *de Anima*, there emerges from it the vague notion of a separable pure activity of thought, whether personal or pantheistic. So in the metaphysical theory of the universal. The empiric Aristotle rejected the Platonic ideas *in toto*: the universal does not exist before the particular, but in it, and is drawn thence by the inductive *νοῦς*. This suffices for logic and ethics. But Aristotle is unable or unwilling to apply this anti-Platonic

view consistently to the ultimate problems of metaphysics. The name 'first essences' (substances), no longer reserved for individual things, is now sometimes applied to abstract ideas. The universal, the abstract, the 'first essence,' is the 'form,' or actualization, the union of which with matter or potentiality is the particular. A doctrine of associationist nominalism might conceivably be stated in this terminology. But the scorned Platonism takes its revenge, and leads Aristotle in his search for the absolute to postulate a form divorced from matter—an actuality correlative to no potentiality. We need not ask whether this actuality belongs to certain ideas only or to all universals taken as pure abstract essences. We have at any rate the problematical conception of the absolute and unrelated existence of ideas, forms, or thoughts. Lastly, in his theory of the world Aristotle postulated an eternal finite order in opposition to the infinite series and the cosmic evolutions of the pro-Socratics. He is sometimes called an evolutionist. But this is a misconception or an equivocation. Every individual thing, institution, and art-form is indeed for him the highest development contained in its germ. But the germ itself is a product not of evolution, but of an antecedent perfected individual. His mind was closed to any conception of development which presented the picture of a different world from that which he had constructed. The chain of causation is limited by a finite space and a fixed eternal order. Within this order all changes are confined to the region below the moon, and are caused by the great revolution of the heaven and the obliquity of the ecliptic. The cause of these is the first and ultimate cause. Operating eternally and unweariedly, it cannot be material. It is pure actuality unmingled with potentiality. The convergence of these three lines of thought in the idea of God is indicated and assumed rather than explicitly stated in the *Ethics* and *Metaphysics*. God is pure thought and pure activity. His bliss from everlasting is the happiness of the thinker in the rare moments of highest contemplation (*Met.* 1072^b, *Eth. Nic.* 1178^b). The content of this thought is Himself—the pure essences of the thoughts that constitute Him. There is nothing else that He could think without derogation and subordination of the thinker to the purpose of his thought (*Met.* 1074^b 34). The universe is a harmonious whole, and, as Homer says, 'the rule of many is not good. Let one be ruler' (*ib.* 1076^a 4). The mode of God's operation on the world may be illustrated by love (*ib.* 1072^b 3). The beloved object moves, though unmoved itself, by the power of desire in the lover. God is the prime mover because He is the *primum amabile*. He is, in Dante's phrase, 'L'amor che move il solo e l'altre stelle' (*Paradiso*, xxxiii. 145). This is Aristotle's theism. Neo-Platonic syncretism identified it with Platonism by the interpretation that the Platonic ideas are the thoughts of God. To trace its further influence on mystic and speculative theology would exceed our limits. Nor can we do more than glance at the difficulties that it presents (*Cicero, de Nat. Deor.* i. 13). What is the relation of God, who moves the outer heavens, to the independent motor principles assumed to explain the movements of the planets? What ground is there beyond the system-building instinct for identifying the first cause of physical movement with the active intellect of the *de Anima*, or that with the 'first essences' of the ideas? Is God ignorant of particulars? Aristotle implies that He does not love man as man loves Him—the disproportion is too great (*Eth. Nic.* 1138^b 35). If His operation ceases with the rotation of the heavens, how can benevolent design be attributed to Him or to nature? But to ask these questions is to confine all metaphysical

theology within the limits set by the empirical understanding.

The post-Aristotelian philosophies are of more significance for the diffusion than for the origination of ideas. In the age of Epicurus and Menander the mythological religion of the city-State retained so little vitality that the populace of Athens could lodge a Demetrios in the Parthenon and welcome him to the city with a hymn that contrasted his present divinity with the dubious gods who dwell afar or heed us not. There remained for the populace foreign superstitions, mysteries, and coterie cults (*P. Foucart, Des Associations religieuses chez les Grecs*, Paris, 1873), and for the educated class moral philosophy, vague poetic religiosity, or scepticism. The comparison of Alexander to Bacchus, who also conquered India, and the various apotheoses of his successors provoked a formulation of scepticism which is of slight philosophy, but of considerable historical significance. About the middle of the 3rd cent. Euhemerus published his tale of the island of Panchaia, and the 'sacred inscription' there discovered in which Zeus and all the house of Kronos are revealed as mortal kings deified by the gratitude or fears of their subjects. Euhemerus may have been, as Gruppe suggests, a mere romancing precursor of Lucian. But Euhemerism became for Greek sceptics, their Roman disciples (Ennius translated the book), the Christian Fathers, and the rationalizing philology of the 18th cent. a favourite 'key to all mythologies.' A second school of scepticism was the New Academy, which provided a convenient formula for noble Roman augurs who punctiliously performed every ceremony of the cult that made Rome great, but dismissed the dogmatic affirmations of natural theology with a smile (*Cicero, de Nat. Deor.* i. 22). But in the popular estimate the great school of irreligion was the Epicurean. The extant fragments of Epicurus manifest little of the passionate hatred of superstition which animates his Roman disciple, Lucretius. Yet it is perhaps implied in the reiterated affirmation that the only use of physics is to free us from the terrors of false religion. These terrors could not have been very real if we may accept Cicero's assertion that no old woman any longer feared the mythological hell from which the Epicureans promise to deliver us (*Tusc. Quest.* i. 21). Cicero also makes merry with the ingenious theory of faintant gods possessing a *quasi-corpus* and inhabiting the *intermundia* (*de Nat. Deor.* i. 28). And it is probable that few Epicureans took it seriously, though some found it a convenient defence against the charge of atheism, while to others it provided a refuge for the idealizing imagination and an object for the natural instinct of worship. Real impiety, they said, consists not in rejecting the gods of the vulgar, but in thinking unworthily of the divine. True and disinterested worship could be paid only to the gods of Epicurus,

'who haunt
The lucid interspace of world and world,—

Nor sound of human sorrow mounts to mar
Their sacred everlasting calm'

(Tennyson, *Lucretius*).

And thus they too composed formal treatises 'on piety' (Gomperz, *Philodemus περὶ εὐσεβείας*, Leipzig, 1886). But for all later antiquity the Epicureans, as opposed to the Stoics and Platonists, remained the great irreligious school of philosophy. If they did not reject the existence, they denied the providence, of the gods, which for emotional and practical religion amounted to the same thing. Lucian's Platonists, Stoics, and Pythagoreans treat them as pariahs, and his religious charlatans incite the populace against the atheists, the Christians, and the Epicureans.

Stoicism (*q.v.*) in the course of its secular development became all things to all men. The pantheistic world-god, the artisan fire working in the veins of all creation, could be virtually identified with the Platonic soul of the world, or could be described in the language of purest monotheism. The allegorical method whereby the gods of the mythology could be interpreted as parts, aspects, or functions of 'Zeus' or 'nature' veiled prudent accommodations, contented genuine, if not very perspicacious, orthodoxy, and gratified the permanent instinct of ingenious exegesis. Personal immortality, while not strictly compatible with the theory, was not explicitly denied. A temporary survival was sometimes conceded to great souls until the expiration of the cycle and the reabsorption of all things in the fiery world-god. This enabled Stoic writers of consolations (as, *e.g.*, Seneca) to portray the future bliss of the liberated soul as vividly as their Platonic rivals. The designation of the fiery world-god as Zeus, Providence, Destiny, Nature, the λόγος, made every topic of religious rhetoric or philosophic theodicies available to the long series of Stoic authors from Zeno to Cornutus who wrote on religion or on 'the nature of the gods.' In addition to this, Stoicism was an ethical religion tinged with 'cosmic emotion.' It became the expression of an absolute faith in divine providence and manly resignation to the order of nature that, however fatalistic in expression, never paralyzed the will. Of this ethical gospel the chief texts still vital for edification are the *Hymn* of Cleanthes (translated as a psalm in W. Pater's *Plato and Platonism*, London, p. 42), the *Letters* of Seneca, the diatribes of Epictetus, and the *Meditations* of Marcus Aurelius, which have been hyperbolically praised as the absolute religion—that which results from the sole fact of a high human consciousness face to face with the world (Renan, *Marc-Aurèle*, Paris, 1885, p. 272). But in these later developments Stoicism was already tinged with Platonism; and, with the revival of Greek literature in the second half of the 1st cent., Platonism tended more and more to become the religion of all educated men who did not adopt Christianity. This Platonizing religion has three forms.

(1) In the later Stoics it is the gospel of Socrates as set forth in the *Gorgias*, *Apology*, *Crito*, and *Phædo*. The only certain good is the virtuous will. There is no terror for the wise man in the roar of the mob or the threats of the tyrant. For he is strong in the faith that Anytus and Meletus may kill him, but cannot harm him (*Apol.* 30 C). He is by definition a rational animal, and can obey no other principle in his soul but the voice of reason. Though he has good hope of immortality, he does not require that assurance to live and die secure in the conviction that the gods will permit 'no harm to come to a good man here or there.' These and similar Socratic sayings constantly quoted by Epictetus are the chief texts of all his preaching. The life of Socrates, he tells us, is proposed to us as a pattern, and in temptation or doubt we need ask only: What would Socrates have done?

(2) The more literary and avowed Platonists, of whom Plutarch, Dio Chrysostom, and Maximus of Tyre are the types, harp less insistently on these chief notes, and are more broadly interested in the Platonic philosophy as a whole—its refutation of materialism, its demonstration of the fundamentals of natural religion, its tolerance of all cults, its idealization of all symbols that can be dissociated from immoral suggestions. Plutarch toys with mysticism and allegory and his doctrine of daemons, but his personal religion is that of the broad church literary man who believes in God, hopes

for immortality, and, whether in the Roman empire or in the parliament of religions, deems it more edifying to dwell on the underlying unity of the religious spirit than with a Lucian or an Ingersoll on the incredibility of the mythological letter. And this, if we read between the lines, is the religion of Dio's discourse on the first idea of God, and of Maximus of Tyre's discussion of the lawfulness of image-worship.

(3) To a third type of mind the mystical and metaphysical side of Plato appeals most strongly. Beginning with the Neo-Pythagorean revival (see NEO-PYTHAGOREANISM), this form of Platonism developed until as Neo-Platonism (*q.v.*) it became the chief philosophy and religion of paganism in its final struggle with Christianity. Historically it is a form of Platonism; psychologically it is the expression of at least three permanent instincts and tendencies of the human mind: (a) thaumaturgy and the lower mysticism; (b) the higher mysticism and the delight in symbolism, allegory, and the ingenious exposition of sacred texts; (c) the dialectical analysis of the ultimate ontological presuppositions of religion.

(a) Superstition and miracle-mongering remain the same in every age and still conjure with the names of Plato and Pythagoras. We cannot stop to discuss the forged literature of Neo-Pythagoreanism or to describe the miracles of Apollonius of Tyana (*q.v.*), of the charlatans satirized by Lucian, and of the degenerate successors of Plotinus. It is to be noted, however, that the higher mysticism of the best writers was less infected with concrete superstition than we should infer from their language.

(b) The allegorical interpretation of sacred texts was a literary form common to the Stoics, Philo Judæus, and the Platonists, and by them transmitted to the Middle Ages and the Renaissance. It is incompatible with sound philological criticism, but not necessarily with sane and elevated morality or severe and ingenious dialectic. It is essentially the same whether applied to the text of Homer, the OT, or Plato; and the patient reader will find that in Philo, Plutarch, and Plotinus it is merely the fantastic garb of a Platonizing natural religion, associated with acute metaphysical speculations and accommodations to the symbols of historic paganism. To set forth Philo's doctrine of the λόγος, Plutarch's theory of the daemons and the evil world-soul, and the trinity of Plotinus exceeds our scope (see ALEXANDRIAN THEOLOGY, LOGOS, PLUTARCH, NEO-PLATONISM). One thought derived from the *Timæus* dominates Neo-Platonic theology. It is the idea that the ineffable supreme God delegated the work of creation (or a part of it) to His inferior ministers. In later developments these divinities in turn are elevated above contact with 'base matter' by a similar delegation to beings below them. Creation is further conceived as a timeless overflow and emanation of the plenitude of being, as the going forth of one that 'remains' (μένει, μόνη), as the radiance of a light that loses nothing by communicating itself. The application of these ideas by the allegorical method to the divinities of the Greek pantheon and the abstractions of Platonic metaphysics yields the various orders and hierarchies of gods, daemons, and angels multiplied by the piety and ingenuity of successive generations of Gnostics and Platonists. And in the lower plane of the 'surnatural particulier' the worship of these deities suggested or veiled theurgy and miracle-mongering. How far the successors of Plotinus yielded to this weakness is a difficult question. There are traces of it in Iamblichus, the emperor Julian, and Proclus. But the stories told by Eunapius are to be received with caution.

Even in his account the students are always clamouring for a miracle, while the professors evade the test. Julian combated Christianity as the irreconcilable enemy of the mythology that had created Greek art and literature and the cult that had built up the empire of Rome. Their interpretation as allegories of Neo-Platonic philosophemes satisfied his heart and his imagination. But the rhetoric of his discourses on Apollo and the Mother of the Gods is perhaps no more to be taken literally than that of Renan's prayer to Athens on the Acropolis.

(c) However this may be, the more philosophic Neo-Platonists continued to speculate on the relations of the unknown God to the highest terms of Platonism—the Demiurgus, the One, the Good. Greek subtlety easily proved that these and all terms of human speech connote limitations and relations that cannot properly be predicated of the ultimate and absolute. God can be described only in negations, which, however, are to be understood in a honorific and not in a privative sense. As Thomas Browne puts it, 'Nothing can be said hyperbolically of God' (*Christian Morals*, pt. iii. sect. 2 [*Works*, ed. C. Sayle, London, 1904-07, iii. 483]; cf. Plato, *Rep.* 509). The outcome of this line of speculation is Damascius's doctrine of the unknowable, which differs only in its superior subtlety and consistency from that of Herbert Spencer. The predicate of unity, at least, he exclaims, is never denied by Plato. But even unity is in human speech a relative idea, and, as the *Parmenides* shows, transforms itself into multiplicity under close inspection. We cannot name or define God at all. We are conscious only of a travail of soul—*ôôis* (cf. *Rep.* 490 B). This is the end of Greek philosophy.

LITERATURE. — E. Zeller, *Die Philosophie der Griechen*, 5 vols., Leipzig, 1876-1909; T. Gomperz, *Greek Thinkers*, Eng. tr., 4 vols., London, 1901-12; J. Burnet, *Early Greek Philosophy*², do. 1903; A. B. Kische, *Die theologischen Lehren der griechischen Denker*, Göttingen, 1840; L. Preller, *Griechische Mythologie*², Berlin, 1884; L. Campbell, *Religion in Greek Literature*, London, 1898; E. Rohde, *Psyche*², 2 vols., Freiburg, 1898; P. Déchamps, *La Critique des traditions religieuses chez les Grecs*, Paris, 1904; J. Girard, *Le Sentiment religieux en Grèce*², do. 1887; E. Caird, *The Evolution of Theology in the Greek Philosophers*, 2 vols., Glasgow, 1904; J. E. Harrison, *Prolegomena to the Study of Greek Religion*, Cambridge, 1903; O. Gruppe, *Die griechische Culte und Mythen*, Leipzig, 1887; J. Oakesmith, *The Religion of Plutarch*, London, 1902; C. C. J. Webb, *Studies in the Hist. of Natural Theology*, Oxford, 1915. Zeller and Gomperz give abundant references to the more special literature of Greek philosophy. All pre-Platonic texts are now most conveniently consulted in H. Diels, *Die Fragmente der Vorsokratiker*², Berlin, 1912. See also the articles on mythological and religious subjects in Daremberg-Saglio, Pauly-Wissowa, and Roscher.

PAUL SHOREY.

PHILOSOPHY (Iranian).—It has been asserted by more than one competent scholar that Buddhism is not, strictly speaking, a religion, but a philosophy. Conversely, it may be maintained with still greater reason that Mazdeism, or the national cult of the ancient Iranian people and their descendants, is not a philosophy, but a religion. To put it otherwise, the Mazdean system, at least in its earlier forms, is a pure theology, which interests itself not at all with philosophical speculation. This has been well put by the most recent Parsi writer, M. N. Dhalla:

'The religious system of Zoroaster is theological rather than philosophical. . . . Philosophy attempts to give a rational solution, based on human observation and experimentation, of various problems, which religion claims to solve on the authority of prophetic revelation. . . . Religion has fixed canons, binding traditions. Its tendency is to put a lasting stamp on the doctrines for all times. It rests upon the teachings of a prophet, and nourishes them as an unchangeable heritage. Philosophy, on the other hand, progresses with the times, and ever encourages fresh inquiry. It always revolts from every kind of dogmatic teaching. . . . The utilitarian genius of the Persians led them to disparage metaphysical speculation as a vain attempt at the impracticable. Religion should be such that its ideals can be applied to our workaday world. Its

teachings should be applicable to the exigencies of daily life. . . . This is the characteristic of Zoroastrianism through its very simplicity' (*Zoroastrian Theology*, pp. 356-359).

These sentences express excellently the very genius both of the Mazdean faith and of the Iranian habit of mind. The ancient Iranian thinkers seem not to have troubled their minds at all with such problems of being or knowledge as underlie the Indian concepts of *māyā*, *karma*, *ātman*, *samsāra* ('metempsychosis'), *nirvāṇa*, and the like. Indeed, few things are more surprising than the direct opposition which exists between the mental attitudes of the two most closely connected of all the members of the great Indo-European family—the Indian and the Iranian. The former, as is well known, is distinguished among all other peoples by its ineradicable love of metaphysical speculation, its groping after and brooding over the most abstruse problems of being, of knowledge, of psychology, as well as by its endless multiplication of philosophical schools; for, as Dhalla observes, 'there are as many philosophies as there are philosophers,' and 'these come and go, and with them the cradle of the speculative thought is ever swinging to and fro' (p. 357). The inevitable tendency of the Indian philosophizing is towards pantheism or monism, on the intellectual side, and towards pessimism, on the moral side. The Iranian tendency is the very opposite. Against the Indian pessimism we must set the irrepressible optimism of the Iranian mind. To the Indian thinker existence itself is an evil, and all his spiritual philosophy is directed towards deliverance from an endless series of re-births by a final cessation of all conscious personal existence, or even of existence itself. The Iranian looks for the full enjoyment of an active life here and a still happier continuance of life, conscious and intelligent, beyond the tomb. Against Indian pantheism is set the monotheism of the Mazdean system, tempered as it is in a peculiar way by a dualistic tendency (see DUALISM [Iranian]).

1. Earlier times.—In the Avesta itself, whether in its older or in its more recent strata, it is difficult to lay hold of anything that may be strictly called philosophical speculation, if by philosophy we understand, according to the definition of one authority, 'the science of the principles of being and of knowledge.' The Avestan system is presented frankly as a revelation from a supreme intellect to the human mind and heart. In the *Gāthās*, indeed, there are broodings and speculative questions concerning fundamental verities and moral problems. But they are all referred for solution, as in the ninth *Gāthā*, to the divine giver of revelation ('This I ask thee, tell me truly, Ahura' [*Yasna*, xliii. 1]).

(a) *Being*.—As regards the problem of being, the Avestan teaching is simplicity itself. Ahura Mazda is the one supreme eternal being, the creator of both worlds, the world of spirit and the world of matter. It is not necessary to dwell upon this first dualism of 'the two worlds,' but mention must be made of that other dualism which, at least in the later stages of Avestan development, so curiously modifies the characteristic monotheism of the Mazdean belief—the problem of the origin of evil. In the art. DUALISM (Iranian) the present writer has already set forth what seems the only tenable view of Zoroastrian dualism, and, although modern Parsis and even several Western scholars vehemently deny that Mazdeism is dualistic, he finds that the high priest, M. N. Dhalla, so often quoted, is at one with him in his interpretation of the theology in both the Avestan and the later periods. Dhalla writes:

'The arch-fiend who disputes the kingdom on earth with the Holy Spirit, Spenta Mainyu, or with Ahura Mazda, who intro-

duces discord and death in the world, who strives to thwart the purposes of God, is Angra Mainyu, or the Evil Spirit. *He does not owe his existence to the Good Spirit. He is independent. Consequently he is co-eternal and co-existent, if not co-eternal with the godhead* (p. 48).¹

Moreover, this rival spirit has one distinct attribute of divinity in that he also is a creator. Not only moral and physical evils of all kinds, but also evil beings, whether demons (*daēvas*) or noxious animals (*xrafstras*), are his creatures. This dualistic teaching is the Mazdean solution of the perennial problem of the origin of evil. It has ever been one of the difficulties of reconciling the Avestan religious system with that of the Achæmenid kings, as preserved in their inscriptions, that there is apparently in the latter no mention of a dualistic creation or creator. Auramazda holds precisely the position of his namesake in the Avesta, i.e. that of supreme deity, creating and ruling all his creation by his free will (*vasnā*). Latterly, however, J. H. Moulton (*Early Zoroastrianism*, London, 1913) has suggested, not without plausibility, that the Angra Mainyu of the sacred books actually appears in the inscriptions under the term *Drauga*, meaning literally 'the Lie,' perhaps personified.

(b) *Asha*.—There is one transcendental concept in Mazdeism which suggests analogy with an Indian one—that of *Asha* (Old Pers. *Arta*), most frequently personified as the genius *Asha*, one of the Amesha Spentas, or archangels of Ahura Mazda's court. There is no doubt that we have here a concept which Dhalla rightly calls 'basic' in the system, and which corresponds even etymologically with the Sanskrit *ṛta*, or, again, is akin to *dharma*, i.e. the 'right order' both in the physical and in the moral universe—whether or not conceived as independent of the divine will it is difficult to determine. In the Avesta, whether as an abstract or as a personified name, *Asha* is almost exclusively conceived in the moral sense, as 'righteousness,' 'holiness,' the 'justice' of both the OT and the NT.

(c) *Fravashis*.—The only other Avestan concept which gives rise to some degree of direct philosophical speculation, especially in the later writings, is that of the mysterious *fravashis* (q.v.). These enigmatical beings have played a widely diversified part in the Zoroastrian system, and one which has constantly varied at different periods. As we find them, at least in the post-Gāthic period, they are something very different from the other spiritual beings of Ahura Mazda's celestial court. Whatever be their origin, whether originally conceived as spirits of the dead, or from whatever other source, there is little doubt that in the Later Avestan system they were conceived as celestial archetypes and antetypes of all good beings, somewhat after the style of the Platonic *idéas*.

'The Fravashis constitute a world of homonyms of the earthly creations, and they have lived as conscious beings in the empyrean with Ahura Mazda from all eternity. The multifarious objects of this world are so many terrestrial duplicates of these celestial originals. The Fravashis constitute the internal essence of things, as opposed to the contingent and accidental. Earthly creations are so many imperfect copies of these perfect types. The Fravashis are not mere abstractions of thought, but have objective existence and work as spiritual entities in heaven, like the angels and archangels, until they come down to this earth voluntarily, as we may infer through later statements in the Pahlavi texts. They migrate to this world, and are immanent in the particular bodies that come into being after their divine images. Everything that bears the hall-mark of belonging to this good creation has its Fravashi. Every object which has a name, common or proper, is endowed with a Fravashi. Ahura Mazda, the father of all existence, has his Fravashi, and so have the Amesha Spentas and the Yazatas. Even the sky, waters, earth, plants, animals, and all objects of this kingdom of goodness, are not without their

special Fravashis. Thus beginning from the supreme godhead down to the tiniest shrub growing in the wilderness, every object has this divine element implanted in it. It is only Angra Mainyu and the demons, who are evil by nature, that are without it' (Dhalla, p. 143f.). Moreover, 'when a child is born its Fravashi that has existed from all eternity now comes down to this earth as the higher double of this child's soul' (p. 144).

The latter concept strangely recalls one of the curious conceits of Maeterlinck in *The Blue Bird*.

(d) *Daēna*.—The last-quoted teaching forms the bridge by which to pass over from what we may term the ontology to the psychology of the Avestan teaching. Indeed, in so far as psychology is concerned with the analysis of the component elements of the non-material part of the human compound, Iranian thought seems to have been much addicted to such analysis at all epochs. As W. Geiger puts it, the psychology of the Avesta cannot be called either simple or primitive, but presupposes a certain amount of philosophical speculation.

'It is based upon the observation that man's spiritual activity expresses itself in manifold ways and that hence there exist in man a multiplicity of forces, each of which has its individual limited sphere of action. Moreover [this doctrine] is a specific product of the Iranian mind and scarcely admits any fundamental connexion with pre-existing conceptions and doctrines' (*Ostiränische Kultur im Altertum*, p. 293).

In the Avesta we find four or five such spiritual powers referred to. Of one of these, the enigmatical *fravashi*, we have spoken above. A scarcely less enigmatical term is that of *daēna*. In one sense this term indicates 'religion,' specifically the true faith, the Mazdean faith, like the Persian and Arabic *dīn*. But, in another and quite different sense, it is one of the human faculties, and is generally translated by modern scholars as 'conscience' (Moulton, 'self'). It has this peculiarity, which it shares with the *fravashi*, that it would appear to be, if not pre-existent, at least to some extent independent of the individual soul, and to live on after the dissolution of death. Moreover, as Moulton points out, perhaps a crucial difference between the two elements lies in the fact that the bad man as well as the good man has a *daēna*.

The conception was probably suggested to Zarathushtra by his own philosophic analysis of man's personality: if he knew of the *fravashi*, apart from its connexion with ancestor-spirits, he presumably used another word to emphasize the fact that each man had his own individual responsibility, and an immortal ego within him which would pass on to weal or woe. The *fravashi* was too much entangled with mythology to suit him, and he had no use for a system which would not apply to all men' (Moulton, p. 264).

Geiger, on the other hand, looks upon the *daēna* as a kind of divine force, existing eternally, which cannot be affected in any way by the sins of man or by his death, though still able to exercise an influence on the soul after death. In a well-known allegory, perhaps the most beautiful passage in the Avesta, the *daēna* is presented in a manner somewhat reminiscent of the Indian *karma*.

The soul (*urvan*), wandering for three days after death, on the third day meets (in the case of the just soul) a wondrously beautiful maiden, stately, robust, and graceful, who in reply to his question declares, 'I am thine own good thoughts, words, and deeds, thy *daēna*': and, when he asks her, 'Who hath made thee so great and fair?', the damsel replies that it is the man's own good life, his good thoughts, words, and deeds that have made her grow in greatness and beauty; and then proceeds to lead him into the celestial abode. The wicked soul similarly wanders for three days, but we do not find it meeting its *daēna*, at least in the Avestan texts, though in the later Pahlavi traditions a hideous old hag is represented as replacing the beautiful maiden described above. Possibly the latter conception has been excogitated subsequently for the sake of symmetry, as it does not appear at all in harmony with the original conception of the *daēna* (see *Vendidad*, xix. 20-34, and *Yasht*, xxii.).

(e) *Urvan*, *baodah*, and *ahū*.—Apart from the two powers or faculties so far described, we have the *urvan*, which seems to correspond specifically to our English word 'soul' (Dhalla, 'the ego proper, the real I-ness' [p. 144]). It is a moral power, by which man exercises his free choice

¹ Italics are the present writer's. On p. 88 Dhalla speaks of the 'highly developed type of dualism of the Younger Avestan period.'

between good and evil; it shares with the following element his responsibility, and so must undergo judgment and consequent reward or punishment after death. The *baodah* appears to indicate 'consciousness,' or perhaps 'intelligence,' and shares the responsibility of the *urvan*. Lastly, the *ahū* in its most general sense seems to mean 'life' or 'vital force' (or again 'nature'), which apparently comes into being with the body and perishes with it, and thus ranks as the lowest among spiritual faculties (see Geiger, p. 299 f.).

(f) *Man*.—The ethical conception of man in the Mazdean system through all epochs is clear and simple. Placed by the creative act of a supreme power in a universe in which exist both good and evil, whether in the moral or in the physical order, man has the power of choice—as we should say, free will—and according as he chooses and works in this life for the one or the other of these opposing forces he will have his reward or punishment, his happiness or misery, in the heaven of Ahura Mazda or in the hell of Angra Mainyu, in the former case at least, for all eternity. But here we touch upon a purely theological topic which need not be further pursued.

2. Later times.—During the post-Avestan times variously known as the mediæval, patristic, or Pahlavi epoch—or, to be more definite, the Sasanian and post-Sasanian periods—a considerable amount of philosophical speculation appears in Zoroastrian literature. This is only natural, for it is well-known that Greek philosophers played no inconsiderable part at the royal court of Persia. Hence Greek speculation must to some extent have leavened the Iranian mind, and, indeed, we have many traces of this in the religious literature of the epoch. We have, moreover, direct evidence of it in the Syriac writings of Paul the Persian, who flourished at the court of the greatest of the Sasanid kings, Khosrau Anosheravan (more commonly known as Chosroes the Great, A.D. 531–578).

'There are some,' Paul writes, 'who believe in only one God; others claim that he is not the only God; some teach that he possesses contrary qualities; others say that he does not possess them; some admit that he is omnipotent; others deny that he has power over everything. Some believe that the world and everything therein have been created; others think that all things are not created. And there are some who maintain that the world has been made *ex nihilo*; according to others (God) has drawn it from a *ἄλγ* (pre-existing matter)' (Paulus Persa, *Logica*, fol. 56 [ap. J. P. N. Land, *Anecdota Syriaca*, iv., Leyden, 1870]).

It might be suspected that in this passage, amidst general remarks on philosophical theories, Paul was speaking of the various doctrines scattered over the world, especially as he was a Christian and had studied the Greek philosophers in the schools of Nisibis or Jondishāpūr. But it must be remembered that the writer is directly addressing King Khosrau and quoting details which must have been familiar to him. It is therefore more probable that the author is describing opinions current in his time in the bosom of the Mazdean religion itself, and the existence of numerous schools of thought at the time is also manifest from the *Mainōg-i-Xrat* (i. 17). But, apart from Greek influences, this diversity of doctrine is a necessary consequence of the Zoroastrian dualism itself. This dogma, as we have seen, teaches the existence of an evil principle, distinct from and independent of the good principle—i.e. God, as we should say. Now this conception of the co-existence of two eternal principles, distinct from each other and possessing independent powers, is as repugnant to the human mind as polytheism itself. Sooner or later the mind will push its theories further until it finds repose in an original unity of principle. If this is generally true, how much more so for the Iranian mind, so passionately fond of systematization? Different schools had recourse to different

means of evading the difficulty. Some found the solution in a pre-existing indifferent and immutable being, from whom are derived both the good and the evil principles—a source of being, rather than a personal being, an eternal, divine source, an *Ur-gottheit*, as Spiegel calls it. This is Zrvan Akarana, 'Unlimited Time,' not infrequently confounded with destiny or fate. It is he who has begotten both Aūharmazd and Ahriman. This system is therefore monotheistic. Other philosophers maintain that the primeval principle is Aūharmazd himself, and attribute to him the two spirits, one good, the other evil. In this hypothesis God 'possesses contrary qualities,' according to the expression of Paul the Persian. As regards the Pahlavi writings, we seem to find in the *Dinkart* a real monotheism, possibly developed under Christian or Jewish influences; on the contrary, in the *Mainōg-i-Xrat* destiny and eternity play a preponderating part. Finally, in the *Ulamā-i-Islām*, a small treatise of much later date, it is said that some consider Ahriman as a reprobate angel, but we do not know that this Christian idea can be traced to Sasanian times. Generally speaking, it is not easy to distinguish time (Zrvan) from destiny. The Armenian writer Eznik, a contemporary of the Sasanids in the 5th cent., writes:

'When there was as yet nothing, say the Magi, neither heaven nor earth, there existed a certain Zervan, whose name, when translated, signifies Fortune or Glory' (tr. ap. J. A. Gattegrius, *L'Arménie et les Arméniens*, Paris, 1882, p. 40).

Here Zrvan and destiny (Bakht) seem to be identical, as Theodore of Mopsuestia also affirms (Zapovēd . . . *δν καὶ Τυχὴν καλεῖ* [ὁ Ζαπάδης], ap. Photius, *Bibliotheca*, ed. Berlin, 1824–25, p. 63). The *Mainōg-i-Xrat*, as just said, develops this doctrine of eternity and destiny. Sometimes, however, they are separated.

'The affairs of the world all proceed through Destiny and Time and through the supreme decree of the self-existing Eternity, the king and lord of Long Time' (xxvii. 10).

Elsewhere it is said of Zrvan Akarana:

'He is imperishable and immortal; he is without grief, without hunger, without thirst, without affliction, ever living, sempiternal, whom no one can stay, nor remove his control from his affairs' (viii. 9).

Again:

'Destiny is that which is supreme over every person and over all things' (xxvii. 11).

One is tempted to believe that this Zrvan was considered by certain sects, not as the eternal source of all being, including Aūharmazd himself, but as a vast chaos, an infinite pre-existing matter, the *ἄλγ* of Paul the Persian, 'out of which Aūharmazd has formed all his creatures.' In these speculations we seem to hear an echo of some of the Indian philosophical schools. That the idea of this primeval principle was mingled with that of destiny need not astonish us. Destiny plays a prominent part in all Oriental religions, all more or less inclined towards fatalism, and its effect is everywhere to disturb the idea of divinity. The notion of an inevitable *fatum*, a blind power which is even above the will of the gods, is not reconcilable with that of a true supreme being, especially like that of the Mazdean religion. But we must not expect to find too much consistency in these theories, because in that case we should have to exclude dualism itself. Nor can we be surprised to find this power, vague, mysterious, and shapeless, confounded with that other equally intangible and misty entity, Zrvan. The transition from one to the other is quite natural. From another point of view, that of the Avesta, which we also meet in Sasanian times in the *Bundahishn*, this infinite time is neither the source nor the creature of Aūharmazd, but rather one of his co-eternal attributes, for he is spoken of as 'endowed with boundless time' (*damān-i-akanārak-homand* [i. 3]). There is also a concept, which already appears in the Avesta as *Thwasha* (or infinite space), to which

likewise the idea of destiny seems to have been attached, and which appears to be identical with the Pahlavi *spñhr*, indicating the celestial sphere and even used in the *Mainōg-i-Xrat* to signify destiny, just like the modern Persian word.

It is somewhat surprising to find that not only Ezriq, but also—if we may believe another Armenian historian—the celebrated official edict of the prime minister of Yazdagird II. affirms that Zrvan existed before heaven and earth and begot two sons, the good and the evil spirits. If this edict is authentic, we must suppose that Zervanism had assumed the proportions of almost a State religion. Parsi writers, however, do not accept the testimony of the Armenian writers, though Dhalla adds:

'Be this as it may, it is certain that a sect of the Zarvanites, who evidently aimed at resolving the Zoroastrian dualism into monotheism by the apotheosis of Time, did flourish for a long time in Iran. Shahristani, who wrote in the early part of the twelfth century, attests . . . that he met the followers of this sect in his day' (p. 205).

The same writer points out that in several of the Pahlavi writings time and fate are indissolubly linked together:

'The movements of the heavens regulate Fate, and the planets and constellations are the arbiters of man's fortune. The good and evil stars determine man's lot, which is linked with the course of the stars' (p. 205 f.).

Among the various divergent philosophical schools of the period to which we are referring, two stand out conspicuously, because they are known by the names of their founders, who have ever been regarded by orthodox Zoroastrians as heresiarchs. The more famous of these was Mani, or Manai, who suffered death in A.D. 276, and whose eclectic system, based on materials drawn from Mazdeism, Buddhism, Christianity, and Gnosticism, was destined to play such an extraordinary part throughout the Roman Empire and even within Christianity itself, under the name of Manichæism. The other heterodox philosopher was Mazdak († 528), whose system was social and economic rather than metaphysical, and amounted to pure communism. See artt. MANICHÆISM and MAZDAK.

There is abundant material in the various books of the Pahlavi period for a study of the divergent schools of philosophic thought during the golden age of Zoroastrian faith. We may here condense a few of the principal notions. The *Dinkart*, in particular, frequently seems to develop a system of its own, especially on the side of cosmology. According to this, being (*yehevūnīshn*)¹ is the foundation of all creatures. From this indifferent foundation animated beings are formed in three stages: (1) the four elements, which are the basis of all matter; (2) a sort of vitality given to a mixture of these elements, which are organized in the form of bodies, and thus become living, though mortal; and (3) the spiritual parts, the *fravāhar* and the soul; these are added to the power of the creator, and so the human or animal compound is formed. This compound lasts till its dissolution by death, when the material portion, or body, dies by separation from the spiritual parts, the existence of which still continues.

Passing over the various theories concerning what we should now call 'natural science'—astronomy, meteorology, geology, botany, and zoology—as not strictly falling within our subject, we must say a word or two on some curious notions concerning anthropology. It is first laid down that man rules over the rest of the world (*Dink.* ii. 77. 2), and was the last of the creations of Aūharmazd. He was, in fact, the work of the sixth epoch of the creation (*Bund.* i. 28). Aūharmazd formed Gāyōmart, a solitary male being, from the

¹ Or *yehevūn*; see the curious diagram reproduced in art. DUALISM (Iranian).

earth. He being eventually put to death by the evil spirit, Ahriman, there was after a time produced from his semen, which had been absorbed by the earth, a double plant (*rivās*) having but one stem, and this plant, passing from vegetable to human form, became a male and female couple known as Māshya and Māshyoi, 'the reasoning faculty which is the soul (*nismo mano aūt rūbān*) spiritually entering into them' (*Bund.* xv. 5). The subsequent history of the primeval pair, their fall and progeny, so singularly like the account in Genesis, must not detain us here. Suffice it to say that the principal points that stand out in the whole legend seem to be (i.) the original unity of the race, (ii.) the mortal nature of man, (iii.) his original innocence, (iv.) his fall by the influence of the evil spirit, and (v.) his successive progress in the arts of life.

Psychological analysis is very greatly developed during the Sasanian and subsequent epochs. The spiritual part of man is the subject of predilection of the Pahlavi treatises. Lists of the spiritual faculties or powers are very frequent, but the number of them varies in quite a remarkable manner. Mention is made of three, four, five, six, eleven, or even more. These lists are exceedingly varied and, strangely enough, sometimes include what we should consider material elements, such as the senses, or speech and action. The longest list is that of the *Dinkart*, in which we find enumerated wisdom, development, knowledge, discernment, faith, and belief, reasoning, sense, intelligence, etc. From a general review of the various treatises, we may conclude (i.) that these philosophers were very fond of making psychological distinctions as to the spiritual elements of the human compound; (ii.) that they had no very fixed principles in their divisions—which thus vary greatly and often overlap; and (iii.) that the terms cited, though we may try to translate them by identical terms in our language, have probably not always the same sense in every treatise or in every passage.

One or two of these terms require special consideration. The faculties properly called intellectual are the *khart*, *vir*, and *hōsh*. *Khart* is divine wisdom, and is spoken of as the being who holds his place next to God, and with whom the whole of the *Mainōg-i-Xrat* ('The Spirit of Wisdom') is occupied. But *khart* is also a human faculty and is specifically said to be of two kinds—*asno khart* and *inmate intelligence*. The innate intelligence is 'the root of red intelligence' 'commences in the marrow of the finger—i.e. from experience of the material world—and then settles in the heart. Innate intelligence expresses outwardly what exists in the interior of man; acquired intelligence communicates to the interior that which is outside. All our sources agree in representing the *vir* as the faculty of reason, or deduction. *Hōsh* is generally associated with *vir*. It is perhaps the memory, or else prudence, practical good sense (like the modern Persian *hōsh*), which would explain the fact that it makes man the possessor of strength. It is also said that no one can buy *vir* and *hōsh* at any price. Among other non-material elements we ought also to record *bōi* or *bōd*, in which we meet again the Avestan *baodah*, apparently self-consciousness, by which a man knows himself, but, according to one source (*Shīyast lā-Shīyast*, xii. 5), this element on the death of man passes to the nearest fire, then to the stars, to the moon, and finally to the sun. Elsewhere this faculty, the soul (*revān*), and the *fravāhar* remain together after death to meet reward or punishment. Not so the *jān*, or vital force, which apparently perishes with the dissolution of the body. In *dīno* we find scarcely altered the Avestan *dāna* in both its senses. A word which in the Pahlavi characters can be read either as *ahū* or as *akho* is more embarrassing. In the former reading it corresponds with the same word in Avestan and perhaps means 'nature.' *Akho*, however, is a mysterious power which recalls the *δαίμων* of Socrates, because it has to warn both body and soul to act virtuously and avoid evil. The *fravāhar* or *frāhar*, is of course the Avestan *fravashī*, but it has descended much lower in the scale of dignity. Thus in the *Dinkart* (iii. 123) its duty is to purify the air in the body by means of fire and thus to maintain life (probably the animal heat); while in the post-Sasanian *Saddar Būndahishn* it has become a mere principle of digestion.

It is somewhat surprising that, although the whole system of Zoroastrian ethics rests upon man's free will, we do not find in these Pahlavi texts lists

a specific term which may be translated 'free will.' The doctrine, however, is plainly expressed. It is said in the *Dinkart* that man is distinguished from other creatures in this that he is master of his wishes (*kām khūtai*) and that for this reason he is termed in the Avesta 'lord of the material world.' It is also said that 'except God, the only master is man.'

The fatalist doctrine that every man has his star (*star*), which he is bound to obey, is found only in the *Mainōg-i-Xrat*, to whose tendencies we have already referred.

The eschatology of Mazdeism, whether as regards the individual soul, its judgment, and future happiness or misery, or as regards the end of the world, the final resurrection of the dead, the *frō-kardstaais*, or ultimate regeneration of all things by the great fire and the river of molten metal, belongs to the theology rather than to the philosophy, and need not detain us here.

3. Modern times.—We are indebted to Dhalla for a great deal of interesting information concerning the developments of Mazdeism in later centuries, much of which has not before been known by Western scholars. Of course the works entitled the *Desatir* and the *Dabistān* have long been known and even translated. The latter, written in India in the 17th cent., is founded on the former, and recalls the existence of some fourteen sects.

'We meet with some attempts in them to explain the primordial principle from which creation came into being, and we have some sort of crude metaphysics grafted on physics. . . . Others still preach a strict monism, and assume that the world of phenomena was caused by illusion' (Dhalla, p. 312).

Here we have already the Indian *māyā*; and other sects had taken over the doctrine of metempsychosis as well as the belief in asceticism and rigorous austerities. Mysticism also, with its esoteric doctrines, claimed its devotees, and Parsi mystics composed treatises in the Persian language (see Dhalla for a complete account of all these extraordinary developments, so entirely opposed to the real spirit and teachings of Zoroastrianism). We must conclude with Dhalla that all these strange movements were the direct outcome of the Hindu Yogism, with which the Parsis had been brought into contact during their centuries of residence in India as exiles from their fatherland.

One result of the introduction of Western scholarship to the Parsi mind has been, as we learn from Dhalla, the growth of *theosophism* among a certain number of Indian Zoroastrians. The chapter devoted to this subject is probably in one sense the most interesting in the book, as it gives information not found elsewhere. The movement, we are told, began in the early eighties of last century. Its adepts profess to invest Zoroastrianism with a philosophical garb and to construct for it a scientific basis. They reject philological methods of interpreting the sacred texts and attribute occult significance to the Avestan prayers, however unintelligible. Strangely enough, these theosophists claim to be the champions of orthodoxy, though both their doctrines (such as that of metempsychosis and of the primeval impersonal principle *Zrvan Akarana*) and their practices (such as asceticism and celibacy, 'held to be the primal virtue') are singularly at variance with the whole spirit of the Mazdean religion. Dhalla augurs nothing but disaster to the Parsi community from any considerable growth of this fantastic theosophism in its midst.

LITERATURE.—In addition to the ordinary versions of and commentaries on the Avesta: E. W. West, *Pahlavi Texts*, in *SBE* v. [1880], xviii. [1882], xxiv. [1885], xxxvii. [1892], xlvii. [1897]; W. Geiger, *Ostiranische Kultur im Altertum*, Erlangen, 1882; F. Spiegel, *Eränsche Alterthumskunde*, Leipzig, 1871-78, ii.; J. H. Moulton, *Early Zoroastrianism*, London, 1913; M. N. Dhalla, *Zoroastrian Theology from the Earliest Times to the Present Day*, New York, 1914; L. C. Casartelli, *La Philosophie religieuse du Mazdéisme sous les Sassanides*,

L. C. CASARTELLI.

PHILOSOPHY (Japanese). — 1. Mythology and philosophy.—Mythology everywhere precedes philosophy, but the latter is often an outgrowth of the former. The Japanese people came under the influence of an elaborate philosophical system before they had emerged out of naive mythological thought on the world and human life, which made an independent development of their own philosophy impossible. We need not inquire whether they could otherwise have developed a philosophy out of their inherited thought alone, whether or not they were by nature a philosophical people. Philosophy, properly so called, began in Japan in the turn of the 6th and 7th centuries, when Buddhism was introduced and a dialectic analysis of human knowledge stimulated its thinkers. But this Buddhist philosophy hardly touched the mythical ideas of the spontaneous generation of the world, of the production of many things by the generative acts of the primeval couple, of the origin of death, etc. These mythological traditions found a more congenial partner in Chinese cosmology, which found its way into Japan in the early centuries of the Christian era, and which taught the two cosmic principles (*yin* and *yang*), the five physical elements (wood, fire, earth, metal, and water), and the orderly circulation of these principles and elements in the formation of things, in the seasons of the year, in human life, etc. The combination of Japanese mythology and Chinese cosmology was, especially since the 9th cent., rather an addition to the methods of divination than anything to be called philosophy. Yet, since Confucianism played a great part in the political and institutional life of the Japanese, the combination produced a certain system of political theory and its associate ethics. The chief stress was laid on the monarchic principle of the State constitution, which was based on the divine origin of the ruling family—the Japanese counterpart of the Confucian theory of the heavenly sanction bestowed upon the sovereign. The authority and dignity of the ruler, according to this theory, were a consummation of his patriarchal dignity, and the relation between sovereign and subjects was that between father and children, in an enlarged sense. Loyalty was thus a manifestation or a higher form of filial piety; and other virtues, such as benevolence, justice, propriety, wisdom, and faithfulness, were regarded more as civic than as personal virtues. This ethico-political theory played an important part in Japanese ethics throughout its history.

In the later years, especially in the 14th and 15th centuries, an age of eclecticism, the combination of Japanese mythology (called *Shintō*) and Chinese cosmology embraced Buddhism and Taoism to a certain extent, and enlarged its scope to an ethico-political philosophy based on the idealistic philosophy of the latter systems. The Buddhist philosophy of the oneness of the individual and the cosmic soul was combined with the Chinese parallelisms between the individual life and the cosmic vitality. The most noteworthy representative of this eclectic tendency was Ichijō Kanera (1402-81), who tried to establish a system of *Shintō* philosophy and ethics by harmonizing it with all other systems then prevailing in Japan. The sole principle ruling the universe was, according to him, nothing but the primeval essence of our own soul, which, in spite of its changeable manifestations, was co-eval with the all-embracing divinity. Although Kanera did not explicitly teach a doctrine of emanation, he explained all existences of the world through analogies between mental and

material phenomena and by ethical and psychological interpretations of physical elements and occurrences.

To take one instance, the three insignia of the throne—the mirror, the jewel, and the sword—were explained as symbolizing the virtues of veracity, benevolence, and justice, which were manifested in heaven as sun, moon, and stars, and on earth as fire, water, and metal. The life of an individual as well as of a nation, especially of the Japanese nation, was, or ought to be, an embodiment of these virtues in consonance with the qualities and powers manifested by those material elements and celestial phenomena. Naturally, various theories were adduced to support these analogies, in which Buddhism played the greatest part in metaphysics, Taoism in physics, Confucianism and Shintō in ethics.

This is a typical specimen of Shintō speculation on cosmological and ethical problems, and the eclecticism continued to exert its influence until the revivalist Shintōists of the 18th cent. attempted to exclude alien ingredients and to explain the ancient myths along the lines of a Euhemeristic historicism.

2. **Buddhist philosophy.**—Philosophical thought, properly so named, was started by the Sanron¹ branch of Buddhism, which was based on the Mādhyamika system of Nāgārjuna. The philosophy of Nāgārjuna consisted in dialectically analyzing every finite concept into a thesis and its antithesis, in showing their incompatibility, and in reducing the concept to an illusion, when taken by itself alone. The culmination of the dialectic process, and therefore the aim of the philosophy, amounted to realizing in a spiritual illumination the absolute which transcended, and at the same time embraced, all finite conception and things.

This system of transcendental idealism opened a way to philosophical thought in Japan and helped to awaken the most enlightened minds of the 7th cent. to the vanity of naive realism.² Although this idealism did not exercise a wide influence at the time, it laid the foundation of the Buddhist thought of all coming ages, and, to a certain degree, of the Japanese habit of looking at things 'beyond their appearances,' as manifested in art and poetry.

The philosophical system which brought to Japan more systematic, and more or less realistic, ideas about philosophical problems was the Yuishiki (Skr. Vijñāti-mātrā) school of Buddhism, initiated by Vasubandhu in India and elaborated by Yuan-Chwang in China. The system, in its ultimate basis and goal, was an idealism teaching that the ultimate reality consists in the innermost soul³ of each individual, and this was identified with the cosmic soul. But, it was taught, the soul has in itself an inexhaustible store of the 'seeds' (*bīja*), which may be called 'vitalons' on the analogy of 'electrons.' By the innate virtues of the vitalons the innermost soul manifests itself in the soul-activities of the lower grades, seven in number, as well as in the external phenomena which are nothing but projections of the soul-activities. Thus we have before us a kind of emanation theory, in which cosmology and physics were always closely interrelated with psychology, allied to a system of mystic contemplation. The latter had in view the practical purpose of arriving at the innermost essence of the soul by penetrating the entanglement of mental and physical phenomena.

¹ Sanron meant the 'Three Śāstras,' because the system was founded on the *Mādhyamika-śāstra*, *Sata-śāstra*, and *Dvādaśādvāra-śāstra* of Nāgārjuna. For the first of these see Max Walliser, *Die mittlere Lehre des Nāgārjuna*, Heidelberg, 1911; S. Yamakami, *Systems of Buddhist Thought*, Calcutta, 1912, ch. v.

² The most prominent of them was Prince-regent Shōtoku, for whom see A. Lloyd, *The Creed of Half Japan*, London, 1911, ch. xviii.; M. Anesaki, *Religious and Moral Development of the Japanese* (in preparation), pt. ii.

³ Called the *ālaya*, or 'store,' soul. For this and other points see artt. ASAŌA, VASUBANDHU; S. Lévi, *Mahāyāna-Sūtrā-lamkāra*, Paris, 1907-11; Yamakami, ch. vi.

Thus the physical and psychological analyses were intended in the Yuishiki philosophy to be the means of getting through the phenomenal world; and yet studies on these subjects induced this school of philosophy to dwell much on minute details of the physical and mental processes, with the result that the system manifested realistic traits more than any other branch of Buddhism. In other words, things (*dharma*) were classified under five categories: (1) the soul, or mind-essence (*chitta*); (2) the mental functions (*chitta-vṛtti*); (3) the material phenomena (*rūpa*); (4) the relationships arising out of neither mind nor matter alone (*viprasamyukta-dharma*), such as attainment (of a new acquisition by the mind), universality, vitality, annihilation; (5) the unborn and unchangeable (*asankṛta-dharma*), the state of the ultimate universality. We shall not enter further into the minute classifications of these categories, but the designations alone show how the system deserved its other title Hossō (Skr. Dharmalakṣaṇa), i.e. the treatment of the 'signs of things,' including physics, psychology, ethics, and religious philosophy.

As the foundation of these speculations and discussions, the Hossō system emphasized the importance of logic and epistemology, called together Hetu-vidyā, the 'science of the ground.' The origin of this system of Indian logic is traced to Akṣhapāda, believed to have lived before Buddha, but it was further systematized by the Buddhist philosopher Dignāga, who is said to have lived in Andhrā in the 6th cent A.D. The logical system was further elaborated in China and Japan, and flourished in the latter for many centuries from the 8th, being cultivated even by the court nobles. The nature of the whole system may be seen from its general divisions: (1) the theories of concepts and propositions, both intuitive and inferential; (2) a system of syllogism, consisting of three or five propositions; (3) the theories of fallacies, inherent in one of the three main propositions. This system of logic attained its utmost subtlety in Japan.

Closely connected with the logical theories is the part of grammar treating of the eight cases (in Sanskrit, but applied to Japanese) and the formation of compounds (six in kind). Although Japanese philosophers did little to develop their original theories or systems in these respects, they succeeded in applying them to their own language, and in greatly elaborating them according to its possibilities. Indeed, it was the adoption of the Indian system of logic and grammar that made the philosophical thought of the Japanese possible, and overcame, to a great extent, the defects of their language as to precise expression of philosophical thought.

When the Hossō school had laid the foundations of Buddhist philosophy in Japan, another system akin to Hegelianism was introduced there, in the beginning of the 9th century. It was a system of Buddhist idealism attempting to explain the different forms of Buddhism as the tactful steps of Buddha's educative method (*upāya-kauśalya*) adapted to the various needs and capabilities of his disciples. The system is known by the name Tendai (Chinese, Tien-t'ai), because it was formulated by Ch'i-i (536-597) of Mount Tien-t'ai, in the province of Chekiang.¹ The man who introduced it into Japan and made use of it for unifying Japanese Buddhism under its banner was Saichō (767-822).² In Saichō's thought, again, we see little originality; his work consisted in translating the idealistic system of the Chinese philosopher into religious practice, and the Tendai philosophy

¹ Cf. J. Edkins, *Chinese Buddhism*, London, 1893, ch. viii.

² Lloyd, pp. 228-235; Anesaki, pt. iii.

pragmatized, so to speak, ruled Buddhist thought in Japan throughout centuries, parallel with another school of pantheistic mysticism, Shingon (see below).

The philosophy of the Tendai school is founded essentially on the same basis as that of the Sanron school, and amounts to denying reality to a finite conception, or thing, taken by itself. But it is further urged that reality in the full sense consists neither in an abstract vacuity nor in a phenomenal actuality alone, but in the synthesis of both—the doctrine of the Middle Path. In other words, reality means a concrete being seen under the aspect of the universal, or a universal seen in a concrete existence. To realize this truth of reality, first in meditation, and then in moral and religious life, is the kernel of the Buddhist religion.¹

Now the Tendai philosophy of religion proceeds, upon this basic conception of the world, to explain the various branches of Buddhism as the stages of the necessary development of thought, which were taken into account by Buddha in leading his followers to the ultimate truth of reality. The first stage, to speak in a general way, was to instruct the people in the lawful order (*dharma*) of existence, and therefore in the realistic traits of the Hinayāna and the Hossō schools. Then the necessity of breaking down the exclusive adherence to actualities was shown in the teaching of vacuity (*śūnyatā*), as expounded at length in the Prajñā texts. The higher synthesis of these two extremes was carried out in the sermons of the *Lotus of the True Law* [*g.v.*] *Sad-dharma-piṇḍarīka*, given during the last eight years of Buddha's ministry, according to Buddhist legend, and Chi-i claimed to have based his system on the teachings of that book. Chi-i distinguished five stages in Buddha's educative process and eight kinds of doctrines therein expounded, and he further elucidated these stages and doctrines as the successive steps in Buddha's instructions as well as the gradual development of spiritual enlightenment in individual psychology. But the gist of this religious philosophy was the consideration of the thesis, antithesis, and synthesis which, as stated above, were applied to all philosophical theses and to the instructions in moral and religious life. Thus, after all, we have here a splendid counterpart of the Hegelian idealism, and the contribution of the Japanese mind to the system consisted in applying this synthetic idealism to practical life. In this respect Japanese Buddhism produced not a few men of more or less originality, not only in religion and morals, but also in the arts and poetry; but this belongs to religious history rather than to the consideration of philosophy.

The pantheistic mysticism known as the Shingon (Skr. Mantra) school was promulgated by Kūkai (774-835), a younger contemporary and great rival of Saichō.² The philosophy of Shingon was a significant combination of materialism and idealism, viewing the universe as the very body of the Buddha Great Illuminator (Mañi-Vairocana) vitalized by his soul. The five material elements, together with one 'mental' element, consciousness, are enlivened by the soul consisting of the ninefold stages or strata³ of soul-activities. And in every one of these material existences, even in dust or sand, and in every one of our thoughts and utterances, is embodied the all-pervading vitality of the universe. This was a mystic consummation of the cosmological, physical, and psychological specula-

tions elaborated in India, Central Asia, China, and Japan; and its religious practice consisted in the mystic acts of prayers and rituals. In this respect Kūkai simply imported what he found in China, but the grand scale of his world-view may be seen in his theory of the ten stages of spiritual development, in which he surpassed the achievements of his predecessors.

Kūkai's scheme arranged the various systems and ideas in a series of spiritual development, tracing the gradual illumination of the individual soul from beast-like stupidity up to the full realization, chiefly through mystic practices, of the cosmic life of the Great Illuminator. Not only the various branches of Buddhism but also Hinduism, Confucianism, and Taoism, were included in the scales of the progressive development which culminated in the mystic pantheism of Shingon. Here we shall simply enumerate the ten stages: (1) the stage of the soul, living and dying like a beast absorbed in the thoughts of food and sex—common men without religion; (2) the state of the soul like a stupid child scrupulously sticking to moral rules and social conventions—Confucianism; (3) the state of the soul like an infant living without fear, being nursed in the mother's bosom, i.e. in the belief in the heavenly life—Brāhmanism; (4) the state of the soul which is convinced of the sole reality of the five constituents (*skandhas*) of existence and the non-entity of self—Hinayāna; (5) the state of the soul which, having realized the evil of existence, has eradicated its root, *karma*, and attained an absolute tranquillity—the enlightenment of the Pratyekabuddha (*g.v.*); (6) the state of the soul awake to the oneness of existence and proceeding to the illumination in the truth of the illusoriness of external existence—the Yuishiki, or Vijñāti-mātrā, school; (7) the state of the soul fully enlightened as to the ultimate reality which transcends all relativities—the Sanron, or Mādhyamika, school; (8) the state of the soul in which the all-embracing sole way of reality is grasped, the reality universal and eternal identified with our own soul—the Tendai school; (9) the state of the soul freely moving in the world of living force, which is neither a chaotic mass nor a static entity, but exhibits its whole vitality even in a particle—the Kegon school, based on the book *Avatamsaka* (Chin. *Hwa-yen-king*); (10) the state of the soul which has fully grasped the glories of cosmic mysteries and lives the life of the cosmic Lord even in an individual body—the Shingon mysticism.

The complete embodiment of cosmic mysteries in the individual life is more a matter of religious mysticism than of philosophical speculation; but we have to note that the mystic ritualism of Shingon had in its background, or rather as its systematic expression, this view of a vast spiritual development going on in the individual soul as well as in the cosmic life. The final aim of every finite existence, according to this view, was participation in the full life of the cosmic Lord and attainment by this means of complete mastery over the cosmic mysteries.

The Shingon mysticism was, in fact, a culmination of Buddhist philosophical thought, which tried to unite in a harmonious whole not only the different schools of Buddhism, but also all other religions and philosophies with which it came into contact. What the Tendai school regarded as the steps in Buddha's educative method was modified by the Shingon system to mean the successive stages of spiritual development, guided and illumined by Buddha's wisdom and mercy. Thus the general trend of thought in these philosophical systems was idealistic in their philosophical foundation and pantheistic in their religious bearing.

¹ Cf. the appendix to M. Anesaki, *Nichiren*, Harvard University Press, 1916; Yamakami, ch. viii.

² For Kūkai and Shingon mysticism cf. Lloyd, pp. 235-240; Anesaki, *Buddhist Art in its Relation to Buddhist Ideals*, Boston, 1915, ch. ii.

³ One higher stage, called *amala*, 'purity-consciousness,' is added to the eighth, the *ālāya* (for which see art. *ASAŌGA*).

3. Confucian philosophy.—In the early stage of its influence in Japan Confucianism was a system of civic morality and social institutions, and left the field of philosophic thought to Buddhism, never attempting to rival it. But the characteristic feature of Buddhism—its linking of ethics and metaphysics through psychological self-introspection—made more and more impression upon Chinese Confucianists, and resulted in the Sing-li school of the 12th cent., represented chiefly by Chu-Hsi (Jap. Shu-shi).

Sing means literally 'nature,' the universal nature of all existences identified with the ultimate principle of cosmic existence; and in this sense *sing* is identical with *li*, 'reason' or 'universal principle,' like the Stoic *λογος*. Besides this, the Sing-li school postulated the existence of another principle called *k'i*, literally 'air,' which meant the particularizing and vitalizing principle—the source of concrete physical existence. Thus the antithesis between *li* and *k'i* may roughly be characterized as a dualism of the metaphysical and spiritual on one side and the physical and concrete on the other. The Sing-li school emphasized in its metaphysics the all-pervading rule of *li* as the wisdom and will of heaven, while in physics it elaborated the theory of the differentiation out of *k'i* of mental and physical conditions, which were pervaded by the positive and negative principles (*yin* and *yang*) and composed of the five material elements.

Though the chief interest of the school was in ethics, its thinkers had to face the problem of psychologically examining human nature as reflecting the heavenly reason, on the one hand, and as being disturbed by physical conditions, on the other. The intricate problems of human nature were treated along psychological lines—e.g., the relation between the fundamental nature of the mind and its emotional agitations, the difference of temperaments caused by the preponderance of the various elements in the physical life, the close link existing between control of moral will and intellectual investigation into the nature of things, etc. These discussions were directed towards moral problems and applied to the methods of mental culture and control. This system of metaphysics and ethics was introduced into Japan in the 14th cent., but was cultivated chiefly by Buddhist monks, until it was adopted as the orthodox teaching of the State by the dictatorial government in the beginning of the 17th cent. and took the upper classes under its sway. The story of how the orthodox teachings of the Shu-shi philosophy moulded the moral life of the ruling classes is an important chapter in the moral history of the Japanese, but cannot be treated here.¹ We may, however, point out an important feature of the Sing-li school in Japan: it emphasized the virtues of sincerity and obedience perhaps more than benevolence and justice, the cardinal virtues of the original Confucianism. This was a consequence of the Shu-shi ethics adapted to the needs of the time, when the Japanese nation was ruled by a strong military government and enjoyed a peace lasting over two centuries. Sincerity, thus emphasized, verged on religious devotion—a pious obedience towards the heavenly reason as well as towards social order. This was a characteristic point of Japanese Confucianism, distinguishing it from the same system in its native land; and, in fact, some Japanese Confucianists of the 18th cent. organized a Shintō-Confucian cult.

A system of ethical teaching thus dictated by

¹ See Anesaki, *Religious and Moral Development of the Japanese*, pt. v. On Confucianism in Japan in general see R. C. Armstrong, *Light from the East*, Toronto, 1914, and its review by Anesaki in the *Harvard Theological Review*, viii. [1915] 563-571.

the government and emphasizing obedience inevitably aroused reaction from men of ability and originality. One of the reactions was the 'Old Learning' (Jap. Ko-gaku-ha), which claimed to purge Confucianism from later admixtures and proposed a more dynamic view of the world and life. Speaking in general, the result was a monistic philosophy identifying *k'i* with *li*, i.e. attributing the concrete vitalizing force to the very nature of the cosmic principle. In this system the partition between metaphysics and physics was partly abolished, and likewise the antithesis between the universal nature and the actual life. Every thing is a direct manifestation of the universal vitality, and what the Shu-shiists call the 'reason' or intelligence is nothing but the reign of law to be detected in the processes of the cosmic and individual life. The ethical consequence of this monistic philosophy was that not obedience but an actual realization of the universal life in the individual was the virtue of human life—a self-realization in which the individual embodies the all-comprehensive vitality of the universe. The cardinal virtues are, therefore, benevolence and justice, the virtues which represent the love and law of the cosmic existence in the individual and social life. In short, the 'Old Learning' school was, in spite of its claim and title, a product of Japanese genius, which cared not so much for metaphysical abstractions as for the realities of life. In its teaching we see a close tie between metaphysics and ethics, to the exclusion to a large extent of physical theories and psychological subtleties.

The second of the heterodox schools consisted of the followers of Wang Yang-ming (Jap. Ō-Yōmei), the intuitionist of the 16th century. This school identified conscience, when unstained and fully alive, with the primeval conscience of the universe. The main distinction of the school was that it abandoned all theoretical subtleties and aimed at realizing the primeval conscience in the individual life, first in intuitive insight and spiritual drill, and then in actual life. This feature had its best manifestation in the moral attainment of a select few, who also favoured democratic ideas and practices. The Yōmei school was eminent and efficacious in its practical effects more than in philosophic thought as such.

4. Review and present conditions.—Viewed as a whole, the philosophic thought of the Japanese never manifested originality, but was always influenced by the philosophical systems of the Asiatic continent. Yet the impression made and the modifications wrought by the Japanese upon these imported systems cannot be overlooked. Pragmatic application and attempts at unifying those systems characterized the history of Japanese thought, and it bore its best fruits in religious and moral life rather than in theoretical elaborations.

The change in philosophy going on at present is chiefly due to Japan's contact with Western civilization. Auguste Comte and J. S. Mill were the first European philosophers introduced, in the seventies of the 19th cent., soon after the reform of 1868, and some Confucianists found in Comte's positivism an ally of their own ethical and social theories. Herbert Spencer followed, and the sway of agnosticism lasted during the eighties. The English philosopher exerted his influence in dispelling, more or less, mystic or religious ideas handed down among the Japanese, but a peculiar point in his influence was that his agnosticism was brought by some Buddhists into connexion with the Buddhist transcendentalism of the Sanron school. This was due to the fact that the Unknowable of Spencer showed kinship to the over-coming, in Sanron, of all finite conceptions in

the search for the ultimate reality. This alliance is also found in Lafcadio Hearn's¹ appreciation of Buddhism through his Spencerian agnosticism, though independently from the Japanese thinkers. While agnosticism was prevailing, Hegel was gradually introduced, and soon some young Buddhists realized the kinship between Hegel's metaphysical dialectic and the Tendai philosophy of Buddhism. This discovery, in conjunction with various other circumstances, gave a strong impetus to the revival of Buddhist philosophy during the later years of the eighties. Since then nearly every one of the European philosophers has found his exponents in Japan, and the philosophical thought of modern Japan is in a melting-pot of Oriental and Occidental philosophies. Nearly twenty chairs of philosophy and philosophical sciences in Japanese universities represent all possible combinations of these philosophies. Although it may be premature to speak of any definite tendencies or predominant features, we may perhaps safely say that all these streams of Western thought are being correlated with either Buddhist idealism or Confucian positivism.

LITERATURE.—This is cited throughout the article.

M. ANESAKI.

PHILOSOPHY (Jewish).—Jewish philosophy may aptly be designated as the conscious attempt of Jewish thinkers to reconcile the teachings of Judaism with the results of their studies in the fields of the secular sciences. The literary products of the Jews in this line of thought are not the continuation of either the Bible or the Talmud, nor do they represent a spontaneous manifestation of the Jewish mode of thinking, as was the case with the philosophy of the ancient Greeks; they are the outgrowth of foreign influences which were fundamentally antagonistic to the religious spirit of Judaism. A people begins to philosophize only when, for one reason or another, it becomes suspicious of the value and truth of its inherited ideas and national beliefs. The Jews of ancient times, with the exception perhaps of some individuals, of whom, however, we have no sufficient records to warrant conclusions, never entertained any doubt as to the truth and the ethical worth of their religious teachings. Looking upon the Bible as a sacred book, the contents of which were revealed or inspired by God Himself, they felt themselves in the possession of all truth, and it did not occur to them that they were in need of some new system of metaphysics which would reveal to them verities not contained in their religious documents. It was only when the Jews came in contact with other nations, first with the Greeks and then with their disciples, the Arabs, that some of their scholars, who in their quest for knowledge had ventured beyond the boundaries of their own national literature, began to notice the discrepancies between what they had hitherto considered as eternal verities and the new truth which was heralded with so much clearness and certainty in the works of foreign philosophy. This realization of a conflict of ideas is already reflected in the book of Ecclesiastes, whose author, however, makes no attempt at any philosophic reconciliation of the opposing views.

The first Jewish author of prominence who tried to harmonize the Jewish and the Greek world-conception was Philo of Alexandria (c. 20 B.C.—A.D. 50). Starting out from the point of view of a pious observant Jew, such as he was, that the Law of Moses is the source and standard of all truth, religious and philosophic, and being at the same time an enthusiastic devotee of Greek thought, Philo set himself the task of proving

that Judaism and Hellenism not only are not antagonistic, but actually teach the same divine truth, though each in a different form. In order to achieve his purpose he, on the one hand, resorted to an elaborate and often fantastic system of allegorization of the Bible, whereby the text could be made to mean anything desired, and, on the other hand, selected from the various writings of the philosophers those views which in his opinion could be best adapted to the teachings of the Bible. Philo, though far from being a mere compiler, is thus to be classed with the philosophic eclectics. The doctrines of Pythagoras, Plato, Aristotle, the Stoics, and others were all made to contribute to his system, the main purpose of which was, as already noted, the defence and justification of the Jewish religion (see C. Siegfried, *Philo von Alexandria*, Jena, 1875, p. 137 ff.; James Drummond, *Philo Judæus*, London, 1888, i. 257 ff.). Philo's influence on the later development of Jewish philosophy was comparatively small (cf. Siegfried, pp. 299–302), but was an important factor in the construction of the Christian dogma by the Church Fathers. See, further, ALEXANDRIAN THEOLOGY, § 2.

In the literature of the Jews that originated during the nine centuries following upon the short Hellenistic period very little is found that can be designated as philosophy. The only work of a speculative nature is the semi-mystic Hebrew treatise known under the name of *Sefer Yetzirah* ('Book of Creation'), which was ascribed to the Mishnic teacher 'Aḳiba (2nd cent.) and even to the patriarch Abraham, but is no doubt a product of the Saboraic or the earlier Geonic period (5th–7th cent.). Apart from some philological paragraphs dealing with the Hebrew language, the treatise is a speculative attempt to solve the mysteries of God and nature in short sentences which are partly very obscure. The number-symbolism of the Neo-Pythagorean school and some Gnostic ideas are the most conspicuous elements of the book, which exercised an immense influence on later Jewish literature, particularly the *Kabbālā* (q.v.). It appeared in several hundred editions, was frequently translated into Latin and all the leading European languages, and was variously commented upon by the most prominent Jewish and also Christian authors (see for the literature *JE* xii. 606; M. Steinschneider, *Die hebräischen Übersetzungen*, Berlin, 1893, p. 395, n. 181).

With the general advancement and scientific progress which mark the 9th cent. in the history of Islām a new period of literary activity and productivity was inaugurated also among the Jews living under Islāmic rule. Among the various secular sciences then cultivated philosophy, too, was given careful attention. The numerous Jewish philosophic writers who represent this period (which lasted about four centuries) are properly classified according to the prevalence in their works of the doctrines and ideas which they adopted from one or the other of the three main divisions of contemporaneous Muhammadan philosophers. The latter are usually grouped as Mutakallimūn, Neo-Platonists, and Aristotelians, or Peripatetics, the three schools following one another in chronological succession, although we meet with adherents of the Kalām, e.g., also during the period of the Peripatetics. The Jewish philosophers who looked upon the Arabs as literary models naturally adopted with the external literary form and method also the essential contents of the Arabic philosophy of their time—that is, in so far as the latter was found to be compatible with the principal tenets of Judaism. We find, therefore, the same three philosophic divisions among the Jews as among the Arabs. Often, however, religious

¹ Lafcadio Hearn, *Japan: an Attempt at Interpretation*, New York, 1904, pp. 229–230.

scruples prevented individual thinkers from abandoning themselves entirely to the influence of the school to which, in the main, they belonged. In such events they would adopt single doctrines from some other system of thought, graft them upon their own, and thus obtain the chief result aimed at, namely, the harmonization of reason and belief, of philosophy and religion. With a few exceptions, Jewish philosophers are accordingly, as are indeed most of the mediæval Muhammadan and Christian philosophers, more or less eclectics. Their writings, nearly all composed in Arabic, but some preserved only in early Hebrew or Latin translations, cannot be properly understood without a sufficient knowledge of the kindred Arabic literature upon which they drew (see PHILOSOPHY [Muslim]). It would be a mistake, however, to think that owing to these facts Jewish philosophy is but a repetition or slight modification of that of the Arabs. For, as we have seen, the Jewish mind, when it made acquaintance with philosophy, whether Greek or Arabic, was not a *tabula rasa* capable of accepting anything that offered itself for acceptance, but, on the contrary, had been fully indoctrinated with a system of religion involving, if we may say so, a philosophy of its own which was totally different from the one that now presented itself. A thorough revision of the entire stock of their religious ideas as well as deep penetration into the real meaning of Græco-Arabic metaphysics was required in order to make possible a mental readjustment and a complete blending of the two heterogeneous elements. The Jewish thinkers succeeded fairly well in this task of combining the secular and the sacred, the human and the divine, and by this combination gave to Greek (especially Peripatetic) philosophy, as taken over from the Arabs, a distinct religious character, transforming the whole into a system of ethics and theology. From a scientific point of view, all this activity may have been uncritical and wrong, but, as a stage in the development and manifestation of human thought, it was of no less importance and originality than the philosophy of the Muhammadan theologians and Christian scholastics, which likewise culminated in the attempt to reconcile pagan thought with the tenets of their respective religions. It should also be noted that there were some Jewish thinkers who did not enter upon the field of philosophy with a view of harmonizing it with their religious belief, but tried to solve the problems without considering the consequences from the point of view of religion.

An author of this type was Isaac b. Solomon Israëli of Kairawān, N. Africa († 953, as is reported, at the age of over 100 years), the first known Jewish philosophic writer of the Arabic period, and recognized as the greatest physician of the Middle Ages, mediæval Christian authors referring to him as 'eximius monarcha medicinae.' As a philosopher, Israëli cannot be rated very high; he was altogether an eclectic, taking his material from any source with which he happened to be acquainted; hence he cannot be classed with any of the three groups mentioned before, although on the whole he inclines more towards Neo-Platonic ideas. Israëli deserves recognition, however, for having first introduced the study of philosophy among the Oriental Jews of his time. His influence on the development of Jewish philosophy was very small, but Christian scholastics, like Albertus Magnus, Thomas Aquinas, and others, made prolific use of his writings (see Steinschneider, *Arabische Literatur der Juden*, Frankfurt, 1902, § 28; J. Guttman, *Die philosophischen Lehren des Isaak ben Salomon Israeli*, Münster, 1911, esp. p. 17 ff.).

1. The Jewish Mutakallimūn.—The earliest

Jewish writer who is known to have followed the philosophy of the Kalām is David b. Merwān ibn al-Muḥammad (JQR xv. [1903] 682) of Rakka, Mesopotamia, who flourished towards the end of the 9th and the beginning of the 10th cent. and is the first Jewish author to mention Aristotle by name (ib. xvii. [1905] 357). He wrote a philosophic work under the title *Ishrūn Maqāla* ('Twenty Chapters'), dealing with the various philosophical and theological problems current in those days. Fifteen chapters of the work were not long ago discovered in the Petrograd Library, while some portions of it were embodied in a Hebrew translation in the work of an author of the 12th cent. (Steinschneider, *Arab. Lit.*, § 25, p. 338 f.; Schreiner, *Der Kalām*, p. 22 f.; JE iv. 466).

Of far greater importance for the history of Jewish philosophy is the famous Gāṓn Sa'adya b. Joseph al-Fayyūmī (892-942), who is generally recognized as the inaugurator of a new epoch in all branches of Jewish learning, and who was actually the creator of mediæval Jewish philosophy. While in general following the method and the ideas of the Mutakallimūn, he shows himself in many essential points an independent thinker, who paved the way for the work of harmonizing reason and religion. It is impossible here even to mention the problems discussed in his very numerous writings, especially in his main philosophic work, *The Book of Philosophic Doctrines and Religious Beliefs*, which was much read in the Hebrew translation (*Emūnōt we Dē'ōt*) of Judah ibn Tibbōn (1186). The Arabic original was published by S. Landauer (Leyden, 1880). See art. SA'ADYA and literature there cited; cf. also H. Malter, *Life and Works of Saadia Gaon*, in the press; Steinschneider, *Arab. Lit.*, § 31; Guttman, *Die Religionsphilosophie des Saadia*, Göttingen, 1882; Schreiner, pp. 5-22.

Among the Jewish followers of the Kalām shortly after the time of Sa'adya (c. 950) special mention is made by a prominent Muhammadan

author of one Abu-l-Hayr (خبر) Dāūd ibn Mūsā

(diminutive of Mūsā), who defended the doctrines of the Kalām in learned meetings of Muhammadan Peripatetics in Baghdād and Basra (see Goldziher, *REJ* xlvii. [1894] 41-46).

Sa'adya was taken as a model also by the Geonim Samuel b. Hofni († 1034) and his son-in-law Hai († 1038), both very influential scholars (see Schreiner, *MGWJ* xxxv. [1886] 314 ff.), as also by their contemporary Nissim b. Jacob, head of the learned community of Kairawān, who in his *Clavis* (*Maftāḥ*, ed. J. Goldenthal, Vienna, 1847), as well as in other writings (Goldziher, *REJ* xlvii. 179-186; Steinschneider, *Arab. Lit.*, § 59), frequently set forth various doctrines of the Mutakallimūn.

An anonymous Arabic treatise in Hebrew characters dealing, as far as the recently discovered fragment goes, with the question of the divine attributes likewise represents the school of the Mutakallimūn. As supposed by Goldziher, who edited the fragment (*Harkavy-Festschrift*, Petrograd, 1908, pp. 95-114), the author lived also in the period under consideration (11th century).

In this connexion mention must be made of a distinct group of Jewish Mutakallimūn—the sect known under the name of Karmites (q.v.). Having broken away from the solid ground of traditional Judaism with its Haggadic theology, which formed a strong barrier against heretic tendencies, they were thrown into a state of religious confusion which inclined them to be blown about by any wind of theological doctrine that happened to be prevailing in their days. The Karmites, especially

those of the 11th and the 12th centuries, therefore adopted the philosophy of the contemporaneous Kalām in its entirety, so that some of their works might 'almost as well have been written by a Muhammadan author' (Steinschneider, *Übersetzungen*, p. 453). The most prominent of the Karaite philosophic writers are: Abu Jūsuf Ja'kūb al Kirīsānī (c. 930 [*ib.* p. 451 ff., and *Arab. Lit.*, § 43]); Joseph b. Abraham ha-Kohen, known under the euphemy al-Baṣīr (Hebrew 'ha-Roḥ', 'the seeing') because of his blindness, the most important Karaite philosopher of the 11th cent. (P. F. Frankl, *Ein mutazilitischer Kalām*, etc., Vienna, 1872; Steinschneider, *Übersetzungen*, §§ 265-270, and *Arab. Lit.*, § 50; Schreiner, *Der Kalām*, pp. 27-32); Jeshū'a b. Jehudah (11th cent. [Steinschneider, *Arab. Lit.*, § 51; Schreiner, *Studien über Jeschua ben Jehuda*, Berlin, 1900, who gives a full presentation of Jeshū'a's philosophy]). To these Karaite philosophers may be added the famous author of a Karaite encyclopædia (*Eshkol ha-Kofer*), Judah Hadassi of Constantinople (Schreiner, *Der Kalām*, p. 33 f.), and the Bible exegete Aaron b. Joseph of Constantinople (*ib.* p. 57; cf. Kohler, *JE* i. 14), both of the 13th century.

2. The Jewish Neo-Platonists.—In the works of Isaac Israēli (mentioned above) we find for the first time a decided influence of the Neo-Platonic school, but the real representatives of Neo-Platonism among the Jews did not appear until over a century later in Spain. Of these the first and foremost author is undoubtedly the famous poet Solomon ibn Gabirol of Malaga, who, up to 1846, when Solomon Munk discovered his identity, was known as a Christian scholastic under the corrupt name of Avicenna. His main philosophic work, *The Fountain of Life*, which is preserved only in a Latin translation of the 12th cent. (C. Bäumker, *Avenebrolis Fons Vitæ*, Münster, 1895) and in the Hebrew extracts made from the Arabic original by Shem Tob Palquera (13th cent.), has exercised the greatest influence on the development of Neo-Platonism in the Christian Middle Ages. Ibn Gabirol shows himself entirely independent of Jewish religious dogma, treating the philosophic problems without any theological bias. His work was therefore attacked by some of his successors and had comparatively little influence on Jewish thought. See, further, art. IBN GABIROL.

To the 11th cent. belongs in all probability also the anonymous Arabic work *Ma'āni al-naḥs* ('Essence of the Soul'), whose author is entirely under the influence of the Neo-Platonists, especi-

ally the so-called 'Sincere Friends' (أخوان الصفا), a fraternity of humanitarian philosophers who had established themselves at Baṣra during the second half of the 10th cent. (cf. Goldziher, in *Die Kultur der Gegenwart*, i. 5, p. 309 f.). The work was published by Goldziher (*Kitāb m'āni al-naḥs*, Berlin, 1907), who gave also a thorough analysis of its contents.

During the first half of the 12th cent. Jewish Neo-Platonism is represented by the astronomer and mathematician Abraham b. Hiyya of Barcelona in his ethical work, *Meditation of the Soul* (*Hegyon ha-Nefesh*, Leipzig, 1860; cf. *JE* i. 108-110), and by the poet Moses ibn Ezra of Granada († 1139), in his *Garden* (حديقة), of which only fragments are preserved (see Steinschneider, *Arab. Lit.*, p. 150, no. 3).

Moses ibn Ezra's prominent contemporary, the philosopher Joseph ibn Ṣiddīk (or Ṣiddik) of Cordova († 1149), in his *Microcosm*, preserved only in a Hebrew translation (*Olām Kaṭān*, ed. S. Horovitz, Breslau, 1903) likewise propagates Neo-Platonic

ideas (cf. M. Doctor, *Die Philosophie des Josef ibn Zaddik*, Münster, 1895; Schreiner, *Der Kalām*, p. 27 ff.; Kaufmann, *Attributenlehre*, pp. 255-337; Horovitz, *Die Psychologie*, pp. 147-207), as does also the famous Bible exegete Abraham ibn Ezra of Toledo († 1167) in his numerous Bible commentaries and independent works (M. Friedländer, *Essays on the Writings of Abraham ibn Ezra*, London, 1877; for his relation to the Kalām see Schreiner, *Der Kalām*, pp. 35-41).

Altogether in the spirit of Muhammadan Neo-Platonism is the philosophic work *Bustān al-'Ukūl* ('Garden of Intellects'), in seven chapters, by Nathanael al-Fayyūmī of Yemen (12th cent.), published with an English translation and notes by David Levine, New York, 1908 (Steinschneider, *Arab. Lit.*, § 147).

In the very popular ethical work, *Duties of the Heart*, by Bahya ibn Pakūda of Saragossa, which in the Hebrew translation (*Hōbōt ha-Lebābōt*) of Judah ibn Tibbon (1167) has gone through about 50 editions, and has been translated into several European languages, Neo-Platonic and Ṣūfī doctrines are frequently met with, though the author shows a marked inclination towards the Kalām (see Kaufmann, 'Die Theologie des Bachja ibn Pakuda,' in *Gesammelte Schriften*, ii., and especially Schreiner, *Der Kalām*, p. 25). The Arabic original under the title *Al-hidāya ilā farā'id al-qulūb* has been edited with a learned introduction by A. S. Yahuda (Leyden, 1912).

Apart from the authors of independent works here enumerated, there were several others who, through translation into Hebrew of non-Jewish Neo-Platonic writings, have largely contributed to the spread and popularization of Neo-Platonic doctrines. In some instances the works in question have been preserved in the Hebrew translation only, as, e.g., the pseudo-Empedoclean treatise on *The Five Substances*, edited by D. Kaufmann in *Studien über Salomon ibn Gabirol*, Budapest, 1899.

Through the influence of this literature various doctrines of Neo-Platonic origin gained entrance into Hebrew Bible commentaries and other works of later authors, who were not always aware of the real origin of their ideas. The main stream of Neo-Platonic ideas, however, emptied into the wide sea of mediæval Jewish mysticism, the *Kabbālā* (q.v.).

3. The Jewish Aristotelians.—The philosophy of Aristotle reached the Arabs and the Jews only after having undergone considerable changes. Aristotle's early interpreters, especially Porphyry, took great liberties in reading into the text certain ideas which were foreign to Aristotle's system. In the following centuries a number of pseudo-Aristotelian writings came into existence, the doctrines of which would have been vigorously repudiated by the great Stagirite. The lack of historical criticism, however, which was common to those ages, made the Arabs as well as the Jews believe in the genuineness of these writings. Obvious contradictions of the system of Aristotle were represented as later views of the philosopher, or difficulties were smoothed over in some other artificial way. Thus a combination of Aristotelian, Neo-Pythagorean, and Neo-Platonic doctrines was attributed to Aristotle, the influence of which makes itself felt even among the keenest and staunchest Peripatetics.

The first Jewish writer to refer to Aristotle by name is the above-mentioned David al-Mukammās (Steinschneider, *JQR* xvii. [1905] 357), while his younger contemporary, the Gāṣn Sa'adya (892-942), though never mentioning Aristotle by name, at times adopts some of his philosophic theories, and at others assails him bitterly. By this time, then,

al-Kindī, al-Fārābī, and other Arabs had made the name of Aristotle familiar to Jewish thinkers, but, as Kalām and Neo-Platonism were predominant among the Arabs, the Jews, too, were held under their influence, and for nearly two centuries no representative of Peripateticism appeared among them. The famous poet Judah Halevi (*q.v.*) of Toledo († 1140) shows thorough acquaintance with the philosophy of Aristotle in his apologetic work known under the title *Kuzari* (*Chazari*), which is a philosophic dialogue between a Hebrew scholar and the king of the Chazars, and which was translated into Latin and the leading European languages (Steinschneider, *Arab. Lit.*, § 103). Being likewise a strong opponent of philosophy, he cannot be counted among the Jewish Aristotelians. It was not until about the second half of the 12th cent. that a real champion of Aristotelian philosophy appeared in Abraham ibn Dāūd of Toledo († c. 1180). In a work called *The Sublime Faith* he made the first attempt at reconciliation of Judaism with the doctrines of Peripatetic philosophy. Ibn Dāūd's chief interest was the problem of free will *versus* predestination. He also discusses at some length the problem of *creatio ex nihilo*. Here he deviates from the Aristotelian assumption of the eternality of matter, adopting instead with certain reservations a theory similar to the Neo-Platonic doctrine of emanation. Neo-Platonic ideas find expression also in some other parts of the essentially Aristotelian work (see Guttman, *Die Religionsphilosophie des Abraham ibn Daud*, Göttingen, 1879; Horowitz, *Die Psychologie*, p. 211 ff.).

Of much greater consequence was Moses b. Maimūn, commonly called Maimonides (*q.v.*) 1135-1204), the greatest Jewish philosopher of the Middle Ages. Like Ibn Dāūd, whom he frequently follows, he started out with the conviction that reason, being a gift of God, cannot possibly conflict with true religion, which emanates from the same source. Aristotle is to Maimonides 'the prince of philosophers' whose theories he opposes to those of the Mutakallimūn. In his main philosophic work, *The Guide of the Perplexed*, he tries to demonstrate the identity of Aristotle's teachings with those of Judaism. The apparent contradiction between Aristotle and the Bible is due only to a too literal interpretation of the latter. A large portion of the work is therefore devoted to explaining away the anthropomorphism of the Scriptures. In connexion therewith he discusses the divine attributes. Maimonides does not admit any positive attributes in the description of God, except those referring to God's actions. God's essence can be described only negatively. The last chapters of the first part offer a history of the Kalām and a trenchant criticism of its methods and teachings, which until recent times was the most important source of our knowledge about the Kalām. The main philosophic problems, as *creatio ex nihilo*, unity and incorporeality of God, and the nature of prophecy, are admirably treated in the second part of the *Guide*, while the third is devoted to questions of a more theological character, such as the origin of evil (theodicy), the extent of divine providence, which, contrary to the opinion of Aristotle, Maimonides holds, embraces all human individuals, and, finally, the meaning and purpose of the revealed law, which is treated in much detail. Maimonides identifies religion, as expressed in the divine precepts of the Pentateuch, with ethics, and tries to show that the precepts, if properly understood, have a moral purpose.

The main results of his philosophic investigations were formulated by Maimonides in short paragraphs at the beginning of his famous code, called *Mishneh Tōrah*. Peripatetic philosophy of Aristotle thus appears here as an integral part of a

code of Jewish law. See, further, art. MAIMONIDES.

Of the immediate pupils of Maimonides special mention is to be made of Joseph ibn 'Akūn († Aleppo, 1226), to whom Maimonides dedicated his *Guide*. He is the author of several philosophic treatises, some of which were published (see Steinschneider, *Arab. Lit.*, § 170; J. L. Magnes, *A Treatise as to Necessary Existence*, etc., Berlin, 1904; W. Bacher, *Sepher Musar*, do. 1910).

Maimonides' works exercised great influence on Christian scholastics, especially Albertus Magnus, Thomas Aquinas, and others (Kaufmann, *Gesammelte Schriften*, ii. 152 ff.). Among the Jews many of his doctrines were strongly opposed as incompatible with traditional Judaism. This opposition led to a wide-spread internal strife and to a decline of philosophic studies within the ranks of Jewry (see H. Graetz, *Hist. of the Jews*, Eng. tr., London, 1891-92, iii. 522-545, 623 ff.). The numerous philosophic writers of the 13th cent. merely repeated the ideas of previous authors. Some of them, however, displayed great literary ability and industry as translators of foreign works into Hebrew (Steinschneider, *Übersetzungen*, pp. 42-500), as compilers of general encyclopedias (*ib.* pp. 1-42), or as commentators on the works of others. Among these writers mention should be made of the Provençal Shem Tob Palquera (1225-90), a profound scholar and keen literary critic (Malter, *JQR*, new ser., i. [1910-11] 151-181, 451-501); the Italian physician Hillel b. Samuel (1220-90), translator into Hebrew of several works, among them the pseudo-Aristotelian *Liber de Causis*, from Latin, and author of an independent philosophic work (*Taḡmule ha-Nefesh*, Lyck, 1874; see Steinschneider's letter in the introd. to this work); Isaac Albalag of S. France, an unreserved follower of Aristotle, with some leaning, however, towards the Kabbalā (H. Auerbach, *Isaak Albalag*, Breslau, 1906); Joseph ibn Caspi of Argentières (1340), the most prolific writer of that period (see E. Renan and A. Neubauer, in *Hist. littéraire de la France*, Paris, 1893, xxxi. 477-547), and his contemporary, the poet Jedaiah Penini of Béziers, whose *Examen Mundi*, an ethical work in a highly poetical Hebrew style, was one of the most popular books of the Middle Ages. It was translated into Latin and most of the modern languages (Eng. by T. Goodman, London, 1806), and very frequently published with various commentaries (Renan-Neubauer, pp. 359-402).

During the first half of the 14th cent. Jewish Peripateticism once more came into great repute through Levi b. Gershon (*q.v.*) Gersonides, Magister Leo Hebræus, † c. 1344) of Bagnols, after Maimonides the keenest and the most consistent Jewish Aristotelian of the Middle Ages. Levi is the author of numerous philosophic commentaries on books of the Bible and on the works of Averroes as well as of a comprehensive independent work called *Milhamōth 'Adōnai* ('Battles of the Lord'), which established his fame (Renan-Neubauer, pp. 586-644; Kellermann, *Die Kämpfe Gottes*, Berlin, 1914; cf. Hnsik, *JQR* vii. [1917]).

Of great interest for the history of philosophy are the works of Moses Narboni of Narbonne, † c. 1362), surnamed Maître Vidal Bellsom (Belhomme). Like Gersonides, he was an ardent exponent of Peripatetic - Averroistic philosophy. He wrote valuable commentaries on the works of Avicenna, Ghazālī, Ibn Tufail, Averroes, and Maimonides (*Guide*), as well as several independent works on philosophic subjects (Renan-Neubauer, pp. 666-681).

A philosopher of great originality was Hasdai Crescas of Barcelona and Saragossa (1340-1410), author of a profound work entitled *Or 'Adōnai*

('Light of God'). Hasdai marks a decided turn in the history of Jewish philosophy. Far from continuing the Peripatetic doctrines of Maimonides and Gersonides, he, like Ghazālī among the Arabs, tried to demolish the whole structure of the philosophers' world-conception, showing the inadequacy of reason to establish the truth, which, he claims, can be obtained only on the firm basis of revealed religion. Hasdai's work exercised great influence on Spinoza, many essential points in the latter's system having been taken from the former (M. Joel, *Don Chasdai Crescas' religionsphilosophische Lehren*, Breslau, 1866, *Zur Genesis der Lehre Spinoza's*, do. 1871; J. Wolfsohn, *Der Einfluss Gazālī's auf Chisdai Crescas*, Frankfurt, 1905).

The Karaite Jews of the period under consideration also produced a philosopher of prominence in the person of Aaron b. Elijah of Nicomedia, Asia Minor, whose *Tree of Life* (finished in 1346) compares fairly with the *Guide* of Maimonides, after which it was modelled (see F. Delitzsch, *Ahron ben Eliä's . . . System der Religionsphilosophie*, Leipzig, 1841; Schreiner, *Der Kalam*, p. 57 ff.).

Towards the end of the 14th cent. Profiat Duran (Spain), commentator of Maimonides' *Guide* and author of several other works, arrests attention as a man of philosophic learning and critical acumen (S. Gronemann, *De Profatii Durani Vita ac Studii*, Breslau, 1869). He is greatly excelled by his namesake, Simon Duran of Majorca (1361-1444), a man of keen intellect and vast Jewish and secular learning, who wrote numerous works, among them one of an encyclopædic character, in which he shows perfect familiarity with the problems of philosophy and all the sciences of the Middle Ages (see Guttmann, *MGWJ* lii. [1908] 41-72, liii. [1909] 46-79, 199-228).

The best known philosophic writer of the 15th cent. is Joseph Albo († c. 1444), a pupil of Hasdai Crescas. He is the author of the very popular book, *Ikkurim* ('Principles'), which is characteristic of the change that took place within the ranks of the Jewish thinkers during the 15th cent. (see A. Tünzer, *Die Religionsphilosophie Joseph Albo's*, Frankfurt, 1896). Partly owing to the sharp criticism of Hasdai, Peripateticism had gradually given place to doctrines which were more in keeping with the spirit of Judaism. Among the writers of this period worthy of mention are Joseph b. Shem Tob and his son Shem Tob, both in Spain, the former a very independent writer and critic, the latter a strict follower of Maimonides and commentator of his *Guide* (see Guttmann, *MGWJ* lvii. [1913] 177 ff.); Abraham Bibago of Huesca († c. 1490), author of commentaries on Averroes and of *The Path of Faith*, a valuable philosophic presentation and defence of the Jewish religion (Steinschneider, *Übersetzungen*, § 38, p. 168); Judah Messer Leon of Mantua, author of several works, among them a compendium of logic and a commentary on Aristotle's *Ethics* (Husik, *Judah Messer Leon's Commentary on the 'Vetus Logica'*, Leyden, 1906); Elijah del Medigo of Crete (1450-93), the famous professor of philosophy at the universities of Padua and other Italian cities, author of *Behinat ha-Dat* ('Investigation of Religion') and of several commentaries in elegant Latin on works of Aristotle and Averroes, some written at the request of his pupil and friend, Count Pio de Miranda (Steinschneider, *Übersetzungen*, p. 973); Isaac Arama of Zamora († 1494), author of the very popular philosophic homiletical *Offering of Isaac*, part of which was translated into Latin and made the subject of an academic dissertation by Anton J. von der Hardt (1729; see Steinschneider, *Übersetzungen*, p. 214 f.; *Zeitschr. für hebr. Bibliographie*, iii. [1899] 17, no. 209; *JE* ii. 66); the Catalan Abraham Shalom († 1492),

translator of Albertus Magnus's *Philosophia Pauperum* and of a treatise by Marsilius Ingenus, and author of the learned work *Neveh Shalom* (Steinschneider, *Übersetzungen*, pp. 465, 469); Don Isaac Abravanel (1437-1508), treasurer of Alfonso V. of Portugal, the most prolific writer of that period, author of voluminous Bible commentaries and other works, which were much studied and highly esteemed also by Christian scholars (Guttmann, *Die religionsphilosophischen Lehren des Isaac Abravanel*, Breslau, 1915); Judah Abravanel (son of the preceding), called Leo Hebreus, a Neo-Platonist of the Italian Renaissance period, who has made himself famous as a philosopher by his work *Dialoghi di amore*, which went through many editions in the Italian original and in various translations (Munk, *Mélanges*, pp. 522-528; B. Zimmels, *Leo Hebraeus*, Leipzig, 1886, *Leone Hebreo Neue Studien*, Vienna, 1892).

With the expulsion of the Jews from Spain (1492) the centre of Jewish mediæval secular civilization was destroyed. A considerable number of Hebrew authors were busy writing on religious philosophic subjects also during the following centuries, especially in Italy, where many of the Spanish exiles had settled, but none of their writings can be considered as an original contribution to Jewish philosophy. The Jewish philosophers of great prominence that still appeared on the scene, such as Baruch Spinoza, Moses Mendelssohn, and others of more recent times, were not the continuators of what is known as 'Jewish' philosophy, and are, therefore, not to be discussed here. They belong to the history of philosophy in general.

In summing up it may be said that, while on the whole the Jews as philosophers play only a secondary rôle, 'they indisputably share with the Arabs the merit of having preserved and propagated the science of philosophy during the centuries of barbarism, and of having exercised for a certain period a civilizing influence on the European world' (Munk, *Mélanges*, p. 511).

LITERATURE.—Works on individual authors have been referred to in the text, we quote here only works that deal with Jewish philosophy in general: W. Bacher, *Die Bibelexegese der jüdischen Religionsphilosophen des Mittelalters vor Maimuni*, Strassburg, 1892 (cf. his *Bibelexegese Moses Maimuni's*, do. 1896); S. Bernfeld, *Da'at Elohim*, Warsaw, 1897; P. Bloch, *Die jüdische Religionsphilosophie*, in Winter and Wünsche, *Die jüdische Literatur*, Berlin, 1897, ii. 699-704, also separately; M. Eisler, *Vorlesungen über die jüdischen Philosophen des Mittelalters*, 3 vols., Vienna, 1870-83; I. Goldziher, in *Die Kultur der Gegenwart*, i. [1913] 301-337; S. Horowitz, *Die Psychologie bei den jüdischen Religionsphilosophen des Mittelalters*, 4 vols., Breslau, 1898-1912; I. Husik, *A Hist. of Mediæval Jewish Philosophy*, New York, 1916; D. Kaufmann, *Gesch. der Attributenlehre in der jüdischen Religionsphilosophie des Mittelalters*, Gotha, 1877; P. J. Müller, *De godskleer der middeleeuwsche Joden*, Groningen, 1898; S. Munk, *Mélanges de philosophie juive et arabe*, 2 vols., Paris, 1857-59 (cf. B. Beer, *Philosophie und philosophische Schriftsteller der Juden*, Leipzig, 1852); D. Neumark, *Gesch. der jüdischen Philosophie des Mittelalters*, Berlin, 1907-10; M. Schreiner, *Der Kalam in der jüdischen Literatur*, do. 1895; J. Splegier, *Gesch. der Philosophie des Judenthums*, Leipzig, 1891.

HENRY MALTER.

PHILOSOPHY (Muslim).—I. The earliest attitude of Islām to reflective thought.—The heathen period of Arabian history, 'the time of ignorance' (*jāhiliya*), came to an end when Muḥammad received his divine revelation from the hands of the archangel Gabriel. The Qur'an contains everything that man needs to know. In point of fact, however, it supplies but scanty materials for the philosophical spirit; and of such materials already in existence it was the wisdom of Luqinān alone (cf. Qur'an, xxxi.)—a body of religious and practical ethics that might be compared to the book of Proverbs—that found admission into the bible of Islām. Had Muḥammad known of philosophers in the Greek sense of the term, he would doubtless have doomed them, as he doomed the poets, to the

al-Kindī, al-Fārābī, and other Arabs had made the name of Aristotle familiar to Jewish thinkers, but, as Kalām and Neo-Platonism were predominant among the Arabs, the Jews, too, were held under their influence, and for nearly two centuries no representative of Peripateticism appeared among them. The famous poet Judah Halevi (*q.v.*) of Toledo († 1140) shows thorough acquaintance with the philosophy of Aristotle in his apologetic work known under the title *Kuzari* (*Chazari*), which is a philosophic dialogue between a Hebrew scholar and the king of the Chazars, and which was translated into Latin and the leading European languages (Steinschneider, *Arab. Lit.*, § 103). Being likewise a strong opponent of philosophy, he cannot be counted among the Jewish Aristotelians. It was not until about the second half of the 12th cent. that a real champion of Aristotelian philosophy appeared in Abraham ibn Dāūd of Toledo († c. 1180). In a work called *The Sublime Faith* he made the first attempt at reconciliation of Judaism with the doctrines of Peripatetic philosophy. Ibn Dāūd's chief interest was the problem of free will *versus* predestination. He also discusses at some length the problem of *creatio ex nihilo*. Here he deviates from the Aristotelian assumption of the eternality of matter, adopting instead with certain reservations a theory similar to the Neo-Platonic doctrine of emanation. Neo-Platonic ideas find expression also in some other parts of the essentially Aristotelian work (see Guttman, *Die Religionsphilosophie des Abraham ibn Daud*, Göttingen, 1879; Horowitz, *Die Psychologie*, p. 211 ff.).

Of much greater consequence was Moses b. Maimon, commonly called Maimonides (*q.v.*) 1135-1204), the greatest Jewish philosopher of the Middle Ages. Like Ibn Dāūd, whom he frequently follows, he started out with the conviction that reason, being a gift of God, cannot possibly conflict with true religion, which emanates from the same source. Aristotle is to Maimonides 'the prince of philosophers' whose theories he opposes to those of the Mutakallimūn. In his main philosophic work, *The Guide of the Perplexed*, he tries to demonstrate the identity of Aristotle's teachings with those of Judaism. The apparent contradiction between Aristotle and the Bible is due only to a too literal interpretation of the latter. A large portion of the work is therefore devoted to explaining away the anthropomorphisms of the Scriptures. In connexion therewith he discusses the divine attributes. Maimonides does not admit any positive attributes in the description of God, except those referring to God's actions. God's essence can be described only negatively. The last chapters of the first part offer a history of the Kalām and a trenchant criticism of its methods and teachings, which until recent times was the most important source of our knowledge about the Kalām. The main philosophic problems, as *creatio ex nihilo*, unity and incorporeality of God, and the nature of prophecy, are admirably treated in the second part of the *Guide*, while the third is devoted to questions of a more theological character, such as the origin of evil (theodicy), the extent of divine providence, which, contrary to the opinion of Aristotle, Maimonides holds, embraces all human individuals, and, finally, the meaning and purpose of the revealed law, which is treated in much detail. Maimonides identifies religion, as expressed in the divine precepts of the Pentateuch, with ethics, and tries to show that the precepts, if properly understood, have a moral purpose.

The main results of his philosophic investigations were formulated by Maimonides in short paragraphs at the beginning of his famous code, called *Mishneh Tōrah*. Peripatetic philosophy of Aristotle thus appears here as an integral part of a

code of Jewish law. See, further, art. MAIMONIDES.

Of the immediate pupils of Maimonides special mention is to be made of Joseph ibn 'Aqūn († Aleppo, 1226), to whom Maimonides dedicated his *Guide*. He is the author of several philosophic treatises, some of which were published (see Steinschneider, *Arab. Lit.*, § 170; J. L. Magnes, *A Treatise as to Necessary Existence*, etc., Berlin, 1904; W. Bacher, *Sepher Musar*, do. 1910).

Maimonides' works exercised great influence on Christian scholastics, especially Albertus Magnus, Thomas Aquinas, and others (Kaufmann, *Gesammelte Schriften*, ii. 152 ff.). Among the Jews many of his doctrines were strongly opposed as incompatible with traditional Judaism. This opposition led to a wide-spread internal strife and to a decline of philosophic studies within the ranks of Jewry (see H. Graetz, *Hist. of the Jews*, Eng. tr., London, 1891-92, iii. 522-545, 623 ff.). The numerous philosophic writers of the 13th cent. merely repeated the ideas of previous authors. Some of them, however, displayed great literary ability and industry as translators of foreign works into Hebrew (Steinschneider, *Übersetzungen*, pp. 42-500), as compilers of general encyclopædias (*ib.* pp. 1-42), or as commentators on the works of others. Among these writers mention should be made of the Provençal Shem Tob Palquera (1225-90), a profound scholar and keen literary critic (Malter, *JQR*, new ser., i. [1910-11] 151-181, 451-501); the Italian physician Hillel b. Samuel (1220-90), translator into Hebrew of several works, among them the pseudo-Aristotelian *Liber de Causis*, from Latin, and author of an independent philosophic work (*Tagmule ha-Nefesh*, Lyck, 1874; see Steinschneider's letter in the introd. to this work); Isaac Albalag of S. France, an unreserved follower of Aristotle, with some leaning, however, towards the Kabbālā (H. Auerbach, *Isaak Albalag*, Breslau, 1906); Joseph ibn Caspi of Argenteire (1340), the most prolific writer of that period (see E. Renan and A. Neubauer, in *Hist. littéraire de la France*, Paris, 1893, xxxi. 477-547), and his contemporary, the poet Jedaiah Penini of Béziers, whose *Examen Mundi*, an ethical work in a highly poetical Hebrew style, was one of the most popular books of the Middle Ages. It was translated into Latin and most of the modern languages (Eng. by T. Goodman, London, 1806), and very frequently published with various commentaries (Renan-Neubauer, pp. 359-402).

During the first half of the 14th cent. Jewish Peripateticism once more came into great repute through Levi b. Gershon (*q.v.*) Gersonides, Magister Leo Hebraeus, † c. 1344) of Bagnols, after Maimonides the keenest and the most consistent Jewish Aristotelian of the Middle Ages. Levi is the author of numerous philosophic commentaries on books of the Bible and on the works of Averroes as well as of a comprehensive independent work called *Millāmōth 'Adōnai* ('Battles of the Lord'), which established his fame (Renan-Neubauer, pp. 586-644; Kellermann, *Die Kämpfe Gottes*, Berlin, 1914; cf. Husik, *JQR* vii. [1917]).

Of great interest for the history of philosophy are the works of Moses Narboni of Narbonne († c. 1362), surnamed Maître Vidal Bellson (Bellhomme). Like Gersonides, he was an ardent exponent of Peripatetic - Averroistic philosophy. He wrote valuable commentaries on the works of Avicenna, Ghazālī, Ibn Tufail, Averroes, and Maimonides (*Guide*), as well as several independent works on philosophic subjects (Renan-Neubauer, pp. 666-681).

A philosopher of great originality was Hasdai Crescas of Barcelona and Saragossa (1340-1410), author of a profound work entitled *Or 'Adōnai*

('Light of God'). Hasdai marks a decided turn in the history of Jewish philosophy. Far from continuing the Peripatetic doctrines of Maimonides and Gersonides, he, like Ghazālī among the Arabs, tried to demolish the whole structure of the philosophers' world-conception, showing the inadequacy of reason to establish the truth, which, he claims, can be obtained only on the firm basis of revealed religion. Hasdai's work exercised great influence on Spinoza, many essential points in the latter's system having been taken from the former (M. Joel, *Don Chasdai Crescas' religionsphilosophische Lehren*, Breslau, 1886, *Zur Genesis der Lehre Spinoza's*, do. 1871; J. Wolfsohn, *Der Einfluss Gazālī's auf Chisdai Crescas*, Frankfurt, 1905).

The Karaite Jews of the period under consideration also produced a philosopher of prominence in the person of Aaron b. Elijah of Nieomedia, Asia Minor, whose *Tree of Life* (finished in 1346) compares fairly with the *Guide* of Maimonides, after which it was modelled (see F. Delitzsch, *Ahron ben Eli'a's . . . System der Religionsphilosophie*, Leipzig, 1841; Schreiner, *Der Kalam*, p. 57 ff.).

Towards the end of the 14th cent. Profiat Duran (Spain), commentator of Maimonides' *Guide* and author of several other works, arrests attention as a man of philosophic learning and critical acumen (S. Gronemann, *De Profiatii Durani Vita ac Studiis*, Breslau, 1869). He is greatly excelled by his name-ake, Simon Duran of Majorca (1361-1444), a man of keen intellect and vast Jewish and secular learning, who wrote numerous works, among them one of an encyclopedic character, in which he shows perfect familiarity with the problems of philosophy and all the sciences of the Middle Ages (see Guttmann, *MGWJ* lii. [1908] 41-72, liii. [1909] 46-79, 199-228).

The best known philosophic writer of the 15th cent. is Joseph Albo († c. 1444), a pupil of Hasdai Crescas. He is the author of the very popular book, *Ikkurim* ('Principles'), which is characteristic of the change that took place within the ranks of the Jewish thinkers during the 15th cent. (see A. Tánzer, *Die Religionsphilosophie Joseph Albo's*, Frankfurt, 1896). Partly owing to the sharp criticism of Hasdai, Peripateticism had gradually given place to doctrines which were more in keeping with the spirit of Judaism. Among the writers of this period worthy of mention are Joseph b. Shem Tob and his son Shem Tob, both in Spain, the former a very independent writer and critic, the latter a strict follower of Maimonides and commentator of his *Guide* (see Guttmann, *MGWJ* lvii. [1913] 177 ff.); Abraham Bibago of Huesca († c. 1490), author of commentaries on Averroes and of *The Path of Faith*, a valuable philosophic presentation and defence of the Jewish religion (Steinschneider, *Übersetzungen*, § 38, p. 168); Judah Messer Leon of Mantua, author of several works, among them a compendium of logic and a commentary on Aristotle's *Ethics* (Husik, *Judah Messer Leon's Commentary on the 'Vetus Logica'*, Leyden, 1906); Elijah del Medigo of Crete (1450-93), the famous professor of philosophy at the universities of Padua and other Italian cities, author of *Behinat ha-Dat* ('Investigation of Religion') and of several commentaries in elegant Latin on works of Aristotle and Averroes, some written at the request of his pupil and friend, Count Pico de Mirandola (Steinschneider, *Übersetzungen*, p. 973); Isaac Arama of Zamora († 1494), author of the very popular philosophic homiletical *Offering of Isaac*, part of which was translated into Latin and made the subject of an academic dissertation by Anton J. von der Hardt (1729; see Steinschneider, *Übersetzungen*, p. 214 f.; *Zeitschr. für hebr. Bibliographie*, iii. [1899] 17, no. 209; *JE* ii. 66); the Catalan Abraham Shalom († 1492),

translator of Albertus Magnus's *Philosophia Pauperum* and of a treatise by Marsilius Ingenus, and author of the learned work *Neveh Shalom* (Steinschneider, *Übersetzungen*, pp. 465, 469); Don Isaac Abravanel (1437-1508), treasurer of Alfonso v. of Portugal, the most prolific writer of that period, author of voluminous Bible commentaries and other works, which were much studied and highly esteemed also by Christian scholars (Guttmann, *Die religionsphilosophischen Lehren des Isaac Abravanel*, Breslau, 1915); Judah Abravanel (son of the preceding), called Leo Hebræus, a Neo-Platonist of the Italian Renaissance period, who has made himself famous as a philosopher by his work *Dialoghi di amore*, which went through many editions in the Italian original and in various translations (Munk, *Mélanges*, pp. 522-528; B. Zimmels, *Leo Hebræus*, Leipzig, 1886, *Leone Hebreo Neue Studien*, Vienna, 1892).

With the expulsion of the Jews from Spain (1492) the centre of Jewish mediæval secular civilization was destroyed. A considerable number of Hebrew authors were busy writing on religious philosophic subjects also during the following centuries, especially in Italy, where many of the Spanish exiles had settled, but none of their writings can be considered as an original contribution to Jewish philosophy. The Jewish philosophers of great prominence that still appeared on the scene, such as Baruch Spinoza, Moses Mendelssohn, and others of more recent times, were not the continuators of what is known as 'Jewish' philosophy, and are, therefore, not to be discussed here. They belong to the history of philosophy in general.

In summing up it may be said that, while on the whole the Jews as philosophers play only a secondary rôle, 'they indisputably share with the Arabs the merit of having preserved and propagated the science of philosophy during the centuries of barbarism, and of having exercised for a certain period a civilizing influence on the European world' (Munk, *Mélanges*, p. 511).

LITERATURE.—Works on individual authors have been referred to in the text, we quote here only works that deal with Jewish philosophy in general: W. Bacher, *Die Bibelepik der jüdischen Religionsphilosophen des Mittelalters vor Maimuni*, Strassburg, 1892 (cf. his *Bibelepik Moses Maimuni's*, do. 1896); S. Bernfeld, *Da'at Elohim*, Warsaw, 1897; P. Bloch, *Die jüdische Religionsphilosophie*, in Winter and Wünsche, *Die jüdische Literatur*, Berlin, 1897, II. 699-704, also separately; M. Eisler, *Vorlesungen über die jüdischen Philosophen des Mittelalters*, 3 vols., Vienna, 1870-83; I. Goldziher, *in Die Kultur der Gegenwart*, I. [1913] 301-337; S. Horowitz, *Die Psychologie bei den jüdischen Religionsphilosophen des Mittelalters*, 4 vols., Breslau, 1893-1912; I. Husik, *A Hist. of . . . jüdischen Religionsphilosophie*, New York, 1916; D. Kaufmann, *. . . jüdischen Religionsphilosophie*, F. J. Müller, *De godeler der middeleeuwsche Joden*, Groningen, 1893; S. Munk, *Mélanges de philosophie juive et arabe*, 2 vols., Paris, 1857-59 (cf. B. Beer, *. . . Schriftsteller der Juden*, Leipzig, . . . jüdischen Philosophie des Mittelalters, 1892); Schreiner, *Der Kalam in der jüdischen Literatur*, do. 1895; J. Spiegler, *Gesch. der Philosophie des Judenthums*, Leipzig, 1891.

HENRY MALTER.

PHILOSOPHY (Muslim).—I. The earliest attitude of Islām to reflective thought.—The heathen period of Arabian history, 'the time of ignorance' (*jāhiliyya*), came to an end when Muḥammad received his divine revelation from the hands of the archangel Gabriel. The Qur'ān contains everything that man needs to know. In point of fact, however, it supplies but scanty materials for the philosophical spirit; and of such materials already in existence it was the wisdom of Luqmān alone (cf. Qur'ān, xxxi.)—a body of religious and practical ethics that might be compared to the book of Proverbs—that found admission into the bible of Islām. Had Muḥammad known of philosophers in the Greek sense of the term, he would doubtless have doomed them, as he doomed the poets, to the

Fire. The Tradition ascribes, to him the characteristic saying, 'The devil is found upon the way of the solitary,' and philosophers are, as a rule, solitary men. As time, however, reconciles all opposites, the Prophet, according to the Tradition, likewise said that the first thing created by God was knowledge ('ilm) or reason ('aql). His son-in-law, 'Alī, the fourth *khalīfah*, who was regarded by many heretics of a later age as the first Arabian philosopher properly so called, is reported to have said, 'Philosophy is the lost sheep of the faithful; take it up again, even if from the infidel.' Further, the Socratic maxim 'Know thyself'—in a somewhat mystical or pantheistic sense—was put into the mouth both of the Prophet himself and of his son-in-law.

To the mind of Muhammad Allāh was pre-eminently the Powerful, the Wise. Primarily, indeed, he is the Powerful, who can do all things, and does as he wills, and it is rather in a secondary sense that he is the Wise—an attribute that here properly means 'all-knowing,' for primitive thought dwells more upon the compass than upon the content or the mode of knowledge. Allāh's wisdom might, in fact, be characterized as shrewdness or sagacity. Just as the merchants of Mecca enter their transactions in their books, so Allāh notes down the deeds of men; he is quick at calculation; he is something of a schemer. His 99 beautiful names or attributes do not include reason. We need not wonder, therefore, that his *rasūl* should speak as time and circumstances demand, or according to the changing moods of his own soul.

2. Islām in contact with Hellenistic and Christian thought.—A change ensued when Islām, in the first century of its existence, spread to Syria, Persia, and Egypt, and came into touch with the Hellenistic and Christian culture of these lands. To begin with, it had to come to terms with Christian theology. The Christians whom the Muslims had subjugated were far above their new masters in the dialectic art, and the sons and grandsons of the latter became the pupils of the subject peoples. The polemical and apologetic activities of the Christians brought to view certain naive inconsistencies and defects in the religious law and the Tradition of Islām. The problems of theological metaphysics which above all others gave occasion to disputes and so led to the formulation of doctrines and systems were as follows: (a) divine righteousness and man's freedom and responsibility; (b) the eternity of God's word; (c) the unity of God and His attributes; and (d) the relation of God to man and to the world.

In the discussion of these problems, more particularly during the first three centuries of Muslim development, political faction played a part sometimes of decisive, sometimes of merely secondary, importance. We cannot enter into this here; the attendant disputes concern us only in so far as they led to the development of logical or dialectic methods (see art. KALĀM, vol. vii. p. 637 ff.) and prepared the way for the progress of philosophic thinking.

The results of the conflict between the Mu'tazilite Kalām and the Kalām ranking as orthodox in Sunnite Islām may be summarized as follows. The Christian doctrine of human freedom (a) was rejected, as was also a doctrine that had been developed in various ways under philosophical influences, viz. that the attributes of God are not to be differentiated at all, or are to be differentiated only in the slightest degree, from the unity of His being (c). On the other hand, the doctrine (b) of the eternity of the divine word (the Logos) was applied to the Qur'ān and became a Muslim dogma; while, finally, the relation of God to the world and to man (d) received various interpretations of either a rationalistic or a mystical type.

The more rationalistic explanation predominates in the orthodox Kalām of the early centuries, just as it does in the Qur'ān. It starts from the view that the world is the work of Allāh, and that man is his slave. It accordingly makes little inquiry regarding natural causes or human motives, and refers all that takes place in the world and in the soul to the omnipotent and inscrutable will of God. Every change is therefore something absolutely new. There is no causal connexion, no continuous procreation, in the world; every occurrence is a fresh act of creation. A peculiar modification of the atomistic philosophy on these lines was adopted by orthodox Islām (cf. art. ATOMIC THEORY, vol. ii. p. 202 f.).

Among many Muslim sects, however, and especially in the Shi'ah, and in all schools of Sūfīite mysticism, the divine is brought into closer relations with man and the world, or, conversely, men and the world are deified.¹ Like the Greek and Arabic Neo-Platonists, these sects adopted a thought expressed in the *Theatetus* (176 B), viz. that the great object of our reflexion is to become as like God as is possible for man. By a mystical overstraining of this idea the desiderated 'likeness' (ὁμοίωσις θεῷ κατὰ τὸ δυνατόν) is sometimes conceived as complete unification. For the most part, however, the idea is expressed in a more cautious form; thus, under the influence of Christianity, man was regarded as the image of God, and from this point of view it was asserted that one who knows himself knows also his Lord. Servile obedience, moreover, gives place to love, and the devout servant becomes a fellow-worker with God. In minds of an ecstatic cast, however, an extravagant mysticism tends ever to pass into a pantheism for which the human ego becomes God and the world an empty show (cf. art. HALLAJ, vol. vi. p. 480 ff.). The merit of having been the first to reconcile the rationalistic or scholastic trend of thought with the mystical in a fashion that proved satisfactory to the Islām of subsequent times belongs to al-Ghazālī (cf. art. ETHICS [Muslim], vol. v. p. 508 f.). In reality both tendencies were at one in the view that it is Allāh who *works* all in all, while a more extreme form of mysticism added that he is all in all.

3. Early influence of philosophy upon Mu'tazilite thinkers.—The extent to which the Mu'tazilite thinkers of Basra, even by the 9th cent. A.D., had allowed their teaching to be influenced by philosophy is best seen in the writings of al-Nazzām († A.D. 845) and his pupil al-Jāhīz († A.D. 869).

According to al-Nazzām, man has in virtue of his reason the capacity of knowing that God exists. God, in His essential nature, is not will, but knowledge. Nor is He able to do all things; on the contrary, He can do only what is good, i.e. what He knows is best for His servants. From the goodness of God's character, moreover, it follows that He could not have created the world better than it actually is. Creation is to be regarded as, in its divine aspect, a single act by which all things were brought into being simultaneously; in other words, one thing is contained in another, and the whole variety of existing things—minerals, plants, animals, men—are in the process of time evolved from their original state of latency (*kumūn*). Thus, e.g., all the generations of mankind were potentially existent in Adam, the first man. This doctrine of creation as a single act stands in direct opposition to the view that God creates all things afresh every moment, as was taught in the atomistic Kalām.

Al-Nazzām likewise maintains that, while God,

¹ In what degrees this mystical phase was conditioned by native asceticism and by Persian and Indian influences need not be discussed here.

by the necessity of His nature, wills and does what accords with His wisdom and goodness, and while nature can work only in conformity with the constitution given to it at the creation, the human soul, with its freedom of volition and action, stands midway between the two. The human body and its physical activities are certainly subject to natural law, but the soul, which resides in the body as in a vessel, or interpenetrates it in every part and so makes it an instrument, is free. Somewhat obscurely al-Nazzām speaks of the soul as the real and veritable man; it would seem that here certain Pythagorean-Platonic and Stoic elements were mingled together in his thought; and we are reminded also of Qusṭā b. Lūqā's speculations regarding the soul and the life-spirit (*πνεῦμα*, Arab. *rūḥ*), which owe much to the influence of Galen.

Al-Nazzām, in his theory of the material world, stands opposed to the atomistic view. He maintains the continuity, or rather the complete interpenetration, of all material things (the Stoic *κρᾶσις δι' ὅλων*?). This accords admirably with his doctrine of involution (*kumūn*; see above), according to which every thing is contained in every other. The so-called atom, he holds, is infinitely divisible. Then, with a view to explaining how infinitely divisible spaces can be traversed, he advances his fantastic doctrine of the 'spring' or 'leap' (*taḥra*).

Al-Jāhīz, the pupil of al-Nazzām, while he devoted himself more to literature than to philosophy, yet played an important part in the diffusion of philosophic culture in Islām. What is usually ascribed to him in the way of philosophical doctrine may be traced almost wholly to his teacher, as, e.g., his theory that God, having once created the world, cannot annihilate it again, that the only real activity of man consists in the inward exercise of his will, etc. His most effective work is probably found in his compilations in the philosophy of nature, in which he cites not only Pythagoras, Plato, Democritus, and Aristotle, but also Hermes and Zoroaster, Jeremiah and John the Baptist. Like al-Nazzām, al-Jāhīz belongs to the older school of philosophical thought in Islām—the school which Arabian tradition traces back to Empedocles, Anaxagoras, and other pre-Socratic or even mythical thinkers.

4. Influences of an older emanational and redemptive metaphysic.—It is a widely prevalent tradition in Arabic literature that the earliest philosophy, which was traced back to Hermes, Agathos Daimon, Asklepios, Pythagoras, Thales, Solon, Empedocles, Balinūs (Apollonius of Tyana), and others, found its way from Alexandria through Antioch and Harrān to the countries lying farther east. In this movement an important rôle was, as it seems, played by the Ṣābians of Harrān (cf. art. HARRANIANS, vol. vi. p. 519 f.). During the Muslim period Harrān was for centuries the centre of a Hellenistic community which combined certain elements of the ancient Babylonian astral religion with the Hermetic *γνῶσις*. The knowledge of divine mysteries was said to have been conveyed to them by the primitive revelation given to the Uranians, especially Hermes and Agathos Daimon, who were identified with the prophets Seth and Enoch (Arab. Idris). This revelation, or philosophy of enlightenment, consists in a graduated system of emanation, the principal stages being—with some variation in the order—(1) God, or the First Cause, (2) reason, (3) the soul, (4) matter, and (5) nature. These proceed successively from one another, and each higher stage, even after its emergence from the antecedent one, still continues to influence the lower. The highest being is usually conceived as light, and the action of the higher upon the lower is represented as being

mediated by light. This metaphysic of light likewise may have been compounded from speculations of Hellenistic philosophy and Persian religion. Connected with it at every point is a species of mathematics that plays fancifully with letters and numbers, as also astrology, alchemy, and magic, or the science of talismans. Nevertheless, the leading idea—the thought that stands at the centre of all these speculative exercises—is that of the salvation of the soul, which longs to escape from the evil (or, at least, imperfect), sensuous, and material world to its original source; and it is upon the path of asceticism and meditation that the soul seeks re-union with the spiritual or divine world.

Among the adherents of this philosophy of revelation and redemption, as also among the extreme mystics, a spirit of eclecticism and syncretism was largely prevalent. Among all peoples and in all religions and philosophies these thinkers found one and the same truth—the same divine light—though in various gradations of purity. Even those who externally gave their adhesion to Islām did not regard that religion as the highest and final revelation. The anthropomorphic and crudely sensuous language of the Qur'ān was interpreted allegorically without the slightest misgiving, for to these thinkers truth lay solely in the inner sense.

Elements of this philosophy of revelation, combined with Persian and Indian wisdom, are even yet more popular in the East than the systems formed more or less on Neo-Platonic models by the so-called Aristotelians of Islām. Directly or indirectly, the intellectual life of Islām had been permanently influenced by Pythagoras and Plato long before it opened the door to the thought of Aristotle.

5. The introduction of the Aristotelian philosophy.—Not only among the Ṣābians of Harrān, but also in the Christian schools and monasteries of Syria, as well as in the medical school instituted by Khosrau I. in Yundai-Ṣābir, a beginning had been made with the study of Greek writings and the translation of Greek scientific and philosophical works into Syriac, even before the Muslim conquest. Besides the works of Hippocrates and Galen, a large number of mathematical and astronomical writings, and at length nearly all the works of Aristotle, were thus translated. This work of translation was greatly encouraged by the Abbāsīd *khālifas* Maṣṣūr and Hārūn al-Rashīd, and especially Ma'mūn. Most of the translators were Syrian Christians, though Jews, Ṣābians belonging to Harrān, and now and again Muslims (e.g., al-Kindī) did their part. By profession they were generally physicians, their great aim being, of course, to promote their own special study. From the 4th to the 8th cent. the Greek books were translated into Syriac; from the 8th to the 10th, into Arabic, either from Syriac versions or directly from the original. Probably the more eminent Arabian translators of the 9th cent., such as Qusṭā b. Lūqā (c. 835; a Christian of Bal'abak), Thābit b. Qurra (a Ṣābian resident in Harrān; †901), and especially the Christian physician Hunayn b. Ishāq (809–873) and his pupils, worked in part directly from the Greek. From the end of the 9th cent. the work of translation was confined almost entirely to Aristotelian or pseudo-Aristotelian writings, with their paraphrases and commentaries.

Neither the natural philosophers nor the theologians received the works of Aristotle without opposition. Till well on in the 9th cent., when the Hermetic *γνῶσις* or the Pythagorean-Platonic wisdom was still in the ascendant, Aristotle was known almost solely as a logician (*ṣāhib al-mantiq*)

—a fact the most convincing proof of which is found in the work of the celebrated physician Rāzī († A.D. 923 or 932). The physical, and even more the metaphysical, teachings of the Stagirite met at first with vigorous resistance. This was especially the case with his doctrine that the world was eternal, i.e. without beginning—a view probably at first identified with a doctrine widely current in the East, viz. that of the Dahrites.¹ It was but natural that theologians of different schools, as, e.g., the Shi'ite Hishām b. al-Haḡam (a contemporary of Nazzām), the Mu'tazilite Abū Hāshim of Basra († 933), and the orthodox al-Ash'ari (873–935), should issue polemical pamphlets against the encroaching philosophy. These writers often found support in the arguments of Aristotle's Christian commentator, Johannes Philoponos (Yahyā the grammarian), whose writings were well known in the East.

On the other hand, al-Kindī and al-Fārābī, the first so-called 'philosophers,' or Peripatetics, in Islām, following the example of the Neo-Platonists, sought to demonstrate the essential harmony of Plato and Aristotle. This task was greatly facilitated by the fact that the Arabic translations included numerous pseudo-Aristotelian writings some or all of which they regarded as authentic. Among these pseudographs were the so-called *Theologia Aristotelis* (an abstract of the *Enneads* of Plotinus), the *Liber de Causis* (an abstract of the *Στοιχειώδης θεολογική* of Proclus), the *Book of the Apple* (a Hermetic imitation of Plato's *Phædo*), the *Secretum Secretorum*, etc. Even in a later and more critical age, as the *Politics* of Aristotle was still unknown in Islām, a great mass of Platonic material from the *Republic* and the *Laws* was incorporated (e.g., by Ibn Rushd) with the Aristotelian philosophy.

The line of more or less Platonizing Aristotelians in Islām begins with Ja'qūb b. Ishāq al-Kindī († after 870). As the earliest Muslim philosopher of Arabian descent—previous thinkers having been Syrians or Persians, and, later, Turks, Berbers, etc.—al-Kindī is styled 'the philosopher of the Arabs.' In theological matters he belonged to the Mu'tazilite school. One great article of his teaching was the righteousness of God, and he also laid stress upon the unity (i.e. the absence of properties) of the divine nature. Doctrines common to various religions, and especially the general belief of mankind in a Creator who reveals himself in prophecy, al-Kindī recognized as expressing the truths of reason. His philosophical syncretism enabled him to descry everywhere traces of a divine truth which flows in various channels from a single source.

Al-Kindī was known to mediæval Christendom mainly as an astrologer and a student of medicine. In the East, however, his significance rests upon his having been one of the first to engage in a thoroughgoing study of Aristotle's works. It was owing to that study, as perhaps also to his sound understanding, that he could so strongly inveigh against alchemy and various forms of the belief in miracles. It was also of importance for the development of philosophy in Islām that, with the support of Alexander of Aphrodisias's commentary on the *de Anima* of Aristotle, he introduced the doctrine of a manifold *νοῦς* (Arab. *'aql*). Here he distinguished four types of reason, viz. (a) the ever actual or active *'aql*—the source or essence of all spiritual entities in the world, and thus probably equivalent to God and the pure spirits who direct the celestial spheres;² (b) the *'aql* as the constitu-

tion or potentiality of the human soul; (c) the *'aql* as those properties or faculties of the soul of which she can at every moment avail herself; and (d) the *'aql* in the state of outward manifestation. The passage from (b) to (c), i.e. the development of the potential into the habitual reason, is usually regarded as effected by the prime, ever active reason. This doctrine of *'aql*, somewhat modified as time went on, is found also in the greater philosophers of Islām (cf. artt. FĀRĀBĪ, vol. v. p. 757 ff., AVICENNA, vol. ii. p. 272 ff., AVERROES, vol. ii. p. 262 ff.).

6. Difference between the older and the newer type of thought.—The difference between the older philosophical movement, with its Neo-Pythagorean and Neo-Platonizing tendencies, and the logico-metaphysical school of the Aristotelians receives its most apposite illustration from a comparison of the encyclopædic system which the Iḥwān al-Safā ('The Faithful of Basra'), about the middle of the 10th cent., imposed upon the data of their knowledge with the classification of the sciences found in al-Fārābī († A.D. 950). The Faithful of Basra arranged the 52 treatises composing their philosophical encyclopædia as follows:

i. The first part comprises the propædæutic sciences: first (in conformity with the precedent of the Platonic school) mathematics, and then logic. Mathematics they divided into (1) arithmetic, (2) geometry, (3) astronomy, or rather astrology, (4) geography, (5) music, and (6) the doctrine of arithmetical and geometrical proportion (with much trifling). In all these six treatises the great object is to rouse the soul from 'foolish slumber and careless sleep,' and to lead it from the sensuous to what lies beyond—the spiritual. The transition to logic is made in the next three treatises, viz. (7) on the theoretical sciences, (8) on the practical sciences, and (9) on the various customs or characteristics of mankind. Logic, again, in conformity with (10) the *Isagoge* (of Porphyry), (11) (12) *peri epimeliai*, (13) the *Prior* (14) *Analytics*.

ii. The second part, the *epimeliai*, is the science of nature on its physical side, but, as the Iḥwān regarded the physical as of little value, their theme here—not only for purposes of edification, but quite directly—was often the soul itself. This section consists of seventeen treatises (nos. 15–31), viz. (15) elucidation of the fundamental conceptions—matter and form, space, time, and motion, (16) the heavens and the earth, (17) genesis and dissolution, (18) meteorology, (19) mineralogy, (20) nature in general, (21) botany, (22) zoology, (23) the structure of the human body, (24) sense perception, (25) development of the human embryo under the influence of the heavenly bodies, (26) man as a microcosm, (27) the development of individual souls, (28) the faculty of cognition, (29) the contemplation of death and life, (30) pleasure and pain, (31) the diverse languages of the nations.

iii. The subject of the third part is the spiritual world—the soul (*nafs*) and the reason (*'aql*)—which is dealt with in ten treatises (nos. 32–41), as follows: (32) spiritual principles according to Pythagoras, (33) spiritual principles according to the Iḥwān al-Safā, (34) the world as man on a large scale, (35) thought and its object, (36) theory of the spheres, the genesis and dissolution of the world, (37) the soul's love and longing for God, (38) resurrection (in a spiritual sense), (39) the kinds of motion, (40) causes and the caused, and (41) definitions and descriptions of things. The leading thought of all these treatises is that the spiritual is the essence and cause of the physical, and that the soul, which stands midway between reason (*'aql*) and nature (*tabi'a*), yearns for its primal source.

iv. The fourth section deals with the supreme, divine world, the world of divine law (*nāmūs*=νόμος), and contains eleven treatises (nos. 42–52), viz. (42) the various religions and philosophies (their common object being the welfare of the soul), (43) the way to God, (44) the Iḥwān al-Safā's profession of faith in the immortality of the soul, (45) the life of the Iḥwān al-Safā in loyal fellowship for mutual aid, (46) faith, (47) the divine law (*nāmūs*), or prophetic revelation (interpreted allegorically, of course), (48) homily and exhortation, (49) the practice of the spiritual life, (50) communal life (in the State and other associations), (51) the order of the world, (52) miracles and the magic arts, angels and demons.

Al-Fārābī, in his *Enumeration of the Sciences*, arranges the material in a somewhat different order, thus:

i. The science of language, in seven parts, discusses (1) the word, (2) the sentence, (3, 4) the rules of their formation and construction, (5, 6) correct speech and writing, and (7) the technique of verse.

ii. Logic, which is closely associated with linguistic science, is divided into eight parts, corresponding to the six books of the *Organon* (*The Categories*, *Interpretation*, *First and Second Analytics*, *Topics*, *Sophistical Arguments*), together with (7) the *Rhetoric* and (8) the *Poetics* of Aristotle. While rhetoric

¹ Cf. artt. 'Dahr,' 'Dahriya,' in *BE* i. 894 f.

² The term *'aql fa'āl* was, after al-Kindī's time, applied principally to the spirit emanating from the lowest heavenly (i.e. the lunar) sphere.

and poetics belong, on their technical side, to linguistics, they are here treated under logic as the theory of representing and imitating the real. According to this view, which came to have great importance in the East, the sequence of the subjects—topics, sophistics, rhetoric, poetics—forms a descending scale of the probable or the false which gradually declines from the high level of certain and demonstrative knowledge dealt with in the *Analytics*.

iii. Mathematical science consists of seven divisions, as follows: (1) arithmetic, (2) geometry, (3) theory of perspective, (4) astronomy, (5) music, (6) theory of measure and weight, and (7) technique.

iv. Natural science is divided into eight parts, viz. (1) doctrine of the principles of all material things (*φυσικὴ ἀρχαίολογία*), (2) the earth and the sky, (3) genesis and dissolution, (4, 5) meteorology, (6) mineralogy, (7) botany, (8) zoology, with which is conjoined psychology (as a natural science).

v. Metaphysics, or (likewise in Aristotle's terminology) theology, has the following three provinces: (1) the doctrine of the existent in general, together with its accidents, (2) the principles of the special sciences (logic, mathematics, physics), and (3) the doctrine of purely spiritual beings and their gradation, with God as the highest stage.

vi. Politics.—In this section, as the Aristotelian writings on practical philosophy were not as yet translated, or were translated only in part, there is a considerable representation of Platonic elements, though al-Fārābī seems to have been acquainted with the *Nicomachean Ethics*.

vii. Legislative science, i.e. the science of faith and of religious duty.

Such agreement as is found between the classification of the *Ihwan al-Safa* and that of al-Fārābī is due to the introductory treatises of Ammonius and Johannes Philoponus. Characteristic differences, however, appear both in the arrangement and in the exposition; as regards the former, the foregoing outline will enable the reader to compare the two systems, while, as regards the latter, it is impossible here to go more fully into detail. The material distinction may be briefly expressed by saying that the longing of the soul, which, according to the *Ihwan*, aspires to return to its celestial source, gives place in Fārābī to a more tranquil and broader contemplation of all things in the light of reason.

7. Muslim philosophy in the West.—The progress of Muslim culture in the West—in N. Africa, Spain, and Sicily—was in many respects a duplicate of the Oriental development. What Iraq and the city of Baghdad passed through in the 8th cent. was in the 10th repeated in Andalusia and its capital, Cordova. Conditions in the West, however, were of a more simple kind; gradations of culture were fewer; and Spain, true to its orthodox bent both before and after the Muslim invasion, was only superficially influenced by any of the sects and factions of the East. Nevertheless, some of the main currents of Muslim thought made their way to the West. As a result of pilgrimages to Mecca, and even more of scientific journeys extending as far as E. Persia, Andalusians became acquainted with the science and philosophy of the East, and those who travelled brought home books. Oriental scholars, again, frequently moved westwards in order to find employment. In the first half of the 9th cent. Abū Bakr Faraj b. Salam, a physician of literary attainments belonging to Cordova, made a journey of the kind indicated to Iraq, and, e.g., attended the lectures of al-Jāhiz in Basra. On his return to his native city he disseminated there the writings and the theology of that Mu'tazilite teacher, and also the first germs of Greek philosophy.

Somewhat later in the 9th cent. the Neo-Pythagorean philosophy found its way into Spain under the mask of Sufiite and Batinite (see below, § 8) mysticism. It purported to rest upon the authority of Empedocles. Its chief representatives here were Muhammad b. Masarra, a Muslim of Spanish descent, and the Jewish thinker Ibn Gabirol (q.v.).

Ibn Masarra, who was born in Cordova in 833 and died in 931, and whose father had studied Mu'tazilite and mystical theology in the East, lived the life of a devout ascetic. He eventually retired, with his pupils, to the solitude of the monn-

ains, and was on this account styled al-Jabali. In his place of retreat he instructed his pupils in the Mu'tazilite doctrine of freedom combined with a form of esoteric wisdom, this being in reality the emanation theory of the pseudo-Empedocles. From God, the One, the original principle—he held—proceed all things, each stage deriving from the antecedent one in the following order: (1) first or spiritual matter; (2) reason; (3) the soul; (4) nature or second matter, which forms the substrate of all finite existence in the physical world. Of God Himself, exalted as He is above all predicates, nothing can be said; He is unknowable. He reveals Himself, however, in His emanations; the first emanation, i.e. the spiritual matter from which all spiritual and material things proceed, is symbolically named 'the throne of God.' God, moreover, is so exalted above all things that He has no knowledge of these emanations. His emanations, however, are cognized by reason—by that which arises out of the primal matter; and from reason, again, is derived the soul, which, while bound to the physical, yet seeks to deliver itself from it by asceticism and so to rise to the high plane of the spirit. It was at first only in the West that Ibn Masarra succeeded in forming a body of adherents, but the fact that his ideas were adopted by Ibn al-Arabi (1165-1240), Islam's greatest mystic, made them eventually the common property of the Muslim world.

Towards the end of the 11th cent. the philosophical writings of al-Fārābī and the medical teachings of Ibn Sīnā became known in the West, and the first of the Western Muslims to apply himself actively to their lines of thought was Abū Bakr Muhammad b. Yahyā b. al-Sā'igh b. Bājja, who, born in Saragossa, lived in Seville and Granada, and died at the court of the Almoravids in Fez in 1138. This Ibn Bājja, with al-Fārābī as his model, composed elucidations of the Aristotelian and other philosophical writings. He felt very keenly the isolated position of the philosopher in the world at that day—a fact reflected in the title of his ethical work, *The Guidance of the Solitary*. The ideal of self-culture portrayed in that book was embodied by his disciple Ibn Tufail (q.v.) in the figure of 'Hayy ibn Yaqzān,' and his doctrine that the human intellect attains to a general (i.e. not individual) immortality by union with the intellect of the lunar sphere was further developed by Ibn Rushd (cf. art. AVERROES, esp. p. 264); this found a place in the literature of mediæval Christianity as the bingaboo of philosophical heresy.

8. The reconciliation of philosophy with religion.—One of the main problems of Muslim philosophy was naturally the definition of its relation to religion, as presented in the Qur'an and the Tradition. Many theologians, more or less conscious of this problem, were already working towards its solution by spiritualizing the letter of the law, having taken over from Hellenism the allegorical method of interpreting sacred writings. Those who applied this method in thoroughgoing fashion were called Bātinites (adherents of the 'inner sense' [*bāṭin*, 'interior,' 'inside']); and the endless variety of attempts to harmonize their own speculations with the word of God and of His Prophet developed at length into sheer contempt of the external word. Extreme mystics, rationalists, and free-thinkers all came in this way to the same results. Another theory common to them all was that the inner sense of the word—the truth—was revealed to only a few, whether by divine enlightenment (mystics) or by one's own reflexion (rationalists and free-thinkers).

Now, in the main, the Muslim Aristotelians agreed with this view. They propounded, however, a mediating theory, expressing the matter less crudely and with finer gradations of meaning. With the aid of scholastic distinctions, they tried to show that the different modes of expression used by theologians and philosophers respectively were but varying phases of the one changeless truth. They did not claim that the truth was confined to their philosophy alone, but they held that that philosophy was the highest form of truth attainable by man. It is in the light of this hypothesis that we are to interpret the philosophic endeavours to rationalize the doctrine of prophetic

revelation. Al-Kindī himself had defended prophecy i.e. had sought to show that it was in harmony with reason; at all events, like the Mu'tazilite theologians generally, he regarded the contemplation of revealed truth as a religious duty. Such was also the view of al-Fārābī and Avicenna. Al-Fārābī, in particular, even identifies the philosopher and the prophet. Taking Plato's ideal of the king-philosopher, he furnishes it with various traits of the Stoic sage in such wise that the faithful Muslim, in reading al-Fārābī's works, might well substitute the name of Muḥammad himself. Prophecy is here made intelligible by means of the 'aql theory, the doctrine of the *voûs*. As Plato had set forth in the *Republic*, human beings vary greatly in their intellectual endowments, and the majority require a guide; it is only the most gifted of men, in fact, whom the superhuman *voûs* (the *intellectus agens* = 'aql fa'āl) enables to receive and assimilate the truth, and so to impart it to others in a form that varies with the stage of their mental development.

We may discern here not only the resemblance but also the difference between the so-called Aristotelians and the other schools of thought in Islām. The mystics, too, had all their theory of grades—a doctrine of the several stages to be successively traversed on the way to God. The stages are variously enumerated—as many as eight, or even more, being given—and variously described by different thinkers; and few men reach the highest. In similar fashion the Iḥwān al-Safā distinguish four grades of initiation within their society, these corresponding to the stages of divine emanation.

The principle of the philosophical theory of stages in the narrower sense, however, is made to rest upon distinctions in mental endowment, and here there is no transition from one stage to another. In al-Fārābī the doctrine still rather follows the psychological scheme of Plato's *Republic*, while in Averroes it leans more to the outward form of the Aristotelian logic. Each distinguishes three grades of intellectual capacity. In al-Fārābī they correspond respectively to (1) sense-perception, (2) ideation, or perception, which operates with remembered (mentally perceived) images, and (3) pure reason, or the capacity for thought. In few men is the last of these (potentially) present in such measure that by union with the active intellect (the spirit of the lunar sphere) it can rise to actual reason. It is on this highest plane that the philosopher and the prophet join hands. The philosopher, however, receives or wins the truth in a pure form, and in that form, too, he utters it for those who are able to comprehend it; while the prophet, receiving it in figures and similitudes, likewise makes use of these in order to accommodate his thought to human conception; in this way, too, he becomes a guide to those who either cannot rise at all or can rise only with difficulty above sensuous perception. We find similar views in the writings of Avicenna and Maimonides, and in the romance of Ibn Tufail.

Averroes deals with this theory of the harmony of philosophy and religion in a special work. He holds that there is no ground for conflict between reason and faith, since the doctrines of religion are simply symbolical expressions of philosophic truth. That our scientific and philosophical modes of expression might likewise be of a symbolical character seems never to have entered the mind of this Aristotelian thinker; he was satisfied that in Aristotle *par excellence* he had found the pure truth. Aristotle, in his *Metaphysics* (1004^c 15 ff.), had said, however, that the Sophists and the dialecticians deal with the same object as the philosophers, although in a different way. The

knowledge professed by the Sophists was at best fictitious, and even the probability of the dialectician—dependent as it is upon generally recognized principles—fell below the philosophical plane of apodictic certainty. Now Averroes finds in these statements the doctrine of the three stages. The sophistic-rhetorical mode of argumentation is successful with the multitude; the procedure of the dialecticians finds favour with the more cultured classes, and especially the theologians (*mutakallimān*); finally, the thoroughgoing apodictic method of the philosophers—the heritage of the few—presents the truth in its pure and consummate form. Thus, to take a concrete instance, the simple-minded believer of the lower class will say, 'God is in heaven.' The man of trained dialectic, again, knowing that God must not be represented as a physical entity in space, will read that statement as meaning that God is exalted above all that is earthly and human, and will say, 'God is everywhere, and not merely in heaven.' But, if the omnipresence of God be taken in a physical and spatial sense, that formula too is liable to be apprehended wrongly, and accordingly the philosopher more adequately expresses the purely spiritual nature of God when he asserts that God is nowhere but in Himself; in fact, rather than say that God is in space he might more justly say that space and matter are in Him.

This example suffices to show us that in the view of Averroes the three stages or forms of knowledge have a common basis in one fundamental principle, viz. that there is a God. He believes that the existence of God is a fact to be recognized by every man, God being either figured more or less sensuously or conceived in a purely spiritual way, according to the grade of one's intellectual capacity. To deny the existence of God is forbidden, and such denial should be punished. But the blurring of intellectual distinctions is also an evil thing: the uneducated must not venture to engage in allegorical interpretation, nor shall the philosopher seek to popularize his higher intelligence of things. Hence Averroes censures al-Ghazālī for having diffused philosophy too widely through his popular writings. The masses should believe in conformity with the text of the Book; the theologians must not read more into the Book than is compatible with the Arabic language and diction; absolute liberty of thought is the exclusive prerogative of philosophic genius. Thus the Peripatetic movement of Muslim philosophy ends in what may be called an aristocratic rationalism.

9. The influence of Muslim philosophy. — The development of philosophy in Islām was of importance, in the first instance, to the Muslim peoples themselves. Its influence made itself felt in all branches of science and general culture, though chiefly, no doubt, in the study of theology—a study which still maintains an outstanding place in Islām. In the theological sphere we can trace various currents of thought. In general, it may be said that the mystics of all periods have imported many Neo-Pythagorean and Neo-Platonic elements into their systems, while thinkers of a more rationalistic type owe much to the teachings of Aristotle in the form given them by Avicenna. Avicenna ranks in the East as the prince of philosophy, and, in the conflict regarding the influence of philosophy upon theology, the watchword for centuries has been 'For or against Ibn Sīnā.'

The right of applying philosophical or logical methods to the treatment of theological problems in philosophical discussions is not generally contested. The theologians, in their works dealing with the *Kalām* (g.v.), usually begin with a section discussing questions in the logic of language and the theory of knowledge, and then, in the body of

the work, set forth their scheme of speculative theology.

From the time of al-Ash'ari (q.v.) a moderate and partly mediating orthodoxy has succeeded in coming to terms with speculation on theological problems. To the rigid orthodoxy that clung uncompromisingly to the letter of the law al-Ash'ari made the following rejoinders: (1) the Prophet did not condemn those who speculate; (2) the Prophet was cognizant of the speculative problems, and the Qur'an and the Tradition have furnished us with the principles of their solution; (3) his not having dealt with them singly is to be explained on the ground that in his time they had not yet emerged—otherwise he would, of course, have spoken definitely regarding them. The second of these rejoinders furnishes a vindication of the more or less liberal modes of interpretation to which the Qur'an and the Tradition were subjected in the subsequent period. It is impossible here, however, to deal more fully with the process of theological development in Islām; much useful material will be found in the works of M. Horten.

Secondly, the influence of Muslim philosophy was in some measure augmented when at length, more particularly by means of Latin translations, it came to be known in Western Christendom. The best-known translators during the 12th cent. are Johannes Hispanus and Gerard of Cremona; and the work was prosecuted by other students in the century following. Likewise many Jews took part in the process of mediation. The various mutations of Arabic learning were all shared in, either actively or receptively, by the Oriental Jews (cf. PHILOSOPHY [Jewish]); and at length Maimonides (q.v.) 1135-1204, working under the influence of al-Fārābī and Avicenna, made an attempt to harmonize Aristotle with the OT. In this endeavour he availed himself of the device of interpreting the sacred text allegorically and restricting the scope of Aristotle's teaching to this world, while maintaining that everything of a supramundane nature is known only by divine revelation.

Such was also the view of the Christian scholars and theologians of the West. Their knowledge of the world, including a great deal of astrology, alchemy, etc., was borrowed very largely from the Arabs, while at first they gave a ready welcome to everything of a Neo-Platonic cast. The most permanent of the Oriental factors in the West, however, were Avicenna's medical teachings and the Aristotelian tradition from al-Kindi to Averroes. In that tradition the Scholastics found abundant incentives to philosophical discussion, and to it they also owed in part their abandonment of the Neo-Platonic ontology for the purer form of Aristotelianism represented by Albertus Magnus and Thomas Aquinas in the 13th century. It was therefore upon good grounds that Dante placed Avicenna and Averroes among the great figures of classical antiquity in the forecourt of hell.

LITERATURE.—1. GENERAL.—S. Munk, *Mélanges de philosophie juive et arabe*, 2 vols., Paris, 1857-59; T. J. de Boer, *Gesch. der Philosophie im Islām*, Stuttgart, 1901, tr. E. R. Jones, London, 1903; D. B. Macdonald, *The Development of Muslim Theology, Jurisprudence, and Constitutional Theory*, New York, 1903; I. Goldziher, 'Die islamische und die jüdische Philosophie' (in *Kultur der Gegenwart*, i. 6, Leipzig, 1909).

II. SPECIAL.—Of the numerous monographs dealing with the various phases discussed in the paragraphs we can mention only a few:

1. and 2. D. S. Margoliouth, *The Early Development of Mohammedanism* (H.L., 2nd ser., 1913), London, 1914 (cf. lect. vii. 'The Philosophical Supplement'); C. H. Becker, 'Christliche Polemik und islamische Dogmenbildung,' *ZA* xxvi. (1911) 175 ff.; R. A. Nicholson, *The Mystics of Islam*, London, 1914; Carra de Vaux, *Gazali*, Paris, 1902.

3. Cf. M. Horten, *Die philosophischen Systeme der spekulativen Theologen im Islām*, Bonn, 1912, pp. 169 ff., §20 ff.

4. Cf. T. J. de Boer, 'Urāni,' in *ZA* xxvii. (1912) 8 ff.

5. M. Steinschneider, *Die arab. Übersetzungen aus dem Griechischen* (Beilage zum Centralblatt für Bibliothekswesen,

xli.), Leipzig, 1893; T. J. de Boer, 'Zn Kindi und seiner Schule,' *AGPA* xlii. [1899] 153 ff.

6. Cf., besides the writings of the Iḥwān al-Safā (various Arab. edd.; Germ. tr. F. Dieterici, Leipzig, 1865-79), esp. L. Baur, 'Dominicus Gundissalinus de divisione philosophiae,' *Beiträge zur Gesch. der Philosophie des Mittelalters*, iv. 2-3 [1903].

7. M. Asín Palacios, *Abenmasarra y su Escuela; Orígenes de la Filosofía hispano-musulmana*, Madrid, 1914.

8. M. Steinschneider, *Al-Fārabi; des arab. Philosophen Leben und Schriften*, Petrograd, 1869; Carra de Vaux, *Avicenne*, Paris, 1900; L.-G. Lévy, *Maimonide*, do. 1911; E. Renan, *Averroès et l'Averroïsme*, do. 1882; L. Gauthier, *La Théorie d'Ibn Rochd sur les rapports de la religion et de la philosophie*, do. 1909.

9. M. Horten, *Die philosophischen Ansichten von Rāzi und Tusi*, Bonn, 1910, *Die philosophischen Probleme der spekulativen Theologie im Islām*, do. 1912. A considerable amount of material relating to the influence of Muslim philosophy on medieval Christian thought will be found here and there throughout *Beiträge zur Gesch. der Philosophie des Mittelalters*, ed. O. Baumeister and G. von Hertling, Münster, 1891 ff. (still being issued), in which (iii. 2 [1903]) will also be found C. Baumeister, 'Wilelo, ein Philosoph und Naturforscher des XIII Jahrhunderts'—especially important for its excursions on the metaphysics of light and the proofs for the existence of God in Christian and Muslim philosophy.

T. J. DE BOER.

PHILOSOPHY (Roman).—I. Introductory.—The Romans made no claim to originality in philosophy. Here, even more than in other fields, the work of Roman literature was mediation (*Vermittlung*). From this point of view, however, it is impossible to exaggerate the significance of such names as Lucretius, Cicero, and Seneca, not to speak of Epictetus and Marcus Aurelius, who wrote in Greek. It is from Lucretius that the modern world received not only the system of Epicurus and the atomic cosmogony of Democritus, but something of the spirit of the pre-Socratic nature philosophy.

Cicero taught the history of older Greek philosophy and the controversies of the post-Aristotelian schools not only to his contemporaries and the Christian Fathers, but for many centuries after the Renaissance to all modern Europe (see the excellent, though incomplete, history of Cicero's influence in T. Zielinski, *Cicero im Wandel der Jahrhunderte*, Leipzig, 1912, pp. 89 ff., 211 ff.; there is a convenient English résumé of Zielinski's in *English Literature and the Classics*, Oxford, 1911).

Seneca transmits to the modern world the ethical religion of later Greek philosophy, the precepts that would make invincible the heart that conformed them, the half-Christian sentiments of a Stoicism more than half Platonized.

When the Roman tardily turned his attention to Greek literature, it was, Horace tells us (*Epist.* ii. i. 161 ff.), to ask what profit there might be in the Attic stage. Horace does not here mention philosophy, the refuge and religion of his later years (*ib.* i. i. 25).

But the dramas most frequently adapted to the Roman stage, those of Euripides and the New Comedy, were, as Cicero says of his own orations (*de Nat. Deor.* i. 3), stuffed with philosophic sentences (J. S. Reid, *Academica*, London, 1885, p. 9), which conveyed to an intellectually young people the criticism of life, ethics, and religion of a sophisticated and weary civilization (*ib.*, *Introd.* p. 20, note 1; T. Mommsen, *Hist. of Rome*, bk. iii. ch. xiv.; W. Warde Fowler, *The Religious Experience of the Roman People*, London, 1911, pp. 348, 264, 319, *Roman Ideas of Deity*, do. 1914, pp. 30, 101; J. B. Carter, *Religion of Numa*, do. 1900, pp. 64, 122 f.). This completed the disintegration of the Roman religious instinct, which was already sadly confused by the progressive assimilation of the old Roman deities to the Greek mythology.

'Atque haec quidem ejusmodi ex veteris Graeciae fama collecta sunt: quibus intelligis resistendum esse, ne perturbentur religiones' (*Cic. de Nat. Deor.* iii. 23. 60).

Ennius, the Roman Homer (Fowler, *Rel. Exper.*, p. 351), translates Enchiridion (see EHEMERISM),

revelation. Al-Kindī himself had defended prophecy i.e. had sought to show that it was in harmony with reason; at all events, like the Mu'tazilite theologians generally, he regarded the contemplation of revealed truth as a religious duty. Such was also the view of al-Fārābī and Avicenna. Al-Fārābī, in particular, even identifies the philosopher and the prophet. Taking Plato's ideal of the king-philosopher, he furnishes it with various traits of the Stoic sage in such wise that the faithful Muslim, in reading al-Fārābī's works, might well substitute the name of Muhammad himself. Prophecy is here made intelligible by means of the 'aql theory, the doctrine of the *voīs*. As Plato had set forth in the *Republic*, human beings vary greatly in their intellectual endowments, and the majority require a guide; it is only the most gifted of men, in fact, whom the super-human *voīs* (the *intellectus agens* = 'aql fa'āl) enables to receive and assimilate the truth, and so to impart it to others in a form that varies with the stage of their mental development.

We may discern here not only the resemblance but also the difference between the so-called Aristotelians and the other schools of thought in Islām. The mystics, too, had all their theory of grades—a doctrine of the several stages to be successively traversed on the way to God. The stages are variously enumerated—as many as eight, or even more, being given—and variously described by different thinkers; and few men reach the highest. In similar fashion the Iḥwān al-Safā distinguish four grades of initiation within their society, these corresponding to the stages of divine emanation.

The principle of the philosophical theory of stages in the narrower sense, however, is made to rest upon distinctions in mental endowment, and here there is no transition from one stage to another. In al-Fārābī the doctrine still rather follows the psychological scheme of Plato's *Republic*, while in Averroes it leans more to the outward form of the Aristotelian logic. Each distinguishes three grades of intellectual capacity. In al-Fārābī they correspond respectively to (1) sense-perception, (2) ideation, or perception, which operates with remembered (mentally perceived) images, and (3) pure reason, or the capacity for thought. In few men is the last of these (potentially) present in such measure that by union with the active intellect (the spirit of the lunar sphere) it can rise to actual reason. It is on this highest plane that the philosopher and the prophet join hands. The philosopher, however, receives or wins the truth in a pure form, and in that form, too, he utters it for those who are able to comprehend it; while the prophet, receiving it in figures and similitudes, likewise makes use of these in order to accommodate his thought to human conception; in this way, too, he becomes a guide to those who either cannot rise at all or can rise only with difficulty above sensuous perception. We find similar views in the writings of Avicenna and Maimonides, and in the romance of Ibn Tufail.

Averroes deals with this theory of the harmony of philosophy and religion in a special work. He holds that there is no ground for conflict between reason and faith, since the doctrines of religion are simply symbolical expressions of philosophic truth. That our scientific and philosophical modes of expression might likewise be of a symbolical character seems never to have entered the mind of this Aristotelian thinker; he was satisfied that in Aristotle *par excellence* he had found the pure truth. Aristotle, in his *Metaphysics* (1004^a 15 ff.), had said, however, that the Sophists and the dialecticians deal with the same object as the philosophers, although in a different way. The

knowledge professed by the Sophists was at best fictitious, and even the probability of the dialectician—dependent as it is upon generally recognized principles—fell below the philosophical plane of apodictic certainty. Now Averroes finds in these statements the doctrine of the three stages. The sophistic-rhetorical mode of argumentation is successful with the multitude; the procedure of the dialecticians finds favour with the more cultured classes, and especially the theologians (*muta-kallimūn*); finally, the thoroughgoing apodictic method of the philosophers—the heritage of the few—presents the truth in its pure and consummate form. Thus, to take a concrete instance, the simple-minded believer of the lower class will say, 'God is in heaven.' The man of trained dialectic, again, knowing that God must not be represented as a physical entity in space, will read that statement as meaning that God is exalted above all that is earthly and human, and will say, 'God is everywhere, and not merely in heaven.' But, if the omnipresence of God be taken in a physical and spatial sense, that formula too is liable to be apprehended wrongly, and accordingly the philosopher more adequately expresses the purely spiritual nature of God when he asserts that God is nowhere but in Himself; in fact, rather than say that God is in space he might more justly say that space and matter are in Him.

This example suffices to show us that in the view of Averroes the three stages or forms of knowledge have a common basis in one fundamental principle, viz. that there is a God. He believes that the existence of God is a fact to be recognized by every man, God being either figured more or less sensuously or conceived in a purely spiritual way, according to the grade of one's intellectual capacity. To deny the existence of God is forbidden, and such denial should be punished. But the blurring of intellectual distinctions is also an evil thing: the uneducated must not venture to engage in allegorical interpretation, nor shall the philosopher seek to popularize his higher intelligence of things. Hence Averroes censures al-Ghazālī for having diffused philosophy too widely through his popular writings. The masses should believe in conformity with the text of the Book; the theologians must not read more into the Book than is compatible with the Arabic language and diction; absolute liberty of thought is the exclusive prerogative of philosophic genius. Thus the Peripatetic movement of Muslim philosophy ends in what may be called an aristocratic rationalism.

9. The influence of Muslim philosophy.—The development of philosophy in Islām was of importance, in the first instance, to the Muslim peoples themselves. Its influence made itself felt in all branches of science and general culture, though chiefly, no doubt, in the study of theology—a study which still maintains an outstanding place in Islām. In the theological sphere we can trace various currents of thought. Likewise many Jews took part in the process of mediation. The various mutations of Arabio learning were all shared in, either actively or receptively, by the Oriental Jews (cf. PHILOSOPHY [Jewish]); and at length Maimonides (q.v.) 1135-1204, working under the influence of al-Fārābī and Avicenna, made an attempt to harmonize Aristotle with the OT. In this endeavour he availed himself of the device of interpreting the sacred text allegorically and restricting the scope of Aristotle's teaching to this world, while maintaining that everything of a supramundane nature is known only by divine revelation.

Such was also the view of the Christian scholars and theologians of the West. Their knowledge of the world, including a great deal of astrology, alchemy, etc., was borrowed very largely from the Arabs, while at first they gave a ready welcome to everything of a Neo-Platonic cast. The most permanent of the Oriental factors in the West, however, were Avicenna's medical teachings and the Aristotelian tradition from al-Kindi to Averroes. In that tradition the Scholastics found abundant incentives to philosophical discussion, and to it they also owed in part their abandonment of the Neo-Platonic ontology for the purer form of Aristotelianism represented by Albertus Magnus and Thomas Aquinas in the 13th century. It was therefore upon good grounds that Dante placed Avicenna and Averroes among the great figures of classical antiquity in the forecourt of hell.

LITERATURE.—I. GENERAL.—S. Munk, *Mélanges de philosophie juive et arabe*, 2 vols., Paris, 1857-59; T. J. de Boer, *Gesch. der Philosophie im Islam*, Stuttgart, 1901, tr. E. R. Jones, London, 1903; D. B. Macdonald, *The Development of Muslim Theology, Jurisprudence, and Constitutional Theory*, New York, 1903; I. Goldziher, 'Die islamische und die jüdische Philosophie' (in *Kultur der Gegenwart*, I. 5, Leipzig, 1909).

II. SPECIAL.—Of the numerous monographs dealing with the various phases discussed in the paragraphs we can mention only a few:

1. and 2. D. S. Margoliouth, *The Early Development of Mohammedanism* (HL, 2nd ser., 1913), London, 1914 (cf. lect. vii. 'The Philosophical Supplement'); C. H. Becker, 'Christliche Polemik und islamische Dogmenbildung,' ZA xxvi. [1911] 175 ff.; R. A. Nicholson, *The Mystics of Islam*, London, 1914; Carra de Vaux, *Gazeli*, Paris, 1902.

3. Cf. M. Horten, *Die philosophischen Systeme der spekulativen Theologen im Islam*, Bonn, 1912, pp. 189 ff., 320 ff.

4. Cf. T. J. de Boer, 'Urani,' in ZA xxvii. [1912] 8 ff.

5. M. Steinschneider, *Die arab. Übersetzungen aus dem Griechischen* (Beilage zum Centralblatt für Bibliothekswesen,

xli.), Leipzig, 1893; T. J. de Boer, 'Zu Kindi und seiner Schule,' AGPA xlii. [1899] 153 ff.

6. Cf., besides the writings of the Iḥwān al-Safā (various Arab. edd.; Germ. tr. F. Dieterici, Leipzig, 1865-79), esp. L. Baur, 'Dominicus Gundissalinus de divisione philosophiae,' *Beiträge zur Gesch. der Philosophie des Mittelalters*, iv. 2-3 [1903].

7. M. Asín Palacios, *Abenmararra y su Escuela; Orígenes de la Filosofía hispano-musulmana*, Madrid, 1914.

8. M. Steinschneider, *Al-Fārābī; des arab. Philosophen Leben und Schriften*, Petrograd, 1869; Carra de Vaux, *Avicenne*, Paris, 1900; L.-G. Lévy, *Maimonide*, do. 1911; E. Renan, *Averroès et l'Averroïsme*, do. 1882; L. Gauthier, *La Théorie d'Ibn Rochd sur les rapports de la religion et de la philosophie*, do. 1909.

9. M. Horten, *Die philosophischen Ansichten von Rāzi und Tusi*, Bonn, 1910, *Die philosophischen Probleme der spekulativen Theologie im Islam*, do. 1912. A considerable amount of material relating to the influence of Muslim philosophy on mediæval Christian thought will be found here and there throughout *Beiträge zur Gesch. der Philosophie des Mittelalters*, ed. O. Baumeister and G. von Hertling, Münster, 1891 ff. (still being issued), in which (iii. 2 [1903]) will also be found C. Baumeister, 'Witelo, ein Philosoph und Naturforscher des XIII. Jahrhunderts'—especially important for its excursions on the metaphysics of light and the proofs for the existence of God in Christian and Muslim philosophy. T. J. DE BOER.

PHILOSOPHY (Roman).—I. Introductory.—

The Romans made no claim to originality in philosophy. Here, even more than in other fields, the work of Roman literature was mediation (*Vermittlung*). From this point of view, however, it is impossible to exaggerate the significance of such names as Lucretius, Cicero, and Seneca, not to speak of Epictetus and Marcus Anrelius, who wrote in Greek. It is from Lucretius that the modern world received not only the system of Epicurus and the atomic cosmogony of Democritus, but something of the spirit of the pre-Socratic nature philosophy.

Cicero taught the history of older Greek philosophy and the controversies of the post-Aristotelian schools not only to his contemporaries and the Christian Fathers, but for many centuries after the Renaissance to all modern Europe (see the excellent, though incomplete, history of Cicero's influence in T. Zielinski, *Cicero im Wandel der Jahrhunderte*, Leipzig, 1912, pp. 89 ff., 211 ff.; there is a convenient English résumé of Zielinski's in *English Literature and the Classics*, Oxford, 1911).

Seneca transmits to the modern world the ethical religion of later Greek philosophy, the precepts that would make invincible the heart that condescended them, the half-Christian sentiments of a Stoicism more than half Platonized.

When the Roman tardily turned his attention to Greek literature, it was, Horace tells us (*Epist.* II. i. 161 ff.), to ask what profit there might be in the Attic stage. Horace does not here mention philosophy, the refuge and religion of his later years (*ib.* I. i. 25).

But the dramas most frequently adapted to the Roman stage, those of Euripides and the New Comedy, were, as Cicero says of his own orations (*de Nat. Deor.* i. 3), stuffed with philosophic sentences (J. S. Reid, *Academica*, London, 1885, p. 9), which conveyed to an intellectually young people the criticism of life, ethics, and religion of a sophisticated and weary civilization (*ib.*, Introd. p. 20, note 1; T. Mommsen, *Hist. of Rome*, bk. iii. ch. xiv.; W. Warde Fowler, *The Religious Experience of the Roman People*, London, 1911, pp. 348, 264, 319, *Roman Ideas of Deity*, do. 1914, pp. 30, 101; J. B. Carter, *Religion of Numa*, do. 1906, pp. 64, 122 f.). This completed the disintegration of the Roman religious instinct, which was already sadly confused by the progressive assimilation of the old Roman deities to the Greek mythology.

* Atque haec quidem ejusmodi ex veteri Graeciae fama collecta sunt: quibus Intelligis resistendum esse, ne perturbentur religiones' (*Cic. de Nat. Deor.* iii. 23. 60).

Ennius, the Roman Homer (Fowler, *Rel. Exper.*, p. 351), translates EnheMERUS (see EUHEMERISM),

adapts with Roman illustrations Euripides' diatribes against priestcraft and augury (Cic. *de Div.* i. 58), and sums up for the populace in three racy lines the Epicurean doctrine that the gods are careless and the traitorous doubts of the moral government of the world long since formulated by Thrasyllus (H. Diels, *Die Fragmente der Vorsokratiker*³, Berlin, 1912, frag. 8) and eloquently repudiated in the theodicy of Plato (*Laws*, 905 B; cf. Cic. *de Nat. Deor.* iii. 32, *de Div.* i. 58):

'Gods there are, I've always said it, and that will always be my view:

But they little reck, I reckon, of what we race of mortals do,
For if they did the good would flourish, the bad would
perish, which is not true.'

Many such quasi-philosophic and critical utterances occur in Plautus (Fowler, *Rel. Exper.*, p. 352; F. Leo, *Plautinische Forschungen*², Berlin, 1912, pp. 129-131; Ranke, *Periplecomenus*, Marburg Dissertation, 1900) and in the fragments of early Latin tragedy (Reid, *Introd.* p. 20, n. 1). The beginnings of more direct study of Greek philosophy are known mainly from the allusions in Cicero (*Tusc.* iv. 6, *Acad.* i. 5), Seneca (*Ep.* c.), Quintilian (*Inst. Orat.* x. i. 123), and Aulus Gellius (vi. [vii.] 14, xv. 11).

The famous embassy to Rome in 155 of the three representative Greek philosophers—Carneades the Academic, Diogenes the Stoic, and Critolaus the Peripatetic—is the obligatory introduction to the history of Roman philosophy, and has often been brilliantly, if somewhat conjecturally, described (see C. Martha, *Etudes morales sur l'antiquité*, Paris, 1883, p. 61 f., 'Le Philosophe Carnéade à Rome'; A. W. Benn, *The Greek Philosophers*², London, 1914, ch. xii. sect. i.).

Cicero himself can name no Roman student of Greek philosophy prior to Lælius and Scipio (*Tusc.* iv. 5), though he sometimes alludes to Pythagoreanism in Italy (*ib.* iv. 1 f.).

The culture of the 'Scipionic circle,' and its possible indebtedness to Polybius and the Achæan exiles, we must dismiss with a reference (Mommesen, bk. iv. ch. xii.; P. Wendland, *Die hellenistisch-römische Kultur*, Tübingen, 1912, pp. 34, 58; J. B. Bury, *The Ancient Greek Historians*, London, 1909, p. 191; Fowler, *Rel. Exper.*, p. 363 f.; Cic. *de Fin.* ii. 8; Polyb. xxiii. 10). Elsewhere Cicero admits that sceptical readers have doubted the erudition in Greek philosophy displayed by the interlocutors in his dialogues, and defends himself lamely (Reid, on *Acad. Prior.* ii. 2). It is not likely that any Roman, except Cicero himself, and possibly the learned Varro or Brutus, could have delivered the systematic expositions which Cicero puts into the mouths of his personages. But the general truth of Cicero's idealized representation of this Roman culture remains.

In the 1st cent. B.C. the educated Roman nobility did often maintain in their households Greek scholars who might be philosophers (see A. Hülsscher, in Fleckeisen's *Jahrbücher für class. Philol.*, suppl. xviii. [1891-92] 353-444; Cic. *Brutus*, 90, 97, *de Or.* i. 22, *de Fin.* iv. 26, v. 3, 25). In their youth, or later en route to Asia, they heard at Athens (*de Or.* i. 18, *de Fin.* v. 1) or Rhodes (*de Or.* i. 17) lectures from which they acquired, if not expert knowledge, a sufficient conception of the attitude towards life and experience represented by the three chief post-Aristotelian schools—the Stoics, the Epicureans, and the Academic sceptics. They knew the names and personalities of the leading representatives of these schools and took an amused interest in their controversies (*Acad. Prior.* ii. iv. 11 f., *de Or.* i. 11, 18 f., *de Leg.* i. 20). Their villas sometimes contained libraries in which a scholar could find almost any treatise that he happened to need (*de Fin.* iii.

2 f., *Topica*, i., *ad Att.* iv. 10). They sometimes professed personal allegiance to the Epicurean, the Academic, the Stoic, or the Peripatetic school as the case might be (*de Nat. Deor.* i. 6). This often meant little more than the assumption of a playful partisanship (*de Fin.* v. 3, 26, *Acad. Post.* i. iv. 14, *de Leg.* i. vii. 21). It was sometimes, as in the case of Cicero's friend, the Epicurean Atticus, the expression of a temperament and an attitude (G. Boissier, *Cicéron et ses amis*, Paris, 1883, p. 137).

In a Cato and in a Brutus it was thought to be a religion and a rule of life:

'Neque disputandi causa, ut magna pars, sed ita vivendi' (Cic. *Murena*, 30, of Cato); 'Scias eum sentire, quae dicit' (Quintil. x. i. 123, of Brutus).

And it is customary in this connexion to affirm a profound affinity between the Stoic philosophy and the old Roman virtue (Fowler, *Rel. Exper.*, p. 362; E. V. Arnold, *Roman Stoicism*, Cambridge, 1911, ch. v., is an excellent history of the 'Stoic sect in Rome'; per contra, F. W. Bussell, *Marcus Aurelius and the Later Stoics*, Edinburgh, 1910, p. 185, says: 'The Stoic school nearly spoilt the nobles of the Romans').

Cicero's complacent portrayal of this philosophic culture of the Roman nobility suggests Burke's and Matthew Arnold's idealization of the similar culture of the English nobility of the 18th century. Whatever the precise historical facts, it is in some such setting and against some such historical background as this that we must view the two great extant monuments of that culture—Lucretius's poem on the nature of things and Cicero's philosophical dialogues. In asserting his own essential priority, Cicero laments that the earliest Roman expositions of Greek philosophy were the cheap and superficial popularizations of Epicureanism by a certain Amalinius and his followers (*Tusc.* iv. 3, 6). This recalls the deprecation by old-fashioned college presidents of the diffusion of cheap Voltairism in America by Ethan Allen's *Reason the only Oracle of Man* (New York, 1784), and Paine's *Age of Reason* (London, 1795). But what chiefly offends Cicero is not the irreligion of popular Epicureanism, but its crudity. Epicurus and, with rare exceptions, the Epicureans were hostile to the encyclopedic liberal culture that was Cicero's life-long religion (*de Fin.* i. 5, 7, 21, iii. 12, *Acad.* i. 2, *de Nat. Deor.* i. 22, 26, ii. 18 f., 29). Their writings lack the literary charm, the mastery of dialectic and rhetoric, the conception of man as a social and political animal, the wealth of historic illustration, that attracted him in the disciples of Plato and the 'great and copious' Peripatetics (*de Leg.* iii. 6, *Orator*, 3, *Brutus*, 31, *de Fin.* ii. 23 f., iv. 3, 9, v. 3). The Stoic system and terminology as a subject of study command the respect even of their opponents (*de Fin.* iii. 1). But any educated man can get up the entire Epicurean philosophy in a few days (*ib.* i. 5, 8: 'perdiscre ludus').

So Macanlay marvels that the 'silliest and meanest of all systems of moral and natural philosophy' inspired in Lucretius the finest poem in the Latin language. Cicero does not raise this question, or indeed mention Lucretius at all, except once in the much discussed letter to his brother Quintus. But the coincidences of diction in the exposition of the Epicurean philosophy are too numerous and precise to be due solely to the use of common sources. The parallels collected by Martha (*Mélanges de littérature ancienne*, Paris, 1896, pp. 157-177) are only a small proportion of those that an attentive reader will discover. For Lucretius as a whole see art. LUCRETIVUS and the well-known book of J. Masson, *Lucretius, Epicurean and Poet* (2 vols., London, 1907-09). We can only glance at

a few of the traits that differentiate him from Epicurus. He is a true poet and transmits to the modern world the spirit not of Epicurus on *Nature*, but of the pre-Socratics and Plato's *Timæus*. He 'denied divinely the divine'; and Aphrodite, Phaethon, the fauns, and the cult of the great Mother of the Gods are more real and vivid in his negations than in any hymn of their worshippers. His atheism speaks the language of the deity answering Job out of the whirlwind; and the expression of his honest doubt always preserves that high seriousness the lack of which makes the petulant boutades of Euripides so disconcerting to the lovers of Æschylus and Sophocles, so unedifying to the disciples of Plato. In him Epicurus's placid repudiation of superstition is transformed into a passionate conviction that historical or institutional religion has been a curse to humanity. This distinction, often overlooked, has never been explained. It may be conjecturally attributed to something in the poet's own temperament or experience, or perhaps to the religious experience of the Roman people during and after the Hannibalic wars (Carter, p. 144; cf. G. Murray, *Four Stages of Greek Religion*, New York, 1912, p. 53).

We may perhaps find further confirmation of his sincerity of feeling in the fact that Lucretius never redeemed his promise (v. 155) to lead his

Memmius in a train
Of flowery clauses onward to the proof
That gods there are, and deathless

(Tennyson, *Lucretius*).

The positive theology of the Epicureans was certainly chimerical, and their opponents plausibly pronounced it insincere (Zeller, *Die Philosophie der Griechen*, III. 1.², Berlin, 1880, p. 399). The speakers in Cicero refuse to take seriously the *faintant* gods who have a *quasi-corpus* and a *quasi-sanguis* (*de Nat. Deor.* i. 26), and take refuge from the cosmic turbulence in 'the lucid interspace of world and world' (*de Div.* ii. 17), where they entertain their infinite leisure with conversation in Greek.

The populace, the false prophets, the mystic or religious philosophers, and the intelligent essayists of later antiquity were agreed in regarding Epicureanism as virtual atheism (Posidonius, in *Cic. de Nat. Deor.* i. 44; cf. iii. 1).

Lucretius has little to say—perhaps there was not much to be said—of the practical aspects of the Epicurean ethics. Satire of Roman luxury and ennui, the praises of sober, sweet, simple Epicurean life, depreciation of the mad race of ambition and the pursuit of wealth, the gospel of renunciation and acquiescence in the law of death—death 'that is more peaceful than any sleep'—that is about all.

2. Cicero.—Cicero was obviously not a professional scholar. But his knowledge of Greek philosophy was extensive, if not always critical. Greek was for him a living language, and he had heard lectures on Greek philosophy, read books about it, and debated the points of controversy between later schools throughout his life (see Reid, *Introd.* pp. 1-9; J. B. Mayor, *de Natura Deorum*, Cambridge, 1880-85, i. p. xxxv, and, for an unfavourable view of Cicero's work, iii. p. xiv). The substance of his chief philosophic treatises he could at any time have written out of his head (*de Fin.* i. 5; not, of course, the 'History of Philosophy' in *de Nat. Deor.* i. 10 ff., for which he had no Diels or Zeller to copy). In the actual composition he freely adapted, translated, paraphrased, or epitomized whatever suited his purpose in the writings of Panætius, Posidonius, Clitomachus, Diogenes of Babylon, Antipater of Tyre, Antiochus, and Philo. Like many of his modern censors, he often took his quotations at

second hand. But it is quite idle to deny that he read Plato, Aristotle, Theophrastus, Crantor, Dicaearchus, and others of the older philosophers, and could consult and quote them independently when he chose. He sometimes speaks of himself as a translator and sometimes protests that he does not follow his authorities slavishly. The determination of his precise procedure in any given case is a problem that philology can neither solve nor renounce (see the Introductions to Reid, *Academica*, and Mayor, *de Nat. Deor.*; R. Hirzel, *Untersuchungen zur Cicero's philosoph. Schriften*, 3 vols., Leipzig, 1877-83; and the more recent literature in Hans Uri, *Cicero und die epikur. Phil.*, Munich, 1914). He achieved his design of illuminating by Latin letters every topic of (recent) Greek philosophy (*de Div.* ii. 2, *Acad. Post.* i. 1. 3). And, in the loss of the Greek 'sources,' this hastily composed philosophical library remains one of the world's chief storehouses of ideas and suggestions and of the great commonplaces of ethics and natural religion. It is no impairment of the value of his writings or disparagement of his intelligence that he did not invent a system of his own, or swear superstitious adherence to the words of any one of his teachers (Boissier, p. 340). The philosophy of the post-Aristotelian schools centred in two or three large topics of controversy still under debate—the criterion of truth, the absoluteness and autonomy of the moral law, the identification of 'virtue' with happiness, and the reality of natural religion and its accommodation to institutional and historic religion. Towards all these questions Cicero's attitude was that of not a few of the best minds of the 18th and 19th centuries. The Stoics maintained that certain states of consciousness are infallible witnesses to their own truth. Cicero held with the New Academy that probability is the limit of our knowledge and the guide of life (*Tusc.* i. 9, v. 11, *Acad.*, *passim*; *de Offic.* iii. 4 *in fine*). This is still a perfectly rational position in relation to all absolute systems, and was in Cicero's as in Plato's day an entirely reasonable view of physical science also (*Acad. Prior.* ii. 39; Plato, *Tim.* 29 B, C). The Stoics insisted that nothing is good except the virtuous will, and that virtue alone ensures not only a happy, but also the happiest possible, life. Cicero admired this fine moral gesture and the ingenious elaboration of terminology that justified it (*de Fin.* iii. 22). He would like to believe it:

'Ego vero volo in virtute vim esse quam maximam' (*ib.* v. 25).

He is not sure that he can find any valid sanction for the moral life without it. But in other moods he doubts its conformity to common sense or its confirmation by experience, and sees in it only the pedantic and paradoxical elaboration of truths better stated by Plato (*de Fin.* iv. 11 f.). Virtue on the rack is still happiness perhaps. But why say the highest possible happiness? 'Would it not be a little happier without the pain? It is our modern problem of the sanction. Unless you go the whole length of paradox, how find a logical sanction for the extreme case of entire self-sacrifice? Cicero's waverings and self-contradictions on this point find their precise parallels in the literature of the modern utilitarian debate from Mill and Grote to Leslie Stephen, and in the associated discussions of the main thesis of Plato's *Republic*. He prefers the Stoic position to the Epicurean of course, and even to the laxity of Theophrastus on the happy life (*ib.* v. 5), and perhaps to the Aristotelian over-emphasis of external 'goods' (*ib.* v. 25). But he does not prefer it to the finer tact of Plato's expression of the same ideas (*Acad.* iv. [*Lucullus*] 44, *de Fin.* iv. 24, *Tusc.* v. 12). And he fears that it may

prove to be only a magnificent rhetorical defiance to experience and human nature :

'Dicuntur ista, Cato, magnifice' (*de Fin.* iii. 3), 'repugnante natura' (*ib.* iv. 20).

He had probably often debated the question with Brutus and Cato, and a large part of bk. iv. of the *de Finibus* reads more like the reflexion of these discussions than the copy of a Greek treatise, for which it is generally taken. The alleged contradiction between bk. v. of the *Tusculans* and bk. iv. of the *de Finibus* practically disappears on a careful consideration of the respective contexts (*Tusc.* v. 11; cf. *de Leg.* i. 20: 'Probe quidem sentis, si re ac non verbis dissident,' *de Offic.* iii. 7: 'Mihi utrumvis satis est: et quum hoc tum illud probabilius videtur').

Space fails for the study of the *de Natura Deorum* and the *de Divinatione* as storehouses of material for the history of the post-Aristotelian philosophies of religion. The 'noble eclectic deism' which Cicero transmitted to the Renaissance and the 17th and 18th centuries is summed up in a concluding paragraph of the *de Divinatione*, which says in effect :

'We ought to conserve religion without encouraging superstition. The wise man will respect and maintain the religious rites and institutions of his ancestors and he will keep his personal faith in a supreme and eternal nature to be revered and admired by man as the author of the beauty and order of the world' (*ib.* 72).

Those who read between the lines could find mingled with this edifying doctrine many suggestions of the statesman's or the policeman's view of the utility of religion (*de Rep.* and *de Leg.*, *passim*, *de Leg.* i. 7, ii. 7, *de Nat. Deor.* i. 27; cf. A. Collins, *ap.* Zielinski, *Cicero im Wandel*, p. 223; *de Nat. Deor.* ii. and iii.) and hints of economies and reserves (*de Nat. Deor.* i. 22, *de Div.* ii. 12, 'sed soli sumus,' *de Leg.* i. 13) and of accommodation (the word, *de Nat. Deor.* i. 15 [41]) legitimate or illegitimate to popular and institutional religion (*ib.* i. 28, iii. 15 f., 23; Warde Fowler, *Roman Ideas of Deity*, p. 54). The Platonizing Dream of Scipio and bk. v. of the *Tusculans* have been the chief channels by which the Platonic hope of immortality was transmitted to the Middle Age and the modern literature of natural religion. The *de Finibus* deals with the theory of ethics (see art. SUMMUM BONUM). The *Tusculans* are, like Seneca's *Epistles*, the practical application of the religion of Greek philosophy (*Tusc.* v. 2: 'O vitae philosophia dux,' etc.; cf. Seneca, *Ep.* 90, both conjectured to be derived from Posidonius's *Protrepticus*) to conduct and spiritual guidance. They exhibit the philosopher as physician of the soul (*Tusc.* i. 49, iii. 1), healing the perturbations, diseases, or passions of the mind, and combating the fear of death and pain and other 'accidental evils,' or maintaining the Stoic thesis of the all-sufficiency of virtue for the happy life. The *de Officiis*, based in the main probably on the *περί τοῦ καθήκοντος* of Panætius, is a practical treatise on the ethics not of the ideal sage but of fallible men. It became in turn the model of St. Ambrose's Christian ethics, and, until the rise of the 19th cent. 'science' of evolutionary ethics, it remained for such readers as Locke, Hume, Voltaire, and Frederick the Great almost the definitive treatment of the subject. The wide-spread opinion that Cicero in the *de Officiis* seriously compromises the ethical ideal is a vague impression left in the minds of hasty readers by his discussion of the Stoic casuistry of *caveat emptor* and similar questions (*de Offic.* iii. 12 ff.). In nearly every case Cicero himself rejects the casuistic compromise, the 'capitulations of conscience' which even John Stuart Mill attributes to him (*de Offic.* iii. 13 *in fine*; Mill, *Three Essays on Religion*, London,

1885, p. 107). Apart from a few possibly prejudiced political and historical judgments, the derogations of the *de Officiis* from absolute, ideal, Platonic, or Christian ethics are rare and doubtful. On the authority of Panætius, Cicero justifies the advocate in maintaining a merely plausible case (*ib.* 14). He twice permits himself the non-Platonic expression that a good man will harm no one 'nisi lacessitus invidia' (*i.* 7, iii. 19), for which Lactantius and Ambrose rebuke him. He once incautiously generalizes a sound principle of legal equity in the unqualified statement that promises need not be kept 'si plura tibi noceant, quam illi prosint, cum promiseris' (*i.* 10). That is about all. The tripartite scheme of the *de Officiis* distinguishes the topics of the right (*honestum*), the useful (*utile*), and the (apparent) conflict of the two. The admission of a real conflict, Cicero insists, would destroy ethics altogether, which must rest on the Socratic-Platonic postulate of their identity (*ib.* 3, iii. 3). The elaboration, for which Cicero himself apologizes (*ib.* 6), of Chesterfieldian prudential morality in bk. ii. is natural in a father addressing his son and not inappropriate to the literary kind which is allied to the 'paraenetic discourse' (see art. ISOCRATES). Transcendental and ascetic ethics are treated in the *Tusculans*, which are essentially akin to the literature of 'consolations.' These and similar distinctions, which cannot be developed here, are indispensable to the discriminating criticism of the *de Finibus*, the *de Officiis*, and the *Tusculans*. The *honestum* of *de Officiis*, i. divides into the four Platonic cardinal virtues. Emphasis is laid on their derivation from 'nature,' the primary instincts, and the social nature of man. The *ius gentium* is sometimes equated with nature (*ib.* 5: 'natura, id est, iure gentium'). Beneficence as a social virtue is placed side by side with justice. And there are many other divergences from Plato and Aristotle due to the elaboration of ethical terminology in the discussions of the schools, the accumulation of political and social experience, and the imperfect equivalence of Greek and Latin ethical terms. Much industry that might have cleared up all these complexities has been wasted on the conjectural philology of Cicero's lost sources.

Cicero boasts that his philosophical treatises had inspired many emulators of his example. Two only require mention here: Brutus, with whom he evidently had often debated the Stoic ethics (Boissier, p. 320), and Varro, for whose vast erudition he felt a certain awe. Varro (*Zeller*, iii. i.² 669) apparently accepted the eclectic compromise of Antiochus between the New Academy and Stoicism. Whatever his private creed, his chief literary interest in Greek philosophy was its service to his interpretation of Roman religion and antiquity. We know him mainly through the Christian Fathers, who sought in him illustrations of the absurdity of the pagan religion.

3. Roman philosophy after Cicero. — Roman philosophy acquired few if any new ideas after Cicero. An exhaustive monograph would study the not inconsiderable traces of Epicureanism and Stoicism in the poets Horace, Vergil, Lucan, Juvenal, and Persius (C. Martha, *Les Moralistes sous l'empire romain*, Paris, 1865, p. 100 ff., 'Perse'; Arnold, *Roman Stoicism*, ch. xvi, merely glances at the topic), the relation of the 'science' of Seneca and Pliny to their Greek sources, and the Latin reflexion of incipient Neo-Platonism in Apuleius. But, broadly speaking, post-Ciceronian philosophy merely amplified that conception of the philosopher as physician of the soul and director of conscience which we have already met in Cicero's *Tusculans*. This, with some admixture of asceticism and Pythagoreanism, was the philosophy of the

school of the Sextii to which Seneca alludes with grateful enthusiasm. And this is the chief function and content of philosophy for Seneca himself (Zeller, III. i.³ 696 ff.).

This ethical culture religion of moral philosophy in the literature of the Græco-Roman empire is of enormous human, though of slight scientific, interest. There are few shades of modern moral sentiment which the ethical culture of to-day cannot find already eloquently expressed in Seneca, Plutarch, Epictetus, Musonius, Dio Chrysostomus, Maximus of Tyre, or Marcus Aurelius—to mention only the best-known names. And under the combined influence of Platonism and cosmopolitan humanitarianism this pagan preaching sometimes approximates so closely to distinctively Christian sentiment as to provoke perpetual renewals of the hypothesis of its direct indebtedness to Christianity (Zeller, III. i.³ 714, Wendland, p. 95, with bibliography; Boissier, *La Religion romaine*, Paris, 1892, vol. ii. ch. v., 'Sénèque et St. Paul'; C. R. Haines, *Marcus Aurelius*, in Loeb Classical Library, 1916, p. 383). It would be futile to try to summarize this literature in a paragraph. It is better to refer the reader to the articles on the authors named and to the many readable and accessible studies of the subjects (W. E. H. Lecky, *Hist. of European Morals*, London, 1890, ch. ii.; Boissier and Martha, *opp. cit.*; L. Friedländer, *Sittengeschichte Roms*, Leipzig, 1910, III. iv., 'Die religiösen Zustände', v., 'Die Philosophie als Erzieherin zur Sittlichkeit'; E. Renan, *Marc-Aurèle*, Paris, 1882, ch. iii.; W. Pater, *Marius the Epicurean*, London, 1888, ch. xv.; T. R. Glover, *The Conflict of Religions in the early Roman Empire*, do. 1909, chs. ii. f., vii.; R. D. Hicks, *Stoic and Epicurean*, do. 1910, ch. iv.; Arnold, *Roman Stoicism*, chs. v., xiii.-xvi.; J. Oakesmith, *The Religion of Plutarch*, do. 1902; O. Gréard, *De la Morale de Plutarque*, Paris, 1874). The theology associated with this gospel of Greek moral philosophy may be described indifferently as natural religion or 'morality touched with emotion.' Matthew Arnold's sharp distinction between the two meant little to Cicero, Plutarch, Seneca, and Marcus Aurelius, who, though, like Plato, they would affirm the autonomy of ethics, were, like Plato, willing to supplement it with the sanctions of natural religion. Discriminating scholarship finds distinctions in the extent and character of their accommodation to popular religion, but no such contrasts as that which Glover discovers between the essential rationalism of Seneca and the superstition, as he deems it, of Plutarch:

'The ancient world rejected Seneca, as we have seen, and chose Plutarch' (*Conflict of Religions*, p. 111)—an exaggerated, not to say a false, antithesis.

Nor ought we to catalogue the entire ethical and religious literature of these centuries under the indiscriminating rubrics, 'orientalism,' 'recrudescence of superstition,' and 'failure of nerve.' There was doubtless a drift towards superstition in the populace, in third-rate writers, and finally in the later Greek literature of Neo-Platonism. The decline of ancient science and scholarship left these tendencies without a check:

'If the old civilization had not been on the wane, if a supply of instructed, critical, cool, indifferent minds had continued,' etc. (M. Arnold, preface to *God and the Bible*, London, 1888, p. xvi, after Renan).

And the accommodations of the Stoics and the ecqueries of the Platonists with mysticism may be thought to have encouraged them. But in the better writers, down to and including Pletinus, neither the accommodations nor the half-serious literary mysticism went farther in concession to the 'concrete supernatural' than many of the most respectable and respected writers of the last fifty

years have done.¹ It is only from the avowed standpoint of a Velleius (Cic. *de Nat. Deor.* i. 8: 'fidenter . . . ut solent isti'), a Lincian, or a Haeckel that modern criticism is justified in deprecating the supernaturalism, the superstition, the failure of nerve of the Græco-Roman ethical teachers of the first two centuries. The later Greek literature of Neo-Platonism is an independent question and does not concern us here.

LITERATURE.—See the works mentioned throughout.

PAUL SHOREY.

PHENICIANS.—Phœnicia lay at the eastern end of the Mediterranean and extended from the Nahr-el-Kabir to Mt. Carmel. It included the maritime plain and the adjacent portions of Jebel Nnsariyeh, Mt. Lebanon, and the highlands of Galilee. Its chief cities in the order from north to south were Arvad (Arados), Simir (Simyra), Arka, Gebal (Byblus), Birutu (Berytus, Beirut), Sidon, Sarephath (Sarepta), Šur (Tyre), Kana, Akzib, and Mahalliba. The name is derived from the Gr. *φοινίς*, which means first 'purple' and then the land that produces purple. It is found as early as Homer (*Il.* xxiii. 743 f., *Od.* xiii. 272, xiv. 288 ff., xv. 415 ff.). The natives named themselves Tyrians, Gebalites, etc., after their individual towns, which were originally independent; or called themselves Sidonians from Sidon, the principal city. Thus Hiram, king of Tyre, calls himself 'king of the Sidonians' (*CIS* i. 5), and on coins of the Greek period Tyre is called 'mother of the Sidonians' (E. Babelon, *Cat. des monnaies grecques: les Rois de Syrie*, etc., Paris, 1890, i. 86). This is the usual name for the Phœnicians in the OT (*Jg* 10¹² 187, 1 K 11¹.²³ 16²¹, 2 K 23¹²) and also in Homer (*Il.* vi. 290, *Od.* iv. 618, xiii. 285, xv. 118).

The Phœnicians also called themselves by the broader racial name of Canaanites, as we know from coins of Laodicea (Babelon, i. 84, 162, 172). We have also the testimony of Herodian and of Stephen of Byzantium that the ancient name of Phœnicia was Χρᾶ, which corresponds to a shorter form *𐤇𐤏* (Kinabhi in the Amarna letters) over against *𐤏𐤋* (Kinabhi in the Amarna letters). Philo Byblius (in Eusebius, *Præp. Evang.* i. 10, ed. E. H. Gifford, Oxford, 1903) names as the ancestor of the Phœnicians Chna, who had his name changed to Phœnix (39d); and in I. Bekker, *Anecdota Græca*, Berlin, 1814-21, iii. 1181, Chnas is the father of Phœnix, whence the Phœnicians are called Oclna (=𐤏𐤋). Augustine states that the Phœnician colonists in N. Africa called themselves Canaanites (*Exp. Epist. Rom.* 13). The OT frequently calls the Phœnicians Canaanites (*Gn* 10¹⁵.¹⁹, *Nn* 13²⁰, *Jos* 5¹ 13², *Jg* 1³¹, 2 S 24⁶, *Is* 23¹, *Ob* 2⁰, *Zeph* 2⁵; cf. *Mt* 15²², *Mk* 7²⁶). In the OT Canaan (*Zeph* 1¹, *Ezk* 16²⁹ 17⁴) or Canaanite (*Zec* 14²¹, *Job* 40³⁰, *Pr* 31²⁴) is the standing term for 'merchant,' but in the early days trade was wholly in the hands of the Phœnicians.

With this testimony in regard to the racial affinities of the Phœnicians their language agrees. It is identical with the proper names and Canaanite glosses in the Amarna letters (see J. A. Knudtzen, *Die El-Amarna-Tafeln*, Leipzig, 1907-15, ii. 1545 ff.), and differs only as a dialect from Meabite and Hebrew, which *Is* 19¹⁸ calls 'the language of Canaan.' In civilization and in religion also the Phœnicians and the Canaanites were one people. Accordingly, we must regard the Phœnicians as a branch of the Semitic race which under the names

¹ This caveat is intended not as a criticism of the indispensable book of Franz Cumont (*The Oriental Religions in Roman Paganism*, Chicago, 1911) or the brilliant sketch in Murray (ch. iv., 'The Failure of Nerve'), but in deprecation of the impression which the present generation of readers will receive from the exclusive emphasis of this aspect of the religious life and thought of the Græco-Roman empire.

of Amorites and Canaanites settled in Palestine about 2500 B.C.

A. PERIOD BEFORE THE HEBREW CONQUEST (2500-1200 B.C.).—During this period the Phenicians were undistinguishable from the other Canaanites. Accordingly, the account of the religion of the Canaanites (*ERE* iii. 176-188) is at the same time an account of the first period of the Phœnician religion.

B. PERIOD FROM THE HEBREW CONQUEST TO THE BEGINNING OF GREEK INFLUENCE (1200-400 B.C.).—The sources for this period are scanty compared with those for the preceding and the following periods. They consist of two native inscriptions, that of Limassol and that of Hassanbey-li; theophorous personal names in the Assyrian records, in the OT, and in Menander's list of the kings of Tyre; and a few statements of the Assyrian annals and the OT in regard to the gods of the Sidonians.

The inscription of 'the servant of Hîrôm, king of the Sidonians,' on fragments of a bronze bowl found at Limassol in Cyprus (*CIS* i. 5) is commonly regarded as belonging to the reign of Hîrôm I., the contemporary of David and Solomon (c. 960 B.C.). This is the view of Lidzbarski (*Handbuch der nordsem. Epigraphik*, pp. 118, 176); but Von Landau (*Beiträge zur Alterthumskunde des Orients*, i., Leipzig, 1893) and E. Meyer (*EBi*, col. 3753) think that the king mentioned was Hîrôm II. (c. 740 B.C.). In either case this is the oldest known Phœnician inscription. It is a dedication to Ba'al Lebanon (*ERE* ii. 287^b). The name Hîrôm (Gr. Ἡρώμ) is an abbreviation of Ahi-rôm, 'brother is high' (=Heb. Hî-râm; *ā* in Heb. is regularly represented by *ō* in Phœn.). This name is a witness to the continued use of the primitive Semitic divine title Aḥ (*ERE* iii. 179, § 6; cf. i. 387, § 1). Josephus (*Ant.* viii. v. 3) quotes from the Greek translation of the annals of Tyre made by Menander of Ephesus (see C. Wachsmuth, *Einleit. in das Studium der alten Geschichte*, Leipzig, 1895, p. 404f.) the information that the father of Hîrôm I. was Abibalos=Abi-ba'l, 'father is *ba'al*,' which contains the divine title Ab (*ERE* iii. 179, § 5) as well as the title Ba'l (*ERE* iii. 179, § 2). Of Hîrôm Menander says that he built temples for Herakles (=Melkart, *ERE* ii. 293) and for Astarte (=Ashtart, *ERE* ii. 117, § 5), and that he dedicated a golden pillar to Zeus (=Ba'l-Shamim, *ERE* ii. 288, § 8). He also instituted the festival of the awakening of Melkart. A wise man who flourished in his reign was Abdēmounos (read Abdēsmounos)='Abd-Eshmun, 'servant of Eshmun' (see below, p. 892, § 33).

The successor of Hîrôm, according to Menander, in Josephus (*c. Apion.* i. 18, ed. B. Niese, Berlin, 1889, v. 21), was Balbazeros (or Baleazeros)=Ba'l-azôr, 'the *ba'al* has helped.' His son was Abdastartos='Abd-Ashtart, 'servant of Ashtart.' He was dethroned by Methousastartos=Methn-Ashtart, 'man of Ashtart,' the son of Leastartos=Le-Ashtart, 'belonging to Ashtart.' His successor was Astharumos (or Aserumos)=אשרום, 'Osiris is high' (see below, C. i. 65; cf. *ERE* iii. 184f.). He was slain by his brother Phelles=פֶּלֶס (*CIS* i. 40. 1, 356. 2f.), an abbreviation of Ba'l-pelles, 'the *ba'al* has levelled the way' (J. and H. Derenbourg, *Insc. ph. dn temple de Seti à Abydos*, *Rassay* i. [1885] 81-101, no. 24). He in his turn was slain by Eithōbalos, the priest of Astarte=Ittoba'l, 'with him is the *ba'al*.' He is the same as Ethba'al, king of the Sidonians (1 K 16³¹). His daughter Jezebel (=יזעבל; see below, p. 890), the wife of Ahab, introduced the cult of Melkart, the *ba'al* of Tyre, into Israel; and from the narrative of the book of Kings we gain some information about his worship (*ERE* ii.

292^a, 293). His son was Balezdōros=Ba'l-azôr, 'the *ba'al* has helped.' He was succeeded by Mettenos=Metten, Heb. מֶטֶן (2 K 11¹⁸), an abbreviation of Metten-ba'l, 'gift of the *ba'al*,' (*CIS* i. 261. 3, 303. 1, 406. 4, and often). His successor was Pygmalion, in whose reign Carthage was founded. On Pygmalion see below, p. 893, § 49.

Here the list of Menander closes, but for the period immediately following we have a number of theophorous names of Phœnician kings mentioned in the Assyrian inscriptions. In 854 B.C. Shalmaneser III. names Matinu-ba'li=Matten-ba'l, 'gift of the *ba'al*,' king of Arvad (*KB* i. 172. 93; cf. ii. 20. 60) and Adunu-ba'li=Adon-ba'l (*ERE* iii. 179, § 8), king of Shiana=the Sinite of Gn 10⁷. On Ba'li-ra'si=Ba'l-rosh, '*ba'al* of the promontory,' in Shalmaneser III., see *ERE* ii. 287, § 4. Tiglath-pileser IV. in 738 B.C. mentions Hîrôm II., king of Tyre, and Sibittibi'li, 'seven is *ba'al*,' (*ERE* iii. 184, § 8), king of Gebal (*KB* ii. 30. 51; cf. 20. 57). On Ba'al-Zephon in Tiglathpileser IV. see *ERE* ii. 288, § 8. In 725 B.C. Shalmaneser V. attacked Elulaios=Elu-eli (Heb. אֱלִילָיוֹס, 'El is my god,' king of Sidon, as we know from Menander, in Josephus (*Ant.* ix. xiv. 2). In the inscriptions of Sennacherib he appears as Lnli (*KB* ii. 90. 35). On the divine name El see *ERE* iii. 178, C. i. In 701 Sennacherib mentions Tuba'lu=Itto-ba'l, Eth-ba'al, 'with him is the *ba'al*,' king of Sidon; Minhimmu=Mēnahēm, 'comforter,' an abbreviation of a theophorous name such as Ba'al-menahēm (*CIS* i. 55. 1, 57. 2, 87. 3; 2 K 15¹⁴), king of Samsimuruna; Abdilīti='Abd-elōt, 'servant of the goddess' (i.e. Ashtart), king of Arvad (*CIS* i. 243. 3, 244. 4; *ERE* ii. 115, § 1); Urumilki, 'light is my king' (*ERE* iii. 181, § 8), king of Gebal (*KB* ii. 90. 48-50). In 676 B.C. Esarhaddon names Abdimilkutti='Abd-milkūt, 'servant of the queen' (i.e. Ashtart; *ERE* vii. 433, § 4), king of Sidon (*KB* ii. 124. 15). He also mentions Ba'lu=Ba'l, king of Tyre; Milkashapa=Milkasaph, 'the king has gathered' (*ERE* iii. 179, § 7), king of Gebal; Matanba'al=Metten-ba'l, 'gift of the *ba'al*,' king of Arvad; Abibaal=Abi-ba'l, 'father is *ba'al*,' king of Samsimuruna (*KB* ii. 148. 13-17). Ashurbanipal names the same persons mentioned by his father and also Yahimilki=יְהִימִלְכִי, 'my king makes live,' son of Ba'l, king of Tyre (*KB* ii. 168. 58); Yakīnu=Yakin-el, 'El causes to be,' king of Arvad (*KB* ii. 170. 63); and the following ten sons of Yakin-el: Azibaal='Azzi-ba'l, 'my strength is the *ba'al*'; Abibaal, 'father is the *ba'al*'; Adunibaal, 'my lord is the *ba'al*'; Sapatibaal=Shopheṭi-ba'al, 'my judge is the *ba'al*'; Pudibaal, 'the *ba'al* has redeemed'; Ba'alyashubu, 'the *ba'al* returns'; Ba'alhanunu, 'the *ba'al* is gracious'; Ba'almaaluku, 'the *ba'al* is king'; Abimilki (Abimelech), 'the father is king'; Ahimilki (Ahimelech), 'the brother is king' (*KB* ii. 172. 82-84). On Melkart, Ba'l-Malki, Ba'l-Shamim, Eshmun and Ba'l-Saphon, and the gods of Tyre mentioned in the treaty of Esarhaddon with Ba'al, king of Tyre, see *ERE* ii. 293^a; and on Ashtart in the same treaty see *ERE* ii. 115^a.

The Phœnician inscription found at Hassanbey-li near Zenjirli in N. Syria (*SBAW*, 1895, p. 122; H. Winckler, *Altor. Forsch.*, Leipzig, 1896, iv. 305) stands next in age to the inscription of Hîrôm, king of the Sidonians, referred to above. Its allusion to 'the king of Assyria' shows that it is older than the fall of Nineveh (606 B.C.). It mentions אֱלִילָיוֹס וְיָמִין, 'Ba'l-shamim and the gods' (*ERE* ii. 288, § 8), יְהִי, 'and Ramman' (*ERE* iii. 183, § 2).

Ashtart, 'the goddess of the Sidonians,' is mentioned in 1 K 11²³, 2 K 23²³.

In the Neo-Babylonian period Josephus again

quotes from Menander a list of kings (c. *Apion*. i. 21). He says that Nebuchadrezzar besieged Ithobalos = Ethba'al II. His successor was Ba'al II. Then came a series of judges: Elknibalos = (H)ekinni-ba'l, 'the ba'al caused me to be' (cf. Yakin-el above), the son of Baslêchos (or Balsachos) = Ba'l-Sakkun (?), 'Sakkun is the ba'al'; Chelbês = כֶּלְבֵּס, 'dog of Isis' (cf. כֶּלְבֵּס; *CIS* i. 50. 1, 'servant of Isis')—interesting as the first appearance of the Egyptian goddess Isis (*ERE* iii. 184 f.); son of Abdaïos, apparently = 'Abd-Yahu (Obadiah), 'servant of Jahweh' (Abdaïos is the transliteration of Obadiah in the Greek version according to Q; other recensions read Abdeïos; on Jahweh among the Canaanites see *ERE* iii. 183, § 17); Abbaros (Lat. Abalus) = Ab-ba'l, 'father is ba'al'; Muttunos = Metten-(ba'l), 'gift (of ba'al)'; and Gerastros = Ger-Ashtart, 'sojourner of Ashtart' (frequent in Phœnician inscriptions), sons of Abdêlimos = 'Abd-êlim, 'servant of the gods.' They were followed by a king, Balatoros = Ba'l-a'tôr, 'the ba'al has crowned.' Then came Merbalos = Mar-ba'l, 'the ba'al is lord'; and after him Eirômos = Ĥirôm III., under whom Babylon fell before the arms of Cyrus (539 B.C.).

During the period of Assyrian and Babylonian rule the Phœnicians must have felt the influence of the Assyro-Babylonian religion. This is shown by survivals in the next period (see below, p. 893, § 53 ff.).

During the earlier part of the period of Persian rule we have no information in regard to the later Phœnician religion. No trace of the Persian religion appears in the later Phœnician religion, so that we may assume that it exerted no influence upon Phœnicia during this period.

Our sources, meagre as they are, for the period from the Hebrew conquest down to 400 B.C. show that the Phœnician religion remained practically the same as it had been during the previous period. Nearly all the old gods are mentioned, and no new ones appear, except Isis and Osiris.

C. PERIOD OF GREEK INFLUENCE (FROM 400 B.C. ONWARDS).—As sources for this period we have a considerable body of inscriptions from Phœnicia and from the Phœnician colonies in Cyprus, Carthage, etc. The oldest of these date from the end of the Persian period (c. 400 B.C.). The majority come from the Greek period (333 B.C. onwards). The inscription of Yehaw-milk of Gebal (*CIS* i. 1) belongs to the end of the 5th or the beginning of the 4th century. Those of Tabnit of Sidon (Lidzbarski, p. 417) and of Eshmun-azôr (*CIS* i. 3) are assigned by some to the end of the 5th, by others to the end of the 4th century. All the other inscriptions found in Phœnicia belong to the Greek period. The Cyprian inscriptions date mainly from the end of the 5th and the 4th century. The Delos inscription (*CIS* i. 114) is from the 4th century. The older inscriptions from Carthage, Sardinia, and other Phœnician colonies in the west belong to the period before the Roman conquest (146 B.C.). The Neo-Punic inscriptions belong to the Roman period, and have frequently Latin translations that are useful for determining the pronunciation of the personal names. These inscriptions contain names of gods, theophorous personal names, and some information in regard to religious beliefs and rites. In many respects the Phœnician religion was preserved in a more primitive form in Carthage than in the homeland, where it was subjected to Greek influence.

Two Phœnicians, Mochos and Sanchuniathon, are reported by classical authors to have written accounts of the Phœnician religion. Mochos of Sidon is named along with Sanchuniathon by Athenæus (iii. 126A), and with Sanchuniathon is said by Strabo (xvi. ii. 24) to have lived before the

Trojan war (cf. *Jos. Ant.* i. iii. 9). He wrote a cosmogony of Sidon, which was translated into Greek by Eudemus, a pupil of Aristotle, from whom a fragment was borrowed by Damascius (*Quæst. de Primis Principiis*, 125, ed. J. Kopp, Frankfurt, 1826, p. 385). It is also said to have been translated by Lætus at the end of the 1st cent. B.C. (Tatian, *adv. Græcos*, 37 = Clem. Alex. *Strom.* i. xxi. 114). Our only knowledge of this cosmogony is from the fragment in Damascius. Another much more extended cosmogony, that of Gebal, is said to have been composed by Sanchuniathon (= Sakkun-yathôn), and to have been translated by Philo of Byblus (Gebal), from whom it is quoted by Eusebius. On the contents and historical character of this document see the artt. PHILO BYBLIUS and SANCHUNIATHON. It is probable in the case both of Mochos and of Sanchuniathon that genuine Phœnician records are preserved by the Greek writers, although the names attached to them may be apocryphal.

Besides these native historians we have as sources the incidental references to the Phœnician religion in Greek and in Latin authors, particularly Herodotus, Lucian (*de Dea Syria*), Origen, Jerome, Theodoret, Tertullian, and Augustine.

From these sources it appears that the characteristic of the period from 400 B.C. onwards was ever-increasing Greek influence upon the Phœnician religion. Even in the Persian period Greek civilization began to invade Phœnicia. King Straton (= 'Abd-Ashtart?) of Sidon maintained a thoroughly Greek court. He established a Sidonian colony in Athens which has left a number of Phœnician inscriptions, and permitted Athenian merchants to settle at Sidon. He joined with the Athenian embassy to Artaxerxes II. in 367 B.C. (Athenæus, xii. 531; *Ælian*, *Var. Hist.* vii. 2). The anthropoid sarcophagi from Sidon of the later Persian period show strong Greek influence, and the splendid monuments known as 'the Alexander sarcophagus' and 'the sarcophagus of the mourners,' which belong to the end of the 4th cent., are masterpieces of Greek art (see O. Hamdy-Bey and T. Reinach, *La Necropole royale de Sidon*, Paris, 1892-97). After the battle of Issus in 333 B.C. the Phœnician cities submitted to Alexander, except the island of Tyre, which was captured by constructing a mole from the mainland. It then became a Macedonian fortress, and from this time onwards the Hellenizing of Phœnicia went on apace. The bilingual inscriptions and Philo Byblius show us that the Greek gods were identified with the old Phœnician deities, and in the classical writers the Phœnician gods are habitually called by their Greek or Latin equivalents. Close relations with the Greek dynasty of the Ptolemys in Egypt encouraged also the adoption of new elements from the Egyptian religion in addition to those that had already been borrowed in the days of the XVIIIth and XIXth dynasties (*ERE* iii. 184). This period, accordingly, is one of unlimited religious syncretism.

1. THE PANTHEON.—(a) *General titles.*—**I. EL.**—The generic name for 'god' in Phœnician, as in the other Semitic languages, is ʾl, ʾl (for this and for the following names of gods see the alphabetically arranged Phœnician vocabulary of Lidzbarski, pp. 204-388, where references are given to all the occurrences of the names in the inscriptions; see also *ERE* iii. 178 ff.).

In the inscriptions this word is never used as a personal name like Heb. ʾl, but is always generic like ba'al. It was the favourite title of the chief god of Gebal, just as ba'al was the title of the god of Sidon. What his real name was, if he had any, is unknown. Hence ʾl is found as an element in personal names chiefly in inscriptions from Gebal—e.g., El-amon, 'Amon is god,' or 'the god is faithful'; El-barik, 'the god has blessed'; El-janôn, 'the god is gracious'; El-pa'ûl, 'the god has done'; El-rôm, 'the god is high'; Na'ôm-el, 'the god is good'; En-el,

'eye of the god'; Tamōk-el, 'the god has supported.' Philo Byblus (in *Eus. Præp. Evang.*, ed. Gifford, i. 10, 36c, 37b) says that Elos (the El of Gebal) is Kronos, that he founded the city of Gebal (37a), that he gave Gebal to the goddess Baaltis (=the Ba'alat of Gebal), and Berytus to Poseidon (=Ba'l-Bērūt) (38d). He had four eyes, two open and two closed; four wings, two spread and two folded; and two feathers (like the Egyptian gods) upon his head. This figure seems to be represented on certain Phœnician seals (M. de Vogüé, *Mélanges d'archéologie orientale*, Paris, 1895, p. 109). On the myth of the El of Gebal see SANCHUNIATHON, O. 2.

Other towns called their chief god *El*, as we know from the Punic name El'am, 'the god is uncle' (*CIS* i. 147. 6); Metten-el, 'gift of the god'; and numerous place-names in Palestine compounded with *El*. Philo also knows another *El* besides that of Gebal (38a). The Greeks were unable to distinguish between these various *els*, and therefore assumed one god Elos whom they identified with Kronos. Through Greek influence the idea of one god El was gradually developed by the Phœnicians.

The plur. of *El* is *Elīm*, which occurs in numerous inscriptions and in the personal names 'Abd-Elīm, 'servant of the gods'; Kelb-Elīm, 'dog of the gods'; and Metten-Elīm, 'gift of the gods.' A favourite honorific title in Carthage is *Elm* אֵלִים, 'establisher of the gods.' Philo (37b) says that the allies of Elos were called Elōim. This Hebrew form cannot come from either Sanchuniathon or Philo, but must be a modification by Eusebius or a Christian transcriber.

2. *Ēlōt*.—The fem. form corresponding to *El* is *ēlōt*, 'goddess,' which is used as a title of 'Ashtart (cf. Arab. al-Lāt). It occurs also in the fem. name *Hōt-lōt*, 'sister of the goddess.'

3. *Allōn*.—Another name for 'god' is *allōn*, which in Hebrew means 'holy tree.' It occurs in the personal names Yehaw-allōn, 'may the god cause to live'; and Aḥ-allōn, 'the god is a brother.' The plur. is *allōnim* and fem. *allōnoth* (cf. *alonim ualonuth*, Plautus, *Pæn.* v. i. 1).

(b) *Celestial gods*.—4. *Shamim*, 'heaven,' occurs in the name [Sa]mēmroumos, 'heaven high' (Philo, 34d); also the name of a district in Sidon (C. C. Torrey, in *JAOS* xxiii. [1902] 162). More commonly we meet Ba'l-Shamim, 'owner of the sky' (*ERE* ii. 288^b, 293^a). Philo (34c) calls him 'Beel-samēn [the Aram. form], which in Phœnician means lord of heaven, but in Greek Zeus.' In the same passage he incorrectly identifies him with the sun. In 36b he calls him Ouranos. In the treaty of Hannibal with Philip of Macedon he is called Zeus (Polybius, vii. 9).

5. *Zebul*, 'dwelling,' or Ba'l-zebul, 'owner of the dwelling,' i.e. the abode of the sky, seems to be an alternative name for the foregoing. It occurs in the fem. name Shem-Zebul, 'name of the dwelling' (Lidzbarski, p. 420. 3), and in the fem. name Ba'l-azbul (cf. Askun for Sakkun), 'dwelling is owner' (*CIS* i. 158. 1 f.); also probably in I-Zebel, the Tyrian queen of Ahab, where *i* cannot mean 'not' any more than in I-Tanit (*CIS* i. 542. 3), or I-Saphon (Lidzbarski, p. 214), or the Heb. name I-kabod (*ERE* ii. 287^a, 289^a, and art. BAALZEBUB).

6. *Saphon*, 'north,' or Ba'al-saphon, 'owner of the north,' in Bod-Saphon, 'member of Saphon'; Abd-Saphon, 'servant of Saphon'; I-Saphon and perhaps Saphon-ba'l, 'Saphon is the *ba'al*' (see *ERE* ii. 288, § 8, 293^b).

7. *Shahar*, 'dawn,' in 'Abd-Shahar, 'servant of the dawn,' and Shahar-ba'l, 'dawn is the *ba'al*' (cf. the Heb. name Ahi-Shahar, 'dawn is a brother').

8. *Ur*, 'light,' in Ur-milk, 'light is king' (*CIS* i. 1. 1; see *ERE* iii. 181, § 8).

9. *Shemesh*, 'the sun,' in Adon-Shemesh, 'Shemesh is lord'; Abd-Shemesh, 'servant of Shemesh'; and in the place-names Shemesh, on coins of Boccos III., and Mekōm-Shemesh, 'place of Shemesh,' on Mauretanian coins (see *ERE* iii. 180, § 1). Philo (34c) says that the sun was worshipped by the first parents of the Phœnicians.

10. *Yerah*, 'the moon,' in 'Abd-Yerah, 'servant of the moon' (see *ERE* iii. 180, § 2). In view of the fact that Phœnician personal names are nearly always theophorous, Hōdesh, 'new moon,' in Ben-hōdesh is probably to be regarded as a god, in spite of the Greek translation *νομήριος* (*CIS* i. 117. 1).

11. *Star-worship*.—*Mazzol*, 'constellation,' 'sign of zodiac,' 'fate,' occurs in the phrase מַזְלוֹ נָסַח, 'good fortune' (*CIS* i. 95. 8). The same word occurs in Assyrian, Hebrew, and Aramaic. In 2 K 23⁵ we read of those who sacrificed to Ba'al-Shamini, to the sun, to the moon, to the constellations (*mazzā. lōth*), and to all the host of heaven. The identification of 'Ashtart with the planet Venus is also implied by Philo in 38c (see *ERE* ii. 116^b), and of El with the planet Saturn in 40c.

12. *Adōd* (=Adad, or Hadad), the storm-god, does not happen to be mentioned in the inscriptions, but Philo (38c) knows him as Adōdos, king of the gods, who ruled the land with 'Ashtart and Ba'al-Tamar (see *ERE* iii. 180, § 4).

13. *Resheph*, the lightning, appears as Reshephes, 'Resheph of the arrow' (*CIS* i. 10. 3, 4); Resheph-Mukol, 'Resheph of the city of Mukol in Cyprus' (*ib.* 89. 3); Resheph-'*l-h-y-t-s* (in the Cyprian transcription *a-lo-si-o-ta-i*=Alashia, 'Cyprus,' in the Amarna letters; *Tamassus inscr.* 2. 4 f.); Resheph-Elit (name of a city); also in the personal names 'Abd-Resheph, 'servant of Resheph' (*CIS* i. 93. 4); and Resheph-yaton, 'Resheph has given' (*ib.* 44. 2, 88. 2, 4, 6). A variant form of the same name is *Arsheph* (*ib.* 251. 2), occurring also in the personal name 'Abd-Arsheph (*ib.* 393. 3), 'servant of Arsheph.' He probably appears also in the name of the Palestinian town Arsuf (=Apollonia). In the bilingual inscriptions just cited he is equated with Apollo. Hence Philo probably means him by Apollo, the brother of El-Kronos and Belos-Zeus (38a). He also is probably meant by Apollo in the treaty of Hannibal (Polyb. vii. 9). Reseph in Melkart-Reseph (M. A. Levy, *Siegeln und Gemmen*, p. 18) is possibly only a variant of Resheph (see *ERE* iii. 180, § 5).

(c) *Terrestrial gods*.—14. אֶרֶץ=Heb. *eretz*, 'the earth.' Philo calls her Gē, the sister-wife of Ouranos (36b). She is mentioned also in the treaty of Hannibal (Polyb. vii. 9). It is possible that אֶרֶץ in עֲרִיכָא and other Punic names is only a variant of the same.

15. The *ba'als*.—Not only the earth in general but every important object upon the earth was animated by a divinity. The generic name for these nature-spirits was *ba'l*=Heb. *ba'al*, 'owner.' There were *ba'als* of water, *ba'als* of trees, *ba'als* of mountains, *ba'als* of holy stones and of their surrounding sanctuaries, and *ba'als* of places (see art. BAAL, vol. ii., particularly pp. 293 f. and 297, where the Ba'al cult in Phœnicia and the Phœnician colonies is discussed; also *ERE* iii. 179, § 2). Philo alludes to these when he says that the first men consecrated the productions of the earth and regarded them as gods (34b).

16. *Dagon*.—One of the most important of the *ba'als* was Dagon, or Ba'l-dagon, which Philo (36c) correctly translates 'corn'=Heb. *dāgān* (see DAGON).

17. *Sacred animals*.—Philo (41a) asserts that 'Taúthos (Thóth) himself regarded the nature of the dragon and of serpents as divine. . . . For which reason this animal has been adopted in temples and in mystic rites. . . . It is immortal, and is self-consumed, as is stated before; for this animal does not die by a natural death, but only if struck by a violent blow. The Phœnicians call it "Good Daemon." In 42b he says: "Having built temples, they consecrated to him shrines the primary elements represented by serpents, and in their honour celebrated festivals, and sacrifices, and mystic rites, regarding them as the greatest gods, and rulers of the universe." Hawk-worship is also mentioned by Philo (41c, 42a). The cult of horses may be indicated by the name 'Abd-usim, 'servant of the horses' (*CIS* i. 46. 1, 49, 63, 93. 3). 2 K 23¹¹ speaks of the horses dedicated to the sun, and the Hebrew names Sūsā, Sūsī, and Hāsar-sūsīm seem to indicate a totemic cult of this animal. The winged horse is a Carthaginian religious emblem. Akkor, 'mouse,' is one of the commonest Phœnician personal names. It appears also as a Hebrew personal name. Is 66¹⁷ speaks of people who sanctify themselves and purify themselves to go into the gardens to eat swine's flesh, and the abomination, and the mouse. In Lv 11¹ the term 'abomination' includes mice and similar small creeping animals, and in Ezk 8¹⁰ we find these as objects of worship.

One can hardly escape the conclusion that the mouse, like the serpent, had demonic qualities for the Canaanites, and that this is the reason why it was 'unclean' for the Hebrews. The swine was sacrificed once a year in the worship of the Cyprian 'Ashtart' (Lydus, *de Mensibus*, ed. I. Bekker, Bonn, 1837, p. 80), and the sacrifices of a sow is depicted in a rock sculpture (E. Renan, *Mission de Phénicie*, pl. 31), but ordinarily it was not eaten (Lucian, *de Dea Syria*, 54; Athenæus, iii. 49; W. R. Smith, *Rel. Sem.*, p. 290f.). This shows that it was a sacred animal, as originally among the Hebrews (cf. the priestly clan of Hezir, 'the swine' [1 Ob 24¹⁵, Neh 10²¹]). The sanctity of the dog is indicated by a statement of Justin (xix. 1) that Darius commanded the Carthaginians not to sacrifice men and not to eat the flesh of dogs, the latter being evidently a sacramental rite (cf. the Hebrew clan of Oaleb, 'the dog'). On the sanctity of the dove in connexion with the cult of 'Ashtart see *ERE* ii. 117^b, 185^b. On the cult of animals in ancient Canaan see *ERE* ii. 286, § 3.

(d) *Tribal gods*.—Powers presiding over tribes, clans, or families were called by names expressing kinship or authority, which described them as owners of men in the same way as *ba'al* described them as owners of things. In the primitive matriarchal stage of social organization the chief tribal gods were feminine. When subsequently the family assumed the polyandrous form, a male 'father-uncle' was worshipped alongside of the mother-goddess. When finally the patriarchal family was introduced, the tribal god began to be called 'father.' The Phœnicians stood upon the patriarchal stage of development, but survivals of more primitive conceptions linger in their personal names.

18. Em, 'mother.'—In *CIS* i. 177 a goddess אִמַּם is invoked along with כַּלָּה חַרָּה, 'mistress of the cella' (*ERE* ii. 288, § 6). This goddess is meant we do not know. In *CIS* i. 380 we meet 'the mother, the mistress of Pnē-ba'l.' She is identical with Tanit of Pnē-ba'l, who is named in many inscriptions (see below, 31). We find also 'mother of the *dshērāh*' (*CIS* i. 13, read אִמַּתִּיר instead of אִמַּתִּיר). This must be 'Ashtart, who is frequently identified with her symbol, the *dshērāh* (*ERE* iii. 186, § 2). Evidently the title 'mother' could be applied to any goddess. It occurs also in the fem. personal name Em-Ashtart, 'Ashtart is a mother.'

19. 'Amm, 'father-uncle,' the designation of the tribal god in the polyandrous period, still survives in Eli-am, 'the god is father-uncle' (*CIS* i. 147. 6; see *ERE* i. 387 f., iii. 179, § 3).

20. Ab, 'father,' as a divine title is common in personal names—e.g., Ab-ba'l and Abi-ba'l, 'father is *ba'al*' (used for both men and women); אֲבִי-בַעַל, 'our father is *ba'al*'; Ab-halol, 'father has begotten'; Ab-milk, 'father is king'; Ab-kōm, 'father has risen' (see *ERE* iii. 179, § 5).

21. Ah, 'brother,' occurs in Ahī-nadōb, 'brother is generous'; and Ahī-allōn, 'brother is god.' Frequently the word is abbreviated to Hī, as in Hī-rōm, 'brother is high,' Hī-milk, 'brother is king.' In the name Hī-milkōt (Lat. Himilco) we cannot translate 'the queen is a brother,' nor 'brother of the queen,' since in every other case in Phœnician and in the Semitic languages in general Ah in personal names is a divine title (see G. B. Gray, *Studies in Hebrew Proper Names*, London, 1896, p. 75 f.). Possibly in this isolated case Hī = 'r, 'life,' and the name is to be translated 'life of Milkot' (cf. the Heb. name Hī-el, 'life of El,' and the Phœn. Mari-ḥi). On the other hand, (a) *hot*, 'sister,' is used exclusively in fem. names, and is not a divine title, but expresses the relation of the worshipper to the god (see below, p. 895*). On these names of relationship as divine titles see the literature under 'AMM, and also *ERE* iii. 179, § 6.

22. Adon, 'master,' is used in Hebrew and Phœnician for the owner of a slave. It describes the god as a proprietor of a person, just as *ba'al* describes him as a proprietor of a place. In the dedicatory inscriptions and in the personal names the term is applied to nearly every god and goddess

of the pantheon. This shows that, like the foregoing terms, it is not an individual name, but a title. Every town could have its *adon* as well as its *el* or its *ba'al* (see *ERE* iii. 179, § 8).

The most famous of the Adonim was the Adon of Gebal, the consort of 'Ashtart, the *ba'alat* of Gebal, whose cult was transplanted to Paphos in Cyprus along with that of the Gebalite 'Ashtart. For the Greeks his title became a true proper name, Adonis. The real name of this 'lord' is uncertain. Several of the classical writers identify him with the Bab. Tammuz—e.g., Jerome, *Ep.* lviii. 3, and Comment. on Ezk 81⁴; Cyril of Alexandria, *Comment.* on Hos 41⁵; Melito, in W. Cureton, *Spicilegium Syriacum*, London, 1855, p. 44. This view is favoured by the facts that Ezk 81⁴ speaks of 'women weeping for Tammuz' in the Temple in Jerusalem, and that Is 17¹⁰ speaks of 'planting shoots of the Pleasant One [a title of the Adon of Gebal], and stocking [gardens] with scions for a foreign god' (a rite of Adon-worship). These passages seem to identify Tammuz and Adon. The difficulty with this evidence is that it is late. The Adon of Gebal may easily have been identified with Tammuz in the Assyrian or the Neo-Babylonian period, although his Canaanite name may have been different; or he may have had no name at all. Tammuz has not yet been found in the early Canaanite period. Adonis was also identified with Osiris (Plutarch, *de Is. et Osir.* 15; Lucian, *de Dea Syria*, 7; Apollodorus, ii. 1. 3); but this does not prove that Osiris was his original name, since Osiris appears as a distinct deity in the Phœnician pantheon. Philo mentions neither Adon nor Tammuz, but connects the myth of Adonis with 'Elyun, 'the high,' which was evidently another title of Adonis.

In character Adonis was a personification of the spring verdure that withered in the dry heat of summer. He was the Canaanite variant of a deity that, under the names of Dumuzi among the Sumerians, Tammuz among the Babylonians and Assyrians, 'Ate, or Attis, among the Syrians and peoples of Asia Minor, and Osiris among the Egyptians, was worshipped from the earliest times. His death occurred in the month of Tammuz (June-July), and his resurrection in December-January, when vegetation once more flourished after the early winter rains. According to the Babylonian myth, he was the child (later the husband) of Ishtar; and, when he died, she descended to Sheol to bring him up (see *ERE* vii. 430, §§ 2, 4, and art. TAMMUZ). In the Phœnician version of the myth, as preserved by Greek writers, Adonis was a beautiful boy who was loved by Aphrodite ('Ashtart). In order to keep him for herself, Aphrodite placed him in a chest and gave him into the keeping of Proserpine (= Allatu, the Babylonian goddess of Sheol). Proserpine fell in love with the child and refused to surrender him. Zeus thereupon decreed that Adonis should stay half of the year with Proserpine in the underworld and half of the year with Aphrodite in the upper world. According to the local Gebalite form of the myth, Adonis was slain annually by a wild boar while he was hunting at Apheca (the modern Aḥḥa) in Mt. Lebanon, and the desecolation of the waters of the Adonis river (Nahr Ibrahim) was due to his blood (see Philo Byblius, 86b; Lucian, *de Dea Syria*, 61; Apollodorus, iii. 14. 4; Bion, *Idyl.* i.; Ovid, *Metam.* x. 503 ff.). A rock relief representing the death of Adonis still exists at Ghineb in the valley of the Adonis river (Renan, pl. xxxvi.; A. Jeremias, *Das AT im Lichte des alten Orients*, Leipzig, 1906, p. 90).

The cult of Adonis consisted in bewailing his death round a bier on which was placed an image of the dead god, which was then deposited in a tomb, and remained there until, six months later, his resurrection was celebrated. Another interesting rite was the planting of Adonis gardens. These were pots, or baskets, filled with shallow earth, in which the seeds of quickly-growing plants were sown and tended by the women for eight days. The plants were allowed to wither at the time of the death of Adonis, and were carried out along with small images of the god and cast into the water. This custom seems to be referred to in Is 17¹⁰. It is a witness to the primitive character of Adonis as a vegetation-god (on Adonis see *GB*, pt. iv., *Adonis, Attis, Osiris*, London, 1907; W. W. Baudissin, *Adonis und Esmun*, with copious bibliography).

23. Mar, 'master,' synonyms with Adon, appears in Mar-barik, 'the master has blessed'; Mari-ḥi 'my master lives'; Mar-sammik, 'the master has sustained'; 'Abd-Marnai, 'servant of our master.' Marna is the name under which the chief god of Gaza (Dagon?) was worshipped (see *ERE* iv. 387^b). A Tyrian lamp (*CIS* i. 111) bears the dedication θεῷ Βερεμάρη, 'to the god Ba'l-Mari.'

24. Milk, 'king' = Heb. Melek (Moloch), is one of the commonest Phœnician divine names.

It occurs in Adon-Milk, 'the king is master'; Ohel-Milk, 'tent of the king'; Ahot-Milk, 'sister of the king'; Ur-Milk, 'light is king'; Bod-Milk, 'limb of the king'; Ger-Milk, 'client of the king'; Han-Milk, 'the king is gracious'; Hī-Milk, 'the king is a brother'; Hot-Milk, 'sister of the king'; Yada-Milk, 'the king knows'; Yehaw-Milk, 'may the king cause to live'; Yaton-Milk, 'the king has given'; Mīkne-Milk, 'possession of the king'; 'Abd-Milk, 'servant of the king'; 'Az-Milk, 'the king is strong'; Šadok-Milk, 'the king is righteous.' This also is not an individual name, but the title of many different tribal gods (see *ERE* i. 390 f., iii. 179).

25. Melkart. — The most conspicuous of the Phœnician Milkim was Melkart = Milk-kart, 'king of the city,' the chief god of Tyre.

This compound becomes practically an individual name, and is used in forming other proper names—e.g., Amot-Melkart, 'handmaid of M.'; Eshmun-Melkart; Bod-Melkart, 'limb of M.'; Ger-Melkart, 'client of M.'; Han-Melkart, 'M. is gracious'; Hot-Melkart, 'sister of M.'; Kabod-Melkart, 'M. is honourable'; Mot-Melkart, 'handmaid of M.'; Abd-Melkart, 'servant of M.'; Sid-Melkart; Rosh-Melkart, 'head of M.'; Melkart-hallu, 'M. has saved'; Melkart-han, 'M. is gracious'; Melkart-hanno, 'M. has favoured him'; Melkart-mashol, 'M. has ruled'; Melkart-Reſeph; Melkart-shama, 'M. has heard.'

Apart from compounding in personal names, Melkart is often mentioned in the inscriptions both in the east and in the west (Lidzbarski, p. 311). In the bilinguals he is equated with Herakles Archēgetēs. Philo (38*) calls him Melcathros, the son of Demarous (Ba'l-Tamar), who is also called Herakles. Polybius in the treaty of Hannibal (vii. 9) calls him Herakles. This identification was the one commonly accepted in Phœnicia and throughout the Greek world (on the cult of this god see *ERE* ii. 292 f.). A feast of 'the awakening of Melkart' was kept annually at Tyre (Menander, in Jos. c. *Apion*. i. 18).

26. Milkot, 'queen,' is a title for goddesses. It is used absolutely in *CIS* 193. 4, and in the personal names Ahot-Milkot, or Hot-Milkot, 'sister of Milkot'; Hi-Milkot, 'life of Milkot'; Mot-Milkot, 'handmaid of Milkot'; Na'om-Milkot, 'Milkot is good'; 'Abd-Milkot, 'servant of Milkot.' This designates no particular divinity, but is used as a title of 'Ashtart, 'Anath, Tanit, or any other goddess.

27. 'Elyun ('Ελιοῦν), 'high,' is mentioned as the father of all the gods by Philo (36a), who translates the name by Ὑψιστος.

He 'died in an encounter with wild beasts, and was deified, and his children offered to him libations and sacrifices' (36b). This identifies him with the Adonis of Gebal. The name seems to occur also in Pygmalion = Pame-'Elyon (see above, p. 888^b). The element *ly* in Punic names is commonly interpreted as a mistake for *ky*—e.g., *ly*-nk, 'brother is god'—but it is possible that it represents this title (see *ERE* iii. 180, § 13).

28. Adir, 'mighty,' seems to be a divine name in the place-name Rosh-Adir, 'head of the mighty one'; also in Adir-bal (Lat. Adherbal), 'Adir is owner,' and Adir-milk, 'Adir is king.' The same name appears apparently in Adrammelek, the son of Sennacherib (2 K 19³⁷; cf. 17³¹; see also *ERE* iii. 180, § 11).

(c) *Departmental gods*.—These were deities who presided over various sections of the life of their people. In distinction from the gods just mentioned, who were called by general titles, these had individual names.

29. 'Ashtart, the goddess of love and of reproduction (see 'ASHTART, and *ERE* iii. 182, § 1).

30. 'Anath, the goddess of war, appears in the Idalion inscription (7), in 'Anath-han, 'Anath is gracious,' and in the inscription on a helmet, nyz, 'with the help of 'Anath' (Lidzbarski, p. 172b; see *ERE* iii. 182, § 2). In the bilinguals and in Philo (36d, 38d) she is identified with Athene.

31. Tanit (conventional pronunciation; the vowels are unknown) appears in a Sidonian inscription from Athens (*CIS* i. 116. 1) in 'Abd-Tanit, 'servant of Tanit' (cf. 501. 4). Here she is identified with Artemis. In Carthage she appears in an immense number of inscriptions as 'the lady Tanit of Pne-ba'l.' Some historians have tried to find a mystical meaning in the name 'Tanit of the face of Ba'al,' but Pne-ba'l is probably only a place (cf. Penuel) where there was a famous sanctuary of the goddess. Perhaps she is represented by Hera in the treaty of Hannibal (Polyb. vii. 9).

She appears also in Bod-Tanit, 'limb of Tanit'; 'Abd-Tanit, 'servant of Tanit'; Sid-Tanit, and I-Tanit (see P. Berger, 'Tanit pene-baal,' *JA* vii. ix. [1877] 147-160). The origin of the name and the functions of the goddess are unknown. Perhaps she was only a local form of 'Ashtart. She is not found in ancient Canaan.

32. Edom (אדם), 'maker,' seems to be a god in Edom-yaton, 'Edom has given,' and 'Abd-Edom (= Heb. Obed-Edom), 'servant of Edom' (see *ERE* iii. 182, § 3).

33. Eshmun, the god of healing = Asklepios, appears alone and in a great number of Phœnician and Punic personal names as אשמון (Lidzbarski, p. 229). This is transliterated into Greek as Esmun, Asmnn, and Usmun. These forms imply that the original pronunciation was Ashmun.

As to the etymology of the name, the current opinion is that it is derived from the root *shaman*, 'to be fat.' It is then an elative, meaning 'the very fat one.' What a god of this sort should have to do with health is hard to see, and the etymology is more than questionable. A number of Phœnician gods have names ending in *un* or *on*—e.g., Allon, Eshmun, Sakkun, 'Elyun, Sidon, Shalmun. This fact suggests that the *n* in Eshmun is not radical, but is a masc. ending. Moreover, the prefixing of the vowel *a* is common in Phœnician; cf. Arsheph and Resheph, Askun and Sakkun, Azbul and Zebul. This makes it probable that *a* in Ashmun is prosthetic, and that the root is *sh-m*. If this be so, then Eshmun is only a variant of Shem, 'name,' which is widely attested as a title of deity among the Semites (see *ERE* iii. 180, § 12). It is interesting to note that, although Shem appears as a divine title in the Canaanite period, it disappears in the later period, evidently because its place is taken by Eshmun. The fem. counterpart of Eshmun is Ashima, the goddess of Hamath (2 K 17³⁰), who appears also as Ashima-Bethel, the consort of Jahweh, in the Assuan papyri. The series Shem (undifferentiated), Eshmun (masc.) and Ashima (fem.) exactly corresponds to the series *el* (divinity), *alil* (male god), *elot* (goddess). In this case Eshmun was originally only a title, like so many other Phœnician divine names (see Lidzbarski, 'Der Name des Gottes Esmun,' *Ephemeris für sem. Epigraphik*, iii. [1912] 260).

At least two kings of Sidon in the late Persian or the Greek period bore the name Eshmun-azor, 'Eshmun has helped.' Eshmun-azor n. relates that he and his mother built a temple for Eshmun (*CIS* i. 3. 17). In 1800 the site of a great temple near Sidon was excavated, and a number of inscriptions were found in which Bod-'Ashtart states that he built this temple for Eshmun his god (see Lidzbarski, *Ephemeris*, ii. [1903] 49; O. O. Torrey, *JACS* xlii. [1902] 163; F. O. Eklens, *Sidon*, p. 143 ff.). It was probably the temple begun by Eshmun-azor. Two fragments of votive inscriptions from this temple also contain the name of the god (*MVG* ix. [1905] 34, 39 f., note). The worship of Eshmun in Cyprus is attested by the compound deity Eshmun-Melkart and by proper names, and in Carthage by the compound deity Eshmun-'Ashtart and proper names. A temple of Eshmun in Carthage seems to be mentioned in *CIS* i. 252. 41. In Sardinia he appears in a trilingual inscription as the equivalent of Asklepios-Esculapius (*CIS* i. 143. 1). Philo (37d, 39c) knows Asklepios as the eighth son of Sūdūk, which suggests that he derived Eshmun from אשם, 'eight.' He states also that he was the brother of the Cabeiri, which seems to connect him with Berytus (cf. 38d).

In all the bilingual inscriptions and in many statements of classical writers Eshmun is identified with Asklepios, and this is maintained with a consistency that is not found in the identifications of other Phœnician gods. This shows that Eshmun as a god of healing must have possessed such marked resemblance to Asklepios that he could not be equated with any other Greek deity. The inscriptions themselves yield no information in regard to the healing character of the god, except that the trilingual mentioned above says of Eshmun, 'He heard his voice and healed him.' None of the objects discovered in the temple of Eshmun at Sidon suggests that he was a healer. Several of his temples were near mineral springs, and these may have been connected with the curing of diseases. The title אשם, Μηρηρ, applied to the god in the Sardinian trilingual, is of uncertain meaning. Philo (36a) says:

'From Sūdūk came the Dloseuri, or Cabeiri, or Corybantæ, or Samothracæ. . . From them have sprung others who discovered herbs, and the healing of venomous bites, and charms.'

This brings Eshmun into a remote connexion with medicine through the descendants of his brothers,

the Cabeiri. The proper names compounded with Eshmun contain the familiar predicates that are applied to all the gods, but no special terms that connect him with the art of healing. Still, in spite of this lack of direct evidence, there is no reason to doubt that the character of Eshmun is correctly indicated by his identification with Asklepios (see Baudissin, *Adonis und Esmun*, with full bibliography for Eshmun, p. xvii f.).

34. Gad, 'fortune,' is found in Ba'l-Gad, 'Gad is owner' (*CIS* i. 107), Gad-na'om (Lat. Giddencme), 'Gad is good,' and the synonymous Na'om-Gad (see *ERE* iii. 182, § 6).

35. Dayyog, 'fisher.'—Philo (35b) names Halieus, 'fisher,' with his brother Agrens (=Sid), 'hunter.' He seems to represent a Phœnician name similar to Heb. Dayyāg, 'fisher.'

36. Do'm, in Do'm-hanno, 'Do'm has favoured him'; Do'm-shallih, 'Do'm has prospered'; and Do'm-milk. In the Greek parallel he appears as Δομ.

37. Harōsh, 'smith'=Chrusor, 'goldsmith,' or Hephaistos (see SANCHUNIATHON, C. 2 (2)).

38. Y-'l (יאל) is the name of a god in *CIS* i. 132, 4, 5, 7, and in the personal name Y-'l-pa'ol, 'Y-'l has made.' It occurs also apparently in Iolaos in the treaty of Hannibal (Polyb. vii. 9). The origin and character of the god are unknown. Perhaps יאל = על, 'profit.'

39. The Kabbirim, or Cabeiri, כבירים, 'the mighty,' according to Philo (36a), were the children of Šuduk, and first invented a ship. They were the same as the Dioscuri, or Corybantes, or Samothracæ. See KABEIROI.

40. Muth (מוט), 'death.'—Philo (38d) calls him the son of Kronos and Rhea, and says that the Phœnicians call him Thanatos, 'death,' and Pluto (see *ERE* iii. 182, § 10).

41. Mellih (= Heb. מלח, 'sailor') was evidently a patron-god of fishermen and sailors.

'He invented the hook, and bait, and line, and raft, and was the first of all men to make a voyage. Wherefore they revered him as a god after his death, and he was also called Zeus Meilichios' (Philo, 38c).

42. Meni, 'fate,' is not mentioned in any of the inscriptions, but seems to be meant by Eimarmene, 'fate,' in Philo (37c) (see SANCHUNIATHON, C. 3 (15)).

43. Miskar (מסקר; Lat. Mescar, Misicir, etc.) appears in Ger-Miskar, 'client of Miskar,' Hator-Miskar (a compound with the Egyptian goddess Hathor), 'Abd-Miskar, 'servant of Miskar.' Nothing further is known about this divinity (see Cooke, *N. Sem. Inscr.* 42).

44. M-'n-k (מנק) appears only in the Neo-Punic mase. name M-'n-k-ba'l, 'M-'n-k is owner.'

45. Mishor (מישר), 'justice,' is named by Philo (36a) as Misor, 'straight' (see SANCHUNIATHON, C. 2 (6)).

46. Sankun, in Sanchun-iathon (= Sankun-yaton), 'Sankun has given,' is generally written, with assimilation of the *n*, Sakkun. He appears in Sakkun-yaton, Ger-Sakkun, 'client of Sakkun,' and 'Abd-Sakkun, 'servant of Sakkun'; also in the form Asknn (*CIS* i. 118). The meaning of his name and his functions are unknown.

47. 'Esau (עסא), 'maker' (or 'subdner'), appears in Ousōos of Philo (35a):

'He first invented a covering for the body from skins of wild beasts which he was strong enough to capture. And when furious rains and winds occurred, the trees in Tyre were rubbed against each other and caught fire and burned down the wood that was there. And Ousōos took a tree, and, having stripped off the branches, was the first who ventured to embark on the sea; and he consecrated two pillars to fire and wind, and worshipped them and poured libations of blood upon them from the wild beasts which he took in hunting. But when Hupsour-anos and Ousōos were dead, those who were left, he says, consecrated staves to them, and year by year worshipped their pillars and kept festivals in their honour.'

He is evidently a patron-god of hunters. His name probably appears also in Ushn, or Palætyrus

(Sennacherib, 'Taylor Cylinder,' col. ii. line 40; see *ERE* iii. 183, § 12).

48. 'Ate (see SANCHUNIATHON, C. 3 (16)).

49. Pu'me (פומע) appears as a deity in the names עברפומע (*CIS* i. 112, c 1, c 2), 'servant of Pu'me,' עברפומע, 'Pu'me is good' (J. Euting, *Sammlung der carthagischen Inschriften*, Strassburg, 1883, p. 263. 2), in Latin inscriptions *Namphame*, *Nampame*, etc. (*CIL* viii. 1030^b), פומע, 'handmaid of Pu'me,' עברפומע, 'servant of Pu'me,' and פומע-ה, 'Pu'me has given.' Here belongs also Pygmalion in the list of kings of Tyre as given by Josephus (c. *Apion*. i. 18). An amulet discovered in a Carthaginian grave by Delattre and published by P. Berger (*CAIBL* iv. xxii. [1894] 453-458) contains the dedication לישתרת לנפילין, 'to 'Ashtart, to Pygmalion.' Here Pygmalion is a deity. In spite of the archaic writing, the form seems to be written back into Phœnician letters from the Greek or Latin. The original is apparently פומע-ה, Pu'me-El'yun. The letter *y* is often represented in Greek by γ—e.g., Atargatis for עברפומע. On 'Elyun cf. *ERE* iii. 180, § 13. This, then, is one of the numerous Phœnician compound deities (see below, 8x, and P. Berger, 'Le Mythe de Pygmalion et le dieu Pygmée,' in *CAIBL* iv. vii. [1880] 60-68).

50. Sid, 'the hunter' (see *ERE* iii. 183, § 14).

51. Šuduk, 'righteousness,' is mentioned by Philo (36a, 37d, 38c) as the brother of Misor, 'justice' (see above, 45). He married one of the Titanides, or Artemides, the daughters of El and Astarte. He had seven sons, the Cabeiri, and Asklepios, or Eshmun (see *ERE* iii. 183, § 15).

52. Šaddidos (= Heb. Shaddai?) is mentioned by Philo (37b) as a son of El (=Kronos), whom he slew with the sword. He seems to appear also in 'Abd-Shaddai, 'servant of Shaddai,' and Gad (read Ger)-Shaddai, 'client of Shaddai.'

(f) *Babylonian and Assyrian gods*.—53. Nergal.—An inscription of the Sidonian colony in Athens (*CIS* i. 119; *CIA* ii. 119) states that the tomb of Asephat, daughter of Eshmunshilleh, the Sidonian, was built by Yaton-bél, son of Eshmunshilleh, chief priest of Nergal. Here the Babylonian god Nergal is worshipped by a Phœnician family even in far-away Athens (*ERE* iii. 184, § 7).

54. Bēl.—Bēl in Yaton-bél is the Babylonian form of the name rather than the Phœnician ba'l, as in numerous other Phœnician names (Lidzbarski, *Handbuch*, p. 236). On the cult of the Babylonian Bēl see *ERE* ii. 290, § 2, 295, § 6.

55. Bēltis.—The form Bēltis for the ba'alat of Gebal (*ERE* ii. 117^b) in classical writers shows the influence of the Babylonian Bēltu (construct Bēlit; see *ERE* ii. 296 f.).

56. Ishtar.—The connexion of 'Ashtart with a star by Philo Byblius and others also shows the influence of Babylonian astral religion (*ERE* ii. 116^b, vii. 432, § 13). The spelling of the proper name נישתרת instead of נישתרת (*CIS* i. 871. 6f.) suggests the Babylonian Ishtar rather than the Phœnician 'Ashtart (see *ERE* vii. 433, § 4).

57. Tammuz.—The cult of the Adon (Adonis) of Gebal was strongly modified by the Babylonian cult of Tammuz (see TAMMUZ).

58. Ashur.—The name אשור in *CIS* i. 65. 1 f. is commonly interpreted as a mistake for אשירא, 'Osiris has sent,' but it is quite possible that it contains the Assyrian god Ashur.

59. Ninib.—The identification of El=Kronos=Saturn with the planet Saturn by Philo (40c) also points to influence by the Babylonian god Ninib (see *ERE* iii. 183, § 3).

60. Shalman appears in the Sidon inscription 4.2. This is the Assyrian form of the name rather than the Canaanite (see *ERE* iii. 183, § 16).

61. Nebo is perhaps found in נבאלי (*CIS* i. 102d). Whether these Babylonian influences date from

the Assyrian and Neo-Babylonian periods or go back to the old Babylonian period is difficult to determine (*ERE* iii. 183 (e)).

(g) *Egyptian gods*.—62. Bast.—In the form אֲבַסְתָּ, with prosthetic א, Bast appears in the names אֲבַסְתָּ, 'Abd-Bast, 'servant of Bast,' and אֲבַסְתָּ, Paol-Bast, 'Bast has made' (see *ERE* v. 245).

63. Amon appears perhaps in אֲמֹן, 'Amon is god,' and in נֵיִתְאֹמֶן, 'Neit-Amon' (see *ERE* iii. 184^b, § 5, v. 247).

64. Isis (אִסִּי) occurs in the name 'Abd-Is, 'servant of Isis,' and perhaps in סֵבִי=Seb-Isis; perhaps also in אִסִּי־אֲשֶׁת־אֵת, 'Isis-Ashtart,' and אִסִּי־תַנִּיט, 'Isis-Tanit' (see *ERE* v. 246).

65. Osiris (אֲסִירִי) is found in the names Osir-badil, 'Osir is terrible (?)'; Osir-gan, 'Osir has defended (?)'; Osir-shamor, 'Osir has guarded'; Amot-Osiri, 'handmaid of Osir'; Milk-Osiri, 'Osir is king'; 'Abd-Osiri, 'servant of Osir.' Possibly Philo means Osiris by Eisiros (39d), the inventor of the three letters, the brother of Chna (Canaan) (see *ERE* v. 246, § 38).

66. Hāthor (חַתְוֹר) appears in the inscriptions only in the compound deity Hāthor-Miskar (*CIS* i. 253. 4, 254. 3 f.). As early as the XIXth dynasty she was identified with 'Ashtart both by the Egyptians and by the Canaanites (see *ERE* iii. 182, § 1, 184, § 1, v. 247 (1), viii. 182^a). The stele of Yehaw-Milk represents the ba'alat of Gebal in pure Egyptian style, like the goddess Hāthor, with the horned disk on her head (see Perrot and Chipiez, *Hist. of Art in Phœnicia*, i. 69).

67. Horus (חַר) is named in *CIS* i. 46. 1; and by Derenbourg, 3a (see *ERE* v. 247^a).

68. Neit appears probably in the compound deity נֵיִתְאֹמֶן=Neit-Amon (see *ERE* v. 247^b).

69. Seb is found in the personal name 'Abd-Seb-Is, אֲבַדְסֵבִי= 'servant of Seb-Isis' (see *ERE* v. 248^b).

70. Ptah (פְּתַח) occurs in 'Abd-Ptah, 'servant of Ptah' (*CIS* i. iii. 1; see *ERE* v. 249^a).

71. Khnum (כְּחַנּוּם) occurs in several inscriptions (Lidzbarski, *Handbuch*, p. 363; see *ERE* v. 245^b).

72. Thōth is not mentioned in the inscriptions, but was evidently a popular god because of the amount of information that Philo has to give about him. In 31d Philo says that the Egyptians call him Thōth, the Alexandrians Thōth, and the Greeks Hermes. He first invented writing, and his history was the beginning of the work of Sanchuniathon. He was the adviser of El in his war against his father Ba'l-Shamim, and devised magical charms by which he succeeded (36d). Here he is called by the Alexandrian name of Hermes Trismegistos. He invented the letters of the alphabet by imitating the forms of the gods, and devised the insignia of royalty for El (39a). El gave him the land of Egypt (39b; see *ERE* v. 246^a, vi. 380^b).

In all these cases it is an open question whether these gods found their way into Phœnicia at the time of the Ptolemaic dominion or were adopted in the period of Old Egyptian rule of the XVIIIth and XIXth dynasties (see *ERE* iii. 184 (f)).

(h) *Compound deities*.—A peculiar feature of the Phœnician religion is the compounding of two divinities to form a new god, who then develops his or her individual traits. Analogies are found in 'Ashtar-Chemosh in the Mesha inscription, Atargatis (= 'Attar-Ate), and such Hebrew forms as El-Shaddai and Jahweh-Elohim.

73. Eshmun-'Ashtart (*CIS* i. 245. 3 f.).

74. Eshmun-Melkart (*ib.* 16. 23-28).

75. Ba'l-Addir, in Bal-Addiris, who was worshipped at Sigus in Numidia (*CIL* viii. 5279, suppl. 19121-19123).

76. Gad-Ate (*CIS* i. 93. 3).

77. Milk-Osiri (Molech-Osiris; *ib.* 123b. 1f.).

78. Milk-Ba'l (*ib.* 123a. 1f., 147. 1f., 194. 1, 380. 1).

79. Milk-'Ashtart (*ib.* 8. 1, 250. 3, *Ma'sub Inscr.* 2f.).

80. Melkart-Rešeph (= Resheph) (Levy, *Siegeln*, p. 18).

81. Pu'me-'Elyon (Pygmalion) (see above, 49).

82. Sid-Melkart (*CIS* i. 256. 3f.).

83. Sid-Tanit (*ib.* 247. 5, 248. 4, 249. 4f.).

In the cases where a male and a female deity are combined one is probably the consort of the other. Where two male deities are united, they are probably identified with one another.

ii. THE MYTHS OF THE GODS.—On the cosmogonies and theogonies preserved by Mocho and Sanchuniathon see art. SANCHUNIATHON.

iii. THE CONCEPTION OF THE GODS.—The way in which the Phœnicians regarded their deities is known to us almost exclusively from the predicates that they apply to them in personal names. Most of these express the supremacy and authority of the gods.

The titles ba'l, 'owner,' adon, 'master,' mar, 'lord,' milk, 'king,' mitkot, 'queen,' and 'elyon, 'high,' have been discussed already. Titles of kinship such as em, 'mother,' amm, 'father-uncle,' ab, 'father,' and ah, 'brother' (see above), bring the gods nearer to men and describe them as friendly powers. As among all the Semites, the predicate קָדוֹשׁ (Heb. *kādōsh*, 'holy') is frequently applied to the gods (Lidzbarski, *Handbuch*, p. 361). The original meaning of this word is 'set apart' or 'tabu.' It describes the gods as charged with a mysterious energy that made it dangerous for men to come into contact with them, and that communicated itself to the objects in which they resided, the phenomena in which they manifested themselves, and the persons whom they possessed. This primitive meaning, rather than the late Hebrew ethical one, obtains in Phœnicia. Other predicates that express the divine transcendence are rom, 'high,' in Ab-rom, El-rom, Ba'l-rom, Rom-Ba'l, and Milk-rom; kabod, 'glorious,' in Kabod-Melkart, 'oz, 'strong,' in 'Oz-Ba'l and 'Oz-Milk.

In regard to the powers of the gods the predicates affirm that they know (יָדַעַת), in Yado-Milk; that they hear (שָׁמַעַת), in Shamo-Ba'l and Melkart-shamo. In regard to their character many personal names state that they are good (טוֹב)—e.g., Na'om-El, Na'om-Gad, Gad-na'om, Na'om-Milkot, Na'om-Pu'me. In relation to men the predicates say that the god has created (בָּרַא), in Bano-Ba'l; that she has made, in מְנַוָּה (a hypocoristic form of a name beginning with 'Ashtart); that he has wrought (עָשָׂה), in Ba'l-pa'ol, El-pa'ol, and Pa'ol-Eshmun; that he causes to live (חַיָּה), an apoc. impf. 3rd sing. Piel from חָיָה, in Yehaw-Alon, Yehaw-Ba'l, Yehaw-Milk; that he has given (a child) (חָנַן), in Yaton-Adon, Eshmun-yaton, Yaton-Ba'l, Ba'l-yaton (Lat. Ballatho and Ballahon), Yaton-Milk, Milk-yaton, Sakkun-yaton (Sanchuniathon), 'Ashtart-yaton, Pu'me-yaton, Yaton-Sid, Sid-yaton, and Resheph-yaton. Because children have thus been given by these various gods, they bear names compounded with metten, 'gift'—e.g., Metten-Elim, Metten-Ba'l—or with mi'ne, 'possession,' as in Mi'ne-Milk. The gods appear as the apportioners of human destiny in Eshmun-hallik, 'Eshmun has assigned,' Eshmun-y'a'od, 'Eshmun has appointed,' and Ba'l-shilek, 'Ba'l has cast' (Lat. Balsillec). The name Yamlik-Ba'l (Jamblichus) affirms that Ba'l has made king.

A great number of names describe the gods as helpers of mankind. Thus the god has arisen (קָם), in Ab-kom; he has judged (שָׁפַט), in Shaphot-Ba'l and Ba'l-Shaphot; he has redeemed (פָּדָה), in Ba'l-pado; he has saved (חָלַץ Pl.), in Eshmun-hallig, Hallig-Ba'l, Ba'l-hallig, Milk-hallig, and Melkart-hallig; he has delivered (פָּלַס), in Adon-pallig; he has helped (עָזַר), in Eshmun-azor, Ba'l-azor, 'Azor-Ba'l, 'Ashtart-azor; he is gracious (חַנּוּן), in El-hannon, Ba'l-hanno, Hanni-Ba'l, Hanon-Ba'l, Do'm-hanno, Han-Melkart, Melkart-hanno, Melkart-han, Han-Milk, and Han-Sid; he has blessed (בָּרַךְ Pl.), in El-barik, Barik-Ba'l (Lat. Baricbal), Mar-barik; he has sustained (שָׁמַר), in Mar-samok; he has carried (נָשָׂא), in Eshmun-amos; he has guarded (שָׁמַר), in Osir-shamor, Eshmun-shamor, and Shamor-Ba'l; he has protected (שָׁמַר), in Saphon-Ba'l; he has prospered (לָבַט, Pl.), in Eshmun-gallih, Do'm-gallih, and Ba'l-gallih; he has rewarded (שָׁלַט, Pl.), in Eshmun-shallim and Ba'l-shallim; he has smoothed the way (שָׁלַט, Pl.), in Ba'l-pallis. The curious title of אהל, 'tent,' or 'shelter,' appears in Ohel-Ba'l and Ohel-Milk. These titles show a lofty conception of the character and the activity of the gods.

iv. THE RELATION OF MEN TO THE GODS.—Corresponding to the fact that the gods were called mostly by names of authority is the fact

that men described themselves usually (1) as the slave (*abā*) of some god.

Thus we meet 'Abd-A-b-a-t (Bast), 'Abd-Adon, 'Abd-Elīm, 'Abd-Isā, 'Abd-Osīr, 'Abd-Eshmun, 'Abd-Ba'1, 'Abd-Ba'1ot, 'Abd-Hanmon, 'Abd-Yerah, 'Abd-Milk, 'Abd-Milkot, 'Abd-Melkart, 'Abd-Miskar, 'Abd-Marna, 'Abd-Seb-Isi, 'Abd-Susim, 'Abd-Azor, 'Abd-Ashtart, 'Abd-Pu'me, 'Abd-Ptah, 'Abd-Sid, 'Abd-Saphon, 'Abd-Resheph, 'Abd-Shaddai, 'Abd-Shahar, 'Abd-Shemesh, 'Abd-Tanit. The corresponding fem. form is *amot* (אֲמוֹת), 'female slave,' which is often abbreviated to *mot*. Thus we find Amot-Osīr, Amot-Ba'1 (Lat. Amobballi), Amot-Milkot, Amot-Melkart, Amot-Ashtart, Mot-Milkot, Mot-Melkart. Another name of submission was *kelb*, 'dog,' 'hierodule.' This appears in the name Kelb-Elīm, and in the hypocoristic Kelba. A similar name was *ger* (גֵּר), 'client.' This appears in Ger-Ba'1, Ger-hekal, ('client of the temple'), Ger-Milk, Ger-Melkart, Ger-Miskar, Ger-Sakkun, Ger-Ashtart, Ger-Sid, Ger-Shaddai, and in the hypocoristic Gera. Similar in meaning probably was *bod*, 'member' (of the family?), which appears in Bod-Eshmun, Bod-Ba'1, Bod-Milk, Bod-Melkart, Bod-Ashtart, Bod-Saphon, and Bod-Tanit.

(2) *Ben*, 'son.'—Much less often do worshippers call themselves by names of kinship to the gods. *Ben*, 'son,' occurs in Ben-Ur, Ben-Ate (?), Ben-Ba'1 (?), Ben-Hodesh, and Ben-Melek.

(3) *Bot*, 'daughter,' is found in Bot-Ba'1, Bot-Na'om, and Bot-Shelem.

(4) *Ahot*, 'sister.'—Women are also called 'sister' of a god, although the term 'brother' is apparently applied only to deities; e.g., we have Ahot-Milkot, Ahot-Melkart, and abbreviated Hot-Milk (Lat. Otmilc), Hot-Lot (= Ahot-Elot), Hot-Milkot, and Hot-Melkart.

v. PLACES OF WORSHIP.—x. High places.—The location of a sanctuary was determined by the presence of a sacred natural object, such as a spring, holy tree, etc., in which dwelt a *ba'al*. This was fenced off from the surrounding territory by a wall or a line of stones. The Canaanite and Hebrew name for such a *temenos*—*bama*, 'high place'—does not happen to occur in the inscriptions, but was doubtless in use. Remains of open-air high places are still found in Phœnicia and in the colonies (see *ERE* iii. 185). Tacitus (*Hist.* ii. 78) informs us that, when Vespasian consulted the oracle on Mt. Carmel, he found neither statue nor temple, but only a much venerated altar (cf. Suetonius, *Vesp.* 5).

2. Temples.—In the larger towns permanent structures were erected over or around the sacred object, which served to protect it, to shelter the priests, and to guard the treasures that were deposited in the sanctuary. Such temples were known as *bet* (בֵּית), 'house' (Lidzbarski, *Handbuch*, p. 235), or *hekal* (הֵקַל), 'temple' (a loan word from the Sumerian *e-gal*, 'great house'), which appears in the personal name Ger-hekal, 'client of the temple.' Another common name is *mikdash*, 'sanctuary' (*ib.* p. 361). The holy of holies where the god dwelt was called *heder* or *hedrot*. All these names are used in Hebrew (see *ERE* iii. 185).

No remains of temples earlier than the late Persian period have come down to us. The majority are of the Greek and Roman periods. The oldest of these temples was the one built by Bod-Ashtart at Sidon, which was excavated by T. Macridy-Bey and H. Winckler in 1903 (see F. von Landau, in *MVG* ix. [1905] 5, x. [1906] 1; and T. Macridy-Bey, in *RB* xii. [1903] 69-77, xiii. [1904] 390-403). A number of other temples of the Greek and Roman periods were investigated by Renan (*Mission de Phénicie*). The temples of Cyprus are described by L. P. di Cesnola, *Cyprus: its ancient Cities, Tombs, and Temples*; and many of the monuments are reproduced in *A Descriptive Atlas of the Cesnola Collection of Cypriote Antiquities* (see also M. Ohnefalsch-Richter, *Kypros*). Coins of Phœnicia and of Cyprus give rude representations of temples that aid in reconstructing their architectural features. A number of fine ruins of the Roman period are still to be seen in

the Lebanon—e.g., at Brummana (see Baderker, *Palestine and Syria*, Leipzig, 1906, p. 283), at Niha near Zahleh (*ib.* p. 292), and at Afka at the source of the river Adonis (*ib.* p. 336). The last is the famous temple of 'Ashtart described by Lucian, where the death of Adonis was annually bewailed. Near Neba' el-Lebn is a remarkable ruin known as Kal'at Fakra. It stands in a hollow among jagged pinnacles of rock that must have been a haunt of some ancient *ba'al*.

From these remains it appears that the earliest departure from the primitive high place was a monolithic structure such as the *ma'abed*, 'temple,' at Amrith (Renan, *Mission*, pp. 63-68). This is constructed of three upright stones that rest on the solid rock and a monolithic roof. It served as a shelter for the cult-object. The style of architecture suggests Egyptian influence. The next step was to construct a platform about the tabernacle and enclose it with a portico. This is the stage depicted on coins of Byblus, where we see the fetish-stone of the god in its shrine surrounded by a large court and portico (Perrot-Chipiez, i. 61; cf. the similar coin from Cyprus, p. 276). Finally, a roofed building was added on one side of the court (see the coin of Byblus mentioned above). Some idea of what an old Phœnician temple was like may be gained from the description of Solomon's temple (1 K 5-7), since this was built by Phœnician workmen. The later temples all show the Greek style.

3. *Maššebhōth*.—Standing stones which served as dwelling-places for the deity were the central objects in all the sanctuaries. They were called either *maššebhōth* (מַשְׁבְּהוֹת) or *našib* (= Arab. *naṣīb*) (see Lidzbarski, *Handbuch*, p. 325). Philo (35b) says that two pillars were consecrated by Ousōos (the eponym of Palætyrus), and that other pillars were consecrated to Samim-rom and Onōōos (see *ERE* ii. 117, § 4, iii. 186, § 1, viii. 487). A common Phœnician name for a variety of the *maššebhōth* was *hammon*=Heb. *ḥam* (see *ERE* ii. 287, § 5). These are probably mentioned by Philo (32b) as the inscribed *ammoneis* from which Sanchuniathon derived his records; also in the name Amunos (35d). Such *hammonim* are depicted in *CIS* i. pl. viii. Fetish-stones were called *beth-el*, 'house of a god,' by the Phœnicians, as by the Hebrews. Philo (36c) speaks of a god Baitalos, the son of Ba'1-Shamim, and the brother of El, Dagon, and Atlas. The same deification of the holy stone is found in the god Beth-el of the Assuān papyri, and is analogous to the deification of the *dšherāh* (see *ERE* ii. 288*).

4. *Asherim*.—Wooden posts that served as dwelling-places for deities, particularly for the goddess 'Ashtart, were as common among the Phœnicians as among the Canaanites and the Hebrews. The word probably occurs in the *Mašub Inscription*, 4, 'Ashtart in the *dšherāh*.' A clay figure from Cyprus represents a goddess sitting within the trunk of a tree (Ohnefalsch-Richter, *Kypros*, i. 171). Such poles are depicted on the stelæ from Carthage. They are mentioned by Philo (35b) along with the *maššebhōth* (see *ERE* iii. 186, § 2).

5. Images.—In the oldest sanctuaries the standing stones were the only emblems of the gods, and these lasted down to the latest times in some of the temples. With the advance of civilization, however, images were developed out of the primitive fetishes. They are implied by Philo's description of 'Ashtart (38c) and of El (39a). The images that have survived show strong Egyptian influence in the artistic treatment. 'Ashtart is represented with the attributes of Hathor, or else as a nude female holding a dove. Ba'1-hammon is represented with ram's horns (see *ERE* iii. 186,

and, after completing his medical studies in 1804, became associated with Gall in his work, and continued with him until 1813, when they separated. There is no doubt that it was to Spurzheim that the great if temporary success of phrenology, towards the end of the first quarter of last century, was due. Gall died in 1828 and Spurzheim in 1832. The latter travelled with Gall through Germany, where they inspected prisons and indicated the characters of the prisoners with great success, to Holland, and to France, where they strove with Cuvier and the doctors, and were at length prohibited from lecturing; Spurzheim also visited England and Scotland, France again, and then America, where he died. One of his demonstrations in Edinburgh in 1816 was attended by George Combe (born 1788), who was attracted by a bitter criticism of the new science that had appeared in the *Edinburgh Review* for June 1815. The demonstration tended to alter his opinion, and he attended the next course of lectures, became a sympathetic student of phrenology, and, finding that his own observation confirmed its truth, became its staunch supporter. Unjust criticisms of phrenology led him to accept the invitation of the editor of the *Literary and Statistical Magazine for Scotland*, who offered a free discussion of its merits. He wrote four papers in its defence, which were afterwards published as *Essays on Phrenology; or an Inquiry into the Principles and Utility of the Systems of Drs. Gall and Spurzheim, and into the Objections made against it* (Edinburgh, 1819). Largely through his efforts a Phrenological Society was started in Edinburgh in 1820, of which he was president, and a *Phrenological Journal* was published by this society from 1823 onwards. Many other societies arose in different parts of the British Isles, in the colonies, and in America, in one of the universities of which a professorship of phrenology was even established. Combe published numerous works, of which the best-known was *The Constitution of Man* (Edinburgh, 1828). It attracted Richard Cobden, who was instrumental in forming one of the societies in Manchester, 1835 (see J. Morley, *Life of Richard Cobden*, new ed., London, 1910, ch. iv.). Several well-known scientists in Britain, as in other countries, defended phrenology—including Dr. J. Elliotson and Archbishop Whately—while more recently Alfred Russel Wallace has spoken in its favour. But its opponents were far more numerous and persistent. One of the strongest defences of the system was that in the *Foreign Quarterly Review* (vol. ii. [1828] no. 3). The *Phrenological Journal* came to an end in 1847, after 20 volumes had been published. Combe died in 1858.

The name 'phrenology' is due to Spurzheim, but was made popular by Combe's adoption of it. Gall's studies had been called 'craniology' or 'cranioscopy.' The change of name is important as indicating that emphasis was to be laid in the new science upon the mental and moral aspects rather than upon the purely physical; unfortunately, it became synonymous in this country and elsewhere with the art of 'reading bumps,' which is quite a caricature of its original intention. Gall had naturally taken notice in the first instance of outstanding personalities, capacities, or peculiarities of disposition, and had sought to connect these with exceptionally large or prominent portions of the head; or, on the other hand, noticing prominent features in heads, had tried to connect these with striking characteristics of the individuals; moreover, in demonstrations, and especially in public demonstrations, it was only the prominent portions of the skull or cast or head that could be brought to the attention;

hence perhaps the unfortunate association in question.

2. *Theory.*—The theory may be stated somewhat as follows. Individuals differ mentally as well as physically from each other; their characters, intellectual and moral, are largely independent of their environment and education, and are more or less constant and uniform; education may repress the manifestation and therefore hinder the development of powers, but it cannot originate new ones. Such differences, therefore, are natural or congenital; they are transmitted from parent to child; there are family and national similarities in mental character, as there are family and national similarities in face and in other physical structure. In the same way, different animal species show different mental powers, which are inherent in all the members of each species. The young differ from the old, and there is a regular progression in the development and decay of the mental powers from birth to death. These mental powers are exercised in the first instance through the brain, which is their physical condition. But the brain is not a single organ, uniform throughout, or capable of conducting *any* mental operation in any of its parts. It consists of a number of distinct and separate organs, each of which has some specific mental function which it subserves, and which depends for its energy and its development upon the relative size and vigour of the organ in question. Three problems are thus before the phrenologist: to divide the intellectual and moral character into its separate powers or faculties; to mark off the separate organs in the brain, or rather on the external skull of the living man; to connect each faculty with its corresponding organ in the brain and its corresponding protuberance or portion of the skull. Spurzheim laid down the principles according to which a faculty is regarded as natural and primitive: if it exists in one species of animals and not in another; if it varies in the two sexes of the same species; if it is prominent or deficient as compared with the other powers of the same individual; if it appears or disappears earlier or later in life than other faculties; if it is active or at rest separately from other powers; if it is inherited by children from parents; if it shows health or disease in its exercise apart from the other faculties. A faculty is 'a specific power of feeling in a certain way, or of forming ideas of a certain kind'—the power being distinct from the feelings or the ideas which are thus produced or formed; it is independent of the will; one faculty cannot manifest the same feelings or form the same ideas as another; each has some definite relation to the objects of the external world; each may be excited from without by these objects, but also from within. The faculties are either propensities, which are both animal and human, such as 'amativeness' and the 'love of offspring,' or sentiments, some of which are peculiar to man, or, finally, intellectual powers, perceptive and reflective. On the other hand, such terms as 'sensation,' 'memory,' and 'imagination' do not correspond to 'faculties' in the phrenologist's sense, but are merely general names for the products of the different faculties either singly or in combination. The connexion between a faculty and its physical organ was determined, as already indicated, by a study of the living heads, of the skulls, of casts from the heads, or of pictures and sculptures of men distinguished beyond their fellows in some specific ability; practice increased skill in noticing the differences in the shape of the head and in the proportionate size of its different parts; heads of animals, of striking mental characteristics, as ferocity, cunning, timidity, etc., were compared with those of man;

differences of skull in the two sexes were compared with the supposed mental differences; the heads of the insane, of the mentally defective, of criminals, etc., were studied and again compared with their peculiar mental or moral aberrations or defects. The results were verified, as far as possible, by reading the heads of unknown individuals, finding how far their actual characteristics coincided with those inferred by the phrenologist from their heads. It was this practice that led to the ridicule and ultimately to the contempt and neglect under which phrenology fell; yet it had a perfectly practical and useful aim. Apart from the verification of the organs, it was hoped by this means to be able to forecast the vocation for which a child was best adapted; to indicate the lines along which a child's education would most successfully proceed, the dangers to which its character was liable, the treatment by which criminals or the insane might best be brought back to human and normal courses; and even the beginnings of eugenics are to be found in the phrenological writings—life-partners are to be selected on its principles. The objections brought against the new doctrine were from various standpoints—anatomical, philosophical, and theological; it was objected that the brain is homogeneous throughout, that there is no evidence that it is the organ of mind, that the size and shape of the brain cannot be argued from that of the head, that great injuries have occurred to the brain without corresponding effect upon the mental powers, that the shape of the head is artificially altered in many savage tribes without affecting the intelligence; that the mind or consciousness is a unity, and cannot consist of separate faculties, or that it is a *tabula rasa* on which impressions are made through the senses and associated together into ideas and thoughts without any innate powers; that there is nothing to fix the number of the faculties, and, indeed, that phrenologists disagree as to their number; that, if phrenology were accepted as true, it would destroy religion, remove responsibility from man, and reduce mind to a purely material process. Gall and Spurzheim were able to show the possibility of studying the structure of the brain, and of proving that differences actually exist in its different parts; in particular, they pointed out the true condition of the brain in hydrocephalous subjects; they were the first to admit that the inner and outer plates of the skull are not parallel throughout, but they showed that this deviation amounts to not more than one or two-tenths of an inch, whereas the difference in heads is from one to two inches; and in general they proved that the shape of the skull is certainly determined by the prior growth of the brain. As to the argument from the effect of injuries or loss of substance of the brain upon the mind, and the striking cases reported by Sir Everard Home from Haller and others, they pointed out that this argument would apply equally against any theory as to the brain functions, that the observations were not always accurately made, and that in describing the resultant effects upon the character only vague general terms were used, such as 'intelligence,' whereas some quite limited and specific ability might disappear or be reduced in its activity without the *general* intelligence being appreciably affected. Analogy with other organs and organisms suggests that each part of the brain has a separate function; the brain becomes more complicated in animals in proportion to their place in the scale of intelligence—insects, fish, birds, mammals, and, highest among them, man; the same is true of individuals in the human race; the different parts of the brain do not grow simultaneously, but in succession; each appears as its faculty appears;

and both organ and faculty are developed when they are necessary for our existence; intense application of the mind fatigues not the whole brain but only some part of it, for a change of work or occupation brings rest; the states of sleep, dreaming, somnambulism, and the like can be explained only on the assumption that the organs of the brain are different in activity and in position. With regard to the philosophical objections, it was pointed out that the same arguments will apply to *life*, which is also a unity, but acts differently in different circumstances, and through different organs; that, in any case, phrenology takes no concern with the ultimate nature of mind or of body, but deals merely with facts of observation and experience, whose truth will not be affected by the truth or falsity of idealism or any other philosophy. This answers the objections from theology also. Phrenology will give us knowledge of ourselves and others, of our characters and tendencies; this will lead to higher morality, not to lower; by preventing the manifestation of bad tendencies, their development will be hindered, and corresponding encouragement may be given to the good. The vices and defects, the virtues and talents, of each particular race can be learned, the former suppressed, the latter cultivated; and a rational treatment of insanity may be adopted, etc. Popular belief has always favoured the idea that persons differ in their natural tendencies—one covetous, another cruel, another kind, another proud; that one has a talent for music, another for mechanics, another for painting, and another for poetry; that these tendencies cannot be changed by an effort of will; that a genius for music cannot be acquired by study or practice; that there is a natural growth in the powers and a certain order in their development with which we cannot interfere without danger; and that no obstacle will prevent a genius from showing and from cultivating his superior powers. At the same time it was admitted that the division of the faculties, being founded upon observation alone, could not be regarded as finally settled; still less was it certain that the particular organs adopted by Gall and Spurzheim were really those of the faculties in question. It cannot be said, however, that the phrenologists were fortunate in their choice of faculties as the primitive ones in human nature, nor are the results of their observations with regard to the position of the organs in the brain in the least degree satisfactory. The following is Spurzheim's latest arrangement of the powers of the mind, with the numbers of their corresponding organs:

AFFECTIVE.—I. *Propensities*: (1) desire to live, (2) assertiveness, (3) destructiveness, (4) Amativeness, (5) philoprogenitiveness, (6) adhesiveness, (7) Inhabitiveness, (8) combativeness, (9) secretiveness, (10) acquisitiveness, (11) constructiveness; II. *Sentiments*: (12) cautiousness, (13) approbation, (14) self-esteem, (15) benevolence, (16) reverence, (17) firmness, (18) conscientiousness, (19) hope, (20) marvellousness, (21) ideality, (22) mirthfulness, (23) imitation.

INTELLECTUAL.—I. *Perceptive*: (24) individuality, (25) configuration, (26) size, (27) weight and resistance, (28) colour, (29) locality, (30) order, (31) number, (32) eventuality, (33) time, (34) tune, (35) language; II. *Reflective*: (36) comparison, (37) causality.

Of this classification it may be said (1) that it is quite inadequate for the complexity of the case; experimental psychology is only at the beginning of the real analysis of mental phenomena; while there is no doubt that there are certain innate powers of the mind, it is quite uncertain at present which of the functions actually manifested by the mind of man are primitive and simple; even the apprehension of colour or of form is probably a very complex process. (2) We are only at the beginning also of a scientific effort to measure and therefore to compare the manifestations of these

different powers in different individuals, so as to have some real knowledge of the extent to which one individual differs from another. (3) We are only beginning to know what are really the changes in the behaviour of individuals that occur after brain injury or disease; or, again, the differences in behaviour between the child born with defective brain and the normal child, etc. (4) A similar limitation obtains in our knowledge of the capacities of different races, sexes, ages. (5) The hundred years that have passed since Spurzheim demonstrated in Edinburgh have not brought anatomists much nearer to an understanding upon the limits of the different areas or regions in the brain; while it is almost universally admitted that there are separate regions, which are intimately connected with different mental phenomena, still it seems improbable that such regions have hard and fast boundaries; a part of one may under compulsion take over the work of another; the destruction of a comparatively large part of an area does not involve the total disappearance of any mental capacity; and in particular the true nature of these regions seems to be that all are connecting systems between sense-organs, on the one hand, and muscles, glands, and viscera, on the other, rather than initiating sources of special activity. (6) Finally, there is even yet no sort of agreement as to how the different portions or areas of the brain are connected with the mental powers (see also art. BRAIN AND MIND).

LITERATURE.—F. J. Gall and J. G. Spurzheim, *Anatomie et physiologie du système nerveux en général, et du cerveau en particulier*, 4 vols., Paris, 1810-19; J. G. J. LEWIS MCINTYRE.

PHRYGIANS.—I. The religion of the Phrygians as old Anatolian.—It is impossible to write any sketch of Phrygian religion without continual reference to the history and ethnology of the Phrygian people. These subjects are still under discussion, and opinion differs; but it is not possible here to discuss the differences. The present writer will merely describe his own views and the historical assumptions on which they are based. It is assumed that certain European tribes entered Asia Minor across the Dardanelles earlier than 1000 B.C., and spread eastwards and southwards. Gradually the eastern branch called Phryges, or Briges,¹ occupied the country which was called after them Phrygia. We trace their history by scanty references in the ancient historians, by archæological remains, and by inscriptions, the sources being all very inadequate. The Phrygians took possession of a country which already enjoyed

a civilization distinctly superior to that of the invaders; but the latter seem to have imposed their language on the country, just as the Gauls did in Galatia, when they conquered it in the 3rd century B.C. The Phrygians, however, like the Gauls, adopted the religion of the country in which they settled, and, though this religion was often called Phrygian, it was really much older than the Phrygian conquest. It represents a prevalent type of religion, which was very widely spread over the countries adjoining the Aegean lands and the south coast of the Black Sea. This widespread type may be called Anatolian, pre-Hellenic, or Pelasgian. It presents close analogies to certain Syrian cults, and the Mosaic Law presupposes the existence of an older cult of the same general type.

2. Influence exerted by the Phrygians on the older Anatolian religion.—It must be supposed that the conquering European race exercised some influence over the old religion, but it is not easy to distinguish the elements which belonged to the different peoples. On one point alone comparative certainty can be attained. As mentioned below (§§ 13, 18), the goddess in the older religion was the most important person in the divine family, but in the subsequent history of Phrygia there are many cases in which the god is apparently dominant. There must have occurred a change, and the probability is that this change was due to the natural relation between conquerors and conquered. In war superior force is exercised by the male sex. It is true that, according to legend, the old Anatolian or Phrygian religion used the services of armed priestesses, who were called Amazons, and Greek art delights to picture the conflict between armies of Greek men and Amazons. To the Greek artist this conflict became symbolical of the great conflict between civilization and barbarism, between Europe and Asia, between good and evil. There is no reason to think that Greek soldiers ever came actually into conflict with a force of Amazons, but the explanation of this artistic form must lie in the fact that the Greeks were aware of the existence of such warriors, at least in the past, and that they pictured the European Phrygian conquerors as being in a sense kindred to themselves, at the early time when they were engaged in the war against the Anatolian system with its armed priestesses.

The Phrygian conquest of the country was achieved by men, and they inevitably tended to put a god rather than a goddess in the position of dominance, and to picture the contest as a fight between men and women. Hence in the *Iliad*, iii. 187, Priam alludes to the battles which he had fought as an ally of the Phrygians against the Amazons on the banks of the Sangarios in the heart of the country which was afterwards known as Phrygia. An allusion so early as this cannot be set down as mere legend; it must have some historical basis such as has been described, and it implies also an approximate date. Homer associated this conflict with a comparatively late stage in the history of that city of Troy which was captured and demolished about 1184 B.C. The last king of that city had in early youth taken part in those battles, which implies that the Trojan race was closely akin to the Phrygians, and was allied with them in their conquests towards the east. It is, however, remarkable, and yet perfectly explicable, that the war between Greeks and Trojans in the old age of this last king should have been regarded in the later historical view as a stage of the conflict between Europe and Asia, for mythology is never logical or self-consistent, and the Phrygians are sometimes considered as Europeans fighting against Asiatics,

¹ On forms and derivatives of the name used in Phrygia see Ramsay, *Cities and Bishoprics of Phrygia*, ii. 382, 616.

bnt at other times, after being settled for generations on the Trojan coast, came to be regarded by Europeans as typical of Asia; and similarly the branch which settled in Phrygia became rapidly identified with their new country, and ranked as an Asiatic stock in their relations with European Greeks. In this, as in almost all similar cases, there is the strongest tendency for the conquering people to adopt, at least in part, the religion of the conquered, because the belief lies deep in human nature that the local gods must be able and powerful to protect or to harm all human beings that are settled in their country (2 K 17²³⁻²⁵). It was therefore necessary for the Phrygian conquerors of Troy and of Phrygia to pay court to the gods of the land, and there is no way of paying court to a deity except by worshipping him as such.

Yet the conquerors, who must have consisted largely of men, generally married the women of the country. But, while they married them, they did not regard them as superior in rank or dignity. They were taking the women of a conquered race, and it was inevitable that they should regard themselves as the superior, conquering caste, who were conferring honour on a certain part of the subject population by marriage.

3. *Mysteries in the Phrygian religion.*—Now the character of pagan religion always reflects the social and economic circumstances of the people who profess it, and the result appeared in the aspect which was imparted to the religion of this more or less mixed Phrygo-Anatolian race. A god generally appears as the superior and dominant figure, at least in outward show, in the most typical Phrygian cities. The coins are struck in the name of a god at least as often as in that of a goddess, and the foundation legends often speak of a god. On the other hand, in the cities to which the Phrygian domination never spread, or where there is reason to think that it was weaker, the goddess remains the more outstanding and characteristic figure. In all cities alike, however, Phrygian and non-Phrygian, of inner Asia Minor the religion remained fundamentally as it was before. This result was attained through the mysteries (*g.v.*), in which the real character of the religion was displayed to the initiated. The religion was not shown in its entirety to every person; only those who fulfilled certain tests, or performed certain preparatory rites, were admitted to see its true nature. A good example of this fact is revealed in the Phrygian city which is generally called Antioch of Pisidia, and which was one of the great religious centres of Phrygia. On the coins and in the inscriptions the god Mên Askaënos is the ruling figure. He appears in them as the hereditary deity (*πάτριος θεός*).¹ Strabo² speaks of the two centres of Phrygian religion near Antioch as being seats of the god Mên, not of any goddess. No form of the native goddess is mentioned by Strabo as known at Antioch; and she appears far less frequently on the coins. One of those two sanctuaries was discovered in 1911. It stands on the top of a mountain, 5000 ft. above the sea and 1300 ft. above the city, from which it is distant about four miles by a steep and difficult path. In and around the great sanctuary there were found numberless dedications to the god Mên, but not one single dedication to the goddess. There was a small chapel of the goddess in one corner of the great sanctuary, if we may judge from the discovery of several statuettes representing Cybele or Artemis. It is apparent that in outward show, just as Strabo says, the sanctuary was obtrusively and pre-eminently that of the god,

while the goddess was relegated to a small chapel in a corner. There were also at least two small temples dedicated to a goddess, one of the Cybele type, and another of the Aphrodite type, outside the sanctuary, on the summit of the same mountain, forming part of a large complex of buildings of various kinds, which composed the Hieron. In none of these small temples was any dedication to the goddess found, but there were statuettes representing her. It is very evident that in outward aspect the Hieron as a whole was characterized to the public as the seat of a god, and that the goddess had quite a secondary place.

On the other hand, when a building which seems to have been the hall of initiation, close to the central and great sanctuary and evidently standing in close relation with it, was excavated, it became apparent that the ceremonies which were there celebrated were the old Phrygian or Anatolian ritual of a goddess, and not the novel ritual of a god, although (c. A.D. 300) the throne of a god was added to the scene. Now those rites which were celebrated in the Phrygian mysteries are described by all ancient authorities as the rites of a goddess, viz. of the Phrygian mother—a goddess who was the impersonation of the earth, as the great mother of all life, who gives birth to all things, and receives back to herself all things at death. Demosthenes describes those rites as celebrated mainly by a priestess.¹ The priestess was the chief figure in the ritual, while a man was the assistant of the priestess. The man acted as the teacher of the ritual; he recited from the books the words of the sacred formulae; he helped those who were being initiated to go through the ritual; he taught them the proper words to use, and showed them how to perform the rites in orderly succession.

In the Hellenic religion, which developed through various external and internal influences out of the pre-Hellenic, Pelasgian, or Anatolian type, many cases are observable in which a prophetic centre was apparently under the presidency of a god, and the prophecy appeared as the expression of his soul or his knowledge. This is especially the case with the god Apollo, a purely Hellenic idea, in whom the highest tendencies of Hellenism were manifested to the world. To take two great centres of Apolline teaching, Klaros on the Asiatic side of the Aegean and Delphi on the European side—at Klaros we know that mysteries were celebrated, and even the scanty allusions to their ritual show that they were fundamentally of the Phrygian or Anatolian type;² at Delphi, as Æschylus expressly says,³ the deity who presided was originally the earth-goddess; she was succeeded by Themis, who is merely a moralized expression of the same divine idea; only in the third place did Apollo come in to replace the successive goddess-ideals in the presidency of this prophetic centre; a woman was always the medium through whom he expressed himself; and in popular statement this prophetess Pythia is mentioned as the source of revelation almost as frequently as 'the god' himself.

4. *God and priest.*—In the rite which Demosthenes describes⁴ the man acting as priest was the director of the ritual, while the woman as priestess was the centre and head of the religion; and all the evidence, scanty though it be, tends to show

¹ The description is given by Demosthenes, *de Corona*, 258 f., where he inveighs against Æschines. The mother of Æschines was a wandering priestess of the Phrygian goddess, who carried the rites about Attica, and the son acted as her assistant and ministering priest.

² Makridi, in *Wiener Jahreshefte*, 1905, p. 155 f., 1912, p. 26 f.; also *EAH*, 1906, p. 349, 1915, p. 33 f.

⁴ G. Foucart, *Assoc. rel. chez les Grecs*, p. 67.

¹ M. M. Hardie (Mrs. Hasluck), in *JHS* xxxi. [1912] 111 f.; J. G. C. Anderson, *JRS* iii. [1913] 63 f.; Ramsay, in *BSA* xviii. 2 xli. 657, 677.

that this is one instance of a general principle. The god is represented by the priest in this religion; he teaches mankind what are the proper rites and words with which they should approach the divine power. The god was himself the first priest, and all subsequent priests are considered as successively taking his place, wearing his dress, bearing his name, and filling his part in the religion. In a sense it is true to say that the goddess is the chief figure. It is she who is the source of all life and the giver of all good things to mankind, while the god is a sort of accident in her life. But this is not the whole truth. The god is in practice the most important figure in the natural relations between the deity and human beings, because he shows, partly by example and partly by teaching, the ritual through which alone man can appeal to the goddess, who is the ultimate embodiment of the divine power. It was therefore quite easy to lay emphasis on the functions of the god, without really altering the character or ritual of the religion. The divine life was in a sense a reflexion of the life of society, or, rather, a model for human life.

Further, this human life was not regarded simply as the relation between individuals or as the picture of a single family. The family is regarded in the religion as the unit in the social organism; and the divine life, as shown in the relations of the god and the goddess, sets forth for the good of men the foundation on which society rests, viz. the mystic marriage of the god and the goddess as the symbol and pattern of earthly marriage. The gods in their mutual relation form the model which human life in society must reproduce. The gods have taught men, and are always teaching men, what they ought to do in their relations to one another and to the deity.

5. The holy marriage.—The theory has been advanced, and seems to the present writer fundamental in the subject, that the holy marriage as celebrated in the mysteries was intended to convey the full teaching about the perfect completion of human life; and the marriage ceremony of the old Phrygian or Anatolian religion consisted in the performance by the pair who were married on earth of precisely the same ceremony as took place at the holy marriage in the mysteries. There is also good reason to think that the marriage ceremony was performed at the sanctuary. One of the rites was that the pair drank from a common cup, and this rite passed into the Greek ceremony of marriage as it is still celebrated down to the present day under Christian forms. At the common meal which formed part of the religious ceremonial constituting the bond to hold together any association in ancient life the crowning rite consisted in drinking from the common cup, and the same was the case in the celebration of the mysteries. Each *μύστης* had in turn to say, 'I have drunk from the holy vessel' (*κύμβαλον*). But in the celebration of the marriage it was only the married pair who drank from the same cup; they alone were united in this social bond; all others present at the marriage feast drank from their own separate cups. Such was the character of the ceremony which was performed in Athens on the second day of the Anthesteria. At that festival the marriage of Dionysos was celebrated, and the fact that all the celebrants drank from separate cups on this occasion marked out the ceremony so distinctively that the name 'Cups' was given to the second day of the festival. Seen from this point of view, the mysteries presented a picture of the nature of civilized society and a contrast between the rude savagery of human life without the divine guidance and the higher civilization which came through that divine example.

One of the formulæ that were repeated in the mysteries by the person who was being initiated consisted of four words: 'I escaped evil; I found better.'¹ It is mentioned that the same formula was repeated as part of the ritual of marriage in Athens, and the divine marriage must be taken to be typical of the old form surviving from pre-Hellenic times. The identity of the formula in the two cases implies the marked similarity of the ritual in both.

6. Two stages in the mystic initiation.—Judging from the arrangements of the Hall of Mysteries at Pisidian Antioch, where was an old, wealthy, and powerful religious centre, there seem to have been two stages in the mystic ritual (just as there were at Eleusis).² But there is no reason to think that the two stages were celebrated at different seasons (as at Eleusis); on the contrary, they seem to have succeeded one another practically without any interval. The first stage was called initiation (*μύησις*); the second stage was called by a name as yet unknown, but the verb denoting the act was *ἐμβατεύειν*, 'to enter' or 'to set foot upon,' and the idea expressed in this stage of the ritual seems to have been the entrance on a new life; possibly the noun *ἐμβατεύσις* may have been a technical term; but no term has as yet been discovered in actual use. The phrase used in the inscriptions at the temple at Klaros near Colophon (where similar mysteries were celebrated) is 'those who had been initiated entered on' (the new stage), and it is certain that at Klaros the stages followed immediately after one another. Those mysteries might be celebrated at any season, like a church service, and were not restricted to a single occasion in the year.³ Similarly at Antioch the arrangements of the hall seem to imply that the *μύστης* passed through the first stage on one side of the hall, and thereafter entered through a sort of gateway in the middle of the hall after purification into the immediate presence of the god, and then began a new series of rites before the throne on which the god was supposed to be sitting; but we may imagine that the high-priest sat on the throne which is dedicated to the god by an inscription of late date. The rites described by Demosthenes took place probably as the first moment of the ritual in this second stage before the face of the god. In the first stage there had taken place an act which is described as the 'reception of the mystic things and words,' and the *μύστης* who had passed through this first stage (*παράλαβὸν τὰ μυστήρια*) immediately was free to enter into the presence of the god, and pass through the second stage of the ritual. The ceremonial of the higher grade symbolized the approach of man to the presence of the god, and its subject was the identification of the initiated person with the god, and the promise was probably given to him in the ritual words, 'Happy and blessed, thou shalt be god instead of mortal.'⁴ This identification of the human being with the divine life is the proper goal of human life. That goal was attained at death, as is shown in many epitaphs, for the dead man returns to the mother who bore him. But the same goal was attained as the result and perfection of the initiatory ritual. In the mystic rites at Antioch the culmination lay in the enactment of the perfect scene of human life—the fundamental rite on which society rests, viz. the mystic marriage of the god and the

¹ *ἔφυγον κακόν· εὗρον ἀμείνον*. The same formula was used in the marriage ritual (see § 8).

² See Ramsay, in *BSA* xviii. 37 ff., and *HDB* v. 127*, 129b.

³ Envoys sent by cities and States were initiated, evidently at a special service for their convenience. They usually brought a chorus with them (Ramsay, *The Teaching of Paul*, p. 289).

⁴ *Θεὸς ἔσσεαι ἀντὶ θρόνου*, known only in the so-called Orphic funeral formula (most recently in J. E. Harrison's *Prolegomena*, Cambridge, Appendix); we take them to be closely connected with the mysteries.

goddess as the warrant and guarantee of earthly marriage.¹

7. The choice between good and evil.—The question presents itself whether the two stages of the divine life were shown in the mysteries as two steps in a development from the worse to the better or in the form of a choice between good and evil. If the answer to this question could be made with certainty in favour of the former opinion, it would be extremely important; but there is no positive evidence to support that view; and all analogy is distinctly in favour of the other opinion, that there was simply presented in the religious ritual a choice between two alternatives, one good, the other evil. Such a choice is frequently presented in ancient religion and in ancient moral teaching. It appears in advanced Hellenic literature in the form of the *Choice of Heracles*; but that is only a literary apologue, elaborating in moral form a choice which, according to religion, is always being presented to mankind. In this religious choice there is not merely a presentation of the alternatives; there is also always the advice and counsel given by the gods to men to prefer good rather than evil and life rather than death. A fundamental idea in the religion is that good and life are aspects or names of one fact, and similarly evil and death of the opposite. The probability therefore is that in the drama of the mysteries the gods of the divine family are represented as choosing between the two courses—good and evil, or life and death—and that the divine choice is the model for human nature to follow. Accordingly, the formula which we have rendered, 'I escaped evil; I found better,' which seems to suggest in that translation the idea of development, is more correctly to be rendered, 'I rejected or avoided evil; I found better,' so as to suggest that the formula is an expression of choice between alternatives both equally open at the same time. Further, the formula is certainly an example of parataxis and really implies, 'I rejected the evil, because the opportunity of better was presented to me.' The idea that men are always placed in a position to choose between good or life and evil or death, and that religion exemplifies and teaches the preference of life rather than death, lies at the basis of the Anatolian religion, which in all departments of conduct shows men what they should do, in agriculture, in household economy, in hygiene, etc. So it is the basis of the Hebrew teaching, 'The fear of Jehovah is the chief part of knowledge; but the foolish despise wisdom and instruction' (Pr 17 9¹⁰ 15³³, Ps 111¹⁰, Ec 12¹³); Moses said to the people, 'I have set before thee life and good, and death and evil, the blessing and the curse; choose life' (Dt 30¹⁵, 19); and the same is expressed in the beginning of human history (Gn 2 and 3), for in the garden that was in the land of Eden there were two trees, the tree of life and the tree of knowledge (which immediately produced death); the instruction given to the man and the woman who lived in the garden was that they must not eat the fruit of the tree of death; but after they did so they were sent forth from the garden, lest they should have access to the tree of life and eat and live, and the angel with the flame of a sword was placed on guard to prevent approach to the tree of life. In this account we have the expression in primitive thought of the idea that from the beginning of human existence the choice between good or life and evil or death has constantly been presented to mankind, and the divine advice has always been given in the most positive form of absolute prohibition, to avoid the act which will 'bring death into the world.'

If the point of view taken in this article is

¹ BSA xviii. 371.

correct, there would probably be presented to the *μύσταις* in the first stage of the mystic ritual the choice between good and evil, and, when he chose rightly and in the proper mystic words, he was admitted on the second stage.

8. The divine teaching.—The 'holy marriage' of goddess and god is only one example of the general principle that the gods are always teaching and advising men what to do and how to behave. There was indeed no formal teaching in the way of discourse or theoretical instruction. There was only (1) the teaching by example in the divinely instituted ritual, and (2) the occasional advice by signs and omens, chiefly those seen in the air, which needed interpretation and application to the individual case. The theoretical basis of the ritual is expressed, e.g., in a relief found in E. Lydia on the Phrygian frontier. This relief is arranged in two zones; in the upper zone the god is represented as performing on an altar the same act of ritual as the priest is performing on an altar in the lower zone.¹ Every act of religion on earth has its counterpart in the performance of the same rite on a higher level in the divine life; and so the marriage celebrated on earth between the man and the woman has its counterpart in the marriage that is always taking place above between the god and the goddess. The teaching lies in the example and model which the divine powers set forth to all their worshippers. But earthly marriage is not merely a relationship between two human beings; it is a rite which concerns the entire society to which they belong. On this rite and on the family relationship organized society is built up. The unit of civilized society is not the individual, but the family. Accordingly we find it recorded that, according to Greek religion, the married pair celebrate the sacred marriage in honour of the god and goddess.

9. Relation of the conquerors to the ancient priesthood.—We have no information about this relation in the case of the old Phrygian conquerors, and we can only speculate with regard to it from the analogy of two later cases. (1) When the Gauls conquered and settled in that part of the old Phrygian country which afterwards was called Galatia, they soon adopted the religion of the country which they had won. Not merely was it necessary for them (as stated above) to worship the gods of the country where they now dwelt; they had also to face the problem of governing the people whom they had conquered. They could not and did not try to exterminate an entire race; all that they could do was to take a portion of the land for themselves, and to employ the conquered race as a subject caste which should till the land for the new owners of the great estates. The conquering caste, then, must govern the subject population according to some method or other. With the ancient views about religion and its fundamental importance as the governing principle in any organized society, the method of governing must be through the use of the already existing forms of religion. Hitherto the priests of the great religious centres had been the rulers of the god's land. The simple and easy way for the Gauls to rule the old inhabitants was to become the priests, and to fulfil the same religious forms and duties as the Phrygian priests had fulfilled. We know from an inscription that at Pessinus the conquering Gauls took only half the places in the priestly college. What was the exact situation at other great religious centres is unknown, but this may be taken as exemplifying the general principle. The chiefs of the new conquering caste allied themselves with, or even wholly displaced, the priests of the old colleges and centres; in con-

¹ Ramsay, *Letters to the Seven Churches*, p. 63.

junction with or instead of the ancient ruling priestly families, they administered the government of the mass of the population.¹

(2) When the emperor Augustus, by the will of the deceased Amyntas, last king of Galatia, came into possession of Pisidian Antioch and the whole territory attached to it, he put an end to the old ruling dynasty or families, in which the priesthood was hereditary, and himself became owner of all the land of the god. His procurator, who represented him in the district and managed his interests for him, was priest in his place, and therefore lord over the cultivators of the estate. This lordship over the cultivators was not applicable to the free citizens of the Græco-Roman cities, and in this way a highly complicated situation arose, according to which the priest-procurator was in the city only an official of the emperor, while on the estates he was the embodiment in human form of the distant god-emperor. Something of the same kind must have existed under the Greek kings in many parts of W. Asia. Those kings were identified with the god, and regarded as the embodiment in human form of the god on earth. This convenient religious fiction was utilized practically as a means of governing the country. It gave to the god-king or the god-emperor the sanction of religious awe, and this obedience to the emperor took the place of loyalty to the empire. The same fiction was widely practised throughout the Græco-Roman world; but we know more about the details only in the case of the Roman empire, because the evidence is clear that in every district and in every city of the Eastern world the emperor was supposed in the cult to be identified with the chief god of the district, and even free citizens, though not actually the serfs on the soil of such estates, yet regarded the emperor as the present god, on whose power they were dependent for defence, and to whom they owed the peace and prosperity of the whole empire. In the 4th cent. those formerly free cultivators became real serfs, because the law regarded the owner of the soil as having a right to their labour.

The same principle that underlies these later historical cases may be applied to the Phrygian conquest of the old Anatolian population of the country which afterwards was called Phrygia; but the details are not yet discovered.

ro. Varying accounts of the character of the mystic ritual.—In the fact that the mystic ritual presents a choice and a contrast between good and evil, between violence and order, and that it places human life under the guidance of religion, lies the explanation of some serious difficulties which are presented by the records about the mysteries. Christian writers describe them as presenting a series of incidents of violence, deceit, and horror. The question has been much debated whether this account is correct. The answer would seem to be that it is perfectly correct so far as it goes, but it was not the object of the Christian writers to give a complete picture of the mysteries or to inquire into the possible truths and ideas that might be suggested by those rites. Their method was simply to show that from the contemplation of such hideous incidents presented in the form of a sort of drama there must result evil to those who contemplated the spectacle. Their object was to contrast the horrors and abominations which were presented to the initiated with the order, simplicity, and beauty of the Christian ceremony. It must always be remembered that they were replying to the misrepresentations of their own ritual which were current among their opponents, and their purpose was to paint in lurid but necessarily true colours the hateful character of the pagan

ritual and the evils that must result from it, while they maintained and described the beauty and purity of their own ritual. They were not antiquaries; it was sufficient for them to point to the horrors which formed a real part of that ritual. False statement or even exaggeration would have been fatal to their purpose. We must therefore accept as correct all the details in the picture that they give, remembering that that picture needs to be looked at from a certain point of view; and we must also remember that the mysteries were intended to exhibit the placing of human life on a higher level through the influence of religion and the example set in the divine life. The use of the formula, 'I escaped evil; I found better' (§§ 5, 8), proves beyond dispute that some such idea formed the fundamental truth underlying the religion presented in the mysteries, and the further fact that the same formula was repeated in the marriage ceremony proves also that the social 'better' which those who chose in accordance with the divine precept found lay in the institution of true marriage. These facts make it clear that we can and ought to accept as true also the opinions expressed by Plato and Isocrates and other Greek philosophers and thinkers that the mysteries shown at Eleusis were an educative and elevating influence in life; and, if it is true, as we must also admit, that part of the ritual of the mysteries was of extremely repulsive character, it follows inevitably that a strong contrast (or even possibly a process of development) in moral and social relations formed the real subject of the mystic ceremony. Thus in one stage of the mysteries the birth of the god-son (or daughter, as the case might be) originated from an act of violence and fraud, and in the other stage the holy marriage was set forth as the rule and basis of society. In both cases the scene was fully presented to the eyes of the initiated; and the details of violence or fraud, as enacted in the divine drama of life, furnished full justification for the attack of Christian assailants; but the apology was that religion should speak straight out, concealing nothing, and that it shows the naked truth to devout eyes. In the process of degeneration to which the Anatolian religion was exposed the ugliest and most repellent parts of the mystery were emphasized and made more prominent. The effect was seen in respect of both sexes. The devout, both women and men, felt bound to live the life of the goddess and the god in every act and every detail. Hence originated the custom of ritual prostitution, in which women voluntarily imitated the fate of the goddess; and this custom was carried out in a series of ingenious perversions and developments which constitute the most abominable and socially degrading side of the Anatolian religion. Similar in origin, and carried out with the same ingenious perversion, was the strange and remarkable rite of self-mutilation among men, which constituted the supreme sign of devotion to the goddess, and which was performed from time to time by devotees at, or even standing upon, her altar. In modern time certain sects of dervishes practise extraordinary rites of mutilation or of personal wounds, which seem to be perhaps an expression of the extremest asceticism (though it is difficult to make any assertion with regard to the original nature of their ritual of self-devotion). But the Phrygian rite seems clearly to stand in close relation to a common part of their economic ritual. It was known that mutilation was prescribed in the divine ritual as a necessary part of the treatment of domesticated animals, and that involuntary self-mutilation also formed a noteworthy fact in the life of the bee; and there were doubtless other analogies,¹ some well-founded and

¹ HDB ii. 83b note.

¹ HDB v. 116a, 123.

some purely fanciful, which seemed to establish the divine origin and character of the rite, so that the devotee who consecrated himself to the observance in the most perfect degree of the religion of the land practised this extremest act on himself, knowing that the god had set the example (as the *ἑρδὸς λόγος* declares) by performing it on himself and thus consecrating it for his human followers.

11. Other examples of the analogy between the divine life as shown in the mysteries and human life.—It would also appear that the purificatory ceremonies which formed part of the mysteries were practically identical with some of the marriage rites, and this identity further confirms the close similarity between the rites in the two cases.

A formula which was uttered by the initiated person at a certain stage in the ritual of the mysteries was, 'A kid I have fallen into the milk.'¹ It is generally recognized that the kid is the mystic form of Dionysos as the god-son in the divine nature. In these words the *μύστυς* expressed the same meaning as the goddess of the world of death uttered to the dead when they came before her already initiated and pure, 'Thou hast become god instead of mortal.' In both the idea is that death is the entrance on life. The initiated dead come back to the goddess from whom they originated. Life comes from her and death also, and the two facts of life and death are different aspects of one idea. The formula about the kid declares that the initiated person has assumed the divine form as Dionysos. Each *μύστυς* in death is merged in, or finds his perfection and completion in, the personality of the god with whom he is identified.² The formula under discussion evidently belongs to the religion of a pastoral people, and places us on the great central plain of Phrygia and Lycaonia, where a god called Zeus Galaktines or Galaktios is mentioned in inscriptions. The variation in the form of the adjective and its non-Greek character show that it is an attempt to express in Greek an epithet of the god which had the same meaning in the Phrygian or Anatolian ritual. We are reminded of the instruction which was three times impressed upon the Israelites in the Mosaic Law, 'Thou shalt not seethe a kid in his mother's milk.' Comparing the two expressions, we must infer that W. Robertson Smith's suggested explanation of the Hebrew commandment is correct. This commandment has formed the subject of much controversy, and Robertson Smith³ interpreted it as forbidding the performance by the Hebrews of a rite which belonged to a forbidden religion. J. G. Frazer⁴ objects that there is no proof of the existence of any such rite, but the formula now under discussion, as taken from the mysteries, seems to allude to symbolism derived from a rite of this kind. The *μύστυς* is now Dionysos; he becomes a god through entering the gate of death, and symbolically in pastoral religion the death is expressed in this form of words; and the words were the prelude to a rite having the religious form which is forbidden by the Mosaic Law. The rite of the kid goes back to a pastoral religion, which has been united in the fully formed mysteries with an agricultural religion.

12. Progressive assimilation of mysteries through the Græco-Roman world.—By the Christian apologists the mysteries are generally described as practically a single uniform institution

¹ The formula occurs several times on gold tablets found in graves of Italy and Crete, which stand in close relation to the Orphic mysteries; see App. to J. E. Harrison, *Prolegomena*, and bibliography there.

² This conception of the nature of death is more fully treated below.

³ *OTJC*, p. 433, *Religion of the Semites*², London, 1894, p. 221.

⁴ *Anthropological Essays presented to E. B. Tylor*, Oxford, 1907, p. 154.

at all mystic seats. Now there can be no doubt that the mysteries as celebrated in different regions were originally distinct and showed different rites, although there was a generic similarity. The Eleusinian mysteries were originally different in character from the Phrygian, for the Eleusinian mysteries were the drama of a purely agricultural religion, whereas the Phrygian were not. It has therefore been maintained that the Christian writers who neglect this difference are really misrepresenting the character of this religious institution by mixing up in a single picture details which belong to diverse religions. But the objection is not valid, for there was a marked tendency in the history of Greek and Græco-Asiatic religions to assimilate to each other the various mysteries; and the assimilation was effected by incorporating in each ceremonies and rites taken from the others. Thus the picture presented by the Christian apologists must be accepted as reasonably accurate in details, though incomplete. On this there is agreement.

13. The ultimate supreme deity and the mediator.—The goddess was the fountain and source of human life. The principles on which that life must be lived emanated from her. The god is instrumental in making those principles known to men; they are made known in practice, not theoretically. The god does what he teaches; he is the worker who by his toil shows principles in operation. This idea, that there is an intermediary in carrying the knowledge of divine truth to the world of men, appears in many forms which are in the last resort almost identical expressions of the same fact. There is a supreme divine power, the source of all truth and all good, and there is an intermediary divine power; and these two divine personages are in the Phrygian religion conceived usually as the goddess who is the mother and the god who is her son or priest or paramour or companion; in these various ways of expressing the relation lay the seeds of much evil in the divine drama as presented in the mysteries. Yet these envisagements as female and male are not universal in early Anatolian or Greek religion. In the first place, as we have already shown, the goddess is often displaced, at least in outward show, by a male embodiment; in this case the two personages are the supreme god and an assistant or ministering god. When names were given to these embodiments of the divine power, the most characteristic were Zeus and Hermes. The embodiment in two persons was necessary to the complete presentation of the divine action (as, e.g., in the striking story recorded in *Ac* 14⁷⁻¹³). It has already been explained (§ 2) how the variation between the presentation of the supreme divine power as male and as female is to be explained. In the second place, while the ministering god is almost invariably presented as male and especially under the name Hermes, there is one striking exception in the *Iliad*, where for certain purposes the goddess Iris is presented as the messenger of the father of the gods. Iris—the rainbow—seemed in certain points of view to be the line of communication by which divine truth was introduced to the world, and this thought is elaborated into the picture of Iris in the *Iliad* (though never in the *Odyssey*). A similar thought appears in the book of Genesis, where the bow is set in the cloud as a symbol of the covenant which is concluded between the supreme God and His people.

14. The ritual expressed the self-protecting instinct of collective society.—The ancient Anatolian religion originated from the self-defending and self-protecting instinct in early society. The instinct and tendency expressed itself through the voice of prophets, and assumed the form of a series

of regulations for the better organization and management of society, mainly in its economic aspect. But it is useless to make rules for an ignorant people, unless there is some powerful sanction for these rules enforcing their observance by the dread of punishment. The rules, therefore, being the expression of the divine interest in the welfare of human society, took the form of religious law; and they were obeyed because the power of the goddess was offended by violation and ready to punish it. Thus, *e.g.*, it is urgently necessary for the welfare of a primitive society, which practises agriculture and lives by its results, that proper times and seasons and methods should be strictly observed. It is not, however, safe to expect that a simple and uneducated population, which is only learning the importance of these things by experience, will observe strictly the rules of sound method; men are lazy, slow to learn, and ready to procrastinate; but, when the rules are embodied in the form of a ritual by which divine protection and help are to be gained, then they enforce themselves, for violation brings punishment by suffering. The gods live in the life of nature; the times and seasons are crises in that life, and the due observance of the ritual brings its reward in the gifts which the gods are always tendering to the use of man. Similarly in respect of domestic economy, or the wise conduct of the family life, or the proper management of domesticated animals, all the rules come from the divine power and are enforced by that power because they are expressed as the ritual or religion. To go into this in detail is impossible here, for it requires elaborate treatment, and it depends on only scanty evidence. It remains really the simple orderly statement of the facts so far as known, but yet only a hypothesis.

In a region where agriculture is the main business of the population the religion is agricultural, and the episodes in the divine life as exhibited in the ritual are the stages in the farmer's year.

So, *e.g.*, 'Demeter, that bright goddess, lay in loving union with the hero Iasion in a thrice-ploughed fallow-field in the fertile land of Crete, and bare goodly Ploutos' (Hesiod, *Theog.* 968 f.; *Odyssey*, v. 126 f.).¹

The marriage of the goddess-mother to the heroized envisagement of the race takes place in the rich field newly opened after long preparation, and her son is Wealth. The rule of times and conduct, as fixed by divine power and revealed in practice to men by the god as priest and head of the ritual, brings in orderly course prosperity, happiness, and life; but, if violated or neglected, it causes suffering and death.

Similarly in a country where flocks and herds constituted the chief source of livelihood the religion was pastoral and the god was the god of milk, who granted the produce on which the life of the people depended. As it happens, we have practically no records of this type of religion, with the exception of the titles 'Galaktios' and 'Galaktinos' applied to the supreme deity. A pastoral people is, as a rule, rude and uneducated, and there therefore remain hardly any memorials of their ritual or even of their life. It is, however, certain that the great plains around the salt lake Tatta were always a pastoral country, in which, *e.g.*, Amyntas, the last king of Galatia, possessed more than 300 flocks.² There can be no doubt that these flocks were very large, as we may judge from the immense size of some of the flocks which shepherds lead about over the plains at the present day. We can understand how the principles of

attending to the welfare of domesticated animals were consecrated in a series of rites fixed according to the seasons of the year.¹

The sacred character of useful domesticated animals was a device for the benefit of men, and it seems probable that the arts of domestication of animals may have in some degree originated on the great Anatolian plateau,² where conditions are exceedingly favourable, and where indubitably a high degree of skill was reached. Valuable breeds were artificially produced by intelligent cross-breeding. Of these the Angora goat still survives, and the secret of its breeding is carefully treasured and concealed. The present writer is unable to accept the view advocated by some distinguished German writers that the Angora goat was introduced from Central Asia and is a naturally distinct species. There is some authority for believing that the secret of preserving the fine character of the wool of the Angora goat lies in a system of breeding. Strabo mentions other fine breeds—*e.g.*, the Colossian sheep with its glossy violet-coloured fleece, and the glossy black-fleeced sheep of Laodicea. These have entirely disappeared, and the reason is that the breeds, being artificial, were through carelessness and ignorance allowed to degenerate.³

The worship of the Ephesian goddess Artemis seems to have been closely related to the practice of bee-keeping. The goddess was the queen bee, and it is noteworthy that in the religion of Anatolia the sex of this supreme official among the bees was correctly known, and its life-history was properly understood, whereas Aristotle and the Greeks generally thought that the queen bee was a male and called it *εσθήρ* or *βασιλεύς*. The image of the goddess has only the slightest resemblance to a human body, but in outline is roughly similar to the body of a bee. As the queen bee she is indicated literally as the great mother of all life in the community. The facts of nature pointed out the queen bee as the natural analogue to the goddess. She is attended by a body who are called Essenes, bearing the same name as the male bees or drones who do no work, while another body of her followers are the Melissæ, the female working bees, in whom the sexual character is undeveloped. These two bodies of followers, the male and the female, constitute the priests and priestesses of the goddess.⁴

An example of the self-protective character of the religious law which ruled the conduct of primitive Anatolian society is found in the conduct of social life. The idea is that the divine power must be localized at each point where the safety of the family or of society is involved. In the construction of the house, where a pillar or column is an important structural member, it is regarded as sacred and as a home of the divine power, in order to impress on all persons the respect with which it must be treated; and this sacredness leads to the institution of a ritual by which the religions awe is impressed on all minds. The roads which led from town to town were placed under divine protection by sacred pillars (in which the divine power finds its home) along their course. These stones were sometimes made useful to human needs as measures of distance, and thus became mile-stones. Under the Roman empire mile-stones were dedicated to the god-emperor. In modern Mediterranean countries the shrines of Christian character which are found at important points,

¹ Ramsay, *Impressions of Turkey*, London, 1897, p. 272 f.

² Ramsay, *Cities and Bishoprics of Phrygia*, I. p. xv.

³ On this subject see Ramsay, *Impressions of Turkey*, p. 272 ff.

⁴ HDB v. 117a. The male bee perishes after consorting with her, like Iasion.

¹ The statement is identical in the two poets, which shows that it expresses the religious myth (*ιερός λόγος*). Hesiod alone specifies Crete, Homer alone the resulting death of Iasion (*Ιάσιος*). The latter fact is essential in the *ιερός λόγος*.

² Strabo, xii. 6, p. 568.

especially at meeting-places of roads, originated in this feeling that the divine guardianship has to be impressed upon all persons at all important points in social life. In the city the streets are similarly placed under the same protection, and, as the number of the people who pass along the streets by day and by night is very much greater, the symbols (usually *Hermæ*) of the presence of the divine power are very much more frequent. The permanence and health of society depend largely on the safety and cleanliness of the streets, and these purposes are ensured by the presence of so many pillars or altars or representations of a god. In the presence of God cleanliness and purity are exacted. No one is free to come into the presence of God unless he is pure both physically and morally. By insisting upon requirements like these the salvation and health of society were attained. The clearest and most explicit declaration of this principle is contained in the Mosaic Law (see Dt 23¹⁴): 'Jehovah thy God walketh in the midst of thy camp, to deliver thee, and to give up thine enemies before thee; therefore shall thy camp be holy, that he may not see an unclean thing in thee, and turn away from thee.'

When the right conduct of people in society was hindered by some catastrophe or some serious change in external conditions, then serious dangers resulted. At the beginning of the Peloponnesian War, e.g., the entire population of Attica was crowded within the walls of Athens. There was not room for them to live according to religious law and custom. The ordinary rules of life were inevitably neglected. The presence of the god could not prove a sufficient restraint, and the result was speedily evident in a terrible plague through which (as popular religion believed) the divine power punished the violation of the laws which God had laid down for human conduct.

The religion of the Phrygians, therefore, must be regarded as springing from a simple enough type of religious feeling which was widely spread throughout the *Ægean* lands and the great peninsula of Asia Minor. This religion shows marked similarity to certain cults which are characteristic of Syria, and some of the best illustrations expressed in brief and clear terms are found in the Mosaic Law. The sacred Law of the Hebrews evidently was adapted to a state of society similar in certain ways to the social conditions implied in the Anatolian religion. This religion in its original character was one of ideas rather than of ritual; that is to say, we can envisage it at a stage early enough to see the ideas which are expressed in the ritual. All of this religion is in origin an expression of ideas and principles designed for man's good.

15. The religion of organized society and the family religion.—Obviously the religion of the mysteries is a religion of an organized society adapted to the conservation of social welfare by enforcing upon all members of the social organism such conduct as is to the benefit of the entire society to which they belong. The individual and even the family are secondary to the society. But behind and beneath this there lies another stratum of religion on which the life of the family is founded. In religion of that older type the guiding principle was not to subordinate the interest of the family to that of the social organism: it was directed to the purpose of conserving the family as an organism complete in itself; the family must not be suffered to come to an end; in life the father works for the sake of the children, in order that they may continue as a family; after death he is still able to aid in conserving it through the right conduct of survivors. In this primitive religion there is no thought of or provision about

work for the purely selfish advantage of the individual. Work is done for certain ideals, not perhaps understood clearly by the individual worker, but impressed upon him by some guiding power. So far as an individual looks merely to selfish advantage, he is not driven to work for the distant future benefit of children or children's children. But religion impresses upon him the importance of the family and the duty of working for it, and moulds his mind into conformity with this salutary purpose; and, while his intellect does not fully grasp the principle, yet his natural emotions lead him to guard and work for his children, at least while they are young. With these two motives in co-operation, an immensely strong force is brought to work on the conduct of the individual. Religious custom in the *Ægean* lands was in its origin the wise guidance of nature.

16. Family cult of the dead members.—The way in which religion guarded the permanence of the family was through the idea that the living members have much to gain from, and serious duties to fulfil towards, the other members of the family who have died. The dead ancestor or parent continues to live as a deity. He is strong to help his family so long as his family give him strength to help them. It is in the mutual relation of each party to the other that the strength of both lies. The dead help the living, provided that the living help the dead. God helps man, but man must co-operate with God. In the modern superstition of Asia Minor, as it appears under Turkish forms, the divine influence which expressed itself at many places all over the land is called 'ancestor' or 'father' (Turkish *dede*), in so far as it is associated with any personality at all. There is no other word in the colloquial language of the uneducated peasant to express his recognition of a vague divine power except this term taken from the family religion. The idea is primitive and fundamental; the dead man becomes god, going back to the goddess-mother who bore him. This idea might develop, and in some minds did develop, along the line of an Oriental pantheism—that the dead is merged in the impersonal divine power; but the typical development was in W. Asia and Greece—that the dead becomes a god, personal and individual.

In the later stratum of the Phrygian religion as a device of social organization there is effected a sort of identification of the family ancestor and god with the god who guards and preserves society. In that later stage or stratum of religion names for the gods came into existence (as Herodotus relates),¹ and the possession of a name indicates growth in the personality of the divine conception, which begins by being simply 'the god,' 'the goddess,' 'the mother,' or 'the father,' and develops into a personal conception moulded only too closely on human personality. The divine prototype in heaven is similar to the human antitype on earth.

Epitaphs belonging to the Roman period give some information about the fashion in which the ordinary uneducated or slightly educated peasantry of Anatolia conceived the relation between the living man and the dead man who has become god. The making of the tomb to a dead person is at the same time the discharge of a vow to the god. The dedication to the dead person is also a dedication to a certain envisagement of the divine nature, whether indefinitely as 'the god' or anthropomorphically as a divine person possessing an individual name and character and local relations. Since the dead person is regarded as identified with the god, he or she is so described in some epitaphs.

¹ At first the Pelasgians had no names for the gods; most of the names came from Egypt, and the oracle ordered the Pelasgians to use them (Herod. ii. 62).

The dead is the god, and the grave-stone is the altar on which this god is worshipped.¹

It is a custom which has persisted throughout every period of Anatolian history and under every religious external form that it requires a grave to impart consecration to a shrine or a locality. This idea is as powerful still under Muhammadan influence as it was in the earliest traceable period of Anatolian history. There are throughout the country innumerable localities which are at present regarded as sacred, sometimes because they are seats of ancient society and sites of dead cities, sometimes as being places where the divine power manifests itself in some striking natural phenomenon. In almost all those places there is a grave of some *dede*, or ancestor, and a sort of worship is maintained in irregular fashion at the shrine. People seek here the cure of diseases and make vows and prayers, and tie a rag from their own clothing on a tree. The sufferer and the unfortunate come here for help. Those who are healthy and prosperous do not need to have recourse to such a way of invoking the divine help and protection. The whole custom is antipathetic to the spirit and the teaching of Muhammadanism, but it rules the conduct of the people, as an imperishable survival of an old religious view, engrained in the popular mind. It is evident that in the earliest Phrygian religion a grave was the means of ensuring the divine presence at a particular spot.² The shrine of a deity was also marked by a grave, and thus shared in the awe arising from both the older and the more developed type of religion. Wherever there was a need for consecration, so that a certain locality should be preserved for general safety or advantage, a grave intimidated the presence of a god and warned off violators or intruders. This custom stands evidently in close relation to the worship of ancestors and to the family religion. It is a device to extend the protection of the deified ancestor beyond the circle of the family for the benefit of others.

17. Two strata in the Anatolian religion.—We must therefore regard the Anatolian religion as having come into existence in two different periods from two different causes. The older stratum is the family religion, i.e. a certain group of rites holding the family together in the performance of common religious duties; for, according to ancient religious ideas, no unity and no social body could have a common existence except through the performance in common of certain religious duties. The later stratum was the religion of an organized society, knit together for the common advantage.

18. The divine power as the mother.—In both the older and the later stratum the conception of the existence of the gods as a divine family having certain relations with each other necessarily existed. Especially the conception of the goddess as the mother lay at the basis of the family religion. While it is evident that there was a certain growth in the conception of the divine family between the older and the later religious stratum, it is not easy to distinguish the elements which belong to each period; but in the beginning the goddess-mother must have been the principal figure, for the family exists in virtue of the mother. In old Anatolian custom, as is agreed by the great majority of scholars, the human family kept its continuity through the idea that the influence of the mother was the determining power. To this old custom the name 'matriarchate' is commonly applied in English, but the name is not correct, and the German term *Mutterrecht* is more suitable to the real character of that

early family system. It was not the case that the mother was the ruler, but it was the case apparently that right, law, inheritance, and descent were reckoned in terms of the mother and not of the father,¹ and that influence and freedom of life were a birthright of the women. The introduction into Phrygia of the developed Hellenic religion was unfavourable to the continuance of this early idea of the family; and all those legal and social relations came to be reckoned in terms of the father rather than the mother, as we see in the Græco-Roman period. Yet still the ordinary custom of the land continued in the old habit of assigning prominence to the female element: women magistrates appear frequently in the records of many cities in Phrygia and Anatolia generally, and women are mentioned as performing public duties much more freely than was the case in Greece. Even among the Phrygian Jews—though Jewish feeling was always extremely hostile to the prominence of women—one finds examples of Jewesses not merely filling magistracies in the towns, but actually holding the position of chief of the synagogue (*ἀρχισυνάγωγος*); and this religious fact can hardly be explained otherwise than as due to the influence of the custom of the country on them.²

19. Persistence of the conception of the divine mother.—The deep-seated tendency of the people to look for a conception of the divine nature in a feminine personality was a strong influence on early Christian system. The people sought for something in the new religion to satisfy their craving for such a female element in the divine nature. In all probability the first form of the Thekla-legend as it was composed [by a presbyter of Asia, not later than the third quarter of 2nd cent., was an expression of this craving; the Orthodox Church, while condemning presbyter who gave literary form to the book over the figure of St. Thekla and the legend so as to make it harmless ecclesiastical point of view. Yet there still in the tale slight traces of the idea that in the rights of women find a heroine; women who sat as spectators in the arena where she was exposed to wild beasts. her as their champion and appealed to her behalf, throwing spices and balsam. It is because of this quality in St. Thekla, sort of heroized impersonation of Anthea and ideals, that she gained for her an important place in the hagiography of the Eastern Church.

The Anatolian custom, however, a fuller expression of its nature, found at last in the idea of the Virgin Mary. It was at Ephesus, the city of the earliest proof is found of an the Virgin Mary as the Mother of the Council held at Ephesus in A.D. 431 was definitely established as a Orthodox ritual, while Nestorius because he held that the title 'Mother' ought not to be applied to the Virgin, only the 'Mother of Christ,' was condemned at Ephesus 'in the most which is called Maria' (a title rather than official); and there can that it was the force of popular imposed on the Orthodox Church of the Mother of God. There is a Acts of the Council of Ephesus in A.D. 429 by Proclus, bishop of Constantinople.

¹ Ramsay, *Studies in the Hist. and Art of the Eastern Roman Provinces*, London, 1906, pp. 271-278.

³ Ramsay, *Pauline and Other Studies*, pp.

expresses in Christian form the popular idea. The subject of this sermon is 'to celebrate the glorification of the race of women': for 'the glory of the female' is due to her 'who was in due time Mother and Virgin': 'earth and sea do honour to the Virgin.' It seems impossible to mistake or to deny the meaning implied in this and much similar enthusiastic language. The Anatolian religious feeling craved for some clearer and more definite expression than it could find in Christian rites and language of the honour, the influence, the inevitableness in the world of the female element in its double aspect of purity and motherhood. 'Purity is the material,' but purity that is perfected in maternity. The Virgin, the Mother, the purity of motherhood, was to the popular Anatolian religious sentiment the indispensable crown of the religious idea.

Muhammadan religion, on the other hand, with its stern hostility towards this point of view, was not affected by it in Anatolia. Muhammadanism probably originated from the seed sown in the mind of Muhammad by Christian refugees who had been expelled as heretics from the Orthodox empire, because they were opposed to the worship of the 'Mother of God' and had fled into Arabia. Springing from such seed, which grew up amid Semitic surroundings hostile to the prominence of women, Muhammadanism has always assigned an extremely humble place to the feminine element in society and religion, and it extirpated the old ideals of feminine place and duty from the popular mind in Phrygia. Islam was unable to extirpate so deep-seated a feeling, and had to satisfy it in other ways; and some light is thrown on the nature of the ancient religion by observing how this was achieved. It was partly done through the orders of dervishes with their ritual and enthusiasm,¹ and in recent years the personality of the Prophet himself has come to exercise a profound influence over a large number of devotees, especially among the Arab-speaking peoples, but also among part of the population of Anatolia.

'The Moslem's devotion to his Prophet, his admiration and enthusiasm, nay, his personal love for him, are intense realities. . . . Sometimes he points simply to "the fact of Mohammed," he feels a personal relationship to him, he is conscious of a personal gratitude for the ineffable services he rendered.'²

Another writer says:

'The devout Mohammedan is never so enthusiastic as when he calls on his Prophet. . . . Hymns to the Prophet are sung most enthusiastically on the birthday of Mohammed and on the day of his Ascension. . . . Pious men and women are never so full of devotion as on these occasions. Their whole nature is stirred up and their whole heart goes out in worship and adoration when these hymns are sung.'³

One line of a popular hymn runs thus:

'In every flower and in every plant the light of Mohammed is visible.'⁴

Sectarian Muslims cherish the same feelings towards some other heroes, especially Ali, Hasan, and Hussein, etc.

Two lines of a hymn addressed to one of those heroes reads:⁵

'Thou removest sorrow, thou takest away pain, thou forgivest sin, thou didst restore the widow's son to life, thou didst transform a robber into a saint.'⁶

Prayers and hymns like these form a ritual, which is usually held at night and continued to early morning; and, as another writer says,

'So it has come about that Mohammed is often practically deified, however contrary to exact Islam and to the Prophet's own declaration such an apotheosis may be.'⁷

¹ The dervishes are an excrecence on Islam.

In rites and words like these impassioned religious feeling appears which is similar in tone and words to that which is expressed by Bishop Proclus in the sermon quoted above. The life and joy of nature is expressed now to the Muslim mind in the person of Muhammad. In the Orthodox Church of the 5th cent. and later it was expressed in the Mother of God, 'the sole bridge by which God passes to man.' The idea is the same in both, 'Purity is the material,' but in the Muslim form it is wholly disconnected with any relation to sex. Muhammad is the intercessor between God and man, and the only intercessor. But there is a price to pay for the narrowing of the scope of this idea, which results in the Muslim position of women, and in the growing dissatisfaction of many Muslims with the position that their religion assigns to women, almost excluding them from the higher departments of life. The Mariolatry of the Orthodox Church was an attempt to express in form comprehensible to an uneducated populace an idea which was latent in Christianity, but which seemed to be not clearly enough expressed to the vulgar mind. It was the purification and Christianization of the mother-worship of the old Anatolian religion. The enthusiastic devotion with which the mother-goddess was served expressed itself in forms often indeed repulsive, but corresponding to the strongest and deepest feelings of human nature.

20. Outstanding characteristics and social effects.—In this old Phrygian or Anatolian religion certain characteristics especially arrest attention.

(a) *The land is divine property.*—There is no pretence that land is national; human ownership cannot exist in any form, when the Earth herself is the supreme goddess; the divine nature cannot be the property of men. Accordingly, the land is the deity's, just as the people on it are her slaves. In this principle is found a guarantee for what practically amounts to possession by the cultivator as distinguished from ownership and dominion; and the implication of the principle becomes clear when one looks at the parallel case of the freedom of the individual. The individual is necessarily free in all human relations, in so far as he is the slave of the god; the slave of the god cannot be the slave of a human owner; and the commonest form of enfranchisement of slaves throughout the Greek world lay in the purchase of the slave by the god. According to human law, the slave could not possess any property; all that he earned was the property of his owner and master; but, if the slave earned anything, he could safeguard it by giving it to the god, who kept it for him; and in process of time, as the money accumulated, the god purchased the slave from his human master, and thus enfranchised him. The god in this way came to act as banker and money-lender on a large scale; the temple held money in trust not only for slaves but for free citizens; and it lent to land-owners and probably also to States. Similarly, when the land is owned by the god, it in practice is held on the tenure of cultivation. He who used the land was, practically speaking, its temporary owner; for he could sell the possession but not the *dominium*. The modern Turkish law in Asia Minor recognizes something of this principle, for it contains the enactment that land which has not been used by an owner for a certain short term of years ceases to be his property, and lapses to the common good; and the same law is very favourable to the acquisition of waste land by any one who undertakes to cultivate it, and whose ownership lasts only while he is actually using it.

In this way the divine ownership of the soil was a substitute for, and even better than, peasant

The dead is the god, and the grave-stone is the altar on which this god is worshipped.¹

It is a custom which has persisted throughout every period of Anatolian history and under every religious external form that it requires a grave to impart consecration to a shrine or a locality. This idea is as powerful still under Muhammadan influence as it was in the earliest traceable period of Anatolian history. There are throughout the country innumerable localities which are at present regarded as sacred, sometimes because they are seats of ancient society and sites of dead cities, sometimes as being places where the divine power manifests itself in some striking natural phenomenon. In almost all those places there is a grave of some *dede*, or ancestor, and a sort of worship is maintained in irregular fashion at the shrine. People seek here the cure of diseases and make vows and prayers, and tie a rag from their own clothing on a tree. The sufferer and the unfortunate come here for help. Those who are healthy and prosperous do not need to have recourse to such a way of invoking the divine help and protection. The whole custom is antipathetic to the spirit and the teaching of Muhammadanism, but it rules the conduct of the people, as an imperishable survival of an old religious view, engrained in the popular mind. It is evident that in the earliest Phrygian religion a grave was the means of ensuring the divine presence at a particular spot.² The shrine of a deity was also marked by a grave, and thus shared in the awe arising from both the older and the more developed type of religion. Wherever there was a need for consecration, so that a certain locality should be preserved for general safety or advantage, a grave intimated the presence of a god and warned off violators or intruders. This custom stands evidently in close relation to the worship of ancestors and to the family religion. It is a device to extend the protection of the deified ancestor beyond the circle of the family for the benefit of others.

17. Two strata in the Anatolian religion.—We must therefore regard the Anatolian religion as having come into existence in two different periods from two different causes. The older stratum is the family religion, *i.e.* a certain group of rites holding the family together in the performance of common religious duties; for, according to ancient religious ideas, no unity and no social body could have a common existence except through the performance in common of certain religious duties. The later stratum was the religion of an organized society, knit together for the common advantage.

18. The divine power as the mother.—In both the older and the later stratum the conception of the existence of the gods as a divine family having certain relations with each other necessarily existed. Especially the conception of the goddess as the mother lay at the basis of the family religion. While it is evident that there was a certain growth in the conception of the divine family between the older and the later religious stratum, it is not easy to distinguish the elements which belong to each period; but in the beginning the goddess-mother must have been the principal figure, for the family exists in virtue of the mother. In old Anatolian custom, as is agreed by the great majority of scholars, the human family kept its continuity through the idea that the influence of the mother was the determining power. To this old custom the name 'matriarchate' is commonly applied in English, but the name is not correct, and the German term *Mutterrecht* is more suitable to the real character of that

early family system. It was not the case that the mother was the ruler, but it was the case apparently that right, law, inheritance, and descent were reckoned in terms of the mother and not of the father,¹ and that influence and freedom of life were a birthright of the women. The introduction into Phrygia of the developed Hellenic religion was unfavourable to the continuance of this early idea of the family; and all those legal and social relations came to be reckoned in terms of the father rather than the mother, as we see in the Græco-Roman period. Yet still the ordinary custom of the land continued in the old habit of assigning prominence to the female element: women magistrates appear frequently in the records of many cities in Phrygia and Anatolia generally, and women are mentioned as performing public duties much more freely than was the case in Greece. Even among the Phrygian Jews—though Jewish feeling was always extremely hostile to the prominence of women—one finds examples of Jewesses not merely filling magistracies in the towns, but actually holding the position of chief of the synagogue (*ἀρχισυνάγωγος*); and this religious fact can hardly be explained otherwise than as due to the influence of the custom of the country on them.²

19. Persistence of the conception of the divine mother.—The deep-seated tendency of the people to look for a conception of the divine nature in a feminine personality was a strong influence on early Christian system. The people sought for something in the new religion to satisfy their craving for such a female element in the divine nature. In all probability the first form of the Thekla-legend as it was composed [by a presbyter of Asia, not later than the third quarter of the 2nd cent., was an expression of this craving; but the Orthodox Church, while condemning the presbyter who gave literary form to the legend, took over the figure of St. Thekla and modified the legend so as to make it harmless from the ecclesiastical point of view. Yet there still remain in the tale slight traces of the idea that in Thekla the rights of women find a heroine; and the women who sat as spectators in the amphitheatre where she was exposed to wild beasts regarded her as their champion and appealed to God on her behalf, throwing spices and balsam towards her. It is because of this quality in St. Thekla, as a sort of heroized impersonation of Anatolian custom and ideals, that she gained for herself such an important place in the hagiography and the ritual of the Eastern Church.

The Anatolian custom, however, aspired towards a fuller expression of its nature, and this was found at last in the idea of the 'Mother of God.' It was at Ephesus, the city of the goddess, that the earliest proof is found of an established cult of the Virgin Mary as the Mother of God; and in the Council held at Ephesus in A.D. 431 this cult was definitely established as a feature of the Orthodox ritual, while Nestorius was condemned because he held that the title 'Mother of God' ought not to be applied to the Virgin, who was only the 'Mother of Christ.'³ The Council assembled at Ephesus 'in the most holy church, which is called Maria' (a title apparently popular rather than official); and there can be no doubt that it was the force of popular feeling that imposed on the Orthodox Church this recognition of the Mother of God. There is prefixed to the Acts of the Council of Ephesus a sermon delivered in A.D. 429 by Proclus, bishop of Cyzicus, which

expresses in Christian form the popular idea. The subject of this sermon is 'to celebrate the glorification of the race of women': for 'the glory of the female' is due to her 'who was in due time Mother and Virgin': 'earth and sea do honour to the Virgin.' It seems impossible to mistake or to deny the meaning implied in this and much similar enthusiastic language. The Anatolian religious feeling craved for some clearer and more definite expression than it could find in Christian rites and language of the honour, the influence, the inevitableness in the world of the female element in its double aspect of purity and motherhood. 'Purity is the material,' but purity that is perfected in maternity. The Virgin, the Mother, the purity of motherhood, was to the popular Anatolian religious sentiment the indispensable crown of the religious idea.

Muhammadan religion, on the other hand, with its stern hostility towards this point of view, was not affected by it in Anatolia. Muhammadanism probably originated from the seed sown in the mind of Muhammad by Christian refugees who had been expelled as heretics from the Orthodox empire, because they were opposed to the worship of the 'Mother of God' and had fled into Arabia. Springing from such seed, which grew up amid Semitic surroundings hostile to the prominence of women, Muhammadanism has always assigned an extremely humble place to the feminine element in society and religion, and it extirpated the old ideals of feminine place and duty from the popular mind in Phrygia. Islām was unable to extirpate so deep-seated a feeling, and had to satisfy it in other ways; and some light is thrown on the nature of the ancient religion by observing how this was achieved. It was partly done through the orders of dervishes with their ritual and enthusiasm,¹ and in recent years the personality of the Prophet himself has come to exercise a profound influence over a large number of devotees, especially among the Arab-speaking peoples, but also among part of the population of Anatolia.

'The Moslem's devotion to his Prophet, his admiration and enthusiasm, nay, his personal love for him, are intense realities. . . . Sometimes he points simply to "the fact of Mohammed," he feels a personal relationship to him, he is conscious of a personal gratitude for the ineffable services he rendered.'²

Another writer says:

'The devout Mohammedan is never so enthusiastic as when he calls on his Prophet. . . . Hymns to the Prophet are sung most enthusiastically on the birthday of Mohammed and on the day of his Ascension. . . . Pious men and women are never so full of devotion as on these occasions. Their whole nature is stirred up and their whole heart goes out in worship and adoration when these hymns are sung.'³

One line of a popular hymn runs thus:

'In every flower and in every plant the light of Mohammed is visible.'⁴

Sectarian Muslims cherish the same feelings towards some other heroes, especially Ali, Hasan, and Husain, etc.

Two lines of a hymn addressed to one of those heroes reads:⁵

'Thou removest sorrow, thou takest away pain, thou forgivest sin, thou didst restore the widow's son to life, thou didst transform a robber into a saint.'⁶

Prayers and hymns like these form a ritual, which is usually held at night and continued to early morning; and, as another writer says,

'So it has come about that Mohammed is often practically deified, however contrary to exact Islam and to the Prophet's own declaration such an apotheosis may be.'⁷

In rites and words like these impassioned religious feeling appears which is similar in tone and words to that which is expressed by Bishop Proclus in the sermon quoted above. The life and joy of nature is expressed now to the Muslim mind in the person of Muhammad. In the Orthodox Church of the 5th cent. and later it was expressed in the Mother of God, 'the sole bridge by which God passes to man.' The idea is the same in both, 'Purity is the material,' but in the Muslim form it is wholly disconnected with any relation to sex. Muhammad is the intercessor between God and man, and the only intercessor. But there is a price to pay for the narrowing of the scope of this idea, which results in the Muslim position of women, and in the growing dissatisfaction of many Muslims with the position that their religion assigns to women, almost excluding them from the higher departments of life. The Mariolatry of the Orthodox Church was an attempt to express in form comprehensible to an uneducated populace an idea which was latent in Christianity, but which seemed to be not clearly enough expressed to the vulgar mind. It was the purification and Christianization of the mother-worship of the old Anatolian religion. The enthusiastic devotion with which the mother-goddess was served expressed itself in forms often indeed repulsive, but corresponding to the strongest and deepest feelings of human nature.

20. Outstanding characteristics and social effects.—In this old Phrygian or Anatolian religion certain characteristics especially arrest attention.

(a) *The land is divine property.*—There is no pretence that land is national; human ownership cannot exist in any form, when the Earth herself is the supreme goddess; the divine nature cannot be the property of men. Accordingly, the land is the deity's, just as the people on it are her slaves. In this principle is found a guarantee for what practically amounts to possession by the cultivator as distinguished from ownership and dominion; and the implication of the principle becomes clear when one looks at the parallel case of the freedom of the individual. The individual is necessarily free in all human relations, in so far as he is the slave of the god; the slave of the god cannot be the slave of a human owner; and the commonest form of enfranchisement of slaves throughout the Greek world lay in the purchase of the slave by the god. According to human law, the slave could not possess any property; all that he earned was the property of his owner and master; but, if the slave earned anything, he could safeguard it by giving it to the god, who kept it for him; and in process of time, as the money accumulated, the god purchased the slave from his human master, and thus enfranchised him. The god in this way came to act as banker and money-lender on a large scale; the temple held money in trust not only for slaves but for free citizens; and it lent to land-owners and probably also to States. Similarly, when the land is owned by the god, it in practice is held on the tenure of cultivation. He who used the land was, practically speaking, its temporary owner; for he could sell the possession but not the *dominium*. The modern Turkish law in Asia Minor recognizes something of this principle, for it contains the enactment that land which has not been used by an owner for a certain short term of years ceases to be his property, and lapses to the common good; and the same law is very favourable to the acquisition of waste land by any one who undertakes to cultivate it, and whose ownership lasts only while he is actually using it.

In this way the divine ownership of the soil was a substitute for, and even better than, peasant

⁶ *ib.*
⁷ D. B. Macdonald, *ib.*, p. 230 (the book should be read as a whole).

proprietorship. The man who made use of the land and worked it knew that no person could interfere with his right to use the land. This security of tenure by the actual cultivators was the main cause of the improvement of the land and the gradual subjugation of the soil for the benefit of their families. They gathered up the stones, and piled them. They stored up the water that fell from heaven—the gift of the god—or they brought water¹ a great distance in artificial channels from some bountiful fountain which also they recognized to be the gift of the god. They planted trees which would not begin to be useful until a number of years had elapsed. Under the divine guidance they planted and improved the crops. Thus gradually they transformed the Mediterranean lands from their natural rather sterile condition into a great series of gardens that ring round the central sea.² With war and conquest began the system of great estates belonging to owners from a ruling caste, and of cultivators attached to the soil with growing strictness.³

(b) *The influence of the goddess a guarantee of peace.*—The divine life is at once the reflexion of human life and the model or ensample for human conduct, and the influence of women tended towards a state of international peace, whereas war among the nations inevitably tends to diminish the importance of women and to increase that of the male sex. The general character of the Anatolian religion is adapted towards peace, and presupposes a state of peace as its basis. It makes use of the earth and its products, plants and animals, for the benefit of mankind, but the usefulness depends upon security of tenure. As soon as uncertainty begins whether the family of the cultivator will enjoy the fruits of his toil, he ceases to be disposed in the same degree towards cultivation. The influence of habit and the chance that he may gather the fruits lead him to continue his attention to the soil for a time, but, in proportion as uncertainty of enjoyment increases, his attention to the soil is lessened.

(c) The goddess is the revealer of principles and the teacher of ideals to her worshippers through her prophets. Through her influence domestic, economic, and international law are gradually established. The god in the divine family is the worker. He imparts to men the knowledge of the right way to approach the divine pair through the establishment of a ritual which he performs as the first priest, and which men imitate from him. He is the first cultivator of the soil, because cultivation of the soil is the putting into practice of the principles which are revealed, and which constitute the ritual of agricultural religion. It is the same with every department and every form of human life; the god exemplifies by his practice the way of carrying into action the principles which come from the goddess.⁴

Certain principles of international law were observed in early warfare. The goddess, who lived in peace and through peace, was striving to mitigate the sufferings and the tears of that state of war to which her ritual was opposed. There was

in Hellenized Greece a sacred month during which war was suspended, in order that the combatants should be free to celebrate the sacred festival of the summer and should be able to travel safely back and forward between their homes and the scene of the festival. There can be no doubt that the custom goes back to a very early time, and that it was a means to ensure a safe time for the gathering or the sowing of the crop—two supreme duties of the ritual marked by festivals and rites, impressive and sacred. Thus were limits set to the excesses of war. The water supply should not be interfered with, because the life of the earth depended in the Mediterranean world on the proper distribution of the water. The year's harvest, in so far as it was secured by a year's labour, might be destroyed, and thus the enemy might be vexed and overcome through scarcity and high prices, but the fruit trees were not allowed to be destroyed, because to recreate them is a matter of many years' growth, and their destruction would imply too serious an interference with the ritual of the divine command. This law of war is expressed in Rev 6⁸ 'A measure of wheat for a shilling, and three measures of barley for a shilling; but the oil and the wine thou shalt not touch.'¹

(d) Another characteristic of the Anatolian religion which specially impressed the Greek mind was the strong hold which it had on its servants and the enthusiastic devotion with which they were affected by it. This was due partly to mere difference of temperament: the people of Anatolia were nearer the Asiatic than the European type; and in Asia religion, as a rule, has had stronger hold of its people than in Europe (though from this we may except the Turkish races, who are usually too insensitive to be much dominated by religious enthusiasm). But the effect of the Anatolian religion on its people was due partly to its nature. It touched closely the greatest facts of ordinary life, as connected with the family, with a simple type of society, with the food supply, with the returning seasons and duties of the year. The people could not but feel that their life was staked on the observance of the ritual duties which an agricultural or pastoral religion imposed upon them. The custom of mutilation already referred to was the most striking example of this fact, and it was of such a character as to impress strongly the Greek mind by its absolute contradiction to some of the deepest feelings of the Greek nature. The religion of the mother-goddess was essentially one of enthusiasm and strong emotion.

(e) The old Anatolian cult is essentially a religion of ideas, and the ritual comes into existence for the sake of embodying ideas in the form of acts and ceremonies, which are a method of appealing to God, as kindly and all-powerful, to benefit His creatures. We have here to deal with what is in its essence and original character a religion, and not a system of magical rites whose object is to compel the deity to act according to the desires and caprices of a worshipper possessed of the requisite knowledge. Such is the true character of the Anatolian worship. Yet the general principle on which it is based, viz. that there are certain fixed acts and verbal formulæ through which the deity ought to be approached and to which the deity will certainly respond, is one that lends itself readily to be perverted into magic. The principle is a necessary part of the religion, in which is involved that the whole system of domestic, agricultural, pastoral, and national economy must be fixed, and that the desired result will certainly ensue if the system of acts and rites is followed

² Ramsay, *Luke the Physician and other Studies in the Hist. of Religion*, pp. 179, 191, 195-197.

³ The change of free peasants into *coloni adscripti glebæ* was accomplished when Roman law formally recognized the right of the landlord to the labour of the cultivators (A.D. 415). A big step in this change was made when Augustus recognized that all persons had a proper home (*lúa*) and must return to it periodically (Lk 22); the same principle was known in 118 B.C., and explicitly stated by Roman prefects of Egypt (e.g., A.D. 154) (Ramsay, *Bearing of Recent Researches on Trustworthiness of NT*, pp. 258-272, quoting from Rostowzew, *Stud. zur Gesch. des röm. Kolonates*, p. 305, and Zulueta, in *Oxford Essays* (Vinogradoff), 1909, p. 42).

⁴ See preceding note: also the influence of the writer's Gifford Lectures, Edinburgh, 1916-17, pervades (a) and (b).

¹ Ramsay, *Cities of St. Paul*, p. 431; cf. Dt 28; less definite in Persian rules (see E. L. Hicks and G. F. Hill, *Manual of Greek Historical Inscriptions*, Oxford, 1901, p. 20).

out with perfect accuracy. This is easily perverted into the magical idea that the performance of certain acts gives to the performer a hold on, and power over, the deity. But this magical perversion is a stage in the degeneration of the religion, and not essential to it. It is not the case that the religion originates out of the magic, but that the magic is a perversion of the religion (though certainly this perversion began very early).
